5.21 The inherent inadequacy of the States finances to meet their essential obligation get reflected in their overdraft with the Reserve Bank of India. The gap between receipts and expenditure is the real cause of the ailment of which overdraft is a mere symptom. The ever increasing gap is caused by a multiplicity of factors. On one hand, the State has to incur heavy expenditure on law and order, social services and debt servicing. On the other hand, failure to invest adequately in self-liquidating projects has resulted in a situation where the revenues yielded are not even sufficient for the maintenance of assets already created. Mere doubling of the entitlement of ways and means advances will not ease the situation. Unless the disease itself is cured the symptoms will persist. Liability for servicing and repayment of debt for a backward State like Manipur amounts to about Rs. crores which is far in excess of its own tax revenues. Remedial measures call for a change in the present pattern of central assistance for plan reducing the predominance of loans over grants, reduction in rate of interest, rescheduling of outstanding debts annually instead of after every 5 years as at present and a more liberal scheme of devolution. Besides, the distinction between normal and special ways and means advances may be dispensed with and the overall limit of ways and means advances should not be lower than the aggregate of the existing limits of the two kinds of advances. The existing practice of demanding security in respect of special ways and means advances causes severe hardship and may therefore be abandoned. Further, the existing rate of interest, applicable to ways and means advances and overdrafts should be lowered to the level of that applicable to plan assistance and to other forms of assistance extended by Government of India. The additional liability on account of interest would itself act as a deterrent to improvidence on the part of the States.

5.22 Performance of the States in terms of resources mobilisation should be viewed in the perspective of the powers conferred on them by the Constitution and the available base for mobilisation of resources. Most of the taxes left with the States, with the exception of sales tax, are inelastic. In sales tax again most of the States have reached a saturation point and there is little or no scope to raise further resources through modification of sales tax rates.

In spite of the constitutional limitations it will be seen that some States show a higher tax effort per capita than others. This is due to uneven level of industrialisation and urbanisation prevalent in the States. Low degrees of urbanisation and industrial backwardness prevents the Weaker States to catch up with the advanced ones in terms of per capita tax effort. In our country the major portion of national income originates in the agricultural sector and hence this sector should bear a large part of the burden. This is equally true of the States where major portion of SDP represents agricultural income.

5.23 The Central Government failed to raise the incidence of additional excise duties as a percentage of the value of clearance to 10.8 p.c. as agreed to with the States in 1970 in respect of items where sales tax has already been replaced by additional excise duties. Moreover, taxes and duties listed in Art. 269 have not been fully tapped by the Centre to raise resources for the exclusive purpose of the States. The State Governments are, as a result being deprived of revenues which legitimately belong to them. Besides, huge arrears, taxes and tremendous increase in investment in public enterprises even for meeting their losses has created a situation which needs to be reversed to increase the size of the Central surplus.

5.24 There is no doubt that much of the present distortion in Union-State relations would not perhaps have grown as it has over the years had

the States been provided with opportunity for full and free discussion with the Centre before taking decision on matters affecting revenues of the States. Much of the discontents could either have been avoided or dissolved through the process of consultation between the Centre and States. The views of the State Governments should be ascertained while moving a Bill to levy or vary the rate structure or abolish any of the duties and taxes enumerated in Art. 268 and 269.

5.25 Art. 269 of the Constitution lists the taxes levied and collected by the Union and lay down that the net proceeds therefrom are to be assigned to the States. Under this Article no tax except estate succession duty in respect of property other than agricultural land has been levied by the Union. Tax on railway fares and freights was once levied in 1957 but subsequently repealed in 1961. Art. 269 has not so far been fully availed by the Centre to raise resources for the exclusive purpose of the States.

5.26 No comment.

5.27 No comment.

5.28 The present arrangement in regard to financing of relief expenditure is that as recommended by successive Finance Commissions, an amount referred to as the margin money is provided and when a calamity occurs necessitating expenditure on relief measures, the States have the margin to draw upon immediately. In determining the margin the successive Finance Commissions considered the actuals of relief expenditure of the States for a few years and adopted the average of such expenditure as the margin for each State. Prior to the Seventh Finance Commission the margin did not provide for any element of repairs and restoration of public assets over and above direct relief in the calculation of margin on the basis of 9 years' average expenditure with suitable price escalation. In our view the adoption of 9 years average of actual expenditure does not truly reflect the need of the States and its substitution by 3 years would be a more realistic indicator.

In case of a natural calamity of more than moderate severity necessitating relief expenditure in excess of margin money, a Central team makes an on-the-spot assessment of the extent of damage caused and recommends the ceiling of expenditure above the margin. In regard to the expenditure of a State on relief and repair/restoration of public works following a natural calamity, Central assistance is made available as non-plan grant not adjustable against the plan or Central assistance for plan of the State to the extent of 75% of the total expenditure in excess of the margin. The remaining 25% is left to the States to meet from their own resources. But in case of Manipur with its slender resource base and furry of floods manifesting itself practically every year, it becomes impossible to bear the burden of 25% in excess of the margin. Manipur's case should be considered on a special footing and the entire expenditure in excess of the margin should be fully borne by the Centre. In order to ensure optimum utilisation of relief assistance the States should be free to incur expenditure on any item of relief and repairs subject to the overall ceiling.

5.29 It is felt that creation of too many agencies may lead to overlapping of jurisdiction and function. The proposed loans Council should be able to look into the distribution of loan and its utilisation for productive purposes and also the credit requirements of the States. However, a National Economic Council might be established to serve as a forum for consultation between the Union and the States in matters of economic, commercial, fiscal and monetary policies.

5.30 Collection and distribution of fund must conform to certain norms or also they will frustrate the basic purpose of how best the funds can be collected and employed for the benefit of the people so as to ensure distributive justice. As such, collection of funds must satisfy the canon of economy, efficiency, convenience etc. So also spending of funds should conform to national policies and priorities so that they can be applied at points where they are more needed in order to secure social justice and removal of regional disparities.

5.31 At present there is no organisation except parliament and its statutory committees that can exercise vigilance over the magnitude, appropriateness and efficiency of Union expenditure. Apart from the enormous increase in Central expenditure is recent years on subjects within their sphere, there has been tremendous increase in the expenditure on financing public enterprises as well as on subjects included in the concurrent list which ultimately has the effect of depriving the States through diminution of surplus transferred to the States. A National Expenditure Commission was experimented within 1979 but it was wound up. The Finance Commission may be assigned the task of looking into the receipts and expenditure of the Centre and a permanent Finance Commission type body may dispense with the requirement of a National Expenditure Commission.

On the other hand, the State Government with limited resources at their disposal do not have the capacity to indulge in fiscal indiscipline in a big way. In any case, the State's expenditure proposals are reviewed annually by the Planning Commission besides periodic review by the Finance Commission. In the circumstances, a National Expenditure Commission for the States does not seem to be necessary.

5.32 The present system of compilation and submission of accounts involves a lot of delay at various stages and as a result the overall financial picture of State pertaining to a particular financial year emerges after a considerable lapse of time. By the time, the final account of a year is obtained, effective steps to plug the loopholes or any remedial measures become meaningless due to the time-lag. Moreover accounting delay serves as a serious impediment to regular flow of funds from the Centre where release of Central assistance is dependent on audited figures of expenditure.

5.33 The desirability of evaluation audit is not denied but while conducting such audit due emphasis needs to be given on achievement rather than

pointing out defects alone. Unless suggestive remedies are focussed evaluation audit shall not serve any meaningful purpose. Left to C. & A.G. the conducting of evaluation audit might lead to direct interference with the executive. Considering desirability of evaluation audit it should be entrusted to an agency constituted by the State Government itself.

5.34 No comment.

5.35 At present C. & A.G. does only test audit. The periodicity of such audit is biennial, triennial etc. Though the reports are often delayed they serve a useful purpose to the extent the State Government want to take remedial action on the basis of the audit report for bringing the erring officials to book and for plugging procedural and other loopholes.

Since, in the nature of things, the C. & A.G.'s report is always likely to be delayed a useful improvement could be supplementing the C. & A.G.'s audit by an extensive system of internal audit.

5.36 Internally, there is the Ministry of Finance with its Financial Advisers in every Ministry to check improper spending and externally, there is parliament with its committee assisted by the C. & A.G. and between them they are expected to keep a watch on Union and State spending. Though the public Accounts Committee and the Committee on Public Undertakings have done very useful work.

5.37 Yes, the Estimates Committee should go into the wider aspect of policies and programmes and advise the Government on improvements necessary.

5.38 No separate Expenditure Commission is considered necessary in view of the existing provision in the Constitution empowering the C. & A.G. to play this role and the periodical scrutiny of the expenditure of States as conducted by the Planning Commission and the Finance Commission.

5.39 We share the views expressed by some State Governments in this regard. In order to avoid such irritants and consequential delay leading to lapse of funds, the proper implementation of schemes and evaluation thereof should be left with the respective State Governments. There is no reasons to apprehend that the State Governments will indulge in improper spending. The State Governments are equally interested in achieving economic and social objectives at a minimum cost.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 Plan formulation passes through at least four stages. The Planning Commission prepares basic documents which are at each stage discussed by the N.D.C. prevailing economic situation and performance of the current plan is reviewed through mid-term appraisal of the plan performance. In the light of this appraisal N.D.C. formulates the objectives/outlines for the next plan. The approach paper is prepared by the Planning Commission. Thereafter, it is again approved by the N.D.C. Then guidelines are issued by the planning Commission to the States for preparation of draft plan. In the whole process State involvements are only during the N.D.C. meetings which is considered as inadequate. Planning Commission or its Working Groups may involve State representatives at the formative stage, preparation of basic documents wherein the State's development aspirations for the period may be reflected. The State's participation at the subsequent stage of plan formulation may obviate, to a great extent, any tendency towards imposition of the schemes formulated by the Central Ministries.

The present system of sending guidelines to the States and asking them to work out their plan scheme in a hurry gives no time for reflection and scrutiny. This should be remedied by sending the guidelines well in advance. Discussions with the States by the Working Groups may be spread over longer periods doing away with the present system of calling all the States together and hurriedly going through each States' programme in a single day which results in rushing to decisions through bargains rather than any fruitful discussion. Invariably Working Groups have most of the say in the bargain.

6.2 Owing to their poor finances and due to inadequate planning machinery the States are landed in a situation where they can take few terminal decisions on the development of their own States. Irrigation, Power, Education and Health Scheme are conceived, planned, financed and implemented by the State Governments. Requirements that the schemes conform to national schemes of priority takes away the marginal decision making power from the States. When as have been mentioned earlier, finances of the State is in a bad shape, involvement of the Centre is complete. The sectors mentioned above, though essentially State subjects, by their very nature need huge capital outlay compelling the States to look to the Centre for finance and material resulting in increasing Central Encroachment on State subjects. The remedy lies in strengthening the State planning machinery and actual financing of major projects through Central loans or grants.

It is not considered necessary that the N.D.C. should be a statutory body unless the changes as suggested in our replies in part I and part IV are given effect to for the Inter-State Council. As at present the basic documents should be prepared by the Planning Commission in consultation with the States at every stage in the absence of the statutory Inter-State Council. The N.D.C. will continue to prescribe objectives, lay down guidelines for the Planning Commission and finally approve the plan prepared by the Planning Commission in the light of the guidelines. Once the development plans are approved by the N.D.C., the States should be free to implement them dispensing with further discussion with the Planning Commission which will, of course, continue to provide adequate financial resources to implement the schemes.

The prevalent system does not enable the States to have any say in shaping the national policies. The agenda papers not related to the State's plan do not reach the State capital before final decision.

This omission may be rectified and participation of States in formulating national policies should be ensured.

6.3 The resolution constituting the planning Commission invested the Commission with certain responsibilities. The Commission is supposed to act as an independent body. It may consult the Central and the State Governments and act in close understanding with both. Notwithstanding the resolution defining its responsibilities, the planning Commission in its present form is essentially an agency of the Central Ministries. States are seldom taken into confidence in the formulation of schemes of national importance. The Central Ministries, through the planning Commission, are in commanding position in formulation of schemes particularly the Centrally sponsored schemes or in schemes in respect of which the Central Government shares expenditures though the schemes fall under the State subjects.

The remedy lies in cutting across the tendency on the part of the Planning Commission towards dependence on the Central Ministries in formulating its decisions. Interaction should at best be limited to consultation with the Ministry and the State and not beyond that.

6.4 The Central Government is vested with virtually unlimited economic powers. Not to speak of the Union List and those not specified in the Seventh Schedule, the Central Government has over-ridding powers in respect of the Concurrent List. Since economic planning involves decisions of wide dimensions and of serious consequence in the socio-economic fabric of the country, it is proper that the nation's highest planning level should consist of eminent experts in the sphere of Economics, Science, Technology and Management. This body should be of the highest status and responsible only to the National Development Council. It should be free from other influences and act directly under the guidance and direction of the nation's highest Development Council. This will ensure at least optimum utilisation of the potential towards achievement of the nation's aspirations, working within the guidelines set up by the National Development Council.

6.5 As in 6.4.

6.6 The Planning Machinery at the State level is not at all equipped to guide the State Government on the national priorities. Until the State Planning Machinery is strengthened, the Planning Commission will continue to be in a commanding position. The States, due to their poor finances are dependent on Central decisions and have to determine their priorities and selection of schemes well within the bound demarcated by the Centre through the Planning Commission. The requirement that it should conform to the national scheme of priorities take away even the marginal decision making powers from the State. As Centrally sponsored schemes of education, health, employment, irrigation, etc. constitute part of the State Plan. These are conceived, formulated and sponsored by the Central Government. Even the outlays are included in the Central Sector Plan, the only task left to the State being to implement it. The States are compelled to accept it even though such schemes do not fit in their scheme of priorities. This they are obliged to do only because the State's resources are limited. This involvement in every detail has resulted in the erosion of the State autonomy. Once the outline is approved by the highest body i.e. N.D.C., a State should be free to work out how to implement the detailed schemes without any interference by the Centre.

6.7 The present system of channelising Central assistance through loans and grants, seems to be working satisfactorily. Divested of the responsibility of finding resources the Commission may devote itself solely to the evaluation and guidance of the plan schemes and to be instrumental, as it should be, in economic transformation of the country. This channelisation should conform to certain criteria outlined by the N.D.C. viz., backwardness of the State and their resource constraint. The basic objective should, of course, be balanced development of all the States, taking into consideration the special problems confronting each particular State. There should be check against too much inroads into the State schemes based on the special needs of the particular State in an effort to make them conform to the national priorities. Allowance should be given to the State Planning Machinery to handle the Special Regional Problems on its own. The Planning Commission may, however, oversee that the scheme is not too ambitious so as to be beyond the realm of practical implementation.

6.8 As stated in reply to Q.5.5(1), Manipur may be allowed to retain its status as a special category State outside the Gadgil formula. The pattern of Central assistance may be changed to an uniform pattern of 90 per cent grant and 10 per cent loan, doing away with the existing distinction as between General and Hill Areas.

6.9 The criteria evolved by N.D.C. for allocating central plan assistance to States places the backward States at a great disadvantage. Advanced States with more resources could go for bigger State Plans. Added to this, private investments are attracted mostly by advanced States, and are extremely shy in the less developed States. This cuts at the root of balanced development of States.

Manipur being a special category State outside the Gadgil formula and in recognition of the especial position accorded to Manipur there should not be different pattern for General, Hill and Tribal Areas. The existing distinction may be abandoned and the whole State may be governed by the uniform pattern of 90 per cent grant and 10 per cent loan. Determination of priority sector may be left to the State. The present system of allocation of 50% on population and 50% on area basis has not resulted in any perceptible forward step on the part of hill areas of weaker States towards their goal of removal of poverty apart from the avowed object of balanced regional development. The quantum of special Central assistance should be in conformity with the special need for accelerated development in certain spheres

e.g. high incidence of poverty and under-development prevalent among the Tribal and the other backward Classes of the North Eastern Region. The State Government should be given a free hand in the drawing up and implementation of priority sector schemes without any string attached to it.

6.10 Most of the Centrally sponsored schemes are conceived, formulated and sponsored by the Centre. Schemes of this category, coming under Primary Education, Public Health and Social Welfare constitute part of the State plan. The States are obliged to implement them even if such schemes do not get integrated with the rest of the State plan and remain attached as appendages. The Centre may consider these schemes necessary from the national point of view while the States are tempted by the inducement of Central assistance in the initial stages.

But under the federal policy and prevalent distribution of fiscal powers, any change in this regard cannot be visualised. As long as the State continue to suffer from the chronic illness of financial weakness and resource constraint, the Centre will continue to use its power more effectively reducing the limited decision-making power enjoined on the States by the Constitution.

6.11 At present, the evaluation organisation has been able to take up only evaluation schemes of experimental nature and few important schemes from the point of view of the State. Again, in respect of monitoring of plan schemes the organisation has not been able to achieve much due to inadequate staff in the organisation.

In order to examine that the Central and State funds invested in the development plan yield the desired results, the State Evaluation and Monitoring Organisation needs to be suitably strengthened without further delay.

The State units of the Planning Commission's Programme Evaluation Organisation, should maintain more effective and closer ties with the State Evaluation Organisation. Instead of present practice of occasionally exchange of reports prepared by each organisation separately, there should be constant rapport, close cooperation and in appropriate cases joint studies may be undertaken.

6.12 No comments.

6.13 In Manipur the State planning Board Oversees the plan formulation and implementation. But the extent of effective exercise of the State Board is circumscribed, as the State Plans are prepared within the guidelines prepared by the Centre. Secondly, the strengthening process of the State Planning machinery has been hindered or rather crippled by excessive inroads by the Centre. The strengthening of the State Planning machinery has to be effected through a prescription issued by the Planning Commission which, in effect, is a catalogue of junior officers, assistants and peons to be recruited and a few minor items to be purchased. The list does not provide for appointment of experts with decent salaries attached to their post. Nor does the list provide for any construction or purchase of conveyances for providing mobility for effective functioning of the machinery.

The remedy lies in allowing the State Planning machinery to strengthen itself and to meet its own needs without let or hindrance within the financial limitations recommended by the Planning Commission. In fact, if necessary, States may go beyond the recommendations of the Planning Commission for strengthening the Planning machinery at the State level to be able to handle its own plan and with the implementation of plan schemes.

PART VII

MISCELLANEOUS

Industries

7.1 The First Schedule to the Industries (Development and Regulation) Act, 1951 envisaged Central regulation of a few industries which were of vital public interest and of national importance. Thereafter Central control has grown to add more and more industries of all types leaving to the States only the small scale industries which are also controlled by the Centre to a large extent. However, we have no instance to cite that the Centre has used a deliberate policy to the detriment of the State interest.

7.2 We are of the view that the Central Government should only regulate those industries having connections with defence and security of the Country. The licensing authority for the remaining industries should be vested with the State Government under the guidelines of the Central Government.

7.3 It is observed that licences are taken for many items by big houses but never implement them. It is observed that such licences are taken to stop establishment of similar projects by other parties. It may also be pointed out that backward States are normally victims of this as new licences for these items are not considered on the ground that licences for excess capacity of these items have been issued. Definite time schedule be fixed for implementation of the project and such licences should be cancelled after the expiry of stipulated time. Application from public & co-operative sector should not be rejected on the ground of excess capacity licence being issued if the project is found otherwise viable. Applications for industrial licences for establishing project in category-A backward district and non-industry district should be given over-riding preference. Although the principle is laid down by the Government of India for non-industry district but this is not followed in practice.

Many States particularly the backward States are not fully organised to support the small scale industries mainly in respect of supply of raw materials and marketing assistance. Although State Small Scale Development Corporation are authorised to procure and distribute all variety of steel materials, the performance is not very satisfactory

because the cost of materials often becomes uneconomic for S.S.I. units. For other items, it is suggested that the organisations like S.T.C., M.M.T.C., N.S.I.C. etc., should open their functioning establishment in all States so that the small entrepreneur from the State need not run for their requirement to the head office or regional offices of these organisations. It is observed that the offices of these organisations were opened in many States but without sufficient power. The offices should be given necessary powers to function to assist the local S.S.I. unit in true spirit. Central Government is the biggest individual buyer in the country. It is true that the Central Government has taken number of steps to provide marketing assistance to Small Scale Industries but many more are necessary. It is suggested that the requirement of various organisations of Government of India's establishments & undertakings should purchase the requirement of various items from the local units where these items are required to be consumed. If the prices offered in such cases are found to be higher, the prices may be fixed by competent authority on cost analysis basis which is the established practice of D.G.S. & D.

7.6 The Centrally controlled industrial institutions working in the State are hardly known and their functions and facilities extended by them needs wider publication by running an educational programme. To reach this object a coordinated agency representing all such institutions is a necessity.

7.7 Locational decision on central investment in public sector is the most important matter particularly for the State where the private investment is shy. The Industries reserved for public sector should be established in the State where there is potentiality as well as availability of raw materials and in such cases the State Government concerned should have a major say in location of the industrial project. In respect of other items backward States should get preference. Under no circumstances States' demand for establishment of central sector projects should be turned down on the ground of lack of suitable infrastructure if the project is otherwise viable.

7.8 We are fully satisfied with the policy of the Government of India in regard to the assistance given for development of the backward areas.

Trade and Commerce

8.1 We agree to the provision of Article 307 of the Constitution providing for appointment of an authority for the purposes enjoined in Articles 301 to 304.

Agriculture

9.1 So far as the Centrally sponsored schemes are concerned, it is evident that while approving the State Plan. Central Government priorities are not keeping in tune with the State Government priorities—the tendency being to retain uniformity in the terms and conditions for the entire country. It is therefore, considered meet and proper that the Government of India would give priority to the interests of the States.

9.2 It is suggested that in such cases, the Government of India should continue to bear the whole expenditure of the scheme so long as the Government of India considers the running of the scheme necessary.

9.3 Apart from the recommendations of the National Commission, the Government of India should also formulate locally suitable schemes keeping in view the diverse conditions in different States.

9.4 (a) Fixation of minimum or fair prices of agriculture items uniformly throughout the country does not appear proper. It is suggested that they should be fixed keeping in view local conditions of productivity, market price, demand etc., which differ from State to State.

9.5 National Agricultural Research Institutions should come forward to help the State Governments for solving local problems faced by different States as the States do not have the infrastructure for conducting researches on he local problems.

Similarly NABARD should formulate the credit scheme keeping in mind the different stages of development in each State instead of having a uniform regulation applicable to all States.

Food & Civil Supplies

10.1 Present arrangements for the purpose mentioned in the question are adequate.

10.2 Periodical review will definitely help improved functioning. The States should have unfettered power in respect of those enforcement and regulatory orders administered by the States.

Education

11.1 It is not true that there is unnecessary centralisation and standardisation in the field of education and excessive interference. Our experience in recent past is that Centre seldom interferes in this sphere and has always sympathetically treated the problems of the State. It is an established fact that centralisation is essential in some fields of education and perhaps in such fields only the Centre has guided the States. Educationally, Manipur is one of the nine backward States and it has received special attention and financial aid from the Centre.

11.2 There is wide scope for the University Grants Commission to tone up the administration of the Universities for their effective functioning. In this respect, they can also extend financial help for imparting training for better management of University affairs. It will be better to provide legal action against the Universities for their failure to conduct the examinations timely.

11.3 At present a Central Advisory Board under the Chairmanship of Union Minister of Education is functioning and all the State Education Ministers are its members. Timely meeting of this Board

facilitating exchange of views at regular intervals will be quite adequate and no separate arrangement is called for.

There is no difficulty in maintenance of separate institutions for linguistic minorities both tribal and non-tribal, except financial drawbacks. There are restrictions in rules and procedures to provide deficit finance to such institutions. Even if rules are relaxed, it may not be convenient to give financial aid to all the linguistic minorities' institutions. The Central Govt. may consider to provide a scheme under the Central Sector for giving side to such institutions.

11.5 There is no such conflict between the Centre and the State in Educational fields.

Inter-Governmental Co-ordination

12.1 No serious problems in the Centre-State relations have been found in this State. Therefore, the setting up of an Advisory Commission in the line of U.S.A. is not considered necessary.

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 to 1.6 Our Constitution provides the right mix of federal features with a unitary form of Government. Given the historical background, cultural, linguistic and ethnic diversities, sizes of the States and the vast area of the country the framers of the Constitution consciously felt that this constitutional arrangement with a strong bias in favour of an overriding centre was a paramount necessity. In the field of economic development, however, more powers and responsibilities need to be given to the State particularly in view of the disparities in the level of social and economic development in various parts of the country, which is provided for in the Constitution itself; it only needs proper appreciation while functioning under the Constitution. By and large comments appearing at 1.5 appear to be valid. We subscribe to the views expressed in (c) (i) and (ii) and suggest that an Inter-State Council (as envisaged by Article 263) may be set up.

1.7 These are reasonable and necessary.

1.8 No reconsideration is necessary.

PART II

LEGISLATIVE RELATIONS

2.1 to 2.5 Not being a true federal entity the scheme of distribution of legislative powers in the Constitution is correctly biased in favour of the Union. However, the gradual encroachment of the Union on the State Legislative field under the cover of a declaration of 'national interest' or of 'public interest' has been a retrograde step. Entry 24 of the State List which provides for 'industries' subject to the provisions of Entries 7 and 52 of the Union List has almost been totally transferred to the Union by enlarging the First Schedule to Industries (Development and Regulation) Act, 1952 — Union act under entry 52. This has hampered proper entrepreneurial development in States in regard to industrial enterprises.

Control over State list should be with State unless required to be transferred to the Union only for the purpose of defence or for prosecution of war or needed for purely regulatory functions to achieve uniformity of standard in exploitation of natural resources which are common to more than one State, particularly in case of mining practices. In all other developmental efforts, State should be free to the extent of subjects in the State list; in case Union Government also wants to enter that field, it can do so either as an additionality (in case of U Ts) or automatically delegate the powers to the States for their jurisdiction. Legislation under Concurrent list or of such nature should have ratification by legislators of not less than half the total number of States.

PART III

ROLE OF THE GOVERNOR

3.1 The Governor has an important role in our Constitution. There has, however, been cases in which Governors have not covered themselves with glory in their functioning; but such instances have been few and far between. Some basic norms are, however, needed to be laid down for the appointment and in functioning of the Governors.

(a) They should be appointed in consultation with the Chief Ministers of the States;

(b) Their duration of tenure should be, by and large, strictly adhered to;

(c) Incumbents of such high offices should be selected with care and should be demonstrated worthy of such positions;

(d) In their functioning as Governors, they should largely act accordingly to the advice of the elected council of Ministers;

(e) In case of doubts regarding commanding majority in the House, a test in the House is the best answer; only in case it does not become possible in a reasonable period should the Governor act on his own;

(f) In any other role, like Chancellor of a University, both the Governor and the State Government should respect the statutory powers conferred upon the Chancellor, who is not bound to accept the advice of the Ministry;

(g) As far as possible, the powers of assenting or refusing to assent on a Bill should be strictly decided on legal merits of the case; in case of difficulties or doubts eminent jurists including the Attorney General should be consulted and their opinions should be given due respect; the final action should also be made known to the State either by the Governor or by the President within a stipulated period, say one year.

3.2 Governor should play a healthy role in influencing both the functioning of the State Governments and the attitude of the Union for the best interests of the State.

3.3 (a) In most cases Governors have discharged their functions in the right spirit;

(b) By and large, the democratic principles have been followed;

(c) This has been done very fairly. The present practice may continue.

3.4 The purpose behind Article 200 & 201 is to see that there is no conflict inherent or apparent between a State Law and a Central Law. Further,

it is also to be ensured that a State Law does not in any way contravene any provision of the Constitution. No doubt, the Governor and the State Government will take care of all these aspects while introducing a bill and while it is under discussion in the State Legislature, however, a further check at a third stage at the Central level if the Governor decides this to be a desirable step. The State Cabinet can itself ask the Governor to refer it to the President or the Governor can do it on his own discretion. These two Articles should remain in their present form.

3.5 Through this power only the Constitutional propriety and foreign/defence interests of the Country should be protected, Union should not try to dictate its policies to the State Government unless the proposed Bill goes against national interest or provisions of the Constitution.

3.6 As given against Question 3.3(a).

3.7 We do not agree. A fixed term for Governors with elaborate procedure for their removal will create complications.

3.8 Already covered in previous replies.

3.9 The solution offered by the Constitution of the Federal Republic of Germany is not considered practical in the Indian context and does not suit our political culture. The better alternative may be to dissolve the Assembly and order fresh elections in the event of unstable party positions in the Legislature.

3.10 We do not feel that prescribing any guidelines will be practical or correct. Written guidelines will only lead to litigations and consequential constitutional dead lock. This issue was debated at length in the Constituent Assembly and later, by a Committee of Governors, appointed by President also went into the question. The consensus always was against any such measure.

PART IV

ADMINISTRATIVE RELATIONS

4.1 to 4.3 In the schemes of our constitutional frame-work such provisions are necessary for extreme contingencies. But use of these powers should be resorted to with care, wisdom and fitness. However, before the President holds the views under Article 365 that the Government of the State is not being carried on in accordance with the provisions of the constitution, the State Government should be given an opportunity to explain.

4.4 We have no such experience. Article 356 has never been invoked in the State.

4.5 It is felt that both the conditions laid down in Article 356(5) should separately be sufficient to warrant extension of the President's Rule in the State. It is, therefore, suggested that the word, "and" occurring at the end of Article 356 (5) (a) should be substituted by the word, "or".

4.6 Present arrangements are satisfactory, may continue.

4.7 These agencies are functioning as nodal organisations in the national economy as a whole and must, of necessity, continue. They have a role to play in removing regional disparities in development and supplementing the efforts of the States whose resources are inadequate for this purpose. What is, however, necessary is that the policy in regard to such agencies are reviewed regularly by the Union Government in consultation with the State Governments preferably through the Inter-State Council suggested in Part I of our replies. The Union Government should also ensure that the agencies are responsive to the problems and requirements of the States and their role and functioning should be discussed in the National Development Council. The Agencies should supplement and not supplant the role of the State Agencies, engaged in similar activities.

4.8 Article 312 inter alia provides for creation of one or more All India Services common to the Union and the States. The All India Services, as operated in the present form, are not common to the Union and the States, but have become a State Services though the members are appointed by the President through the Union Public Service Commission. The members of the Services are under full control of the States and they cannot claim, as a matter of right, transfer to the Union or to any other States. In fact, an officer will not be accepted by the Government of India if his name is not in the panel for Joint Secretary level posts and above. When an officer belonging to an All India Service is sent to the Union, it is only on deputation and such deputation is also available to other State Services like Judicial services, etc. Keeping in view the character of the All India Services as provided in the Constitution, Cadre posts should also be shown in the Central Government's establishment in each of the All India Services and members should not be posted to Central Government as on deputation. Moreover persons of the same batch in an All India Service face varying prospects of promotions in different States. The Scheme in the present form has, therefore, not fulfilled the expectations of the Constitution makers.

The only power that is reserved is regarding removal of a member from the service by the President keeping in view the provisions of Article 311. On the other hand while the members of the All India Services are for all practical purposes under the full control of the State Government, the Union Government has reserved itself the right to creation and management of posts in the senior scale super-time, etc., of the All India Services, and this has resulted in difficulties for the State Government in proper management of the cadre.

In view of the above, it is suggested that the scheme of the All India Services may be modified keeping in view the provisions of the Constitution. Full powers should be given to the State Governments for temporary creation of posts for such officers in the cadre at the same time the Union Government should exercise more control over the deployment of the personnel of this Services in the States. The personnel of the Services

should have a legal right of approach to the Union for posting in the Central Government. Allocation of officers belonging to All India officers should be done in consultation with the State Government. Any change in the scheme like distribution of vacancies between insiders and outsiders should also be done in consultation with the States.

4.9 It is a question of interpretation of the Constitution. In case, an occasion arises to determine the powers of the Union under Article 355, the President may consult the Supreme Court.

4.10 States should be free to use additional channels of T.V., Radio for their purpose at their own costs without changing the constitutional arrangement, by bringing entry 31 of list I to concurrent list.

4.11 Since inception Meghalaya has not been included in the Eastern Zonal Council as it was considered that the regional issues of the North East could be tackled comprehensively in the North Eastern Council. Zonal Council could be an useful forum to discuss matter of co-ordination among the States in a Zone. Even the State/Union Territories of the North Eastern Region should be included in the Eastern Zonal Council for providing an opportunity to interact with States which are outside the North Eastern Council in matter of mutual interest.

4.12 Inter-State Council under Article 263 should be set up as mentioned in Part I.

PART V

FINANCIAL RELATIONS

5.1 The intention of the Constitution-makers was that all the States should have adequate revenue to discharge their responsibilities assigned to the States. Due to various factors a number of States are unable to generate sufficient revenues from the sources assigned to them. These States have to depend mainly on the share of Central taxes and grants-in-aid under Article 275(1) of the Constitution on the recommendation of the Finance Commission.

The scheme of devolution envisaged by the Constitution-makers has not come up to the expectation in view of the fact that even after devolution of Central taxes and grants-in-aid under Article 275, large revenue gap existed in case of a few States. This is mainly due to the assessment of the receipts and expenditure of the States by the Finance Commission being not very objective.

5.2 According to the assessment of the Eighth Finance Commission, some States are surplus after meeting their commitment on the non-plan account, while the remaining States are dependent on the Centre even for meeting their non-plan expenditure. With a view to retain the federal structure of the country, it is essential that the disparities between the States should be eliminated. This can be achieved if all the States are placed on a more or less same footing. Adoption of any alternative mentioned at (a) to (e) will increase the disparities between the States. We, therefore, recommend that while the existing procedure may continue, the Finance Commission should adopt a principle under which all the States are recommended surplus of revenue by specific percentage of the total non-plan expenditure realistically assessed by the Finance Commission. In doing so the need and responsibility of the Central Government should not be overlooked.

5.3 We subscribe to the view that the regional imbalances can be reduced only by a strong Centre, having elastic sources of the revenue and more discretionary powers to use the available fund for the development of economically vulnerable States. While the existing procedure of division of the resources among the States may continue, the pattern of transfer should be such that the resources are made available with a view to reducing regional imbalances and attaining social and economic justice.

5.4 It is not factually correct that large deficits in the Union Government's account in recent years and mostly because of devolutions made to the States, which have been of the order of 30% of the Union's aggregate resources. The need of control expenditure and ensure its effective and efficient use will always be a major consideration whatever be the level of resources available. Resort to deficit financing should be made only on the basis of over all national consideration and not because either the Union or the States are in difficult financial straits. If the total situation does not permit such deficit financing the Union Government must desist from the measure and raise additional resources through taxation.

5.5 The fact that the inter-State financial disparities are on the increase is a definite indication that the present practice of transfer of resources has not been quite adequate to bridge the gap in resources between the rich and the poorer States. We would therefore like the Commission to consider the following measures :—

(a) **Transfer through Finance Commission :—** The approach of the successive Finance Commissions has been to devise principles of distribution of Central Government taxes and duties among the States which are not directly related with their practical needs. As a result many States are unable to fully meet their non-plan commitments and adequately discharge their responsibilities with the share of Central taxes and duties. We, therefore, recommend that the Finance Commission may use the union excise duties for covering the revenue deficits of the States on a realistic basis and the Grants-in-aid under Article 275(i) of the Constitution may be recommended to ensure a surplus as indicated at para 5.2 above. A substantial proportion say of the order of 30 per cent, should be with the State Government for taking up some improvement in the services under

non-plan expenditure and should not be tied up as resources for the Plan of the State.

(b) **Transfer through the Planning Commission.**—Plan assistance should be made in such a way that the backward States are brought at par with other developed States within a definite time frame. Non-Plan assistance may be given to the State only on the basis of actual need to meet any contingency arising out of unforeseen circumstances.

5.6 If the recommendations made at para 5.5 above are accepted, there is no need to set up a special federal fund. If the existing procedures are to continue then a special federal fund may be set up to meet the requirements which have been shown at para 5.5.

5.7 We do not suggest transfer of any Central tax to the State because this will increase the inequalities among the States; rich States will become richer and poor States poorer.

5.8 We agree that the fragmentary approach to taxation policy which have a bearing on the economy of the country as a whole should be avoided as far as practicable. However, we do not agree to surrender the right to impose and levy of sales tax to the Centre as this is a major elastic source of revenue for the States.

In case of inter-State sales tax, while the incidence falls on the people of the neighbouring States, the collection is appropriated by the other States. Therefore, it is suggested that the inter-State Sales tax should be collected by the Central Government and paid back to the consumer.

5.9 We suggest that the present procedure with modifications as suggested under paragraph 5.5 above may continue.

5.10 Under the existing arrangement inter-State disparities have not been narrowed down. The present practice while promoting some economy in expenditure has resulted in negligence of proper maintenance of the existing assets. The transfer of resources on the recommendations of the Finance Commission has been done largely on the basis of gap filling approach and the transfer of resources to the States through Central assistance for the plan has been done largely on the basis of distribution based on a general formula of a certain sum of money made available by the Union Finance Ministry to the Planning Commission. In neither case has the devolution been based on a study of the specific needs of committed expenditure or of development.

5.11 It will not be correct to say that the States exaggerate their revenue requirement ignoring the norms of financial discipline. In fact the poor States are anxious to extend the level of administrative and other services as prevalent in other advanced States. Truly speaking the norms should be different from State to State. While in case of thickly populated States, population may be the major criterion for fixing the norm, in case of scarcely populated States, the area and the population should be the basis for fixing the norms.

5.12 As recommended by as earlier in paragraph 5.5, share of Central taxation should take care all the revenue needs of the States to meet their non-plan commitments while grants-in-aid under Article 275 should be used to ensure a surplus of a specific percentage of the non-plan revenue expenditure.

5.13 As mentioned earlier, grants-in-aid under Article 275 should ensure a surplus over the non-plan revenue expenditure of the States to enable them to meet the requirements on account of fresh instalments of dearness allowance and improvement in administrative services under the non-plan.

We also recommend that the Meghalaya with sizable tribal population should be provided with grant-in-aid under Clause (b) to the second proviso to the Article 275(I) to the Constitution of India. It is to be noted in this context that the area now constituting the State of Meghalaya was a part of Assam when the Constitution was framed and that it received this special consideration under Article 275(IA) when the Autonomous State of Meghalaya was formed.

5.14 We do not recommend any such measures. These resources may remain with the Central Government for their use with discretion to remove inter-State imbalances.

5.15 The existing method by which total saving available in the community are apportioned between public and private sectors and between the Centre and the States is more or less satisfactory; provided the development needs of the States are adequately taken care of as recommended at paragraph 5.5.

5.16 & 5.17 The situation can easily be rectified if the devolution of Central resources to the States is recommended by the Finance Commission on the basis of the total needs of the States including the need on the capital account which will cover the liabilities of loans and the interest.

5.18 & 5.20 We do not favour any major change in the policy relating to market borrowings. For, if States are left to raise loans from the market not only it will favour the richer States but it may have an adverse impact on the national economy as well.

The States' needs for development should be realistically taken care of and the allocation of resources for the plan, including from market borrowings, should be made accordingly.

5.19 The present system does not appear to be unjustified.

5.21 The State Governments should not resort to deficit financing as it will have serious repercussion in the economy of the country and their total needs will have taken care of by Finance and Planning Commission. Ways & Means Advance by the Reserve Bank of India to the States is meant

only for overcoming a temporary financial difficulty. The limit of Ways and Means Advance should not be fixed arbitrarily. It should be reviewed from time to time and preferably be fixed as a specific percentages of the total transaction of the State Governments.

5.22 Such a generalisation cannot be made for all States. It may, however, be true that tax efforts of different States vary considerably. A review of the tax efforts of both the Central and the State Governments should be made and discussed in the National Development Council for remedying the situation wherever possible.

5.23 The existence of unaccounted money in the economy is the evidence of leakages occurring in the System. The system should be reviewed and effective steps should be taken to eliminate such leakages. The rate of return of the Public undertakings should also be improved by efficient administration and economic management.

5.24 It would be a healthy convention for the Central Government to ascertain the views of the State Governments before considering any proposal to levy or modify the rate structure or abolish any of the duties and taxes enumerated in Articles for the Central Government to ascertain the views of the State Government in case of modification in the rates of Excise Duties on the items which are subjected to additional excise duties in lieu of Sales Tax.

5.25 We feel that there is limited scope for raising any substantial revenues by exploiting Article 269 of the Constitution as far as this State is concerned.

5.26 Most of the State Governments are levying tax on passengers and goods carried by road transport at the rate of 10%. It is, therefore, reasonable that 1/11 of the gross earning from the passengers fares and freight of the Railways be constituted as divisible pool.

5.27 No comments.

5.28 We have suggested in paragraph 5.5 that the Central Government should meet the requirements of the deficit States for meeting unforeseen and inescapable expenditure by additional Central assistance. While the long term measures for control of floods and to overcome the drought situation may continue to be financed from Plan, the expenditure required for relief and restoration of damages due to natural calamities beyond the funds earmarked by the Finance Commission of this purpose should be met by the Central Government in full outside the Plan.

5.29 We do not feel it necessary to establish any of these Councils.

5.30 The real point at issue is to find a balance between the needs of decentralisation of power and resources and a balance development of various parts of the country. It is also important that the funds are spent prudently and that they benefit the maximum number of the people with emphasis on the weaker sections.

5.31 We agree that the expenditure of both the State Governments and the Central Government should be subjected to closer scrutiny. The task can be performed by the Finance Commission and the Planning Commission in respect of the State Governments as at present and by the National Development Council and the Finance Commission in respect of the Central Government expenditure. We do not feel the necessity of setting up of any other machinery.

5.32 The present system of accounting evolves a lot of delay at various levels. Under the present system it is not possible for the State Governments to have any effective control over the expenditure. The whole system requires a thorough review to evolve a very effective accounting system. The Comptroller and Auditor General may be relieved of the responsibility of maintenance of account of the States as has already been done in the case of the Central Ministries and IAAS may be converted into an All India Services.

5.33 The present system of 'Voucher Audit' cannot be totally dispensed with. The desirability of evaluation audit cannot be denied but it is apprehended that such an audit can be conducted only after completion of a project, what it will not be possible for the State Government to take any remedial measures.

5.34 No comments.

5.35 Under the present system the data furnished in the appropriation accounts are not always accurate and these are not always reconciled with the concerned departments. A lot of mis-classifications take place in the books of the Accountant General. If the Accountant General compiles the monthly accounts in time and facilitates verification of the figures by the concerned departments every month the appropriation accounts will be reasonably accurate.

5.36 Although the Public Accounts Committee and the Committee on Public Undertakings have served very useful purpose in highlighting irregularities the proper control over expenditure lies with the drawing and disbursing officers, the controlling officers heads of departments the administrative departments and the Finance Department. A system of regular and comprehensive internal auditing by the State Government may serve a useful purpose.

5.37 The Estimates Committee reports helps in improving the policies and programmes but it cannot act as a watch dog to scrutiny and the expenditure for which a comprehensive system of internal audit can only be effective.

5.38 We do not consider it necessary to constitute an Expenditure Commission. The Legislature and the Comptroller and Auditor General fulfil this role.

5.39 We agree that the funds meant for specific purposes should not be diverted to any other purpose. We have no objection to its being monitored by the Central Government but there should not be any clearing the State Government's action plans by the Ministries.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1, 6.2, 6.3, 6.4, 6.5, 6.7, 6.9 & 6.12 The National Development Council does not find a place in the Constitution. The Planning Commission also has neither constitutional nor statutory basis. At present the Plans do not adequately represent the aspirations of the States or secure their commitment (of the States). On the one hand the level of consultation effected through the National Development Council is not adequate; while on the other hand there is too detailed an envolvement of the Planning Commission and the Central Ministries with programmes legitimately falling wholly within State jurisdictions. Consequently the States find themselves in the role of a client in regard to the formulation and financing of Plan schemes. Given the predominant role of the Planning Commission and the Central Ministries, the State Planning Boards have not been effective.

The National Development Council should be a statutory body with the Prime Minister, the Central Ministers and all the State Chief Ministers and appropriate experts with a standing Committee which can meet more often. The Planning Commission can be its Secretariat. The Commission can advise on overall aspects of planning and investment, prepare a draft plan for the approval of the National Development Council and can also be given the task of fixing macro level priorities and targets. It should also be free to offer advice on resource raising.

Detailed planning with respect to subjects which fall within the States' sphere should be left to the States. The present practice of subjecting the State Plans and proposal to minute scrutiny by the Planning Commission may be discarded.

6.6 There is need to incorporate national priorities in the State Plans. The Planning Commission could discuss the resource mobilisation efforts of the State Governments and could also guide the State Governments in incorporating the national priorities in the state plans.

6.8 The pattern of assistance to the special category states vis-a-vis other states may continue. The criteria followed by the Planning Commission in regard to the allocation of funds among the special category states are not known to the state. In this connection it may be pointed out that even among the special category states, there is an additional source of central assistance to those having a significant tribal population. This is in the form of a tribal sub-plan funded by the Ministry of Home Affairs. The benefit of such an assistance is, however, denied to the tribal majority states of Meghalaya and Nagaland. The funding of various developmental programmes in the tribal sub-plan areas is obviously based on indicators of development in different sectors. Applying the same yardsticks, it may be possible for the Planning Commission or the Ministry of Home Affairs (or the two State Governments) to locate backward sectors in Meghalaya (and Nagaland), which merit (an) accelerated developmental programme and for which funding could be arranged on the pattern of tribal sub-plans.

6.10 A large number of centrally sponsored schemes tend to distort state plan priorities as they induce the State Governments to opt for them. Centrally sponsored schemes covering State subject should be drastically reduced. Such schemes taken up in the states should be wholly financed by the Central Government.

6.11 The Planning Commission's Programme Evaluation Organisation should maintain closer ties with the State Evaluation Organisation and for uniformity in evaluation comprehensive guidelines on methodology and organisation should also be laid down.

6.13 As mentioned earlier, under the existing circumstances there is too detailed an involvement of the Planning Commission and the Central Ministries, rendering the State Planning Boards less effective. The State Planning Boards are involved at present in the formulation of State Plans. However, changes in the plan take place later with the involvement of the Planning Commission and the Central Ministries and also with the addition of a number of Central sector schemes. The role of the State Planning Board in the formulation of the Plan thus gets seriously eroded. While the Planning Commission and Central Ministries may confine themselves to the broad guidelines and even perhaps the major sectoral outlays, keeping in view the national priorities, detailed Planning should be left to the State Planning Boards.

PART VII

MISCELLANEOUS

Industries

7.1 The Scheme of Schedule I of the industrial development and Regulation Act, 1951, is essentially designed to control the setting up of industries which are of National importance from the point of view of defence, investment and policy towards the small scale sector. So far as industrial proposals linked to the defence efforts are concerned, on change in the present arrangement is necessary. In the case of high investment sectors where financial resources need to be husbanded, licensing should also serve as a means of decentralisation since this is an aspect of overall National importance. Where licensing has become a means of providing protection to the small scale sector and here the examples quoted in the question are of relevance, licensing should be delegated to the State Government to the extent of meeting regional demand.

7.2 No narrowing down of the definition is called for inclusion of items with a view to protecting the small scale sector should, however, be contained in a separate schedule and the licensing powers assigned to the States.

7.3 Where licensing is a function of the Central Government, all other clearances should also be made available by adopting a single window

approach. Those cases which may be licensed by the States may also be similarly cleared by one agency.

7.4 Many States, particularly the backward States are not fully organised to support the small scale sector. This is mainly due to complexity of the requirements of different industries, the ad-hoc changes in policies and programmes, requirement of clearance from the Central Government for all matter relating procurement of raw materials and credit, etc. The task will be easier once a decentralised structure of administration and detailed planning becomes a reality.

7.5 No Comment.

7.6 Yes.

7.7 It is felt that objective criterion giving an opportunity to all States to present their case should be the primary basis for taking an investment decision. In addition, the industrial backwardness of a State should be an additional fact r in taking a final decision which may be taken by the inter-State Council.

7.8 The criteria for selection/identification of industrially backward districts is in order. The insentives, however, need to be designed more realistically in consultation with States and should not be imposed.

PART VIII

TRADE AND COMMERCE

8.1 An Authority as contemplated under Article 307 should be set up.

AGRICULTURE

9.1 We agree with the views of Administrative Reforms Commission on Centre-State Relation, 1967.

9.2 We agree that as soon as possible the Centrally Sponsored Schemes should form part of the State Sector subject to qualification in para 9(2)iii.

The reasons for the above being :—

(i) The sanction from the Central Government is usually not received in time and the amount earmarked by the State is often surrendered for non-implementation of such schemes.

(ii) The norms laid down by the Central Government are not always suitable for the State.

(iii) In this respect our specific suggestion is that the Centrally Sponsored Schemes may become a part of the State sector only if the State thinks that such schemes are conceptually and operationally suitable to the techno-agri-economic situation of the State.

9.3 The Planning Commission indicates broad national priorities and with the Central Ministries lays down schemes even in the spares of Agriculture and Social Services. The result is that we have stereotype system of schemes for the whole country with its immense diversity. Joint working groups may be profitably set up to study development potential and the strategy which can be adopted in different States. Such working groups should, however, have only recommendatory responsibilities and nothing beyond.

9.4 (a) The minimum prices fixed on the agri-items by the Centre have no effect in so far as our State is concerned because till now the open market prices have always been higher than the minimum prices for the items mesta, jute and cotton where minimum prices have been fixed. However, in case, the open market prices fall below the minimum fixed prices then the Central Policy of fixing minimum prices would be quite effective in safeguarding the interests of the farmers.

(b) No comments.

(c) The Central policy with respect to strategic inputs like fertilisers, seeds and credit, etc., is quite effective and should continue with greater sensitivity to individual state requirements.

(d) No comments.

9.5 There is no proper linkage at present between the activities of the ICAR and Directorate of Agriculture.

FOOD & CIVIL SUPPLIES

10.1 & 10.2 There is a need for improving Centre-State co-operation and co-ordination in the areas of procurement pricing, storage, movement etc., and for this purpose an Inter-State Advisory Body may be set up to discuss and advise Agencies operating in this field. Such a body will be helpful to States like Meghalaya which generally depend on Central Pool for foodgrains and other essential commodities. The body proposed above may also periodically review the enforcement and administration of Acts like Essential Commodities and other Central Acts.

EDUCATION

11.1 It is in the interest of smaller States that Education should continue to be in concurrent list. It is borne out by facts that centralisation is desirable in some spheres of education and in such matters interference of centre is of the nature of guidance only.

11.2 The role of the U.G.C. should be objective. The organisation at national level needs restructuring. There should be a National Educational Council with representatives of all States, Centre and eminent educationists for guiding the work of national level bodies like U.G.C.. NCERT, NIEPA etc.

11.3 There should be a consensus with the broad frame-work of national objective so that States are allowed certain degree of freedom to pursue the policy suited to their own needs and genius.

11.4 The provisions enshrined in the Constitution are adequate to meet the requirements.

11.5 We have a case of making Hindi a compulsory subject for All India Services Examination

in North-Eastern Indian (excluding Assam). Sudden imposition may deprive and pose a handicap to the intending candidates particularly those belonging to Scheduled Tribes from this region whose Mother tongues are not in VIIIth Schedule. State must be consulted before formulating such decisions.

PART XII

INTER-GOVERNMENTAL CO-ORDINATION

12.1 An autonomous and independent body on the lines of Finance Commission of permanent nature may be set up to take up issues concerning Centre-State relations and inter-Government co-ordinations.

Government of Meghalaya

WELCOM EADDRESS OF THE CHIEF MINISTER TO COMMISSION ON CENTRE-STATE RELATIONS

The Government of Meghalaya takes pleasure in welcoming you and Shri Sivaraman, and we express our gratitude that the Commission has taken the trouble of visiting us and giving us an opportunity to explain our view point. We are sure that with the wide and varied experience of em. nt persons like you, the Commission will do full justice to the task of national importance entrusted to you.

Of late the working of the Constitution, with particular reference to the relations between the Union and the States, has attracted a lot of attention, and has been a topic of analysis and discussions by scholars, committees and the Administrative Reforms Commission. The decision of the Central Government to set up this Commission to specifically examine and review the working of the existing arrangements between the Union and the States in regard to powers, functions and responsibilities in all spheres and recommend appropriate changes, if any, and other measures is a welcome development. It has become quite necessary to have an authoritative examination of this delicate issue.

In the discussions on the principles of our Constitution in the Constituent Assembly, three different alternatives—a Unitary State, a Federation with a strong Centre and with residuary powers vesting in the Centre, or a Federation with larger powers for the States—were all considered. Considering the historical context that India was emerging as a unified country with a common political system and given the extreme diversity of culture and background that constitute the country, it was finally resolved that a Unitary State would be retrograde step both politically and administratively and "the soundest framework of our Constitution was a Federation with a strong Centre", with residuary powers vesting in the Centre.

After the Constitution was adopted, the country undertook national planning for development. With the introduction of national planning, the Union Government's area of influence and operation got enlarged to cover almost all the subjects relating to development, and this has increasingly blurred the separation of powers and subjects between the Union and the States. The formulation of a national plan including detailed State Plans, the detailed examination of the States resources and the development schemes in each sector by the Central agency from year to year, the quantum of Central assistance decided by the Central agency on annual basis, the clearance required for the State plans from the Planning Commission and the Central Government, and introduction of an increasingly large number of centrally sponsored schemes for sectors which are fully under State jurisdiction have led to a high degree of administrative and financial centralisation. Lack of any institutional arrangements through which the States could put forth their views on policies and working of the Central financing agencies and the nationalised banks which have been concentration of savings and on whom depend substantial investments in agriculture, industry, housing, water supply and power development, all of which are so vital to the development of each State, has only aggravated the problem.

The challenge, therefore, facing the polity of the country is how to balance the requirements of planning for national development and those of local initiative, local savings and investments.

The State Government is of the view that a strong Centre is needed for preserving and fostering the unity and integrity of the country and for national planning for development. We are also equally firm in the view point that States should be equally strong, as the strength of the Centre lies in the strength of the States. Excessive planning, financial and administrative centralisation is not a healthy phenomenon. The need for national planning for development and of balanced regional development do not require the involvement of Central agencies in such a detailed manner as at present. There is considerable scope for improvement in the institutional arrangements for national planning, for devolution of larger resources to the States commensurate with their vastly increased responsibilities and for dealing with inter-State distribution. There is great need for evolving new procedures for meaningful Centre-State and inter-State consultations. We feel that the system of zonal councils should be strengthened and the States of the north-east should be given the opportunity for discussions with the neighbouring States by including them in the Eastern Zonal Council.

We have presented the views of the State Government on the various issues in the legislative, administrative, financial and development spheres, in the form of detailed answers to the questionnaire received from the Commission. I wish to highlight some of the salient points.

The questionnaire of the Commission has exhaustively covered the subject of Centre-State relations in all its aspect.

Under legislative relations, we feel that while the bias in distribution of powers is correctly in favour of the Union, the gradual extension of Union jurisdiction under the cover of "Public interest" or "national importance" is not desirable. Unless it is necessary for purpose of defence or

proper regulation, the State Government jurisdiction over the "State List" should not be curtailed or circumvented.

We feel that the office of the Governor is essential in the present political situation, but certain norms should be laid down for proper and harmonious functioning of the office. A great care is called for in selecting incumbents to this high office and the States should invariably be consulted for selection. The Governor is a close link between the Union and the States and should not be made to act as an agent of one against the other. We have had no problem in this regard so far.

Our reaction to the question whether the present regulations regarding imposition of President's rule need change is that the present system, implemented with wisdom and discretion is quite effective but States should generally be given an opportunity to explain the position before President's rule is resorted to unless the Party in power has been defeated on the floor of the House. We also feel that the management of the All India Services needs to be reviewed. The present arrangement is not satisfactory and do not conform to the intentions of the founding fathers of the Constitution.

In the light of our experience of financial administration in Meghalaya over the last fifteen years, we feel that the scheme of devolution of resources from richer to poorer States and from the Centre to the States has not been equitable and effective as the Finance Commission have not generally taken a practical view of the receipts and expenditure of the States. Financial imbalance between the States must be removed if regional imbalance is to go. Instead of additional taxes, it is necessary to reallocate existing taxes more rationally and Plan assistance should aim at bringing backward States forward. We do not agree that some of the taxes currently with the Centre be given over to States as this will benefit only richer States. We would like to see a more realistic approach to financial planning and sector allocation for the State Government based on actual needs and performance. The formulation of State Plans and finalisation of their size and content should be based on the resource potential of the State, the gaps in development and its special requirements and not in a routine manner. In this context Meghalaya has a case of getting grants under sub-para (a) and (b) of second proviso to Article 275(1)(a) which was available even when an Autonomous State of Meghalaya was formed (Article 275-1A), but has been stopped when a full-fledged State was set up. It has to be noted that Meghalaya was a part of Assam at the time the Constitution was framed. The State should also be allowed the advantage of a tribal sub-plan which is made available to other States for development of tribal population.

In the present system the State do not have the required commitment to plan objectives as these are framed without their active participation. We feel that the Planning Commission should be the Secretariat of the National Development Council, which should be a statutory body. The N D C should work out and decide in consultation with Chief Ministers the macro level targets and allocation of resources. The State Governments should be given more autonomy regarding the detailed sector plans of the States. To this extent, centrally sponsored schemes related to State subjects should be greatly reduced.

In all matters connected with the transfer of resources to the States, an integrated and coordinated approach is very essential. We, therefore, do not favour creation of a number of independent bodies like the National Loan Council, National Credit Council, National Economic Council and the National Expenditure Commission. We feel that a reorganised National Development Council with its committees should be able to deal with these matters most effectively.

With these few observations, I should like to conclude our submissions.

[illegible]

... regulation, the State Government [illegible] ... should not be curtailed or circumvented.

We feel that the office of the Governor is essential in the present political situation, but certain norms should be laid down for proper and harmonious functioning of the office. A great deal is called for in selecting incumbents to this high office and the States should invariably be consulted for selection. The Governor is a closer link between the Union and the States and should not be made to act as an agent of one against the other. We have had no problem in this regard so far.

Our reaction to the question whether the present regulations regarding imposition of President's rule need change is that the present system [illegible] implemented with wisdom and discretion in rare circumstances, but States should generally be given an opportunity to explain the position before President's rule [illegible] has been defeated on the floor of the House. We also feel that the management of the All India Services needs to be reviewed. The present arrangement is not satisfactory and do not conform to the intention of the founding fathers of the Constitution.

In the light of our experience of financial administration in Meghalaya over the last fifteen years, we feel that the scheme of devolution of resources from either as pooled States and from the Centre to the States has not been equitable and effective as the Finance Commission have not generally taken a practical view of the revenue and expenditure of the States. Financial imbalance between the States must be removed if regional imbalance is to go. Instead of additional taxes, it is necessary to reallocate existing taxes more rationally and Plan assistance should aim at bringing backward States forward. We do not agree that some of the taxes currently with the Centre be given over to States as this will benefit only richer States. We would like to see a more realistic approach to [illegible]

GOVERNMENT OF NAGALAND

(a) Replies to the Questionnaire and Additional Points

(b) Memorandum

Nagaland

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTION

1.1 The framers of our Constitution having deep knowledge of the country as a whole and the people residing in different parts of this vast country, thought it fit that the best features of the different constitutional systems prevalent in the world should be incorporated in the Constitution of India and at the same time took care to avoid the defects inherent in any particular system. As a result, a compromise was effected in framing the Constitution of India, which is really a combination of federal structure with unitary features. In the Constitution of India so framed, there is a distribution of powers between the Union and the States and the powers are so distributed as to maintain the homogenity and unity of the country as a whole. In order to achieve these objectives, some powers have been conferred exclusively to the States and powers have been conferred on the Unoin on matters concerning the country as a whole. Again the powers conferred on the States are hegged with certain restrictions during the emergency Proclamation under Part XVIII of the Constitution.

The Constitution of India is thus not 'Federal' in its true sense, but can be said to 'Quasi-federal'.

1.2 In the Constitution of India, the Legislative powers are distributed between the Union and the States in the three Lists of the Seventh Schedule. The powers have been distributed basically on sound principles and in the view of the Government of Nagaland, no substantial modifications are considered necessary in the matter.

However, some modification is suggested in sub-clause (b) of Clause (1) of Article 356 of the Constitution of India. In the said sub-clause the powers of the Legislature of the State shall be exercisable by or under the authority of the Parliament as per sub-clause (b) as it stands. Under the said sub-clause, the Parliament may, by law, authorise the President to exercise the powers of the State Legislature and instances are thereof conferring such powers on the President by law made by the Parliament.

It is suggested that the powers of the State Legislature should be exercised by the Parliament alone in enacting laws to be made for the State, as and when occasions arise.

The State Government of Nagaland is of the view that abolition of appeals to the Supreme Court altogether may not be desirable. However, it is suggested that there may be a separate division in the Supreme Court for dealing exclusively the constitutional matters and cases involving validity or otherwise of the Parliamentary laws and the State laws and another division for dealing with appeals admitted in the Supreme Court by grant of Special Leave against judgments and orders passed by the High Courts. It may be also desirable to constitute appropriate Tribunals for disposal of service matters and cases arising out of different Tax laws in force giving finality to the decisions made by such Tribunals constituted.

1.3 In view of the answers given to the earlier questions, the State Government is of the view that no substantial decentralisation of powers and functions both in normal times and also in times of emergency are considered necessary.

1.4 To the best knowledge of the State Government, nowhere in the present day world, a federation of traditional type really exists.

1.5 The State Government fully endorse the views expressed by the eminent Constitutional Experts as mentioned in the said question. The State Government shares the view that the difficulties, issues, tensions and problems which may arise in Union-State relationship can be resolved without major constitutional amendments and that there are no substantial defects in the scheme and fundamental fabric of the Constitutional relating to Union-State relationship.

1.6 The State Government fully agrees that the protection of the Independence and maintenance of the unity and the integration of the country is undoubtedly of paramount importance. Provisions to that effect appear in a chain in the different parts of the Constitution and proper implementation of all such provisions are sufficient to achieve the aforesaid objectives.

1.7 The Constitutional provisions imposing obligations on the Union and the States are considered reasonable taking into consideration the interest of the country as a whole.

Save and except the suggestion made with regard to Article 356 (1)(b) of the Constitution, no change is considered necessary with regard to the other Articles mentioned in the question.

1.8 Basically no change is considered necessary in Article 3 of the Constitution of India. However, for dissolving dispute or disputes arising between one or more States with regard to the respective boundaries of the different *States, it is suggested that it may be desirable to incorporate a provisions for appointment of Commission or Commissions in dissolving such dispute or disputes.* The powers and functions of such Commission or Commissions should be clearly indicated making suitable provisions for giving opportunities to the concerned States

to place their respective cases, produce materials and documents before such Commission or Commissions in support of the respective claims. On the recommendations of such Commission or Commissions constituted, Parliament may make laws increasing diminishing or altering the boundaries of any State as provided in Article 3 of the Constitution of India.

Article 371 A

One other Article, *viz.* Article 371A of the Constitution, which is applicable only to the State of Nagaland needs to be mentioned with the observations as hereunder. The said Article was incorporated in the Constitution on the basis of an Agreement arrived at between the delegation of the Naga Peoples' Convention and the Representatives of the Government of India because of the keen initiative taken by the then Prime Minister of India Pandit Jawahar Lal Nehru before the formation of the State of Nagaland. The said agreement is commonly known as *'Sixteen Point Agreement'*. To give effect to Clause 7 of the said Agreement, Article 371A was inserted in the Constitution by the Constitution (13th Amendment) Act, 1962. The said Article was incorporated with the clear view that notwithstanding anything in the Constitution, no Act of Parliament in respect of the four matters enumerated in clauses (i) to (iv) shall apply to the State of Nagaland unless the Legislative Assembly of Nagaland by a resolution so decides. It is implicit in the said provision that all laws made by Parliament, whether before or after the commencement of the said Article in respect of the aforesaid four matters shall not apply to the State of Nagaland unless the Nagaland Legislative Assembly so decides. It is suggested that what is implicit in the said Article as regards applicability of Article 371A in respect of laws made by Parliament before the enforcement of the said Article 371A, should be made explicit so as to remove ambiguity, if any, in the matter as may be contended by some quarter.

In the said Article 371A, it has not been specifically mentioned as to what consequences will follow if any law made by the Parliament in respect of the four matters mentioned above is not adopted by the Nagaland Legislative Assembly by any resolution passed. It is again implicit that in such an eventualities, the State Legislature of Nagaland, shall be competent to enact laws in respect of the four matters mentioned in the said Article and the laws so made by the State Legislative shall prevail in the State of Nagaland. It is again implicit that in such an eventuality, the State of Nagaland shall have also full executive powers in respect of the aforesaid four matters being competent to legislate regarding the said matters as mentioned earlier.

In view of the above, it is suggested that necessary amendments may be made to Article 371A of the Constitution in order to make explicit what is implicit in the said Article and to make the said Article as an effective provision as desired at the time of incorporation of the said Article on the basis of the 'Sixteen Point Agreement' mentioned earlier.

PART II

LEGISLATIVE RELATIONS

2.1 As expressed earlier, there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States.

There are some legislative entries like Entry 7, 52, 53, 54 and 56 in the Union List, whereby power has been conferred on the Union to declare by law the matters specified in the aforesaid entries either to be necessary for the purpose of defence or for the prosecution of War or in the public interest or the like. In exercise of the powers conferred by the said entries, the Parliament has enacted laws, from time to time, to achieve the objectives envisaged by the said entries. Legislations made by the Parliament in exercise of the said entries even though might affect the powers of the State Legislatures, should not be considered as encroachments.

2.2 No substantial changes in the present provisions are considered necessary.

2.3 It may be desirable to have the views of the State Governments before enactment of any legislation by the Centre on any matter in the concurrent list. However, the views expressed by the State Governments in the very nature of things have to be in the nature of recommendations and may not be binding as such on the Centre. Nontheless the views expressed by the different State Govenments are likely to help the Centre in enacting laws on a matter falling under the Concurrent List.

2.4 & 2.5 The State Governments is of the view that the existing provisions in the Constitution in this regard do not require any substantial change.

PART III

ROLE OF THE GOVERNOR

3.1 The present provisions of the Constitution as regards the role of the Governor are considered necessary and do not require any substantial change. The relevant consitutional provisions regarding the matter postulate that the powers should be exercised by the respective Governors according to the letter and spirit of the Constitution. Any omission or commission in the matter of exercise of powers in one or two instances, does not justify substantial changes in existing provisions. It is desirable that there should be more insistence for the exercise of such powers by the respective Governors being true to the Constitution as envisaged by the expressed provisions of the Constitution.

3.2 The Office of the Governor of a State being an office of high respect and honour, it is envisaged by the Constitution that the Governor without being guided by any other consideration not contemplated by the Constitution, should act according to the latter and spirit of the Constitution and if it is so done, it will undoubtedly help in fostering healthy Union-State relationship.

3.3 (a) While making a report to the Parliament suggesting action under Article 356(a) of the Constitution, it is essential that the Governor has to act

fairly, not being influenced by any other consideration than in the public interest giving a true and correct picture of the affairs of the State.

(b) Since under Article 164 of the Constitution, the Chief Minister has to be appointed by the Governor and other Ministers are to be appointed by the Governor on the advice of the Chief Minister, it is essential that the Chief Minister, so appointed has the undoubted support of the majority of the House. It is essential in the very exercise of that power that the person appointed as Chief Minister is not dependent on Members sitting on the fence and has the support of the majority of the House to run the Government of the State.

(c) In proroguing the House or dissolving the Assembly under Article 174(2) of the Constitution, the Governor has to act as a Constitutional Governor, *viz.* on the advice of the Chief Minister of the State.

3.4 to 3.6 So far the State of Nagaland is concerned no difficulty was faced at any time in respect of Bills passed by the State Legislature and placed before the Governor for doing the needful in terms of the provisions of the Constitution.

3.7 Under Article 157 of the Constitution, any person who is a citizen of India and has completed the age of 35 years, is eligible for appointment as Governor. It is suggested that there should be some guidelines by way of laying down qualifications for being appointed as Governor of any State, in as much as, a Governor of the State has to perform very many important duties and functions which necessarily requires necessary knowledge and experience of various matters to be dealt with as the Governor of a State. Any person appointed as Governor should have a full term of 5 years. It may be considered in this connection that whether it is desirable that person once appointed in the high office of the Governor of the State, should be permitted to be a member of the Parliament or Rajya Sabha or any State Legislature, after rendering service as a Governor. It is not considered desirable that the same procedure should be prescribed as in the case of a Judge of a Supreme Court or High Court in the matter of removal of the Governor.

3.8 The role of the Governor as suggested in the said question is not considered desirable.

3.9 Criticism may be there in making choice of the Chief Minister by the Governor in one or two isolated cases, but that may not justify any substantial change in the existing provisions. Any provision like Article 67 of the basic law in the Constitution of the Federal Republic of Germany may not be appropriate in India at this stage.

3.10 The recommendations of the Administrative Reforms Commission in laying down guidelines on the manner in which discretionary powers should be exercised by the Governors, may not achieve the desired objective, in as much as, discretionary powers should be allowed to be exercised in the best judgment and wisdom of the authority concerned. Any such guidelines as suggested, may be of doubtful constitutional validity. That apart, such guidelines as suggested, may be of doubtful constitutional validity. That apart, such guidelines may not be of any substantial pragmatic utility.

PART IV

ADMINISTRATIVE RELATIONS

4.1 In a vast country like India, there are good grounds for incorporation of Article like 256, 257 and 365 of the Constitution. The powers conferred by the said Articles have to be considered in the greater perspective of India as a whole any wrong exercise of powers under any of the said Articles does not by itself justify the deletion and/or substantial modifications of the said Articles.

4.2 The provision contained in Article 365 of the Constitution should remain as a reserved provision. It is conceivable that occasions may arise for exercise of powers under the said Article bonafide.

4.3 Powers under Article 256 or 257 of the Constitution should always be exercised with due care and only when exercise of powers under the said Articles becomes absolutely necessary. That appears to be the scheme behind the said Articles.

4.4 No exception should be taken to the powers conferred by or under Article 356 of the Constitution and such provision in the Constitution has been incorporated advisedly. By and large, powers under the said Article have been exercised so far to meet the situation envisaged by the said Article.

4.5 The provisions contained in Clause (4) of Article 356 of the Constitution, as they now stand after the 42nd amendment of the Constitution, should be retained as such. However, to meet the eventualities mentioned in the second paragraph of the said question, some provisions need to be incorporated to meet such situation arising in any State. In incorporating such provision/care should be taken to avoid any possible misuse of power that may be conferred to meet such eventualities mentioned in the second paragraph of the question.

PART V

FINANCIAL RELATIONS

5.1 No

5.2 We agree with the suggestions in part (d) & (e).

5.3 With a view to have a strong Centre, we agree to the suggestion. We feel that a strong Centre, having elastic sources of revenue and more discretionary powers to use the funds available with it for the development of backward States, is desirable to remove regional disparities.

5.4 No. We agree with the suggestions in Part I(ii) and 2 in this para.

5.5 (a) **Share of taxes**—It should be distributed on the basis of backwardness of the State concerned. In addition to that, 25% of share of income tax and 10% of excise duties should be reserved for hill States.

(b) & (c) **Plan assistance and Non-Plan assistance**—These should also be based on backwardness of the State with a view to remove disparities from State to State.

5.6 The State Govt. is of the view that some special provision may be incorporated in the Constitution enabling the Centre to make liberal grants to the economically under-developed States to ensure faster development in such States and raise the economic standard of these States at par with the developed States.

5.7 No comments.

5.8 We agree.

5.9 We agree.

5.10 To a very limited extent.

5.11 No comments.

5.12 We agree.

5.13 We agree.

5.14 The State Government's view is to have a strong Centre. Under Article 273, grant-in-aid needs to be continued.

5.15 No.

5.16 The fiscal imbalance and amount of indebtedness on the part of the States is mainly due to the reason that their resources are very limited and such resources need to be augmented well.

5.17 Same comments as against item 5.16.

5.18 We do not agree. The present restrictions may be maintained.

5.19 Not relevant to Nagaland. Hence no comments.

5.20 We feel that the present system is functioning satisfactorily.

5.21 Same comments as against item 5.16 above.

5.22 No. So far as Nagaland is concerned, the scope for additional resource mobilisation is very much limited. Inspite of that, the State has exceeded the target.

5.23 We have no comments.

5.24 We agree.

5.25 & 5.26 We agree that the said grant should be increased.

5.27 No comments.

5.28 Assistance for natural calamities should be in the form of grant as loan will increase the indebtedness particularly of the deficit States.

5.29 No comments.

5.30 We agree.

5.31 We have already stated that Finance Commission should be a permanent organisation, which can look into the requirements of the States every year.

5.32 to 5.35 No comments.

5.36 & 5.37 The present system is functioning satisfactorily.

5.38 Same as against 5.31.

5.39 No comments.

It is suggested that sub clauses (b) & (c) of Art. 371A(1) need to be deleted from the said Article by necessary amendment of the said Articles. In view of the fact that the complete peace prevails in the entire State of Nagaland and the law and order position of the State for the past so many years are much more better than other States in India. It is no longer necessary for the continuation of two clauses in Article 371A of the Constitution of India. Further, the Regional Council for the Tuensang District as contemplated by clause (d) is also no longer there. In view of the above, clauses (b) to (d) of Article 371A(1) and clause (2) of the said Article need to be deleted by constitutional amendment.

Nagaland being a State like other States in the constitution, any further continuation of the said clauses (b) and (c) is no longer necessary and needs to be deleted.

The provisions contained in sub clause (d) and clause (2) of the said Article 371A have already spent its force, in-as-much as the period of ten years from the data or the formation of the State of Nagaland as mentioned in sub clause (2) is already over and the extended period under the said sub clause is also already over.

Nagaland

MEMORANDAM

CHAPTER I

INTRODUCTION

Physical and Economic Conditions

Nagaland is one of the smallest and most backward States of the Indian Union. Bounded by Arunachal Pradesh on the North, Assam on the West, Burma on the East and Manipur on the South, the State has an area of 16,527 sq. kms. Except the foot-hill area on the West, the whole area of the State is full of Hill ranges varying between the heights of 900 to 3000 metres. The hill slopes are found very steep, specially on the Eastern region. Though rich with mineral and forest resources, Nagaland has lagged behind in the spheres of social and economic development. To some extent, this can be attributed to the difficult terrain and positional location of the State, but more than anything else, the backwardness of State is mainly due to the fact that investment for economic development made in the State has been much below is requirement. Apparently, proper attention has not been paid to the historical circumstancs, leading to the creation of the State on the 1st December, 1963, after a prolonged and traumatic experiences of insurgency. Constitutionally, the State came into being on the 1st December, 1963, but till 1975, the State could not participate fully with the rest of the country for Plan and peaceful economic development. The State was created,

knowing well of its limited resources. No doubt, although small, the State is strategically very important from the angle of the security of the country.

The creation of the State has opened up opportunities for the Government to fulfil the aspirations of the people in their socio-economic development. But the investment so far made in the State for laying a proper foundation of infrastructure for development has been far from satisfactory.

2. The State has no big rivers. The longest river is Doyang, which is navigable for a few kilometres within the State before entering the Assam valley and joining the Brahmaputra. The other important rivers in the State are Dikhu Jhanzi and Dhansiri which join the Brahmaputra and Tizu and Zunki which flow towards Burma and join the Chindwin river.

3. It may be stated that formerly, the people were living in the villages isolated from each other and any interference by out-siders was viewed with concern. But now this isolation is fast disappearing and more people are coming out and having contacts with the outside world. The rate of social transformation is directly related to the desire for economic and social advancement. Each village wants basic amenities such as roads, medical care, water supply, electricity, good administrative set up and other necessities of life. The State is till at the lowest level with regard to various economic aspects. The tribal population in the State is 84% and as such the socio-economic situation in Nagaland is vastly different from that obtaining in other parts of the country. In case of such heavily tribal populated areas, a greater allowance has to be made during the transition period to enable the tribal people to grasp fully the feeling of up-liftment and get on to emotional integration with the rest of the country.

4. The State has no Central Sector Projects. The State also suffers from shortage of flow of funds from the Central financial institutions, which could improve its economy. The road transport is the only means of transport, which is a much constlier medium. The resultant effect is that the prices in Nagaland are much higher than other parts of the country. Now the State has been moving forward through the process of Plan development undertaken in various Five Year Plans. Due to insurgency prevailing for a long time, the State had a late start in its developmental efforts. Consequently the real impact of planning has not yet been felt by the people. Besides, lack of technical and experienced personnel and technical knowhow have been the other constraints. These short-comings and deficiencies can be overcome by massive doses of properly planned investment. To achieve this end, adequate resources are to be made available to the State Government not only for proper maintenance of assets already created, but also for undertaking programmes for upgrading the standards of administration which is mainly accounted for on the non-Plan side.

5. The need is to sympathetically consider Nagaland's requirements keeping in view its potentials as well as economic deficiencies and thus raise the economic base of the people and the State to generate more resources of its own to enable the State to transform its economy into a selfrelient one.

Population

6. In 1961, the population of the State was 3.69 lakhs which increased to 5.16 lakhs in 1971 and 7.75 lakhs in 1981. The percentage of growth during the last three decades is the highest in the country. Percentage growth during the last two decades in Nagaland is as follows :—

YEAR	POPULATION IN LAKHS	PERCENTAGE INCREASE
1961	3.69	—
1971	5.16	39.80
1981	7.75	50.19

People

7. Population comprises mainly of 16 tribes in Nagaland. Broadly, 16 dialects are spoken. In general, one tribe does not understand the dailect of the other tribe. Communication amongst them is generally in Oagamese, a combination of Assamese and other spoken languages in the neighbouring areas. This serves as a vehicle of communication among the people. Each tribe has its own distinct culture and customs.

Climate and Rainfall

8. In certain areas, due to heavy rainfall, ercsion and land-slides are very common. Generally rainfall exceeds the average. Because of the high altitudes, temperature is very low and on some days in the winter it nears 0° centigrate.

Administrative set-up

9. The State has seven districts, i.e. Kohima, Mokokchung, Tuensang, Phek, Zunheboto, Wokha and Mon. It was done with a view to bring administration at the door of the people and to accelerate the process of socio-economic development in the State.

Contribution of Agriculture and industry to State income

10. Agriculture is the main stay of the people. 35.6% of the State Domestic Product is contributed by the agricultural sector and on as little as 3.51% by the organised manufacturing sector. In 1971, 80.85% of the population was living in villages and according to 1981 Census, this percentage has gone down a little but still quite a large number of people i.e., 84.54% are living in rural areas and are mainly dependent on agriculture for their livlihood. In Nagaland except two town Dimapur and Kohima, the rest of the population lives in rural areas.

11. Agriculture practices are still primitive. About 62.3% of the cultivated area is under jhuming and the area sown more than once is hardly 2% of the cultivated area. The State is deficient in foodgrain production and is mainly dependent on imports from other States, which are always constlier due to long distances and heavy transportation charges.

Industrial Backwardness

12. The State lacks in big and medium industries. In fact, industrialisation is yet to take roots in the State. There are only three medium size industtial projects worth mentioning, i.e. Nagaland Suger Mills Ltd. at Dimapur, Plywood factory at Tijit and Pulp and paper Mills Ltd. at Tuli. The Pulp and Paper Mill has gone into production from 1-7-82 only. In all, Nagaland has eight factories as against 88, 077* factories in the country in 1978-79. Thus Nagaland ranks probably the last among the States in respect of industrial units located within the State. During the Sixth Plan, a mini Cement Plant is being set up at Wazeho of Phek District. Value added by manufacture is only Rs. 3.84 crores (under small scale sector) as against All India total of Rs. 13,308** crores in 1978-79. The total number of industrial workers per lakh of population is merely 90 as against 902 of All India as per 1971 Census.

Minerals

13. Nagaland is rich in mineral resources. Important minerals found so far in Nagaland are vast reserves of high grade limestone, sizeable reserves of coal, multimetal deposits of chromium-nickel-cobalt bearing magnetite encouraging deposits of copper, lead, zinc, molybdenum with possible association of gold, silver, tin etc. and minor minerals like clay and slate. As regards coal, a reserve of approximately 6.50 million tonnes of coal has been estimated from Borjan Coal Fields. The inferred reserves of limestone, which are of very high grade are of the order of 375 million tonnes, Magnetite deposit, which has become attratctive because of of its nickel content, is one of the promising metallic mineral deposits of North East India. The Oil and Natural Gas Commission have also recently established a commercially viable oil-field at Tsori-Champang area of Wokha District. These minerals need to be exploited fully but much progress could not be made due to lack of resources.

Transport

14. The State has lagged behind in transport and communications facilities. There are about ten areas where habitation is there, but are still inaccessible by roads. In these areas, essential articles are required to be air-dropped almost regularly throughout the year. The only Railway line which passess through Dimapur is about 9.35 kms. As such Dimapur railway station is the source of supply and the rail head for the whole State of Nagaland and Manipur.

Low Resource Raising Capacity of the State

15. The above paragraphs show that the economy of the State is decidedly low and has not been able to pick up the thread of self-reliance. The dimensions of the problems with which the State is faced are too many. Deficiencies enumerated above give rise to a situation, in which the capacity of the State for raising additional resources is severely restricted. State's own tax revenues constitute only about 5.3% of its total revenues as against the All India average of 45.9%.

16. The week resources raising capacity of the State is directly linked with the weak economic base of the people. Thus the entire State comes in the category of backward area without much tax potential.

CHAPTER II

CONSTITUTION AND LEGISLATIVE

PART I

Constitution

In the operation of the Constitution especially in regard to the provisions relating to the Centre-State relations, the Govt. of Nagaland is of the view that there has not been any area in which the State Govt. has felt any undue strain. Hence there is hardly any need to bring about any fundamental changes in matters pertaining to Centre-State relations.

2. The framers of our Constitution having deep knowledge of the country as a whole and the people residing in different parts of this vast country, though it fit that the best features of the different constitutional systems prevalent in the world should be incorporated in the Constitution of India and at the same time took care to avoid the defects inharent in any particular system. As a result, a compromise was effected in framing the Constitution of India, which is really a combination of a federal structure with unitary features. In the Constitution of India so framed, there is a distribution of powers between the Union and the States and the powers are so distributed as to maintain the homogeneity and unity of the country as a whole. In order to achieve these objectives, some powers have been confirmed exclusively to the States and powers have been conferred on the Union on matters concerning the country as a whole. Again the powers conferred on the States are hedged with certain restriction during the emergency Proclamation under part XVIII of the Constitution.

The Constitution of India is thus not 'Federal' in its true sense, but can be said to be 'Quisi-federal'.

3. In the Constitution of India, the Legislative powers are distributed between the Union and the States in the three lists of the Seventh Schedule. The powers have been distributed basically on sound principles and in the view of the Government of Nagaland, no substantial modifications are considered necessary in the matter.

4. However, some modification is suggested in sub-clause (b) of Clause (1) of Article 356 of the Constitution of India. In the said-sub-clause, the powers of the Legislature of the State shall be exercisable by or under authority of the Parliament as per sub-clause (b) as it stands. Under the said sub-clause, the Parliament may, by law, authorise the President to exercise the powers of the State Legislature and instances are thereof conferring such powers on the President by law made by the Parliament.

It is suggested that the powers of the State Legislature should be exercised by the Parliament alone in enacting laws to be made for the State, as and when occasions arise.

5. The Government of Nagaland is of the view that abolition of appeals to the Supreme Court altogether may not be desirable. However, it is suggested that there may be a separate division in the Supreme Court for dealing exclusively with the constitutional matters and cases involving validity or otherwise of the Parliamentary laws and the State laws and another division for dealing with appeals admitted in the Suprems Court by grant of Special Leave against judgements and orders passed by the High Courts. It may be also desirable to constitute appropriate Tribunals for disposal of service matters and cases arising out of different Tax laws in force giving finality to the decisions made by such Tribunals constituted.

6. The State Government is of the view that no substantial decentralisation of powers and functions both in normal times and also in times of emergency are considered necessary.

7. To the best knowledge of the State Government, no where in the present day world, a federation of traditional type really exists. The State Government shares the view that the difficulties, issues, tensions and problems which may arise in Union-State relationship can be resolved without major constitutional amendments and that there are no substantial defects in the scheme and fundamental fabric of the Constitution relating to Union-State relationship.

8. The State Government fully agrees that the protection of the Independence and maintenance of the unity and the integration of the conutry is undoubtedly of paramount importance. Provisions to that effect appear in a chain in the different parts of the Constitution and proper implementation of all such provisions are sufficient to achieve the aforesaid objectives.

9. The Constitutional provisions imposing obligations on the Union and the States are considered reasonable taking into consideration the interest of the country as a whole. Save and except the suggestion made with regard to Article 356 (1) (b) of the Constitution, no change is considered necessary with regard to the other articles. Basically no change is considered necessary in Article 3 of the Constitution of India. However, for dissolving dispute or disputes arising between one or more States with regard to the respective boundaries of the different States, it is suggested that it may be desirable to incorporate a provision for appointment of Commission or Commissions in dissolving such dispute or disputes. The powers and functions of such Commission or Commissions should be clearly indicated making suitable provisions for giving opportunities to the concerned States to place their respective cases, produce materials and documents before such Commission or Commissions in support of the respective claims. On the recommendations of such Commission or Commissions constituted, Parliament may make laws increasing, diminishing or altering the boundaries of any State as provided in Article 3 of the Constitution of India.

Article 371A

10. One other Article, viz Article of the Constitution, which is applicable only to the State of Nagaland needs to be mentioned with the observations as hereunder.

The said Article was incorporated in the Constitution on the basis of an Agreement arrived at between the delegation of the Naga Peoples' Convention and the Representatives of the Government of India because of the keen initiative taken by the then Prime Minister of India Pandit Jawaharlal Nehru before the formation of the State of Nagaland. The said agreement is commonly known as 'Sixteen Point Agreement'. To give effect to Clause 7 of the said agreement, Article 371A was inserted in the Constitution by the Constitution (13th Amendment) Act, 1962. The said Article was incorporated with the clear view that notwith standing anything in the Constitution, no Act of Parliament in respect of the four matters enumerated in clauses (i to iv) shall apply to the State of Nagaland unless the Legislative Assmbly of Nagaland by a resolution so decides. It is implicit in the said provision that all laws made by Parliament, whether before or after the commencement of the said article in respect of the aforesaid four matters shall not apply to the State of Nagaland unless the Nagaland Legislative Assembly so decides. It is suggested that what is implicit in the said Article as regards applicability of Article 371A in respect of laws made by Parliament before the enforcement of the said Article 371A, should be made explicit so as to remove ambiguity, if any, in the matter as may be contended by some quarters.

11. In the said Article 371A, it has not been specifically mentioned as to what consequences will follow if any law made by the Parliament in respect of the four matters mentioned above is not adopted by the Nagaland Legislative Assembly by any resolution passed. It is again implicit that in such an eventuality, the State Legislature of Nagaland shall be competent to enact laws in respect of the four matters mentioned in the said Article and the laws so made by the State Legislature shall prevail in the State of Nagaland. It is again implicit that in such an eventuality, the State of Nagaland shall havealso full executive powers in respect of the aforesaid four matters being competent to legislate regarding the said matters as mentioned earlier.

12. In view of the above, it is suggested that necessary amendments may be made to Article 371A of the Constitution in order to make explicit what is implicit in the said Article and to make the said Articles as an effective provision as desired at the time of incorporation of the said Article on the basis of the 'Sixteen Point Agreement' mentioned earlier.

13. It is suggested that sub clauses (b) & (c) of Article 371A (1) need to be deleted from the said Article by necessary amendment. In view of the fact that the complete peace prevails in the entire State of Nagaland and the law and order position of the State for the past so many years is much more better than other States of India, it is no longer necessary for the continuation of these two clauses in Article-371A of the Constitution of India. Further, the Regional Council for Tuensang District as contemplated

by clause (d) is also no longer there. In view of the above, clauses (b) to (d) of Article 371A (1) and clause (2) of the said Article need to be deleted by Constitutional amendment.

14. Nagaland being a State like other States in the Constitution, any further continuation of the said clauses (b) and (c) is no longer necessary and needs to be deleted.

15. The provisions contained in sub clause (d) and clause (2) of the said Article 371A have already spent its force, in-as-much as the period of ten years from the date of the formation of the State of Nagaland as mentioned in sub clause (2) is already over and the extended period under the siad sub clause is also already over.

PART II

Legislative Relations

16. As expressed earlier, there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States.

17. There are some legislative entries like entry 7, 52, 53, 54 and 56 in the Union List, whereby power has been conferred on the Union to declare by law the matters specified in the aforesaid entries either to be necessary for the purpose of defence or for the prosecution of war or in the public interest or the like. In exercise of the pow.rs conferred by the said entries, the Parliament has enacted laws, from time to time, to achieve the objectives envisaged by the said entries. Legislations made by the Parliament in exercise of the said ent ies even though might affect the powers of the State Legislatures, should not be considered as encroachments. No substantial changes in the present provisions are considered necessary.

18. It may be desirable to have the views of the State Goverments befor. enactment of any legislation by the Centre on any matter in the concurrent list. However, the views expressed by the State Governments in the very nature of things have to be in the nature of recommendations and may not be binding as such on the Ce.tr. . Nonetheless the views expressed by the different State Governments are likely to help the Centre in enacting laws on a matter falling under t.e concurrent list. The State Governments is of the view that the existing provisions in the Constitution in this regard do not require any substantial change.

PART III

Role of the Governor

19. The present provisions of the Constitution as regards the role of the Governor are considered necessary and do not require any substantial change. The relevant constitutional provisions regarding the matter postulate that the powers should be exercised by the respective Governors according to the letter and spirit of the Constitution. Any omission or Commission in the matter of exercise of powers in one or two instances, does not justify substantial changes in the existing provisions. It is desirable that there should be more insistence for the exercise of such powers by the respective Governors being true to the Constitution as envisaged by the expressed provisions of the Constitution.

20. The office of the Governor of a State being an office of high respect and honour, it is envisaged by the Constitution that the Governor without being guided by any other consideration not contemplated by the Constitution, should act according to the letter and spirit of the Constitution and if it is so done, it will undoubtedly help in fostering healthy Union State relationship.

21. While making a report to the Parliament suggesting action under Article 356 (a) of the Constitution, it is essential that the Governor has to act fairly, not being influenced by any other consideration than in the public interest giving a true and correct picture of the affairs of the State.

22. Since under Article 164 of the Constitution, the Chief Minister has to be appointed by the Governor and other Ministers are to be appointed by the Governor on the advice of the Chief Minister, it is essential that the Chief Minister, so appointed, has the undoubted support of the majority of the House. It is essential in the very exercise of that power that the person appoint as Chief Minister is not dependent on Members sitting on the fence and has the support of the majority of the House to run the Government of the State.

23. In proroguing the House or dissolving the Assembly under Article 174(2) of the Constitution, the Governor has to act as a Constitutional Governor viz. on the advice of the Chief Minister of the State.

24. So far the State of Nagaland is concerned, no difficulty was faced at any time in respect of bills passed by the State Legislature and placed before the Governor for doing the needful in terms of the provisions of the Constitution.

25. Under Article 157 of the Constitution, any person who is a citizen of India and has completed the age of 35 years, is eligible for appointment as Governor. It is suggested that there should be some guidelines by way of laying down qualifications for being appointed as Governor of any State, in-as-much-as a Governor of the State has to perform very many important duties and functions which necessarily require necessary knowledge and experience of various matters to be dealt with as the Governor of State. Any person appointed as Governor should have a full term of 5 years. It may be considered in this connection whether it is desirable that a person once appointed in the high office of the Governor of the State, should be permitted to be a member of the Parliament or Rajya Sabha or any State Legislature, after rendering service as a Governor. It is not considered desirable that the same procedure should be prescribed as in the case of a Judge or a Supreme Court or High Court in the matter of removal of the Governor.

26. Criticism may be there in making choice of the Chief Minister by the Governor in one or two isolated cases, but that may not justify any substantial change in the existing provisions. Any provision like

Article 67 of the basic law in the Constitution of the Federal Republic of Germany may not be appropriate in India at this stage.

27. The recommendations of the Administrative Reforms Commission in laying down guidelines on the manner in which discretionary powers should be exercised by the Governors, may not achieve the desired objective, in-as-much-as, discretionary powers should be allowed to be exercised in the best judgement and wisdom of the authority concerned. Any such guidelines as suggested, may be of a doubtful Constitutional validity. That apart, such guidelines may not be of any substantial progmatic utility.

PART IV

Administrative Relations

28. In a vast country like India there are good grounds for incorporation of Articles like 256, 257 and 365 of the Constitution. The powers conferred by the said Articles have to be considered in the greater perspective of India as a whole. Any wrong exercise of powers under any of the said Articles does not by itself justify the deletion and/or substantial modifications of the said articles.

29. The provision contained in Article 365 of the Constitution should remain as a reserved provision. It is conciveable that occasions may arise for exercise of powers under the said Article bonafide.

30. Powers under articles 256 or 257 of the Constitution should always be exercised with due care and only when exercise of powers under the Articles becomes absolutely necessary. That appears to be the scheme behind the said Articles.

31. No exception should be taken to the powers conferred by or under Article 356 of the Constitution and such provision in the Constitution has been incorporated advisably. By and large, powers under the said Article have been exercised so far to meet the situation envisaged by the said Article.

32. The provisions contained in Clause (4) of Articles 356 of Constitution, as they now stand after the 42nd amendment of the Constitution, should be retained as such. However, to meet the eventualities, some provisions need to be incorporated to meet such situation arising in any State. In incorporating such a provision, care should be taken to avoid any possible misuse of power that may be conferred to meet such eventualities.

CHAPTER III

Financial relations Planning and general

The issue that is now at conflict is unity among diversity. Unity comes with the pre-supposition that there is diversity. For if there is no diversity, the concept of unity does not arise. Keeping this fact in view, the functioning of the federal structure has to be studied. In this connection, James Boyce, an eminent writer, has compared a federation with the solar family i.e. the sun and the planets. He has stated, "The problem of every federation is to keep centrifugal and centripetal forces in equilibrium so that neither the planet States shall fly off into the space nor the sun of the Central Govt. shall draw them into its consuming fires". The planets have got to be kept in such a position that they would not drift away from the course of orbiting the sun and, at the same time, the planets should have the necessary strength as not to be drawn into the body of the sun, only to be vanished. In other words, there should be an equilibrium between the Central Govt. and the various Govts. in the States.

2. Generally there are three areas of Centre-State relations which tend to converge and become controvertial. One is the area of legislative authority, the second is financial participation and the third is of planning. The first has been amply discussed in Chapter II. As regards second and third, these are discussed in the paragraphs that follow.

3. Under the Constitution, the Centre has been entrusted with the responsibility of maintaining important national matters such as National Defence, Foreign Affairs and Communications etc. but the burden of socio-economic development falls mainly on the State Govts. which too is no less important as this is the sphere which directly affects the quality of life of the people. Therefore, the basic criterion in the Centre-State relations should be that devolution of funds from the Central resources to the States should be based on the concept that the federal financial system should be so oriented that surpluses of the Union are given to the States which are in acute need of them and liberally to those whose capacity to create assets of their own is limited. This is more so in the case of States like Nagaland whose sources of revenue, because of its highly undeveloped and backward character, are very inelastic. As a result, backward States in the country and Nagaland, in particular, are faced with inherent imbalances between resources and responsibilities.

4. It is a matter of common experience that the States which have non-Plan revenue gaps also tend to have non-Plan capital gaps. This is because of the fact that the investments of loans for planned development do not bring in, especially in backward States, the comparable returns, resulting in inability of the individual State Govts., to meet the liability of the loan repayment and the interest thereon to the Centre as the returns from investment are, to a large extent determined by the level of economic activity in an area.

5. Accordingly, we feel that balances in Central receipts should be revised in as large a measure as possible so that it may be possible for the Central Govt. to come to the help of chronically weaker and backward States from their inherent disequilibrium, resulting from resource imbalances.

6. Therefore, it is our plea to the Commission on Centre-State Relations to recommend a scheme of devolution of resources in such a way that would enable the States with a low fiscal capacity to maintain comparable standards of administrative, social and developmental services corresponding to a national norm. So long as this objective is not achieved, the devolution of resources to different States should be worked out in such a way that the poorer States are in a position to expand services at a faster rate than the richer States.

7. Locations of industrial projects were based on the decisions taken by the Central Govt. and preference was given to the areas, where already developed communication system, market accessibility, availability of power and technical know-how are available. Secondly the relatively smaller contribution made by the States, like Nagaland, to the national resources pool has inhibited the Finance Commissions from giving adequate consideration to the requirement of such States in the past. Lack of adequate Central assistance, whether in public or private sector and a comparatively less developed entrepreneurial skill have acted in a vicious circle resulting in low absorption of capital. With the result that the vicious circle of backwardness has been breeding backwardness in States like Nagaland and initial economic advantages were multiplying in other well developed States leading to further economic gaps.

8. To carry out these social responsibilities and undertake development programmes to achieve desired welfare objectives, the State has to mobilise resources of a higher order. The resources raising powers of the State are very much limited. They continue to remain at a very low ebb. Despite efforts by the State Govt. there are certain limiting factors which do not allow raising of resources beyond a particular level. For instance, it is not possible to raise the rate of sales tax beyond a particular point. Similar is the case with State excise on liquor and other taxes. It is here that the State Govt. has felt its helplessness in a situation where it is committed to uplift the economic standard and social welfare of the people.

9. As regards Corporation tax and Union surcharge on income tax, many States in the past had pleaded that these should be brought within the shareable pool. Various Finance Commissions have held the view that these taxes should be retained by the Centre as any change in this regard requires amendment of the Constitution. There is no doubt that Corporation tax and Union surcharge have considerably increased during the past years and the yield is of a sizeable order now. The revenue from Corporation tax has been increasing at compound rate of 15% in the last ten years. The Sixth Finance Commission has suggested that the question of bringing them in the divisible pool should be considered by the highest policy making body like the National Development Council. The State Govt. feels that the Sarkaria Commission should consider the need for making the Corporation tax shareable.

10. Similarly, it may be stated that surcharge on income tax is not different from the income tax itself. It has been exclusively appropriated by the Centre. This type of exclusive earmarking of growing revenues for indefinite period by the Centre has deprived the States of growing source of revenue. It is therefore, suggested that it should be levied for only a limited period and, subsequently, be merged in the basic rate of income tax so that the benefit of the increasing receipts from this source accrues to the States as well. The Commission may consider it.

11. As regards shareable pool of income tax and Union excise duties, the State Govt. had pleaded to the Eight Finance Commission that 25% share of income tax and 10% share of Union excise duties should be earmarked for hill States. As these States have special problems which need to be tackled on priority basis. Unless the regional imbalances and backwardness of the areas suffering from such drawbacks are removed, there is a continuing dissatisfaction among the people of such States. We are glad to note that the 8th Finance Commission has appreciated this fact about deficit States. The Commission has stated that the deficit States are also members of the Federation and they should not be left* to fend for themselves. Accordingly, the Commission has earmarked 5% of the Union excise duties, for the 10 deficit States—Assam, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Orissa, Sikkim, Tripura and West Bengal (Rajasthan being deficit in 1984-85 only). The State Govt. feels that this share of 5% should be increased to 10%. So we submit to Sarkaria Commission to consider and recommend raising of the share of deficit States from 5% to 10% during the forecast period 1984-89. As regards tax on railway passenger fare, the Eighth Finance Commission has recommended increase in the quantum of grant to the States from Rs. 23·12 crores to Rs. 95 crores. Since 1971-72, the annual passenger earnings as well as gross earnings of the railways have shown annual growth of about 15%. Keeping this fact in view, the recommendation of the Eighth Finance Commission appears to be reasonable. We hope that Sarkaria Commission would impress upon the Railway Convention Committee to approve it.

12. We also feel that location of Central Sector Projects should be based on the consideration of regional imbalances also and not only on the basis of industrial and locational facilities available in a particular area where industries are already concentrated.

13. The monetary limit of Rs. one crore fixed for power projects in 1950 to be cleared and approved by the Central Electricity Authority, still continues. The result is that schemes which the States could take up on their own 35 years ago, have now to be submitted for Central clearance due to escalation of cost. The examination by the Central Authorities even in respect of small schemes is so time consuming that it takes about two to three years to clear a small scheme. These Central Authorities could be entrusted with schemes above a certain size and projects which have inter-State implications.

14. The approach adopted by the Finance Commission in regard to the transfer of resources has been mainly on the basis of a gap filling approach and the transfer of resources through Central assistance for the Plan has been done mainly on the basis of distribution under a common formula. The transfer of resources has not promoted either efficiency or narrowed down the disparities between different States. Basic changes are, therefore, desired in regard to the principles governing the transfer of resources.

15. The principles of inter-State distribution should be such that they do not leave the advanced States with huge surpluses. Norms should be adopted and weightage be given to matters of national importance.

*Page 50 para 6·25 and page 54, Table 2 of the report of the Eighth Finance Commission.

16. Basic requirement in the matter of distribution of resources in a rational way between the Centre and the States and finally amongst the States themselves should be to increase the overall Central assistance to the deficit and hills States.

17. National Development Council with its Committees will be in a position to deal with most of the problems like planning and Central assistance. It will not be necessary to create a number of organisations such as National Credit Council, National Economic Council and the National Expenditure Commission. We feel that Finance Commission should be made a permanent organisation, which can look into the requirements of the State properly.

18. Deficit States are unable to fully utilise the Centrally Sponsored Schemes for want of matching resources. Therefore, these schemes should be fully financed by the Centre.

19. Industrial backwardness is different from general backwardness. The State has spent substantial sums of money to develop the infrastructure for social and economic development. As a result, the State has achieved a high rate of literacy in the country and a reasonably well-developed physical infrastructure. But, on the other hand, industrial growth has been slow and unemployment in the State is increasing. It should be the specific objective of policy makers and planners to direct massive industrial investment to such States.

Government of Nagaland

ANSWERS TO THE QUESTIONNAIRES AS PER ANNEXURE ATTACHED (SARKARIA COMMISSION)

I. It will not be correct to say that providing initiative and leadership and consultancy services should be left to the Central Ministries only. Every State has their own popular Government Constitutionally established. Even in matters of Planning, the State Government should take initiative and leadership in preparing their own Plans according to the socio-economic needs of their State. The socio-economic condition is different from one State to another. The local Government and leaders know their problems much better than the Central Ministries. Therefore, in actual practice, initiative and leadership in all matters of Planning should be left to the State Government. However, in matters of common national policies affecting all member States, initiative and leadership of Central Ministries is welcome within the framework of the Constitution. In so far as consultancy services are concerned, in some backward States like Nagaland which do not have experts it will take time to build up experts in various disciplines, the Central Ministries can provide consultancy services to the States depending on the demands and needs of the State Government. In so far as the Central Ministries acting as a clearing house of information and intimate such details and datii about good programmes and methods, we welcome the suggestion.

II. (1) The present practices is that State Governments formulate their own Plans on the basis of the guidelines and formats prescribed by the Planning Commission. When the State Plans are also discussed both at the stage of Working Group discussion and the final round, the concerned Ministries are also associated. In this connection the views of Nagaland State is as follows :—

Nagaland which is a very backward and poor State having no resources of its own is in a very disadvantageous position. In respect of National Five Year Plans also, Nagaland is a late starter. In view of this position, Nagaland including the other north-eastern States and Jammu & Kashmir are categorised as Special Category States. But while allocating the resources of the nation for development works, the criteria laid down by the Government of India like population, area and specially the resources gap between Plan and Non-Plan, etc. etc. works against the interest of the backward State like Nagaland. A State like Nagaland which is scarcely populated but its terrain is hostile for development work and the high cost living because of various reasons and which has remained neglected need more resources allocation in its share of national wealth. Inspite of the determination and aspiration of the State Government to take up more development works, the final decision for selecting and locating projects and the resources allocation still remain with the Central Government. This has resulted that advanced States are becoming more advanced and backward States are becoming more backward. In order to bridge the gap, it will be necessary to allocate larger amount of resources to the backward States to bring them up at par with the other advanced States to strengthen the national unity. It may be added that inspite of the good policies and guidelines which may be formulated by the Central Ministries or by the Planning Commission, they may not be able to appreciate the Special and peculiar local problems of the State. Although some States like Nagaland have been declared as special category States, while allocating resources, the resources gap between Plan and Non-Plan is linked in such a way that the resources gap in Non-Plan expenditure is deducted from the Plan resources. This system of giving from one hand taking away from the other works against the interest of the States where there is no resource base. While it is necessary that financial discipline and austerity should be observed by all concerned, the Plan resources once determined should not be reduced due to gap in non-Plan resources.

(2) We have no objection for the Central Ministries or Planning Commission to organise studies, research, surveys, etc. in the field of various departmental sectors and collection of background materials and economic and statistical datii. But this has to be done in close association with the State Government. But as has been stated above, statistical datii do not really reflect the actual socio-economic status of the society. For example, per capita income on the basis of population and the resource allocation works out very high but the actual financial benefits accrued to the people is negligible because a large chunk of the resources goes to capital investment and infra structure development. Therefore, the per capita income worked out on the basis of population does not give a correct picture of the economic condition of the people.

(3) No comments. Since it is between the Central Ministries and the Planning Commission only.

(4) It is no doubt important that the views of the Central Ministry should be taken into account while determining programmes and assistance to the State Plans. But our experience has been that the Central Ministries having no agencies in the States cannot appreciate the local situations. Even if they have any regional institution, they cannot also closely co-ordinate or appreciate the peculiar problems prevailing in the States. Therefore, while determining the development programmes and the size of the State Plans for central assistance, the views of the State should have more weightage. For instance, if the Chief Engineer of the State Government formulates some important project, the Central Works & Housing Ministry who have got their zonal officers insist that it should be cleared first by their Zonal Officers before it is sent to the Ministry. Since the Central Ministries are having their own technical personnel such projects should be directly sent to the Ministries to avoid delay.

(5) The State Government is of the view that once the size of the Plan and the programmes are determined, scrutiny of the various Plan schemes should be left to the State Government and not to the Central Ministries. However, in respect of fund under their control like schemes for National Highway, scrutiny and examination in details should be done by them.

III. We agree provided such research reports are made available to the State Governments.

IV. It is very doubtful whether the Central Ministries can send their evaluation team timely. Otherwise it is a welcome suggestion and the State Government will also co-operate with such evaluation and monitoring teams.

V. It may not be advisable for the Central Ministries to directly undertake activities or schemes which cater to regional or all India needs. It will be always advisable that such activities or schemes are taken up in consultation and in close association with the State Governments.

VI. We will have no objection that it will be advisable that the State Government is taken into confidence before such projects are taken up.

VII. We have no objection that in all foreign and internationally aided programmes which may be implemented in a particular State, the Central Ministry should have closer co-ordination to the extent necessary for compliance with the agreements.

VIII. We agree and we hope to be benefited by such co-ordination and participation.

IX. No objection.

X. With regard to Centrally Sponsored Schemes, it may be stated that the uniform pattern/methods/plans/cost, which are evolved in the Central Ministry cannot be made applicable uniformly to all the States. The State Government should be given power to modify such schemes to suit the local needs and conditions.

XI. We welcome the suggestion.

XII. We have no objection but in the interest of harmonious Central-State relations, it would be advisable that the State Government is always taken into confidence even in dealing with the All India Voluntary or Autonomous Organisations.

FUNCTIONS OF THE CENTRAL MINISTRIES AND PLANNING DEPARTMENTS IN RELATION TO SUBJECTS IN THE STATE LIST

(i) Providing initiative, leadership and consultancy services to the states and in particular serving as a clearing house of information intimating details and data about good programme and methods adopted in one part of the country to the rest of the country.

(ii) Undertaking the responsibility for drawing up the national plan for the development sector in question in close collaboration with the states and developing for this purpose, well manned planning and Statistical Units. This responsibility will *inter-alia include.*

(1) Assisting the Planning Commission in formulating Plans for the sectors with which the ministries are concerned and working them out in appropriate details.

(2) Undertaking, for the above purpose, preparatory work which will include organising studies, research and surveys having a bearing on the development of the sectors and collection of background materials and economic and statistical data.

(3) Providing technical and other assistances with regard to planning to the Working Group set up by the Planning Commission and to Development Councils.

(4) Assisting the Planning Commission in determining the programme in the state plans to which assistance should be tied.

(5) Scrutinising in detail, and before they are put into execution, such state plan schemes as are required to be scrutinised by the Ministries according to the policy in force.

(iii) Undertaking research on matters which are beyond the research resources of states or which have a national import.

(iv) Taking the initiative in the evaluation of programme with the object of checking programmes, locating bottlenecks, giving advice regarding remedial measures and adjustment etc.

(v) Undertaking directly activities or scheme which cater no regional or all-India needs.

(vi) Undertaking experimental projects.

(vii) Coordination of programme undertaken in agreement with foreign and international organisations and agencies and association with their implementation to the extent necessary for compliance with the agreements.

(viii) Attending to functions of the nature of coordination which can appropriately be handled at the Centre.

(ix) Providing a forum and meeting ground for state representatives for the exchange of ideas on different subjects and for the evolution of guidelines.

(x) Centrally Sponsored Schemes.

(xi) Undertaking training programme of a foundational or advanced nature, e.g. training of planners and administrators and training of trainers and assisting the states in other ways in developing their administrative and technical capacity.

(xii) Dealing with all-India voluntary or autonomous organisations (as distinct from such organisations at the state or lower levels).

GOVERNMENT OF ORISSA

(a) Replies to the Questionnaire

(b) Presentation of the Case before the Commission by the Chief Minister

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTION

1.1 Notwithstanding several centralising features which co-exist with the basic federal set up, our Constitution can be recognised as a federal one. This is a well-settled position. As would be evident from the debates of the constituent Assembly, it was a conscious decision of the Constitution makers to create a federation with strong Centre. Considering the peculiarity of the genesis of India nation (carved out of a unitary government) the socio-economic diversity that characterises its various regions, and the historical necessity to preserve its unity and integrity, a federation with strong Centre was the soundest option available. Judged in the present perspective, the centralising features obtaining in the Constitution may not be considered to be unique, when in the classical federations, there has been growth of distinctly unitary tendencies. As for instance, in the Federation of U.S.A. which is accepted as a model, extra constitutional unitary features have developed through the practice/system of Governors conference and frequent meetings of Federal and State functionaries. A federal structure with strong Centre has, therefore, been a historical imperative and its necessity in the present times is amply borne by the socio-political imbalances afflicting the country now. The Constitution of India in this perspective is FEDERAL containing, as it does, the main basic features of Federation viz., dual polity consisting of the Union at the Centre and States at the periphery, each endowed with soverign powers to be exercised in the fields assigned to them respectively by the Constitution.

1.2 The basic scheme of the Constitution is sound and does not need any change although there is room for modifications in detail but nothing should be done to whittle Central supervision and control in the interest of preserving the unity and integrity of the country.

1.3 The existing Constitutional devolution of powers under which reasonable autonomy at the State level has been provided is adequate and quite compatible with efficiency and equity. It does not require any change either in the normal times or during emergency. We feel that greater autonomy contains inherent dangers of generation of local and regional imbalances. In our country, advanced States have to co-exist with backward States and it is the obligation of the Union Government to bring about a degree of uniformity among them. Dichotic division of normal and emergency provisions may lead to resorting to emergency even in normalcy.

1.4 This concept is an exercise in abstaction. Function of Government in the present day has become so complex and interdependent that any 'co-ordinate and absolutely independent' structure cannot sustain itself. In any case, there is no traditional federalism today and every country has to have its own brand of federalism suited to the needs of its people and other relevant factors.

1.5 By and large, these comments appeal to be valid. We subscribe to the views expressed in (c) (i) and (ii). There should be strong institutional network to curb political arbitrariness. The spirit and values enshrined in the Constitution should be constantly imbibed and practiced by evolving healthy conventions and procedures like the British Constitution.

1.6 Yes. This has been ensured by the very first Article of Indian Constitution which stipulates the country to be a Union of States and also be constitutional provision for single citizenship fundamental rights, integrated judiciary, united audits and accounts, appointment of governors by the President, a single Election Commission. All India Service, Finance Commission, primary of Parliament in part XI; (Chapter I), emergency provisions part XVIII, concurrent powers and constitutional obligations for protection of minorities, scheduled castes and scheduled tribes. Financial integration have been ensured through shared taxes, grants to States and a statutory Finance Commission.

1.7 Even, if the obligation of the Centre and the States, to one another, are not mutually commensurate and may put the States prima facie in a defenceless position in certain matters, this kind of balancing was not entirely unintended. The States in the Indian Constitutional frame-work do not enjoy power of equal representation in the Centre, as distinct from the American States which have equal representation in the Senate. This over-riding position of the Centre may be partly offset by the States by seeking judicial relief against the Union directives which are judiciable. But, a more pragmatic approach would be enhance the area of Central obligation towards the States to, not only to meet the rising regional expectations but also to ensure uniform level of development by bolstering up the less-developed ones through certain special dispensations over and above what the Planning Commission and Finance Commission are able to achieve.

1.8 No. It is necessary for the Parliament to have powers as now embodied in Article 3. The present position may continue as it is.

PART II

LEGISLATIVE RELATIONS

2.1 In our view, the State should be fully competent to legislate on all matters allocated by the Constitution

to the State List; otherwise, the arrangement as envisaged in the Constitution would appear to be in order. In this context, attention is drawn to the construction of Article 246 which makes the State List categorically subject to the Union List and the Concurrent List. The expression "notwithstanding anything'," in Article 246(1) and "subject to" Article 246(2) opens up possibility of encroachment in the State List, and it may be difficult for the State to seek judicial redress in such contingency. Therefore, the alternative of deleting the aforesaid expressions may be considered.

Instances can be seen in the Mines and Minerals Development Act and Industrial Developments Regulation Act. The reasons are :—

(i) Entry 23 of List II empowers to make law for regulation of mines and mineral development. It has been made subject to the provisions of List I (obviously Entry-54 of List-I) which provides "regulation of mines and mineral development to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the Public Interest." In other words, the Union Parliament possesses the power to take under the control of the entire subject and the power given in Entry-23 loses its meaning for the State Legislatures. In fact, the present mines and mineral development law is made by Central Government and State Legislature has been completely deprived of its competency to make any law on the subject.

(ii) The next Entry-24 of that List relating to industries has been made subject to the provisions of Entry-52 of List-I. Entry-52 provides, "Industries, the control of which by the Union is declared by Parliament by law to be expedient in the public interest." The moment Parliament by law declares any industry to be under the control of the Union as in case of Industrial Development and Regulation Act, the State Legislatures loses its competency to make law. In cases the State has not been able to reach assistance to certain industries which have been put under the control of the Union Government and has failed to redress the financial or monetary sickness of the industry due to lack of competency.

(iii) This Entry-52 of List-I also has partly affected the trade and commerce within the State and production, supply and distribution of goods as enumerated in Entry-26 and 27 of the State List in respect of the industry control of which has been placed under the Union by the legislation made by Parliament as embodied in Entry-33 of the Concurrent List.

2.2 (i) We feel that trade and commerce should be within the competency of the State Legislature whether it is relating to essential or non-eessetial articles.

In substance, it is suggested that some of the legislative powers dealing with financial matters and taxation enumerated in List-II may be made free from restrictions made by Parliament, such as Entries-50 and 57, since the State Legislature has very limited items of taxation for augmenting State revenue.

2.3 Yes.

2.4 Assumption of the power of legislation of the State legislature by the Parliament in 'national interest' or 'public interest' being always a matter of temporary nature, such legislative power, in the fitness of things, should be of temporary duration. The present provision of Article 249 appears adequate to meet any exigency.

2.5 The point has exhaustively been discussed while answering question 2.2.

PART III

ROLE OF THE GOVERNOR

3.1 The Constitution has visualised that Governor is the Head of the State in whose name the Government of the State is carried on. He is to act in the running of the government on the advice of the council of Ministers except when exercising the choice of the Chief Minister and reporting to the President under Article 356.

Governors have generally functioned as the constitutional head of the state in Orissa and have fulfilled the role assigned to them in the Constitution. We have no instance to quote where a Governor has acted in deviation of the powers envisaged under the Constitution.

3.2 Primarily Governor has to act as the Constitutional Head of the Government. Additionally he acts as the watch-dog/agent of the Central Government. For fostering healthy relations he should act as a broker for the State Government and liaison agency between the State Government and Central Government and should help shaping high policy in the union state sphere.

3.3 Any consideration other than objective in the context of a prevailing situation should not guide or influence a Governor in discharging his obligations under (a), (b) and (c) mentioned in the question. The powers conferred on a Governor under (a), (b) and (c) are of extraordinary nature and should be exercised with great amount of caution and prudence, so that appropriate linkages are built up between the Centre and the States within the framework of a federal Constitution. No change is, however, recommended in the existing provisions of the Constitution in these respects.

3.4 The intention and purpose of the Constitution makers was to ensure uniformity in legislation and also conformity with requirements of the Constitution, as for example Articles 254 and 255 Chapter V of Part VI and Article 368. Our Constitution adopts the checks and balances system of U.K. in the matters of legislation. Hence the progressive views of the members of the Legislature embodied in a legislation calls for a check by the Governor who is part of the Legislature and has equal importance as the Legislative Assembly to ensure that the legislation is in conformity with the provisions of the Constitution and justified in terms of social and economic conditions prevailing in the country. It is healthy and necessary provision and in Orissa no instance has been noticed where Governor has reserved a bill for consideration by the President against the advice of the Council of Ministers.

3.5 Yes, although there are cases where Government of India have suggested changes in respect of provisions contained in Bills received for consideration by President. However, it is not a case of dictation by the Centre. Whenever the suggestion of Central Government has been accepted in such cases, it has been done after discussion between the Central and State Governments. In case of our State, such situation had arisen in case of amendment to Land Reforms Act and Arbitration Orissa (Amendment) Act; but Centre has not tried to dictate any decision in these cases. Of course, cases of delay in getting assent of the President to the bill have occurred as in the case of Orissa Land Reforms (Amendment) Act sent in 1979. However, the delays can be overcome by administering alertness.

3.6 Yes, this is the correct position. Governors have functioned generally as constitutional heads of the state and fulfilled the role envisaged in the Constitution. However, different Governors have adopted different standards when they were requested to exercise discretion in calling or not calling a leader to form a Government when majority support for him was not clear or when recommending or non-recommending action under Article 356. The well-reported case of Orissa High Court in Bijayananda's case can be referred to in this regard.

3.7 No.

3.8 No, the task should be lef tto the Chief Minister who is appointed by the Governor. Governor is an umpire. He should not enter into any political calculation. It is the speaker who should verify in the House as to which party has the majority in the Legislature.

3.9 No, we do not think it will be advisable to incorporate a provision in the lines of Article 67 of the Basic Laws of Federal Republic of Germany, as it does not suit Indian political culture. The better alternative would be in the event of any anticipated party instability, to dissolve the Assembly and allow the existing Government to continue as care taker and order fresh elections. Incidentally, the recent anti-defection law will go a long way in obviating such situation taking place in future.

3.10 The issue whether guidelines should be laid down to be followed by the Governors for exercising their discretionary powers was debated by the Constituent Assembly and it was decided that it was not necessary/desirable to lay down any such guidelines. Later, a Committee of Governors appointed by President in 1970 went into this question and also advised against any such measure/move. We are of the opinion that no guidelines are necessary and the exercise of discretionary powers should be left to be exercised by Governor in the context of political situation confronting the State and the Centre at any given time. We also feel that any written guidelines will create litigations and consequential Constitutional deadlock.

PART IV

ADMINISTRATIVE RELATIONS

4.1 & 4.2 There is absolute need to have Art. 256 and 257 in the Constitution as already explained under 1.2. The Constitution of India envisages a federal polity with some strong unitary characteristics. The pattern though a departure from the classic structure of a federal Constitutional system, would appear to have suited well the Indian conditions. The role of the Union Government in such a set up has been, it may be said, provided with the Constitutional sanction by incorporating the Art. 256, 257 and 365. However, it is to be stated at the same time unless it is a case of an extraordinary situation or a State or a group of States are set on a course of action which is manifestly in opposition to the accepted national ethos and the objectives thereunder, the levers of authority recognised by the Constitution in Arts. 256, 257 and 365 should not at all be operated. Minor aberrations, if any, and other situation of dissent on the part of the States should be resolved through an appropriate institutional arrangement which will afford opportunities for debate, discussions and consultations. A democratic and not an authoritarian tradition is the avowed goal of our Constitution and it should not be eclipsed by frequently having access to the powers vested under Arts. 256, 257 and 365 of the Constitution.

4.3 We feel that the recommendation of Administrative Reforms Commission are reasonable and commend the course suggested by it of exploring all the possibilities of deciding points of conflict by all available means before issuing any direction to a State Government under Article 256.

4.4 In Orissa, the power has been used-twice during the last 35 years. While we feel that generally this extra-ordinary remedial power has been exercised properly, the invoking of the power firstly in 1977 in the wake of victory of Janata Party and secondly in 1980 following the victory of Congress in the Lok Sabha Election, was not free from controversy and its use was contrary to the relevant provisions of the Article. We, therefore, feel that necessary safeguard should be built into Article 356 to prevent recurrence of such instance.

4.5 Prolonged President's Rule is not a solution to these difficulties and, as such the provisions under clauses (4) and (5) need not change.

4.6 The present arrangements are working satisfactorily.

4.7 The Central agencies must of necessity, continue . We do not subscribe to the view that the Agencies enumerated have made undue inroads into the States autonomy. These agencies, while functioning within the charters given to them, are quite careful that they do not encroach upon any area which is the exclusive concern of the State. They mainly deal with the subjects handled by them from the view of the country as a whole or with matters pertaining to more than one State. Generally, we have found their role quite helpful and constructive. We have also to remember that quite a few of these Agencies have been set up under relevant Acts passed by Parliament and, as such chances of any conflict arising between the Centre and State in regard to their functioning are not there.

4.8 In the changing times and situations the All-India Services can definitely be said to have stood up the expectations of the Constitution makers. In,

respect of All-India Services the Union Government must have sufficient control over them. The existing arrangements regarding the All-India Services and the control of the Union and the State Governments exercise over them need not be changed.

4.9 Law and order being a State subject, the State should be allowed to play their legitimate role on this sector with the aid and assistance as and when required of the Centre whether it relates to calling up of the Army or deployment of paramilitary forces. The Centre, however, should not be disabled from the acting in situation of grave emergency or situations which constitute a threat to the integrity of the country. In this context, Article 355 becomes very important for the sake of preserving the integrity of India. There should, therefore, be no question of opposition to Central aggression and internal disturbances although normally no Central force be deployed in the State unless asked for by the State Government.

4.10 The present scheme under the Constitution in this regard may continue. However, States should have a say in the administration of organisation like AIR or DOOR DARSHAN and other media in view of the vital role played by them in dissemination of correct information relating to the functioning of the State Government. An arrangement should be provided under which states are allowed specified period of TV and Radio programmes for their own broadcast subject to central guidelines and inconformity with Central Government directives.

4.11 The Zonal Councils and their functioning do not appear to have so far achieved the objectives for which they were set up.

4.12 We are of the opinion that institutional arrangements should be set up in different areas for consultation between the Union and the States to sort out various issues and problems affecting the centre-state relations. Disputes which may arise between the States may be attempted to be resolved in a forum with representatives from the States and the concerned central ministers. An inter-State Council may be too large a body to go into such disputes. Besides, the Constitutional obligations devolving either on the Centre or the States should not be subjected to any review or discussion in a Council for taking action. Any disputes between the States which cannot be settled by discussions should be taken to the appropriate judicial or semi-judicial forum.

PART V

FINANCIAL RELATIONS

5.1 So far as we restrict our attention to the financial needs of State Government for providing the basic administrative services in the State, the arrangement for closing the gap between the State's needs and their resources through sharing of the Central taxes and making available grants-in-aid on the basis of the recommendations of duly constituted Finance Commission, have commanded the confidence of all. And, to this extent, it can be said that the scheme of devolution envisaged by the Constitution makers has worked well and come up to their expectations. In order that this arrangement continues to command the confidence of the State Government, a strong convention has to be established that the recommendations made by the Finance Commission will be accepted by Government of India in toto.

However, the growing needs of the State for financing different developmental activities, which need transfer of resources from the Centre to the State in a much large magnitude, do not come within the purview of the Finance Commission and is dealt with by Planning Commission. We feel that it is this area that the existing principles of resources transfer have left much to be desired. While, therefore, suggesting that the present system should be improved upon and there should be effective co-ordination between the Planning Commission and Finance Commission, we would recommend that strict objective criteria for determining the quantum of Central assistance to States and its distribution should be laid down and scrupulously and meticulously followed.

5.2 The over-all position stated by the ARC Study Team still holds good. As regards the alternatives given, our views are given below :—

We are not in favour of complete separation of the fiscal relation of the Union and the States and feel that it will be neither desirable nor practicable to do so. Similarly, concentration of all powers of taxation with the Union is not desirable. We believe, in a country like India, transfer of few taxes from the Union to the State List will not suffice. This may improve the finance of richer States but will be detrimental to the interests of poorer States, Centre itself will be left with a much lower order of resources at its command. Poorer States will be starved on account of their inadequate resource base.

Because of some historical reasons, the production, consumption and other economic activities, which sustain the modern and organised sectors of our economy and constitute base for all taxes with Union or States, are located in the specific region of the states of the Union. While the activities in these regions are sustained by the population of the entire country and purchasing power of the entire country is spent on goods and services placed in these areas, this would contribute to the resources of the States of their location only, after more taxation power are transferred to the States.

As already stated, we do not favour the idea of transfering more and more taxation powers to the States because that would subvert the mechanism of transfer of resources from richer to the poorer regions. Nor, do we favour taxation powers to be transferred to the Union List which will render the States absolutely dependent on the Centre.

On the other hand, we feel, in the context of planned development, it is necessary to take an over-all view of the financial needs of the States and the devolution of resources should be made in accordance with the pre-determined principle and on the basis of an assessment of the gap between a State's needs and its own resources to augment the funds to be transferred from the Centre to the State. All

income taxes (including Corporation tax and surcharges) and all excise duties should be shareable with the States, and States should get most of the resources through assured devolution and the principles of inter-State distribution should be such that advanced States are not left with large surpluses. There should also be institutional arrangements for more equitable distribution of resources other than tax resources between the Union and States.

5.3 We subscribe to the view that regional imbalances can be reduced only by a strong Centre having elastic sources of revenue and more discretionary powers to use the funds available with it for the development of poorer States. However, the Central Government has to display the stance in favour of regional imbalances more boldly than has been the case hither to and follow more progressive policies in this regard.

5.4 We do not consider that deficits in the Central Revenue Account are in any way due to the devolutions of resources to the States. On the other hand, we are of the opinion that there is scope and justification for greater devolution of resources from the Centre to the States, as transfer of resources hither to being made through the Finance Commission and Planning Commission is not even adequate—not to speak of being generous. Centre should raise more, wherever feasible and also by improving collection of taxes already levied and through better economy and control of expenditure and, in particular, by improving the performance of the Public Sector Undertakings in which huge funds have been invested. We would suggest that revenue deficits should be avoided but over-all deficit financing may not be totally avoidable. However, it should be kept within reasonable limits contain and control its inflationary impact on the economy.

5.5 Presently, the devolution of resources from the Centre to the States takes place—

(i) Through the channels of the Finance Commission,

(ii) Through the channels of the Planning Commission, and

(iii) Through discretionary transfers in the shape of Central sector schemes and Centrally Sponsored Schemes implemented by different union ministries.

The fact that the relatively under-developed States continue to be less developed and inter-regional disparities seem to be on the increase even after 35 years of planning, is a definite indication that the present scheme of transfer of resources has not been effective in bridging the gap in resources between the poorer and the richer States. We would like the Commission to consider the following alternative scheme of resource transfer.

(a) Transfer through Finance Commission—The approach of the successive Finance Commissions has been to devise formulate for sharing of union taxes and duties by the States without any reference to their resource needs. As a result of this, the developed States, with richer resource bases, which could meet all their requirement of funds for committed non-plan expenditure from their own resources alone or, perhaps, with a limited help from the Centre, have been left with huge surpluses on their non-plan revenue accounts, after receiving their shares in the union taxes in accordance with these formulae. At the same time, the poorer States, with meagre resource bases, whose own revenue fall far short of their non-plan requirement, are left with deficits in their non-plan revenue account even after receiving their shares in the central taxes in accordance with the tax-sharing formulae. The Finance Commission do only bridge this gap through grants-in-aid and leave these States with a zero deficit. This has resulted in a situation where the richer States have been left with huge surpluses from their current revenues for financing their plan outlays while the poorer States have been left with no surpluses at all. In fact, after the non-plan capital disbursements and the additional liabilities on account of the sanction of ADA to the Government employees have been accounted for, these States are left with large deficits on their revenue account which is to be first met from the borrowings and the additional resources raised for the plans, before any provision can actually be made for their plans.

We suggest a departure from this essentially negative approach of bridging only the deficit in a State's non-Plan resources through grants-in-aid without any regard to the State's need for resources to finance its development plans. We suggest that this approach adopted by successive Finance Commissions, hither-to should be discontinued and a more positive view of the State's resource needs be taken. The awards of the Finance Commission should be such that the poorer States as well as the richer ones would be left with some positive surpluses from their current revenues, after meeting all their committed liabilities, for providing the essential administrative services, so that this could form the core for financing their development plans. In fact, it should strive to ensure that the per capita surplus available from current revenues, should, more or less, be equal for all States. The guiding principles of the alternatives scheme of devolution and grant-in-aid, suggested by us, would be the following :—

(i) States which would be found to have deficits in their non-plan revenue accounts even after receiving their shares from income-tax, additional excise duties and estate duty should be first paid sums from the divisible pool of the union excise duties necessary to bring them to the level of a zero deficit. The remaining portion of the divisible pool of the union excise duty may be distributed among the States on the basis of a uniform formula of devolution. The detailed picture of such a formula has been indicated by us in our answer to Question No. 5.12. This would alone reverse the present situation in which the richer states are flushed with funds while the poorer states received enough grants-in-aid from the centre just to bridge the gap in there non-plan revenue account and are left with no surpluses for financing their development plans. Instead, now, each State would have enough to meet its non-plan liabilities and some surplus to meet any unforeseen expenditure and to form the core of its resources for financing its development plans.

(ii) Grants-in-aid under article 275(1) of the Constitution should be made available to the States in need of improvements of the standards of administration and essential services in specific sectors so as to bring these around the national norm. Grants-in-aid should also be available for financing relief expenditure. Our detailed suggestions, in this regard, have been given in our answer to question no. 5.13 and 5.28.

(iii) We also feel that the assumption of price stability made by successive Finance Commissions is not realistic and this fact has been proved by continuous rise in the price level over the past 35 years. We would suggest that all States grant ADA to their employees more or less in keeping with the Centre. Since the Central Government alone has any control over the prices and changes in the price level necessitating the sanction of A.D.A. are directly or indirectly the results of policies followed by the Central Government, such as deficit financing credit expansion, etc., the additional liability on the State Governments on account of sanction of A.D.A. should be borne by the Centre. Grants-in-aid should be sanctioned in favour of the State Governments annually on the basis of actual requirements towards A.D.A.

(iv) The Finance Commissions have also often assumed receipts from certain heads while re-assessing the revenue forecasts of the State Governments which never materialise in reality, This creates a problem for the deficit states. This practice should, as far as practicable be avoided by the Finance Commissions in future.

(b) **Devolution through the Planning Commission**—The level of central assistance for the state plans is presently determined in accordance with the Gadgil formula as revised from time to time. We feel that there is a strong case for reviewing the present arrangment based on Gadgil formula as it is out of alignment with the emerging needs of our times. The Planning Commission's review and adjustment of outlay and central assistance for each year have become mechanised arithmetical exercises of late. In order to reduce inter-regional disparities, it is imperative that the planning authority should be guided by the investment needs of a State for generating a rate of growth which will bring it at par with the rest of the country within a reasonable time-frame. This is not feasible in any formula bound situation. We, therefore, suggest a more positive approach towards allocation of central assistance for planned development of different States according to which the Central assistance receivable by a State for its plan would not be determined in terms of any rigid formula; but solely by the required level of investment dictated as per a global perspective plan formulated by the Planning Commission aiming at progressive reduction in regional inequalities along with a desired rate of growth in the national economy. Evidently, to make such an arrangement work complete impartiality on the part of the Planning Commission will have to be ensured. We also feel that the present mode of central assistance which constitutes 70 per cent of loan and 30 per cent grant, creates heavy loan repayment burdens for the State Governments and, in effect, results in much lower net assistance from the Centre. This question has been discussed in detail by us in our answer to question No. 5.17. We would suggest that the central assistance should consist of 30 per cent loan only and the balance 70 per cent as grant.

(c) **Transfer of Resources through Central Sector and Centrally sponsored Schemes**—The allocations of resources between the States under different Central Sector Schemes and Centrally-sponsored plan Schemes should be such as to augment the level of investment in the less-developed areas so that the pace of development in the backward areas would be speeded up and these can catch up with the more developed states faster. The transfers under Central Sector Schemes and Centrally Sponsored Plan Schemes should supplement the State's plan assistance in this sense. The Planning Commission, while determining the levels of outlays in different Central Plan and Centrally Sponsored Plan Schemes should also, therefore, determine the state-wise allocations. Any factors such as matching contributions of State Governments etc., which would interfere with the freedom of Planning Commission in this regard should be done away with. We are of the view that this basic change in the approach in the transfer of resources from the Centre to the States is necessary if the less-developed States are to catch up with the economically advanced States of the Union within a reasonable time horizon. This should deserve adequate attention of the Commission. Unless a departure in this direction is made, no formula of tax-sharing or plan transfers etc., would be of more than marginal help.

5.6 The creation of a special federal fund for the economically under-developed areas is not felt necessary in our country. The problem of regional inequalities and imbalances can be suitably tackled within the existing institutional frame work for planning. The real need is for making more intensive outlays on infra structure development and income-generating schemes in selected areas which can be easily ensured by devising appropriate Area Development Sub-Plans within the over-all frame work of the State's and Centres Plans.

5.7 The principles stated in the question would appear to be sound and do not call for any alteration. However, a larger divisible pool is to be the objective within the existing scheme of statutory devolutions by bringing into the pool those legitimate items of resource which, by some mechanism or other, have been kept out of it. (Also, please see reply to Question 5.2).

5.8 We agree that there should not be a fragmentary approach to taxes. However, taxes can be imposed only through legislation and it is a basic and un-alterable feature of our Constitution that this power vests only with the Parliament or the State Legislatures. The respective legislative bodies alone are competent to make laws imposing taxes. A Committee of Finance Ministers exercisin

control over the legislative powers of the Parliament would be incongruous and inconsistent with the basic features of our Constitution. However, we can agree that, on a selection basis, some of the items for taxation at present included in State List could be considered for being regulated by the Centre as has been agreed to by us in case of Sales Tax being substituted by a Central Levy (Excise) subject to certain guarantees and safeguards being built in to the arrangements.

5.9 We do not agree with the approach suggested, as we do not consider it to be a feasible proposition to have a single body.

We suggest the following alternative mechanism for transfer of resources for meeting the plan and non-plan expenditure :—

(a) The Finance Commission should continue to exist and function as before, and its recommendations should take care of the non-plan needs.

(b) There should also be a Planning Commission to guide about the choice of technique, investment criteria, Project formulation etc. It may decide upon resource transfer from Centre to States for financing plan outlays.

(c) There should be effective co-ordination between Planning Commission and Finance Commission. In our suggestion, the Central assistance receivable by a State for its Plan would not be determined by any rigid formula but would be taken solely by the required level of requirement dictated by perspective plan formulated by the Planning Commission for the States in order to bring it at par with the rest of the country within a given time-frame. Such schemes, as involve matching contribution by the State Governments should not be encouraged as they tend to distort the allocation of resources worked out by the Planning Commission. Devolution of plan assistance to the States should not be done in a formal mechanical way but should be determined on the basis of State's need for capital outlay for generating a certain rate of growth.

5.10 & 5.11 So far as transfer of resources on the advice of successive Finance Commission is concerned, we feel that each succeeding Finance Commission has adopted a more and more normative approach for forecasting the expenditure of States; this in our opinion has contributed substantially to an inbuilt incentive for the State Governments to promote efficiency and economy in expenditure on the one hand and narrow down the disparity in public expenditure among the States on the other. The schemes of upgradation of standards of administration recommended by the Finance Commissions have also been very useful in narrowing down the disparity in the quality of administrative service of the different States. We do hope the future Finance Commissions would be more normative in their approach so that this tendency will further be strengthened. Also the adoption of a normative approach in assessing the expenditure requirement of different States have an inbuilt disincentive against financial indiscipline on the part of the State Govts and against adoption of populist measures resulting in revenue loss and inessential expenditure. Such a normative approach would also make exaggerated revenue deficit forecasts made by the states meaningless and a tendency would develop in the State Governments not only to effect efficiency and economy in expenditure but also to project their actual requirement to the Finance Commission. However, so far as transfers under the advice of the Planning Commission is cocerned, we feel that it has been done on the basis of distribution in terms of a general formula of a certain amount made available by the Union Finance Ministry to the Planning Commission ignoring by and large the specific needs for development. As recommended by us earlier, a set of objective criteria should be evolved and applied for transfer of resource under central plan assistance for state plan keeping in view the perspective plan drawn up by the Planning Commission for the development of the state need for removal of regional disparities.

5.12 We agree with the Seventh Finance Commission's proposal on effecting bulk of the resource transfers through tax sharing and attaching only a supplementary role to the grants-in-aid under Article 275(1) of the Constitution. The Scheme of devolution should be so formulated as to help closing all the gap between the developed and less-developed states, at the same time leaving enough resources with the Centre. The states having deficit in their non-plan revenue accounts after getting their shares from income-tax, additional excise duties, estate duty, grants-in-view of tax of Railway fares and grants against wealth taxes on agricultural property should be first paid from the divisible pool of the Union excise duties necessary to bring them to the level of zero deficit.

The uniform formula of devolution may have the following features :—

(i) Percentage of the population to the total population of all States;

(ii) Percentage of scheduled caste and scheduled tribe population of a State to the total of such population of all States;

(iii) Inverse ratio of the per capita State domestic product.

(iv) Inverse ratio of per capita household consumption of each State.

5.13 We feel that the role of grant-in-aid should be limited only to be made as correctives intended to narrow the disparity in the field of various administrative and social services between the developed and the less-developed states, the objective being to endeavour to assure certain basic national minimum standards of such services in the country irrespective of state boundaries. Grant-in-aid may also be given to individual States, as has been done by the Eighth Finance Commission, to enable them to meet special burdens on their finances because of their peculiar circumstances or matters of national concern. The role of grant-in-aid for bridging the deficit in revenue accounts of the State Government as has been the past practice should, however, be discontinued. As stated in our reply to the Question No. 12 above, this should be the first charge on the divisible pool on union excise duty.

5.14 We feel, the Special Bearer Bond schemes are in lieu of taxes which could have been collected and shared with States and as such, the entire proceeds have to be shared with the States.

As regards administered prices of petroleum, coal etc., there is justification for bringing the revenue accruing there from into the divisible pool as explained below :

Revenue from excise duties is shared between the Centre and the States. But, of late, the Centre by raising the prices of products of public sector undertakings is able to raise resources for itself and the States, who would have benefited also if excise duties had been levied, are deprived of the additional resources. Since the States are deprived of revenue by the administered prices, it is reasonable that the revenue obtained by the Centre thereby should form part of the divisible pool. Further, we would like to point out that since these items are liable to pay royalty to the State Governments, we feel that is unfair to peg the rates of royalty down for four years while effecting changes in the consumer price of these commodities more often. We would advocate that the rates of royalty of these items should be linked to the administered prices as a fixed percentage so that these would be subject to automatic revision as and when the prices are revised upwards and the State will automatically get a share in the additional resources accruing to the Centre as a result of revision of these prices.

5.15 At present, there is concentration of savings through nationalised banks and central financial institutions, such as LIC, GIC, IDBI, IFCI, NABARD etc., and there are no institutional arrangements through which the States can express themselves regarding the policies and working of these institutions (on whom depend wholly), investment in agriculture, industry, housing, water-supply and urban infrastructure all of which are vital to the development of each State. The link between local savings and local investments have been snapped with consequent deleterious effects on both. Further, there has been, as already stated, decline in the State's share of total public sector resources and a large portion of this decline is accounted for by decrease in the transfer of capital resources from the Centre to the States. It is necessary to correct this trend in the interest of the finances of the State and needs of development. We strongly feel that savings of both the public and private sectors should be drafted for public purposes as we have adopted the philosophy of planned economic development. The proportion of total national savings, which should be deployed for the plan, is a matter which should be decided on the basis of national policy considerations by the N. D. C. One aspect of the distribution between the Centre and the States which needs a second look, is that a larger flow of savings should be in favour of the States as a proportion of the total aggregate capital receipts of the Centre.

Also, the criterion of credit-deposit ratio used now for allocation of funds for lending in different States by the nationalised banks is not appropriate. Credit-deposit ratio may be utilised as a norm for planning each individual bank's lending activities in the country as a whole. The allocations of credit to a particular State should be made on the basis of the credit needs and absorption capacity of the State within the broader plan perspective. Of course, prudence should be observed to ensure recovery of the loans advanced by the Banks.

5.16 It is a fact that most of the States suffer on account of growing indebtedness and over-draft problems in view of the fact that they do not have elastic resources of revenue. Repayment of loans has also become a major burden of the States.

5.17 Observations of the A. R. C. Team would appear to have continued validity. Periodical review of indebtedness and re-scheduling cannot be a permanent solution. Despite re-scheduling and write-off, the State Government contracts huge accounts of loan as a part of the central assistance and bears a huge burden of repayment liabilities much above the levels fixed by the Finance Commission. Statement showing the repayment, liabilities against the central loans is enclosed. We would suggest that the grant of the central loan ratio in the plan assistance should be reversed and 70 per cent of this should constitute grants and 30 per cent loans, particularly in case of the poorer States.

5.18 We do not feel that the freedom of the states to incur public debt has been restricted unduly in the existing system.

5.19 Additional central assistance given by the Centre to the State for funding externally-aided projects should not be viewed in isolation from the overall central assistance of the plans. In view of this, charging the same rate of interest on the additional central assistance given for externally-aided projects as on plan loans should not be construed unjustified.

5.20 We find the working of the R. B. I. quite satisfactory and the constitution of a separate Loans Council on the Australian pattern is not felt necessary.

5.21 The major factors contributory to this situation are :

(1) In case of those States which do not have sufficient revenue surplus as a result of the recommendation of the Finance Commission, it is found that while the requirement of funds increases with the progress of schemes and the rising costs during the plan period, there is substantial erosion in their resources on account of grant of instalments of dearness allowance and other items of expenditure related to rise in costs. Since there is no corresponding increase in assistance for the state plan, the State's resources are squeezed between the increased, demand both on the non-plan and plan sides leading to a situation where overdraft becomes inevitable. The situation is aggravated as within the State itself it is found that generally returns from Road Transport, State Electricity Board or other Public Sector Undertakings do not show much improvement indeed in some case deteriorate. Further, at times during the course of a plan period, State Governments are compelled to include/treat new schemes as plan schemes.

(2) A considerable part of the Centrally sponsored/sector schemes externally assisted schemes, etc., is released towards the later part of the year though it must be admitted, some improvement in this respect has been registered recently as payment in instalments are being made.

As regards, remedies, it is suggested :—

(a) that fixation and distribution of central assistance for state plans should be completely revised;

(b) that for Centrally sponsored/Sector etc., Schemes, instead of expenditure being first incurred by the State and then reimbursed, quarterly advances of the total expenditure provided in the budget should be given to State Government and adjusted against actual expenditure incurred on the basis of certificates received by the concerned State Governments;

(c) Since grant of instalments of dearness allowance causes greatest upset and the main reason for granting instalments of D. A. is rise in the cost of living as result of inflationary forces operating in the economy for which Central Government is responsible being in charge of price situation, the expenditure incurred by the State Government on this account should be covered by the Centre by Grants-in-aid each year;

(d) The State Government, on their part should not add any new schemes to the Plan during the plan period. Also, they should make all out effort to raise the estimated receipts for Road Transport, State Electricity Board, Public Sector Undertakings and see that there is no deterioration in revenue from these sources.

5.22 We feel that our State Government has done whatever was possible for exploiting the difference sources of the revenue for mobilisation of additional resources for the Plans.

5.23 We do not subscribe to these views. However, there is need for continued efforts on the part of the Central Government to assess the collection of revenue from all the items falling within its jurisdiction and also for increasing the contribution from the Public Sector by improving its efficiency. To illustrate, circulation of what is labelled as unaccounted money in the economy in the country is sufficient evidence of leakages occurring in the system. Surplus generated by the Public Sector Undertakings, at present, leave much to be desired. A pragmatic taxation system and a more business like approach for the public sector undertakings, which are not burdened by a large component of social service/obligation, would appear to be the remedy.

5.24 Yes; It will be a healthy convention.

5.25 We agree with the views expressed in this regard by the 8th Finance Commission that there is no large scope for raising additional revenues by exploiting Article 269 of the Constitution.

5.26 Since the 8th Finance Commission have recommended an increase and the Union Government have accepted this recommendation, we have no further comments to make.

5.27 No Comments.

5.28 Provision of Central assistance to the States for dealing with natural calamities has two major lacunae :—

(a) 25% of the expenditure in cases of the margin money has to be borne by the state Government in case of floods and cyclones. This invariably creates a deficit in the State Government's account. we suggest that expenditure on repair, restoration etc., necessitated by the floods or cyclone should be entirely borne by the Centre.

(b) expenditure on drought relief is now conceived as plan expenditure and is covered by advanced plan assistance which is recovered in subsequent years. We suggest that suitable drought control and amelioration schemes as well as employment generating works in drought-affected areas should be covered fully by grants from the Centre.

5.29 We do not feel the need of any such institutions. Our existing institutions take care of all these tasks.

5.30 It is to general a statement to call for specific comments. However, we do not fully subscribe to the view that it does not matter who collects the fund and how the funds are distributed to us. These are very material issues and more so is how the funds are utilised. Prudent deployment of funds is the sine qua non if any system of financial management whether it is by the Centre or by the States. This, however, does not militate against the basic proposition that the weaker states should have adequate resources to carry out the various responsibilities assigned to them.

5.31 We do not agree with the statement (a) or (b) and we do not feel the need for such a machinery.

5.32 The role of the Comptroller and Auditor General and the procedure prescribed by the Articles 150 and 151 of the Constitution are not likely to create any operational problems. However, we find that the present form of National accounts makes it possible to have a comparable set of accounts for all States and therefore, should continue. Some improvements in accounts were made in 1970.

In view of the fast-changing needs of Development and Government, however, it is necessary that form of accounts is reviewed and, if necessary revised every five years. The method of preparation of accounts should also be studied and modernised. At present it is not possible for state Government to have any effective system of financial control, as the figures are available after 3/4 months, despite the fact that prescribed time-limit is 1/2 months. Even the figures of cash balance reported by the RBI for any particular day do not reflect the actual position. They reflect the partial position of receipts

and expenditure over a period of 20/25 days preceding. We also suggest that the C & A. G. may be relieved of the responsibility of maintenance of accounts of State and this process is completed in 7th Plan.

5.33 Although the present system of audit relies heavily on voucher audit evaluation audit has of late been taken up by the A. G. In many important schemes, evaluation or performance is assessed. But voucher audit cannot be completely dispensed with as it is the basis of audit for unearthing irregularity of expenditure, misappropriation etc. Further, proper evaluation audit will be possible only if performance budgeting introduced in all Departments/activities where work can be reasonably quantified. Hence, the present system of voucher audit should be supplemented by evalution audit in major departments of Government.

5.34 Under the provisions of Section 13 of Comptroller & Auditor General of India's (Duties) Functions and Conditions of Service Act of 1971, it shall be duty of the C. & A. G. to audit all expenditure from the Consolidated Fund and all transactions from the Contingency Fund and Public Account. Under Section 14 of the Act the C. & A. G. shall audit all receipts and expenditure of anybody which is substantially financed by grants or loans from the Consolidated Fund. "Substantially financed" has been defined as not less than Rs. 5 lakhs or not less than 75% of the total expenditure. There are many autonomous bodies like registered societies or those set up under separate law like Universities or those directly administered by Government which are either entirely or partly financed by Government which are completely outside the scope of audit by the C. & A. G. It is suggested that all bodies which are fully or partly financed by Government with investment not less than 75% of the total expenditure with a minimum of Rs. 25 lakhs should be brought under the purview of audit by the C. & A. G.

5.35 The Audit Report presented by the C. & A. G. consists of the following :—

(1) Audit Report on civil expenditure.

(2) Audit Report (Revenue Receipts)

(3) Appropriation Accounts.

(4) Finance Accounts.

(5) Accounts relating to commercial establishments.

The reports contain fairly accurate data as these are generally based on the written documents and discussions with the officers concerned Regarding Appropriation Accounts there is, however, considerable scope for improvement in reconciling the accounts as well as in the procedure for booking of expenditure under Works and Purchase through the operation of Suspense Accounts. At present Accounts are not sufficiently accurate in these matters as they do not reflect the correct position at a given time. The improvement in this direction would involve modernisation through computerisation. Regarding comprehensiveness of the reports, it may be stated that these reports contain only such items which come to the notice of audit in course of Test Audit. Although the entire system is analysed by audit, yet there might be many items of commissions and omissions which may not be included in the Audit Report. Further, in case of big project, audit points out only a few items of lapses/default and does not give a comprehensive picture regarding performance, review and achievements. In case of commercial under takings/projects detailed commercial review analysing the profitability or commercial viability is not made. The standard of audit would improve substantially if these aspects are taken into consideration.

5.36 In a democracy the Legislature and its Committees are the ultimate authorities to sanction and control expenditure. Although the Public Accounts Committee of the Union or State only examines individual cases of lapses and default that are pointed out in the audit report of the C. & A.G., this is not a sufficient check to ensure proper control over expenditure which really lies with the various authorities like the Drawing and Disbursing Officers, the Controlling Office or the Head of Department, the Administrative Department and the Finance Department. Unless these agencies from the bottom to top co-operate in observing the rules and norms of financial control, merely pointing out a few cases of default and lapses by the C. & A.G. will not work. It is, therefore suggested that for ensuring financial control these various authorities should observe the financial norms meticulously and serious cases of lapses pointed out by the C. & A.G. will be discussed by the Public Accounts Committee for taking appropriate action to curb their recurrence. The Committee also can raise basic issues such as the usual growth in expenditure of certain items in their reports instead of confining themselves to only the points raised by the C. & A.G. as indeed has been done in some cases both by the Public Accounts Committee at the Centre and in the States.

5.37 It is true that the Estimates Committee can advise the Government on matters necessary for improvement in the existing policy and programmes. But experience has shown that this Committee has not been able to give valuable suggestions in this regard, as the members generally do not possess necessary experience and expertise. It is, therefore, suggested that they may co-opt experienced persons with expertise to assess them.

5.38 In our view, a separate 'Expenditure Commission for assessing the propriety of expenditure of the Union and the States is not necessary as the C. & A.G. can continue to discharge this function efficiently. Bifurcation of responsibility might reduce efficiency. Further, proliferation of checking agencies is not desirable as it may act as a hindrance to field performance.

5.39 Shifting the emphasis of check from pro-expenditure to post-expenditure stage is desirable. Plans and Schemes can be sanctioned by a general check at the pre-expenditure stage and detail check can be exercised by monitoring the progress of work and expenditure at the post-expenditure stage. Sometimes it takes a little long for the State Government to get their schemes cleared from the respective Ministries. The present time consuming process may be cut short. The Centre can ensure utilisation of funds meant for specific projects by deputing experts for field inspection in suitable cases, if necessary. It may further be pointed out that experience has shown that obtaining of the prior clearance

of the central administrative ministries in respect of details of the schemes and projects led and assisted by the Centre causes delay. This realisation has let to setting up of empowered committees at the state level to clear all schemes under the upgradation grants and provisions recommended by the 8th Finance Commission. Similar institutional arrangements may be thought of by including representatives and experts of central ministries for centrally-assisted/sponsored schemes.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The three shortcomings in planning relationship between the Centre and States have no doubt been operating but as time has elapsed and more particularly, of late, there has been more interaction/consultation/collaboration between the Centre and the States in the formulation of National Plans and respective State Plans. We will recommend the following measures to improve the present position and minimise/overcome the shortcomings noticed. The National Development Council determines the policy objectives for national planning. The Central and State plans are formulated in conformity with these objectives though in accordance with their respective priorities. The association of the Chief Ministers with the Council lends the policy objectives the commitment of the State Governments. The process of policy determination, however, also some times involves issues requiring closer scrutiny. To facilitate this, it is suggested that—

(a) officials concerned with development administration in the states may be involved in the process of policy determination for planning,

(b) the meetings of the National Development Council may be preceded or followed by the meetings at the official level.

(c) systematic follow up action may be taken on the decision of the National Development Council.

In regards to the schemes formulated by the Central ministries. it may be advantageous to associate the State Governments or at least such of them as are concerned with the schemes at the formulation stage. The Centre should have a prominent, though not dominant involvement in the determination of plan programmes. This would facilitate better understanding of the States' problems including resources. Since backward states have a narrow resource base and a large number of commitments to fulfil, the Centre may consider taking over the implementation of large projects in the States having inter-State and/or national importance from its own resources.

6.2 There may be no particular advantage in giving the National Development Council a statutory basis. This may. on the contrary, introduce inflexibility in its working Problems may also arise in providing financial resource to the States for implementing the approved schemes. Besides, the formation of an apex body with statutory powers to approve State Plans may also run counter to the principles of decentralisation. Pragmatically. a single statutory council cannot be expected to function as an inter-State Council for all States. The National Development Council should, however, evolve a working procedure which may be incorporated in a set of "Rules of Business".

6.3 In respect of State Plan Schemes, the Planning Commission ordinarily acts in consultation with the State Governments. It may, however, be desirable to associate the State Governments in the formulation of Central Plan and centrally sponsored scheme also. This would enable them to have pre-view of their resources to implement the schemes and facilitate adjustments to be made to suit the local conditions/needs. Suggestions made in reply to question 6.1 may be considered in this regard.

6.4 We are neither in favour of making the Planning Commission an autonomous body nor a purely advisory body. Nor, do we consider it practicable to include in the representatives of all States. Presently, the Planning Commission is composed of union ministers, economists, technological and management experts and it should be continued. Full functional autonomy should, however, be given to the Planning Commission in formulating the national and State plans.

6.5 As an autonomous body, the Planning Commission may not be able to act "in close understanding and consultation with the Ministries of the Central Government and the Government of the States". As planning in India, particularly in the backward State, is yet to cover a large ground, it may be useful to have a Planning Commission both with administrative and advisory functions instead of an autonomous body "overseeing planning, investment and decision making" at the national level.

6.6 National priorities are kept in view in the formulation of State Plans so that they may be conducive to the national objectives. This does not erode the autonomy of the States. As regards the scrutiny of State Plan Schemes by the Planning Commission: it has been suggested in reply to questions 6.1 and 6.3 that the Centre should play a prominent though not dominant role in the formulation of planning policies. Adoption of other suggestions made in reply to questions 6.1 and 6.3 will go a long way in securing necessary reflection of national priorities in State Plans without eroding State autonomy in any way.

6.7 Since the Planning Commission the size of the State Plan with reference to the availability to resources. there is no disadvantage in channelising Central assistance (Loans and Grants) through the Commission. However. as pointed out earlier quantum of Central Assistance to the State Plan as a whole is now fixed on an *ad hoc* basis at the instance of the Finance Ministry. This needs to be modified. as under this arrangement. while the resources of these Central Plan are increased progressively during a Plan period to offset that impact an inflation there is no corresponding increase in the Central assistance to the State Plans. We will. therefore. plead for a mechanism to be evolved to stop this erosion in States' resources for the Plan as also for inclusion of overall quantum of Central assistance to States for their plans.

6.8 The Gadgil formula for determining Central Plan assistance gives 60 per cent weightage of population, 20 per cent to backwardness and 10 per cent each to the States' tax efforts and special problems. The efforts to make the formula more progressive have not succeeded in significantly altering the State-wise shares in favour of less developed States. The Income adjusted to Total Population (IATP) formula, though more progressive, envisages proportionate shares for all States eligible for Central assistance from the allocable resources. The share of poorer States therefore, suffers diminution. Since backward States with a high incidence of population below the poverty line are in need of greater share of Central assistance, it is suggested that the Gadgil formula may be modified as follows :—

(a) tax efforts may be assessed in relation to income minus the consumptionneeds for the population below the poverty line;

(b) The weightage given to population may be reduced from 60 per cent to 50 per cent; and

(c) the weightage for per capita income below the all India average may be increased from 20 per cent to 30 per cent.

6.9 Grant of Central assistance on the basis of ITAP formula may also be discontinued in the seventh Plan. Moreover, at present in terms of Gadgil formula 30 per cent of the assistance is made in terms of grants and 70 per cent in terms of loans. This places an unduly large burden on the States. It is suggested that the formula may also be modified to provide 70 per cent of the assistance in terms of grant and 30 per cent in terms of loan as suggested by us earlier.

6.10 Introduction of a large number of Centrally sponsored schemes sometimes distorts State Plan priorities. Pre-emption of funds for externally aided projects also accentuates the problem. To enable the State Governments to fix their Plan priority *vis-a-vis* Central Sector Schemes, it would be useful if all Centrally sponsored and Central Plan programmes are put forward and taken into account at the commencement of the Plan. Introduction of new Central Sector Schemes during the Plan period may be discouraged. Since Central Sector Schemes are intended mainly to achieve National objectives, it is also proper that they are fully funded from the Central resources leaving the slender resources of the State Governments to be utilised for other schemes.

6.11 The monitoring machineries in the Planning Commission and the States need strengthening. Though guidelines are issued by the Planning Commission from time to time, they are not adopted by the States uniformly. In view of the varying levels of development in the States, it is necessary that, for effective monitoring, guidelines on methodology and organisation are provided for different levels. Inadequacies in monitoring at the lower levels also need to be removed. As a large number of small programmes are executed by various field agencies, the emphasis generally due to the inadequacy of staff, is more on implementation than on monitoring and review. The assistance and directions received from the Planning Commission from time to time help the monitoring process at the State level but a gap still remains to be filled in respect of the monitoring requirements and the sub-state levels. Consolidated progress reports received from the sub-state levels do not generally reveal the items requiring monitoring and review. In the circumstances, it would be useful if scheme-wise guidelines are made available by the Planning Commission for monitoring and evaluation of Plan programmes in different States in accordance with their needs. Training at the State level should also be strengthened and organisational support provided for the sub-state levels to make monitoring and evaluation efforts more effective.

6.12 Decentralised planning is essential for balanced regional development. One of the main constraints for decentralised planning has been the scarcity of resources. Suggestions with regard to the devolution of Central assistance for improving the States, resources have been made in the replies to Q. 6.8 and 6.9. The difficulties in locating adequate funds for State Plan Schemes in view of the implementation of a large number of central sector and externally aided schemes have also been pointd out in reply to Q. 6.10. To remove the existing constraints, it is suggested that—

(a) plan policies may be formulated keeping the resources angle in view and plan programmes may be backed by adequate resources support. This would need re-orientation of the formula based resource allocation arrangements to the States,

(b) in the National Development Council and other official groups of participant states, a broad agreement should be reached in regard to the Central priorities and the sources of resources support. In the other sectors, the States initiative may be supported after mutual discussion,

(c) Decentralised planning in the States should be looked after by the States and adequate financial support may be provided for the purpose.

6.13 State Planning Boards in different States have grown and developed differently. However, as the State Planning Boards gain an experience, the National Plans would become progressively more indicating and less imperative. However, the time has not yet arrived when we can say that an indicating National Plan can be held and the role of the Planning Commission and Central Ministries in formulating the State Plan can be reduced to minimum. Indeed, in a mixed economy like ours, National Plan would have both imperative and indicating features depending upon which sector of the economy and which major projects are dealt with.

PART VII

MISCELLANEOUS

7.1 The Industries (Development and Regulation) Act, 1951 was enacted by the Parliament pursuant to the policy objectives enunciated in the Industrial Policy Resolution dated 6th April, 1948. It has been amended from time to time keeping in view the changes in the policy objectives of Government of India as announced from time to time in Industrial Policy

Resolutions of 1956, 1970, 1973, 1980 and 1981. These Policy resolutions have taken into account the Plan objectives particularly those with regard to correction of regional imbalances through preferential development of industrially backward areas and promotion of economic federalism through an equitable spread of investments and establishment of nucleus plants linked to major ancilliarisation programme. The licencing system introduced by the aforesaid Act has to be seen in this context as an instrument of dispersal of industries so as to correct the regional Imbalances which had developed on account of concentration of industries in a few selected metropolitan centres. Prior to independence there was no industrialisation of the State of Orissa and even now it continues to be industrially backward in spite of the investments made in the Central sector projects and the liberal incentives offered both by the State and Central Governments to promote industries in the backward and no-industry districts. Therefore, it is necessary that the Central licencing system which is in vogue should be vigorously enforced with a view to ensuring flow of industries both in the public and private sectors to the backward regions. We therefore, do not agree that through amendments to the First Schedule, the basic constitutional scheme has been subverted. According to item 52, List I, Parliament has powers to legislate in respect of all industries, the control of which by the Union is declared by the Parliament by law to be expedient in the public interest. Since control and regulation of most of the industries included in the First Schedule to the Industries Act, 1951, is necessary in order to achieve the plan objectives it cannot be said that such regulation is against the public interest.

Although we support the licensing system as envisaged in the Scheme of Industries (Development and Regulation) Act, it has to be conceded that in expanding the scope of the First Schedule of the Act and bringing in a number of insignificant items as enumerated in the questionnaire itself, a certain degree of rigidity has been introduced which has resulted in considerable delay in grounding projects. Licensing of items such as razor blades, gum, match sticks, scraps, paints, varnishes, weighing machines, sewing machines, hurricane lanterns, steel furniture, cutlery, pressure cookers, agricultural implements, bicycles, foot-wear, house-hold appliances and tools, type writers, China-ware and pottery, oil stoves, etc. could be usefully delegated to the State Governments. If necessary detailed guidelines governing the issue of licences in respect of those items could be issued by Government of India according to which the powers of State Government to license industrial units would be regulated.

Although we do not agree that the basic constitutional scheme has been subverted, we feel that in respect of consumer goods, items which usually cater to the demands of regional markets it would be better if, through amendment of the statute, the Parliament delegates the power of licensing to the State Governments.

7.2 As has been mentioned in the preceding paragraphs, the Parliament is competent to legislate in respect of all industries, the regulation of which is considered expedient in the "Public Interest". There is no mention about the "National Public Interest", anywhere in the Constitution. Therefore, in our view, there is no need to define "National Public Interest" in order to justify Parliament's competence to legislate regulating any industry. In order to implement the national objectives of planned development as incorporated in the Five-Year Plans formulated by the Planning Commission and approved by the National Development Council where States are represented, it is necessary that Parliament's legislative powers to control and regulate growth and dispersal of industries should not be limited in any way. However, as has been mentioned in our reply to question No. 7.1 most of the items and items of the nature of consumer goods which cater to the regional demands, could be deleted from the First Schedule and enlisted separately in respect of which licensing powers could be delegated to the state Government.

7.3 At present it is necessary to obtain the approval of Ministry of Industries, Government of India, in all cases where a change of location of the industrial project is involved except in respect of changes to a no-industry district. This has proved very inconvenient necessitating prolonged correspondence with Government of India and consequential delay in establishment of industrial projects. It is suggested that the State Government may be given the powers to approve such change of locations provided it is in consonance with the overall policy framework, approved by the Government of India. In other words, if a project has been approved for establishment in a backward district change of location would be permitted by the State Government to any other area.

In case of transfer of letter of intent from the original applicant to another party prior approval of Ministry of Industries, Government of India, is now required. It is suggested that this power may be given to the State Government with the stipulation that it would be exercised in accordance with the guidelines to be issued by the Government of India and provisions of NRTP Act so that the objectives of prevention of concentration of economic power as well as the other policy directives of Government of India in this regard are not lost sight of.

Recently, administrative Ministries in Government of India have been delegated with powers in the matter of foreign collaboration for certain items. It is suggested that the same powers may be given to the State Government to sanction foreign collaboration arrangements in respect of the industrial projects of the respective States. These powers are to be exercised under the guidelines to be issued by Government of India for the purpose. Considerable delay is experienced at present to obtain central clearance regarding capital issue, import of capital goods and raw materials. The powers of clearing proposals for capital issue, which at present, are being exercised by the controller of capital issues, could be delegated to the State Governments to be exercised under the over-all limit to be fixed for each State by Government of India. Alternatively, regional offices may be set up with full powers to expedite clearance of all proposals for capital issue. Since detailed guidelines regarding import of capital goods and raw materials are available, it is suggested that the powers to clear specific proposals for import

of such items could be usefully delegated to the State Governments. Such delegation would enable the State Government and the State promotion agencies to expeditiously clear all industrial projects while ensuring compliance with the national guidelines to be issued by Government of India in this regard.

Alternatively, regional Boards may be set up with representation from the States coming within the regional zone with full powers to clear all the proposals regarding import of capital goods and raw materials as well as foreign collaboration.

7.4. A number of steps have been taken by the State Government to extend support to small, tiny and artisan sectors. Particularly artisans working in handloom, leather goods, handicrafts have been organised into co-operatives. At the district level, Multi-purpose industrial Co-operative Societies have been set up in order to assist the Primary Co-operative Societies to market their produce and get their raw material requirements. These, in fact, have been linked into state level co-operatives. Raw material banks have also been set up at places where there is concentration of artisans in specific lines. The Small Industries Corporation also looks into the raw material and marketing needs of the industries in the small sector. In spite of this, the fact remains that these organisations have not been able to cover all the artisans and entreprenuers in the small, tiny and village sectors, nor have they functionally stabilised themselves as an alternative to open market operations. It is necessary that Government of India should come forward with special assistance grants to stabilise these co-operatives. The National level institutions engaged in the field of research and development should take the initiative in finding out appropriate technologies for the traditional craft which, besides, removing drudgery, would ensure better quality product, higher productivity and at the same time should not prove too labour displacing. Therefore, transfer of technology is an important area where the central agencies should come to the assitance of the state level institutions. Similarly, they can play a very important role in finding out export and all-India markets, disseminating information regarding demand trends, fashion designs and where necessary transfer of appropriate technologies.

7.5 If we evaluate the performance of the Central financing institutions, the conclusion is inescapable that relatively not much investment has been made through the financing institutions in backward regions like Orissa. The stock argument put forward in this connection is that not many applications have been made for location of industries and consequently for sanction of loans. Although of late, flow of funds from the central financing institutions have improved, they have been entirely due to the promotional efforts of the state agencies. Now-a-days, when, apart from the licencing authority, the central financing institutions also play a great role in financing of the project and, therefore, on their location it may not be out of place to suggest that they should be enjoined upon to encourage funding of projects in the industrially backward states like Orissa with greater priority. A clear policy formulation in this regard would be extremely helpful. We will strongly recommend such a policy instrument being evolved.

7.6 It is necessary that the central investments in the Public Sector are made on an objective evaluation of locational advantages of competing sites after giving necessary weightage to the objective of removing the regional imbalances and ensuring equitable spread of industries in all parts of the country. It may be mentioned here that the National Committee on Development of Backward Areas have recommended to declare Gujarat, Haryana, Tamil Nadu, Karnataka, Maharashtra, Punjab and West Bengal as industrially advanced. This recommendation may be accepted and while deciding on investments on major central industrial projects, weightage should be given to the other States, which by implication, are to be treated as industrially backward. In this context, it is suggested that the Public Investment Board of Government of India which consider all proposal in the central sector should have also representatives of the State Government short-listed for the purpose. This would ensure that the comparative advantages of all the sites are adequately highlighted by the concerned representatives of the States before the Board.

7.7. Yes. Few selected places like Bangalore, Hyderabad and Bhopal have received concentrated attention in the matter of direct central sector investments in heavy industries. It is suggested that every backward state should have one nucleus area developed for central sector investments in heavy industries like machine tools, heavy electricals, electronics development, heavy machineries and structurals, and such other industries requiring heavy investments. Sufficient weightage should be given to the backward States in the matter of allocation of such industries requiring heavy investments in the central sector.

7.8. At present, backward districts/areas and no-industry districts have been identified for various central sector incentives for promotion of industries. In case of Orissa the unit has been a district although specific area (blocks) as and when they get industrially developed are excluded from the purview of the incentive schemes. If the economy of the state is to be strengthened, it is necessary that the whole state should be declared industrially backward and special incentives which are offered for a no-industry district are made applicable to all the districts of the backward state. Of course, exception could be made in respect of certain selected, highly industrialised blocks. The National Committee on Development of Backward Areas in their report have defined all centres with a level of employment in non-household manufacturing exceeding 10,000 according to the 1971 Census as "existing industrial centres". They have defined areas which are not close to such centres on the basis of a nearness formula as industrially backward. Nearness has been defined in terms of the following out-off distance from each category of existing centres;

Level of employment in non-household manufacturing in the existing Centre	Distance
Over 150 thousand	150 Kms.
50-150 thousand	100 Kms.
25-50 thousand	75 Kms.
10-25 thousand	50 Kms.

We have supported these recommendations except that the sphere of influence of an existing industrial centre, should not be allowed to transcend the State's boundary. For example existence of Jamshedpur as an industrial centre has made no impact on growth of industries in the adjoining districts of Keonjhar and Mayurbhanj of Orissa. We had contended that the industrialising impulse of an existing centre would be confined to the territorial limits of a State where the existing centres are located. As the administrative and industrial culture differ from state to state, it would be unrealistic to expect that the neighbouring state would usefully take advantage of the industrialising impulse generated by the existing centres in other state. Therefore, the concept of the NCDBA in defining backward areas in terms of its nearness to existing centres would be useful if the sphere of influence of an existing centre is confined to the political boundaries of the existing states. In that event, except for some of the blocks in Sundargarh district where Rourkela Steel Plant has been set up the whole state of Orissa would qualify to be declared as industrially backward. The other recommendations of the Committee, to categorise states like Gujarat, Haryana, Tamil Nadu, Karnataka, Maharashtra, Punjab and West Bengal as industrially advanced, should be accepted. The remaining States which, by definition, become industrially backward, should be eligible for preferential treatment both in the matter of central subsidy, concessional finance and concessions available u/s 80 HH of the Income Tax Act. We had recommended that all these three modes of assistance *i.e.* central subsidy, concessional finance and concessions under the I. T. Act should apply in package to all the districts/areas which are declared industrially backward. The recommendaion of the Committee that the geographical coverage of the central subsidy and concessional finance should be the same as has been endorsed by us.

8.1 We are of the view that time has come when an authority as contemplated under Article 307 is set up in the country.

9.1 Central involvement in the shape of assumption of responsibility for substantive activity should be permissible since an all-India view has to be taken regarding the matter.

Some of the soil conservation programmes have inter-state bias in nature and implementation of these programmes needs heavy investment and close co-ordination. It may not be possible for the States to implement such programme independently without financial aid from the Centre. Hence, the Centres' involvement to the extent of co-ordination with other States of appreciating the nature of the problems confronted by the States and giving adequate financial aid for implementation of suitable schemes and their subsequent maintenance by way of award appears to be necessary.

9.2 We agree with the recommendation of the National Commission on Agriculture (1976) that a long term perspective be developed in which the central and centrally-sponsored scheme being implemented through the state agency ultimately form part of the State sector and that their number be kept to a minimum. However, the number of central and centrally-sponsored schemes to be implemented in a State will depend to a large extent on the nature of the problem and the financial resources of the State to tackle the same. Care should be taken to see that the new arrangement does not result in the reduction of the volume of financial assistance made available by the Centre for the implementation of various schemes in the States for development of Agriculture.

9.3 Joint Working groups under the auspices of the Planning Commission are likely to enable the States to make meaningful contributions towards shaping of the various central and centrally sponsored schemes. The Planning Commission and the Union Ministries would have the benefit of the feedback from the States and the variations which are warranted in view of the different local conditions and compulsions of the environment.

9.4 The central initiative for fixation of minimum or fair prices of agricultural items has been quite helpful and we fully support its continuance.

In case of irrigation we would suggest that in respect of projects which do not have any inter-state implication or financial assistance from abroad, the sanctioning of schemes should be left to State Governments and the present system of detailed scrutiny of all projects costing above Rs. 5 crores should be given up. However, monitoring and evaluation of projects above a certain level of costs can and should be done at the time of finalisation of the Plans and also by the central technical agencies.

As regard projects for inter-state waters, it is advantageous to retain the need for approval by central agencies. In the matter of allocation of inter-state waters, the procedure for arbitration and appointment of a tribunal are well-laid down and should be followed whenever need arises.

As regard Forestry policy and administration, earlier it was a purely state subject. Of late, however, the Central Government has stepped in a big way with the transfer of the subject to the Concurrent List and enactment of the Forest Conservation law. State Governments are required to refer even small matters pertaining to forest clearance to Central Government. It is suggested that this needs to be reviewed and considerable latitude should be given to State Government in administration of forest subject to national goals in regard to conservation of forest wealth being followed, guidelines for which should be clearly laid. As regards provision of strategic inputs including credit, the central initiatives have been adequate and we will support their continuance.

9.5 As regards the role of agricultural research through ICAR it may be pointed out that research institutions should be further strengthened through setting up of regional units and it should also enlarge the co-ordinated projects in States, involving fully the State Agricultural Universities and Research Institutions. Regarding NABARD we have no suggestion to offer.

10.1 Consultation with the States should precede the formulation of measures in the areas of pricing, storage, movement and distribution of foodgrains as well as other essential commodities. Unilateral directives, unless in the national interest, need to be avoided.

10.2 Periodical review in a forum which need not be statutory, while removing irritants, are likely to bring about greater cohesion and camaraderie between the Centre and the States.

11.1 Unnecessary centralisation and too much central interference in the initiative and authority of the State are not borne out by the experience of our State. Efforts at standardisation have, however, given rise to some difficulties at times, but most of such difficulties have been satisfactorily resolved.

By way of illustration it might be mentioned that the State Government had prepared a comprehensive Bill to substitute the existing Acts of the universities of the State. Several provisions of the existing Acts were proposed to be modified on the basis of the experience gained with the working of the provisions contained therein. The draft Bill was referred to the Central Government who made several observations presumably on the basis of a model legislation prepared by the UGC/Central Government. The State Government was of the view that the suggestions made by the UGC and the Central Government were not appropriate or were unworkable in the context of the situation prevailing in the universities of this State. After a series of discussions and correspondences, the Central Government agreed to the State Government enacting the Bill, but made certain observations for consideration of the State Government. In this context, there has been a feeling in certain circles that models prepared by the Central Government largely on the basis of the experience gained in the management of the central universities are not necessarily appropriate for the state universities and that there should not be any insistence or adherence to a central model for all state universities as well.

Financial assistance provided by the Central Government to the States is usually linked to specific schemes. In other words, the financial assistance is available only to those States which are willing to implement the centrally-sponsored schemes and to the extent the scheme is implemented. Most schemes also involve financial participation by the States at a varying rates. The centrally sponsored schemes may not necessarily conform to the educational priorities of the State. In other words, if the Central assistance were to be made available to the State Governments without being tied to a specific scheme the funds so available would not necessarily be spent by the State on that type of scheme and the State Government may then be in a position to spend the money in priority sectors. To illustrate, if funds earmarked for a particular State for introduction of Educational Television Programme were to be made available to a State without being tied to that programme, the State may well prefer to spend that amount for meeting the basic infrastructural and other deficiencies in the same sector, *i.e.* primary sector rather than on television programme.

This problem would be obviated if the Central and centrally sponsored schemes are related to the needs and priorities of the States. There is, however, a strong case for some measure of uniformity in the matter of educational facilities available in different States and educational standards at various levels. Since the State Government may not be in a position to ensure uniformity in regard to facilities for education wholly from its own resources, it is essential that the Central Government should intervene and assist the educationally backward States to come up to the level of a National minimum. It is also essential that there should be some measure of uniformity as regards the standard or levels of proficiency expected to be attained at various levels of education. The need for uniformity is particularly strong atleast at the Matriculation and Plus 2 stages. A wide divergence in the standards adopted by different States will not only impede mobility from one State to another, but also involves the risk of non-recognition of qualifications acquired in one State by the institutes of another. Since Central Government is the only agency which can ensure this, it is not only necessary for them to ensure that there is reasonable measure of uniformity in the standards of curriculum and teaching in different States atleast upto plus 2 stage, but also to help the States which have not been able to attain the minimum standard, to reach that standard.

11.2(i) The UGC grants have by and large been responsive rather than promotional in that the Commission reacts to the proposals received from the universities and colleges instead of taking initiative in assessing the requirement of universities and colleges on its own and providing assistance on the basis of the assessment. Consequently, there have been instances where low priority projects have been financed by the Commission while high priority items and basic infrastructural and other deficiencies such as deficiencies in laboratories, libraries etc. have remained unattended to.

(ii) The financial assistance given by the UGC is inequitous in that it is more munificent to the Central Universities as compared to the State Universities and affiliated Colleges which are responsible for over 83 per cent of the student enrolment. The Grants also show a wide inter-State and inter-University variation in terms of per-student average annual input.

(iii) Most of the grants sanctioned by the UGC involved matching contribution from the State Government and/or the institutions concerned. Quite a few schemes failed to get implemented because of the inability of the State and the institutions concerned to provide their share. One of the unfortunate consequences of this stipulation is that a State which has not been able to provide adequate resources to meet the basic deficiencies in colleges and universities owing to resources constraint is unable to avail of the UGC contribution and the backwardness is perpetuated.

(iv) The UGC has not taken adequate steps for promoting and encouraging introduction of courses in new and emerging areas of future manpower requirement. There has been a tendency to support and finance the existing and traditional departments rather than encouraging introduction of courses in new areas which are increasingly acquiring critical importance for future manpower needs.

(v) The inter-institutional and inter-disciplinary allocation of resources has been somewhat desperate and does not reflect any definite scheme of priority.

(vi) The field of higher education presents a picture of un-edifying contrasts. A few peaks of excellence existing in the midst of a vast plateau of substandard and subaverage institutions. There has been no conscious effort to remove this disparity.

(vii) The UGC has in the past financed the improvement in emoluments of college teachers of State Governments. However, the financial assistance has been confined to the pay only and not to DA/ADA. This throws heavy financial burden on State Budget. It is suggested that UGC while suggesting improvement in the emoluments of college teachers should cover both pay and DA/ADA by its financial assistance. It is also suggested that in undeveloped States the UGC should help in all possible ways in bringing atleast one college in every district to the ideal standard.

11.3 There should be a National Policy on education so that there would be some uniformity in educational pattern throughout the Nation and students can move from one State to another. The broad contours of this policy may be evolved by the Government of India in consultation with the State Governments and its execution and details may be left to the respective States. In actual implementation of the policy, frequent discussion and consultation between the State and the Centre should take place.

Conferences of Education Ministers and Education Secretaries of State Governments and Vice-Chancellors of the Universities are held as a regular feature. Owing to large attendance and long list of agenda items it sometimes becomes difficult to arrive at clear cut decisions. These meetings, undoubtedly serve useful purpose by providing a forum for exchanging of views, but have not been very effective in arriving at a consensus on specific issues. It would be desirable to identify specific areas where standardisation or uniformity should be aimed at and where Central intervention is considered necessary. Working groups could be appointed to make in depth study of each area in consultation with various State Governments and Universities and to present their recommendations in a high level conference of Education Ministers for acceptance and implementation.

11.4 Essentially the minorities enjoy the following rights relating to establishment and administration of educational institutions :—

(i) all minorities shall have the right to establish and administer an educational institution of their choice; and

(ii) the State shall not, in granting aid to educational institutions, discriminate against any educational institutions on the ground that it is under the management of a minority.

Certain doubts have often arisen in connection with the implementation of these constitutional rights. The relevant issues are mentioned below :—

(a) Whether the minorities have an absolute right to establish an institution of their choice even when such institutions do not conform to the normal criteria applicable to similar institutions not established or administered by the minority community. The requirement may relate to criteria such as the minimum educational qualification of teachers, provision of adequate classroom space, provision of playground and other infrastructural facilities considered essential for a school etc.

(b) Whether an institution should be treated as a minority institution even when preponderant majority of the students do not belong to minority community and when an institution has no features which would distinguish it from other educational institutions.

(c) Grant-in-aid is given to non-Government educational institutions subject to their satisfying certain conditions which include appointment of teachers, possessing the requisite minimum qualifications prescribed by Government, recruitment of teachers through the selection board, prior approval of appointments and promotions by the competent Government authority, etc. On a plain reading of the provision under Article 30(2) it would appear that minority institutions would be eligible for grant-in-aid only if they satisfy the conditions subject to which non-minority institutions are given grant-in-aid. A question that arises for consideration is whether insistence of fulfilment of such conditions would contravene the right of the minority institutions to administer educational institutions according to their choice.

(d) Whether the Government can exercise any power for the protection of the employees of the minority institutions in matters such as pay and allowances, security of service, protection against arbitrary or malafide punishment, etc.

11.5 There has not been any specific instance of conflict of issues between the Centre and the State in regard to any problem of educational programme.

12.1 Provisions in the Constitution of India are elaborate and do not leave too many grey areas to comm nd the establishment of an Advisory Commission on the U.S.A. model where the Constitution is short and has been allowed to evolve in the crucible of experience. Research of Centre-State relations on the lines taken up by the National Institute of Public Finance would be a welcome step to sort out many of the irritants.

Statement showing Repayment Liabilities against Central Loans for State Plan Schemes

(Rs. in crores)

(1)	1980-81 (Accts.) (2)	1981-82 (Actts.) (3)	1982-83 (Actts.) (4)	1983-84 (Accts.) (5)	1984-85 (B.E.) (6)

Orissa

Presentation of the case of Government of Orissa before the Commission by the Chief Minister

More than three decades ago, the people of India while giving unto themselves a Constitution had consciously exercised their choice and option in favour of a federal polity with a strong Centre in the light of our past historical experience. Arrangements made then for the governance of the country also envisaged that in times of a grave emergency the Federal Constitution of India can virtually convert itself into a unitary system. Powers were vested under the Constitution in the President of India to proclaim a financial emergency or take over the administration of a State when he was satisfied that either there was a failure of the constitutional machinery in a State or a State failed to comply with or give effect to the directions given by the Union. The considerations which persuaded the people of India to adopt a constitutional system, which was almost a radical departure from the classic model of a Federation were the preservation of the country's unity, integrity, independence and the emergence of a common/political system for the first time in the history of the nation.

The intervening years have witnessed many developments in different directions. The most significant perhaps is introduction of National Planning as an instrument of economic growth which in turn has accentuated the Centre's influence in the spheres of administration and finance. This trend may not be said to be out of tune. With the theories of federalism as it is acknowledged by contemporary constitutional experts that federal centralisation cannot be ruled out in the context of the complexities and pervasiveness of a modern Governmental system. Of late a Federation in political theory has been viewed more a "functional than an institutional concept". It is also said that "any theory which asserts that there are certain flexible characteristics without which a political system cannot be federal, ignores the fact that institutions are not the same thing in different social and cultural environments". The traditional theory of Federalism would appear to have lost much of its ground in the context of modern technological development and the responsibility cast on a national Government to deal appropriately with diverse and multi-dimensional problems facing the country and its people.

The compulsions which weighed with the people of India and the constitution makers to vote for a strong Centre more than three decades ago continue to be valid and relevant even today. The State Government while advocating for a strong Centre in the overall national interest would also urge that federal centralisation in the areas of finance, planning and administration should not be allowed to impinge on the status and position accorded to the States in the basic scheme of our Constitution. The States are closest to the people and they should be enabled to perform as many functions as are in the former's interest.

The State Government's considered views on the wideranging questionnaire circulated by the Commission in relation to administrative, developmental, financial and legislative matters have already been furnished. I wish to briefly dwell on the State Government's approach embodied in the detailed answers to the question.

We have by and large pleaded for the existing scheme of distribution of legislation powers as enumerated in the Union-State and concurrent lists to be maintained. However, the State should be made fully competent to legislate on all matters allotted by the Constitution to the State List. Certain reservations, as manifest in Article 246(1) and 246(2) open up possibility of encroachment in the State list, and it may be difficult for the State to seek judicial redress in such contingency. Therefore the alternative of deleting these provisions may be considered. Further, it is suggested that some of the legislation powers dealing with financial matters and taxation, enumerated in that list may be made free from restrictions of the Parliament, since the States have very limited area of taxation for augmenting their revenues.

As regards assumption of the powers of legislation of the State legislature by the Parliament in "National Interest" or "Public Interest" it should be, in fitness of things, purely temporary in nature and hence of very limited duration.

In regard to role of the Governor, we have held the view that the Governor is the constitutional head and the powers vested in him under Constitution are adequate to enable him to play the envisaged role. Judging by our experience, we have no instance to quote where the Governor has turned deviant from constitutional norms. We therefore, recommend no modification in the powers of the Governor, including that of reserving Bills for consideration of the President. Barring some cases of delay in obtaining the President's approval which can be overcome by alertness, we do not think that the Centre has dictated arbitrary changes in Bills reserved for assent. In order to obviate delay, a binding time-frame (within which such bills shall either be approved or reverted for re-consideration) may be built into the procedure.

Although different Governors have adopted different standards in exercising their discretionary powers, in calling or not calling leaders to form Government in an uncertain situation or in recommending or not recommending action under Article 356, such variations are only inherent in the nature of this exercise. We are therefore, of the opinion that discretionary powers should be left to be exercised by the Governor in the context of the political situation existing at any given time who should exercise them with utmost objectivity. Imposition of any written guideline will not only be not necessary it may even tend to create litigation and constitutional dead-lock.

Consistent with our basic premise that a strong Centre in our country is a historical imperative, we commend the continuation of Article 256 and 257 in the Constitution, while stating, however, that these powers should be exercised most sparingly and only to deal with extraordinary situations. Minor aberrations, if any, and other situations of dissent on the part of the States should be resolved through an appropriate institutional arrangement which will afford opportunities for debate, discussion and consultation.

In our State provisions under Article 356 have been invoked only twice during the last 35 years. While we feel that the exercise of this extraordinary remedial power has been generally appropriate, the actual episodes were not free from controversy. We, therefore, feel that necessary safeguards may be built into Article 356 to prevent recurrence of any distortion.

Disputing opinions have been expressed regarding location and use of Central force in the aid of civil power in any State. We have held the view that although the State should be allowed to play its legitimate role in the area of law and order which is a State subject, the Centre, however, cannot be disabled from acting in situations of grave emergency and threat to the integrity of the country. Ordinarily however, no central force should be deployed in any state unless requisitioned. Similarly, while broadcasting and telecasting are included in the Union List, we feel that the State should have a say in regard to their administration and programming, in view of their vital role as communication media. Further, we would

suggest that an arrangement should be provided under which States are allowed specified period of TV and Radio programmes for their own broadcast subject to central guidelines and direction.

We do not consider that it is necessary to set up an Inter-State Council to iron out Inter-State and Union-State differences as envisaged under Article 263. Besides, such a Council, if constituted, will be too large and unwieldy a body to go into these differences. We feel, it will, not be appropriate to discuss and review the disputes arising out of Constitutional obligations devolving either on the Centre or States in a Council. Instead, we would suggest that inter-State and Union-State differences should be resolved in a forum comprising of representatives from the concerned States and concerned central ministries. Any dispute which cannot be settled through such arrangement may be addressed to judicial or semi-judicial forums.

In the area of financial relations we hold the view that subject to certain modifications suggested by us in our replies to the question in Part V of the questionnaire, the scheme for devolution envisaged by the Constitution-makers has by and large worked well so far as meeting the financial needs of the State Government for providing the basic administrative services is concerned. Similarly the arrangement for closing the gap between the State's needs and their resources through sharing of Central taxes, and making available the grants-in-aid, on the basis of the recommendations of the Finance Commission, has commanded confidence of all. However, in order to stretch these arrangements to their logical conclusion a strong convention has to be established that the recommendations of the Finance Commission will also be accepted by Government of India in its entirety.

So far as the question of meeting the growing needs of the State for financing different developmental activities is concerned, we feel that the present system of resource transfer through the Planning Commission needs to be substantially improved upon. There is need, in our opinion, to lay down strict objective criteria for determining the quantum of Central assistance to States and for its suitable distribution. There is need in view of our avowed commitment to eliminate regional disparities and imbalance for a more progressive policy of resource allocation by the Central Government than has been the case hitherto. In this connection our specific suggestion in reply to questions 5.5 and 6.8 of the questionnaire may be referred to.

The fact that inter-regional disparities continue to prevail and even seem to be on the increase after 35 years of planning itself goes to show that the scheme of transfer of resources has not been effective and calls for urgent action to redress the situation. We believe that a strong Centre is necessary to promote the weaker States of the Union for equitable economic development and reduction of regional disparities. We do not, therefore, favour any large scale transfer in power of taxation from the Centre to the States as this will weaken even the present mechanism for flow of resources from richer to the poorer regions. Nor would we recommend more taxation powers to be transferred to the Centre as this will reduce the State to a position of economic dependence. However, we will strongly plead for greater devolution of resources from the Centre to the State through Finance Commission and Planning Commission. For this we feel that Centre should raise more resources within the present framework whenever feasible.

While our detailed suggestions in regard to the transfer of resources have been given in response to Part-V of the questionnaire, we will draw the attention of the Commission to the very heavy burden of indebtedness devolving upon the State Government on account of loan received by them as part of the Central assistance, leading to huge burden of repayment liabilities and interest. We feel that periodical review of indebtedness and rescheduling of repayment as has been attempted by referred the matter to Finance Commission will not provide a permanent solution, and calls for a more radical remedy. We feel that the grant of loan ratio in the plan assistance should be reserved and 70% of this should be given as grant and 30% as loans particularly to States whose per capita income is below the national average.

Besides, we would recommend that the expenditure on repair, restoration etc. necessitated by natural calamities such as floods and cyclone should be entirely borne by the Centre and expenditure on droughts should also be covered fully by Central grants instead of being treated as advance plan assistance as at present.

Payment of DA and ADA which is a function of the price situation and imposes a heavy burden on the States, should be taken into consideration, when deciding about transfer of resources to the States.

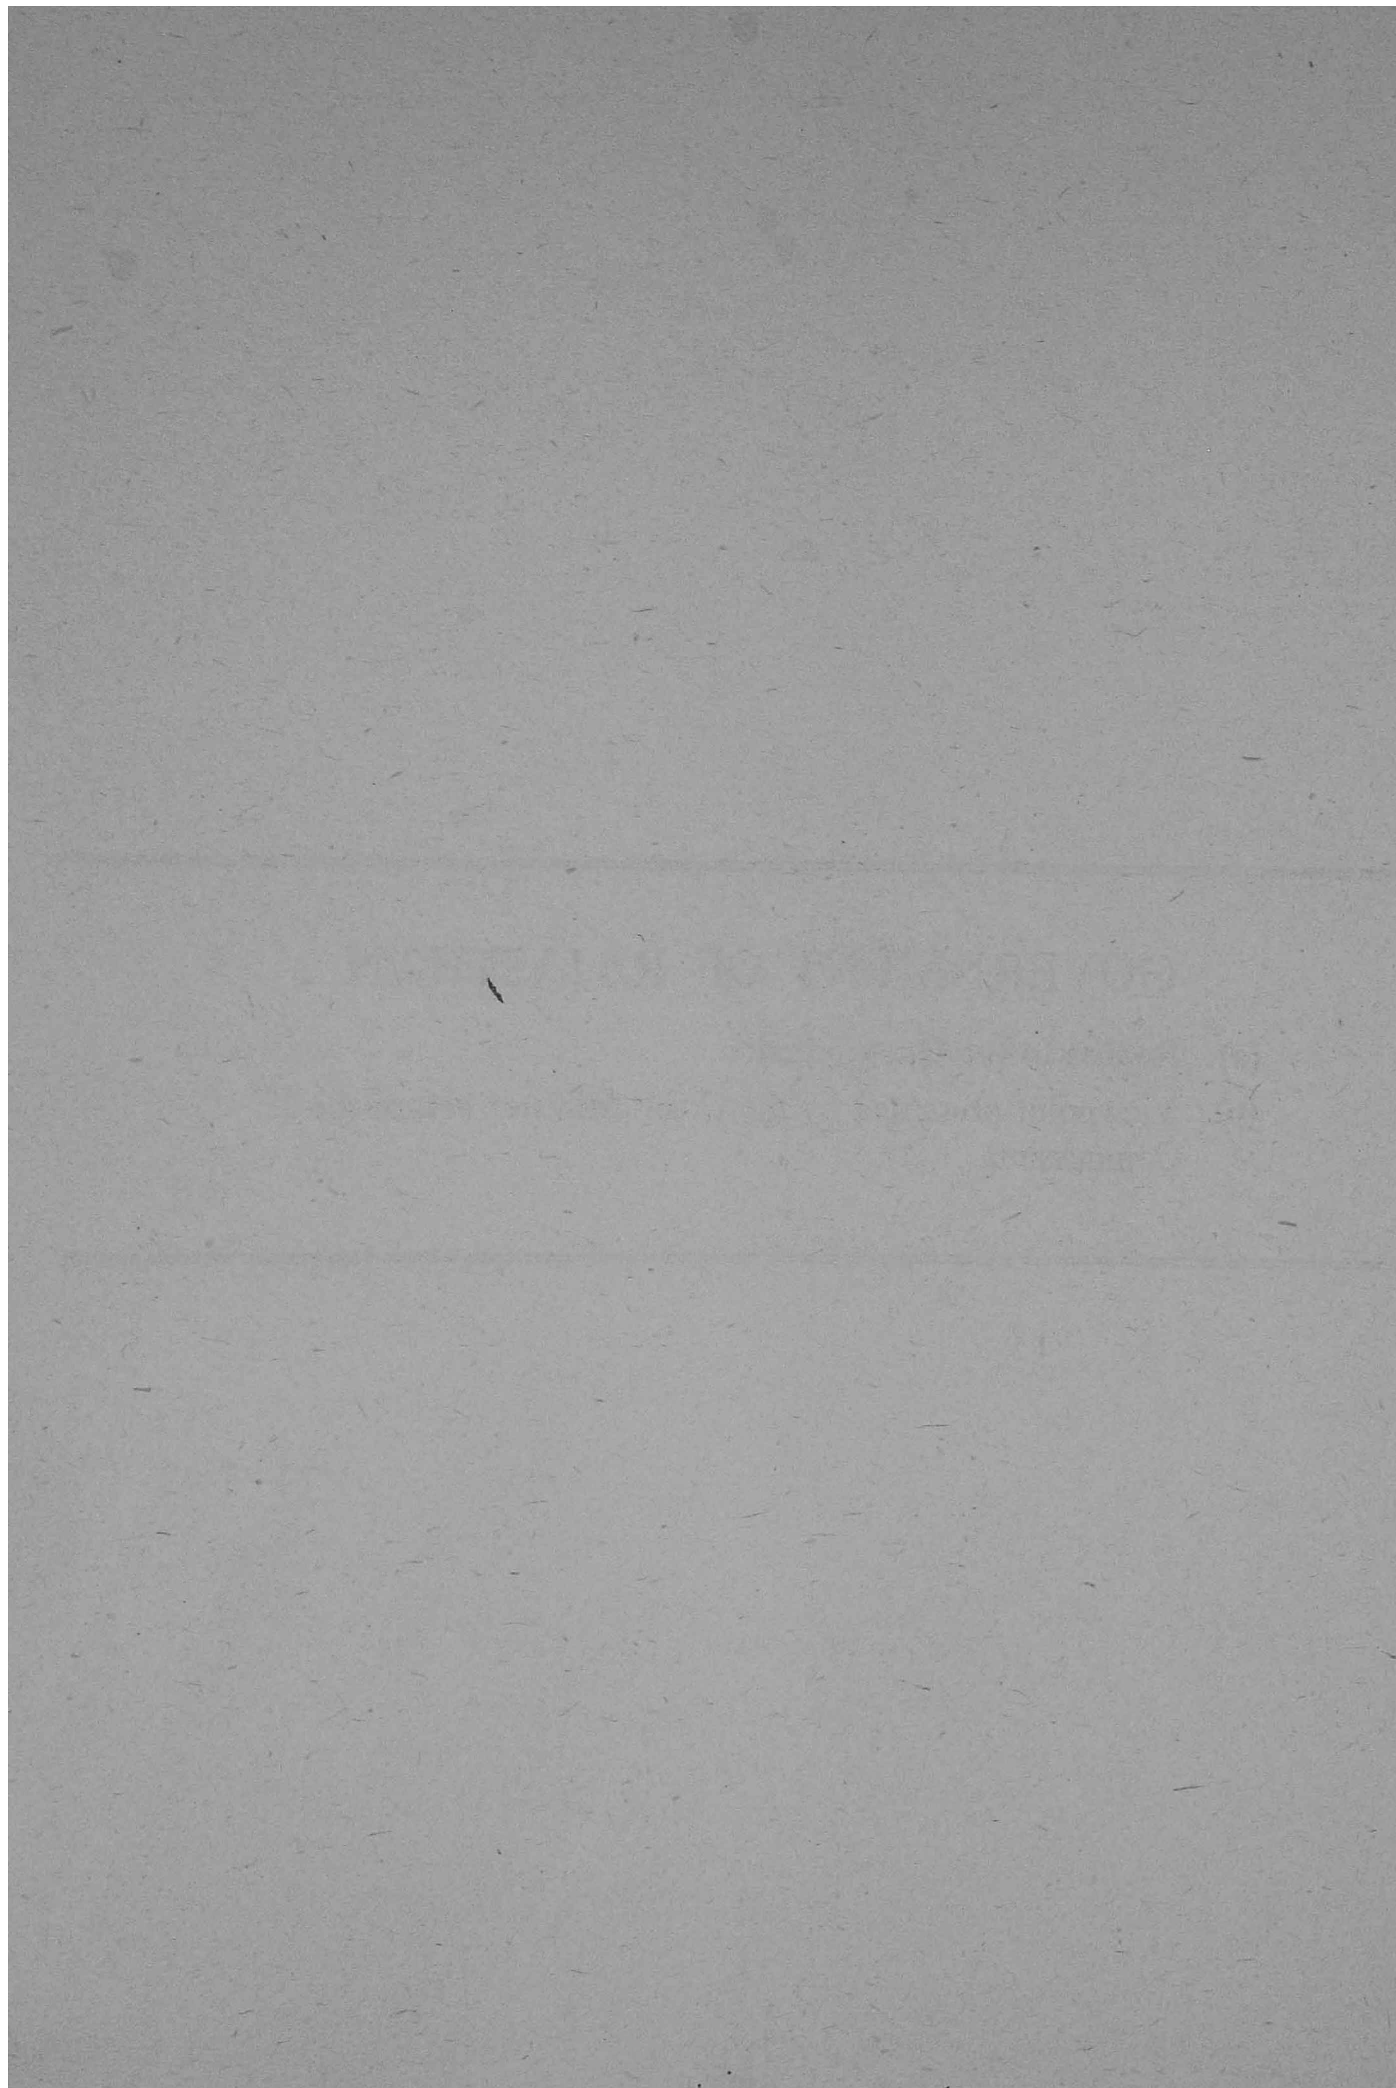
Our response to the question of economic and social planning is based on the premise that in its formulation the Centre may play an advisory role and should not un-necessarily better the State's option in the matter.

We do not advocate any major structural change in the process of Plan formulation. There is neither any particular advantage in giving the National Development Council a statutory basis nor in making the Planning Commission on autonomous, and purely advisory body. The National Development Council should, however, evolve a clear working procedure which may be incorporated in a set of Rules of Business, while Planning Commission should have a more decisive role to play in investment planning.

On the issue of channelising Central assistance, we have observed that while the resources of the Central Plan are increased progressively duirng a Plan period to offset the impact of inflation, there is no corresponding relief available to the State Plans. We will, therefore, plead for a mechanism to be evolved to stop this erosion in the State's resources as also for determination of overall quantum of Central assistance to the States.

While the norms for transfer of Plan resources should be made more progressive, it may also be realised that since Central sector schemes are intended mainly to achieve the National objectives, it is proper that they are fully funded by the Centre, leaving aside the slender resources of the State for other opportune use. Any factor such as matching contribution of the State Government which operates as a fetter on States whose per capita income is below the national level should be done away with.

The *sine quà non* of our Constitutional system is to preserve the unity and integrity of the Nation and to secure for its people in different regions the fruits of rapid and balanced development. Centre-State relations within our federal polity should be designed to subserve this goal. The larger role assigned to the Centre in different spheres of National life should be maintained.



In short we maintain that a strong Centre is essential for a just and fair growth of our nation, for removal of regional disparities and for benefiting large backward populations living in different parts of the country. The original concept of the fathers of the Constitution about a strong Centre should not be diluted in any way. At the same time there should not be any inroad into the well defined autonomy of the States and whatever aberrations have grown in the past should be removed. The unity and integrity of the nation should be held above everything else. The States should play an unfettered role to uphold the ideals of the Constitution so zealously held by our Constitution Makers.

925 ISCS/98—28B

GOVERNMENT OF RAJASTHAN

(a) Replies to the Questionnaire

(b) Viewpoint presented by the Chief Minister before the Commission.

REPLIES TO THE QUESTIONNAIRE

INTRODUCTORY

1.1 Our Constitution makers adopted what is known as the cooperative system of federation. The Chief characteristics of this system are inter-dependence and administrative cooperation between the Union and the State Government and the partial financial dependence of the latter on the former. Dr. Ambedkar in the course of his speech in the Constituent Assembly observe that "the Drafting Committee wanted to make it clear that though India was to be a federation, the federation was not the result of an agreement by the States to join in a federa ion and that the federation not being the result of an agreement, no State has the right to succeed from it". Both the Union and the States enjoy supremacy within their spheres, subject to the limits and conditions imposed by the Constitution. Residuary powers vest with the Union. One distinguishing feature is that during normal times the cooperative federal character of the Constitution prevails but in time of grave emergency it may convert itself into a unitary system.

1.2 Broadly there does not appear to be any necessity to change the provisions of Articles referred to in the question. However, it may be appropriate, if more items so to enable the States to increase their resources are also added in the State list of the Constitution.

1.3 We agree. Involvement of States be increased in activities and programmes which are of particular significance to States such as expansion of post and telegraph facilities, internal Communication, programming of radio broadcast and television transmission, licencing of industries upto a certain extent, expansion programme of railways etc.

1.4 The system as mentioned above does not exist.

1.5 In our view the Constitution is basically sound and flexible enough to meet the challenges of the changing times.

1.6 Independence, unity and integrity of the country are matters of paramount importance which should override all other considerations. Articles 249, 256, 257 and emergency provisions contained in Articles 352 to 356 and 360 as also Article 365 have been incorporated in the Constitution to achieve these objectives. Historically a weak Centre has given rise to fissiparous tendencies, on the other hand a strong Centre has held the Country together. Now that centrifugal forces and such tendencies in form of linguism, regionalism, religious separatism are rearing their heads, provisions which promote centripetal forces should not only be retained in the Constitution, but be further strengthened.

1.7 We do not propose any change.

1.8 Article 3 does not require any amendment.

PART II

LEGISLATIVE RELATIONS

2.1 There is nothing basically wrong in the scheme of distribution of legislative powers between the Union and States.

2.2 Views have been given while giving replies to the specific questions later.

2.3 Yes. The State Government should be consulted on any legislation undertaken by the Central Government on items contained in the concurrent list or amendment of Seventh Schedule of the Constitution.

2.4 Generally legislation made by Parliament on items within the exclusive jurisdiction of State should be for a prescribed period subject to review after that period is over but certain subjects should be declared of national importance and no time limit be firce for them. The Parliament has inherent power to repeal any law at any time. For example entry No. 56 in Schedule VII List I Union List may be amended to read as under :

> "Regulation and development of water and power between States where such control regulation and development under the control of the Union is declared by Parliament to be expedient in public interest". As a corollary to this amendment Article 262 will have to be amended so as to read as below:
>
> "**Article 262**—Adjudication of disputes relating to water of inter-State rivers or river valleys or basins and regarding power :
>
> (1) Parliament may by law provide for adjudication of any dispute or complaint with respect to the use, distribution or control of waters of, or in, any inter-State river; river valley or if the State or any area thereof falls in the basin of such river; and of any disputes between State regarding power."

The State is of the opinion that recent amendment in Inter-State Water Disputes Act authorising the Central Government to constitute Ravi Beas Water Tribunal is for a particular dispute only and does not cover all disputes.

In case the Commission is also examining the Anandpur Sahib Resolution (as there are no questions on this issue in the questionnaire), the State Government offers its comments as below :—

(a) Resolution No. 1 demands "the recast of Constitutional structure of the country on real and meaningful federal principles". The stand which the State Government has decided to take is that the Centre should be made stronger in the interest of national unity.

(b) Resolution No. 2(b) contains demand for "merger" in Punjab of the Punjabi speaking areas. The State Government may oppose this part as far as it may relate to some evil designs on the part of the authors of the Resolution against any area belonging to Rajasthan.

(c) Resolution No. 2(c) relating to control of Head Works and the demand that such control should be vested in Punjab is totally unacceptable and should be opposed. The demand that States Re-organisation Act (in respect of the present States of Punjab and Haryana) be amended is also to be opposed.

(d) Resolution No. 2(d) demands revision of the Award given by the late Prime Minister Shrimati Indira Gandhi on the distribution of Ravi-Beas waters and accepted by the Chief Ministers of Punjab, Haryana and Rajasthan without reservation on behalf of their States on the ground of its being allegedly "arbitrary and unjust" has to be opposed as far as Rajasthan's share is concerned.

2.5 Water and Power should be declared National Resources and only Parliament should be competent to legislate on them. This would be one of the most important steps to eliminate the fissiparious tendencies and promote the National unity and integrity; the Canals and Power lines should literally keep India bound together.

PART III

ROLE OF THE GOVERNOR

3.1 (a) The office of the Governor is meant for forging an important link between Centre and State. He represents Centre in the State. Constitution makers rightly choose Governor as powerful link between State and Centre.

(b) In our view by and large the Agency of the Governor has acted to the best of ability according to the situation then prevailing in the State.

3.2 The Governor is required to maintain balance between his two capacities *viz.* a representative of the Union Government and as constitutional head of the State. He has to maintain this balance with his impartial attitude and sound discretion. This is the only way for fostering healthy relations between the Union and State. Any tilt in the balance in favour of either of the two may adversely affect their relations.

3.3 The Governor is required to act to the best of his judgement and by and large the Governors have acted fairly and unbiasedly in exercise of powers under Articles 356(1), 164 and 174(2).

3.4 In our view the powers exercised under Articles 200 and 201 should continue to be vested with the Governor and the President of India. However, a reasonable time limit may be prescribed for assent or rejection under Article 201 of the Constitution.

3.5 We agree with the conclusion drawn from the case study made under the auspices of Indian Law Institute that the Centre does not try to dictate its policies to the State in giving Presidential assent and the process of Presidential assent has not acted as substantial threat to State autonomy. It appears from the study that the States' Bill when sent to the President are scrutinised by the Union Government with reference to various matters such as compliance with central statutory requirement, conformity with the policies of the Central Government, *ultra vires* or otherwise with existing central legislation and its constitutionality etc. If any delay is caused in the process it does not reflect the Presidential assent acting as a threat to State autonomy. The cases in which assent has been withheld are very few. Till now no difficulty has been felt in obtaining Presidential assent.

3.6 We subscribe to the view that Governor is neither an agent of Centre nor mere ornamental head of the State but close link between Centre and State.

3.7 We do not agree.

3.8 We do not subscribe to this suggestion.

3.9 It is felt that such a provision may not be feasible in India.

3.10 Constitution does not make any provision for guidelines on the manner in which discretionary powers should be exercised by Governors. Such provision may be incorporated in the Constitution and thereafter if any guideline is formulated as recommended by the Administrative Reforms Commission, it may have some practical utility. It is true that the circumstances and situations facing the Governors may not be identical on every occasion and the Governors have to make the choice of their judgement in each case, yet some broad guidelines may be formulated for guidance of the Governor.

PART IV

ADMINISTRATIVE RELATIONS

4.1 Articles 256, 257 and 365 which confer power on the Union to give directions to the States in the exercise of their executive powers are of vital importance to the smooth day to day working of the Central Government. These articles highlight the efforts of the Constitution makers to create a system of co-operation in the Legislative executive field between the Union and the States. In excercise of the above powers the Union has issued directions from time to time to the States.

There is no known case where a State was compelled to carry out the directions issued under Article 256 and 257 under the threat of invoking of Article 365. But, it cannot be denied that Article 365 provide teeth to the Union for dealing with the situations created by flouting the directions given by the Union to the States.

4.2 We subscribe to the second view that Article 365 should not be deleted and may remain as a reserve provision.

4.3 The recommendations of the ARC is not new. It simply points out to the need for restraint which the Union should always maintain. This recommendation shows that the State autonomy has to be respected. The experience shows that the Union has issued

directions only in necessary cases and instances of mines of powers conferred under Article 256 and 257 are wanting.

4.4 In our view this extraordinary remedial power under Article 356 has been excercised properly.

4.5 No. The limits fixed under clauses (4) and (5) of Article 356 are positive measures to check the misuse of power. The period of six months fixed in clause (4) is very just. The total period for which a State can remain under President rule can extend to three years under Proviso to clause (4). Clause (5) has only placed some riders when the President's Rule cannot be continued for more than one year. The provisions of Article 356 are sufficient for dealing with circumstances envisaged in the question as prevailing for example in Assam and Punjab at present. A perusal of the durations of the President's Rule in more than 60 cases during 1950-84 show that the duration exceeded one year only in 9 cases and in most cases the situation became normal in short periods.

4.6 The existing arrangements for implementation of functions like Census and Election are working satisfactorily.

4.7 Central Agencies have played a vital role in performing the specific functions assigned to them. However, it is suggested that the States may be nominated by rotation in these Corporations and their role and functions should be more explicitly clarified. Where-ever such central bodies are required to give clearances, a time limit should be prescribed.

4.8 The All India Services have fulfilled the expectations of the Constitution makers to a great extent. The All India Services have proved very effective in the administration as well as in national integration. Some more All India Services i.e. Judicial, Engineering and Medical Services need to be created.

At present the control of the Central Government on the All India Services is in the matter of recruitment and disciplinary action. In the interests of Service it is necessary that the Central Government should have such control so that there may be uniformity at All India level and the officers belonging to such services may work more effectively. If the State Governments are given greater control over these Services the very object of creating All India Services will be defeated. Therefore, there appears to be no need to give greater control to the State Governments over the All India Services.

4.9 We agree that the Union Government is competent by virt e of Article 355 to locate and use Central Reserve Police and other Armed Forces in aid of Civil War in any State, even *suo moto*.

4.10 Involvement of States be increased in the programming of broadcasts of All India Radio and Doordarshan transmissions.

4.11 The experience of deliberations of the North Zone Council and its standing committees are indeed servicing a useful purpose of collectively pursuing the Centre-State interests cutting across party lines.

4.12 Yes. The setting up of such an institutions would certainly help in ironing out inter-State and Union-State differences and issues and ensure better co-operation between them if it appears to the President that public interest would be served by the establishment of such a council. The Council should be entrusted with the duties mentioned in Article 263(a) to (c). It should be presided over by the Prime Minister and have as its members two Union Ministers nominated by the Cabinet, Chief Ministers of the concerned States or administrators of the Union Territories. The institution may coopt the concerned Union Cabinet Minister when the matter concerning him is being taken up.

PART V

FINANCIAL RELATIONS

5.1 The Scheme of devolution envisaged by the Constitution makers has not worked well. The mechanism of periodic changes made by the President on the recommendations of the Finance Commission has also failed to adequately appreciate the growing requirements of States. It may be illustrated by the fact that revenue surplus envisaged by the successive Finance Commission has almost been wiped out due to increasing inflation. The States are, therefore, left high and dry not to speak of financing the plan outlay out of the anticipated revenue surplus. In case of Rajasthan, the Seventh Finance Commssion envisaged a revenues surplus of Rs. 220.28 crores where as the figures suggest that there would be a deficit of Rs. 30 crores on this account. Two factors have led to the Five Year period assessment being unrealistic. One is the growing rate of inflation which upsets the estimates of expenditure and the other is the implementation of development plans through the mechanism of five year plans. The Planning process has raised the people's expectations and when there is erosion of resources transferred from centre to state due to inflation, the development programmes suffer but states desire to meet people's expectations at all cost results in huge overdraft. The Sixth Five Year Plan, accounts for huge deficit by the states only for this reason.

The expectation that the fiscal needs of the States to discharge their growing responsibilities will be covered under a scheme of devolution partly by sharing with the States, proceeds of certain taxes and duties and partly by grants-in-aid from the Union has not come out to be true. There are inherent structural shortcomings in the mechanism which need to be rectified and have been spelt out in reply to subsequent questions. This structural imbalance would be clear from the fact that Central Government's requirements both on revenue account and Capital account are much lower than its receipts as would be observed from the following table :

	Percentage share	
	Centre	States
1. Combined revenue receipts of Central & State Govts.	63	37
2. Combined revenue expenditure of Central & State Govts.	45	55
3. Combined Capital Receipts . .	81	19
4. Combined Capital Expenditure .	55	45

It would be apparent from the above table that State's receipts were much lower than their expenditure with the result that they had to depend on Central Government for meeting their requirements.

Further, the Central Government's unilateral and sectional wage policy towards their employees had an adverse effect on State's finance since they had to concede, in sympathy, higher wages to their employees. Since the Constitution makers did not envisage such frequent revisions in pay and/or allowances, a system of automatic adjustment of the States' deficits is sadly lacking.

Similarly, not so well conceived policy of loans and grants to States imposed considerable burden on the States' finances. Financing of relief expenditure in drought years through loans is yet another instance of the increasing burden on States finances normally not accounted for in the assessment of Finance Commission.

Since the recommendations of Finance Commission are not open to review during the quin-quenium the obligation of the Centre to meet the deficit by way of grants is lost sight off, resulting in overdrafts and consequent slowing down of developmental efforts.

The State, therefore, would strongly urge for modification of the existing constitutional arrangements to provide for a year to year review instead of a periodic review after five years of resource transfers from Centre to States and assessment of States finances and making good of the deficit through non-plan grant.

5.2 It is true that the State resources on their own have not been enough to meet all non-plan, expenditure and there is thus heavy and increasing financial dependence on the Centre. The following table wherein figures for Rajasthan are given would support this contention.

(Rs. in Crore)

Year	Non-Plan revenue expenditure	Receipts from State's resource Revenue from				Difference between non-plan revenue expdr. & receipts (Col. 2—6)
		State taxes	Non-Tax items	Non-Plan grants in aid	Total	
1	2	3	4	5	6	7
1980-81	554	230	198	15	443	(—) 111
1981-82	688	312	176	43	531	(—) 157
1982-83	807	389	233	9	631	(—) 176
1983-84	914	430	280	26	736	(—) 178
1984-85	1033	473	254	9	736	(—) 297

The total dependence on Centre is thus obvious. Further even the share of Central taxes does not leave sufficient surplus to undertake a bolder plan. In this context it may be pointed out that there are two types of taxes that are shared between Centre and States i.e. the sharing of which is compulsory under the Constitution (Income Tax under Article 270), and the sharing of which is left to the discretion of Union Government (Union Excise Duties under Article 272).

The contribution of Central taxes is given in the subjoined table :

(Rs. in Crores)

Year	Difference between non-Plan revenue expenditure & receipts	Receipts from Central taxes		Total	Difference between Column 5 and Column 2
		Income Tax	Union Excise Duties		
1	2	3	4	5	6
1980-81	(—) 111	44	130	174	(+) 63
1981-82	(—) 157	44	152	196	(+) 39
1982-83	(—) 176	49	164	213	(+) 37
1983-84	(—) 178	51	191	242	(+) 64
1984-85	(—) 297	53	211	265	(—) 32

The share of taxes which may be shared (Union Excise Duties) as distinguished from statutorily shared (income-tax) being much larger is also indicative of the dependence of States on Centre.

For doing away with the giver-receiver relationship structural changes in the system are needed by adopting a Combination of the approaches suggested above in the question, i.e. trasnfer of elastic resources to States in particular Entry 84 relating to Duties of excise on tobacco and other goods manufactured or produced in India of List I Union, List of Seventh Schedule of Constitution.

In this connection it may be pointed out that there is need for providing adequate and elastic sources of revenue to States to reduce or completely do away with dependence on Centre. For this purpose only

that tax which has resource potential and can be uniformaly better administered need to be assigned to States in full.

Union excise is one such tax which need to be transferred to statutorily fully assignable category to the States like Income Tax although it may be collected by the Centre for the sake of uniformity.

Corporation Tax and customs duties may remain with the Centre.

With regard to surcharge on income tax which is presently wholly appropriated by Union Government under Article 271, the observations of Seventh Finance Commission are reproduce d as under:

"We feel that Article 271 does not in express terms lay down that the Union surcharge should be for meeting the burdens of the Centre arising from any emergent requirements, there is an underlying assumption that a surcharge should only be levied for meeting the requirements of some unexpected events and should only be for the period during which it lasts. In this view a surcharge continued indefinitely could well be called an additional income tax, shareable with the rest of the proceeds of income tax. The surcharge levied on income tax has been progressively increased and has become a permanent feature of income tax levy. It is well known that maximum yield from any tax is determinate. The levy of surcharge reduces the capacity of the yield from the basic tax. Therefore, to be fair either the surcharge should be merged with the basic tax or made shareable with the States."

5.3 The views that giving more financial powers to States will only further tilt the balance in favour of richer States probably envisages transfer of taxing powers only and not devolution of resources in its totality. What the less developed States like Rajasthan need are larger resources out of the total kitty through statutory transfers in which the element of buoyancy is inbuilt rather than transfers that are discretionary. This can be ensured by increasing the list of shareable taxes, share in the surpluses of Central public sector undertakings like railways which would mean substantial increase of the total divisible pool. At the stage of determining the share of the States *inter-se* the needs of backward States have to be kept in view by evolving a necessity oriented formula so that regional imbalance can be removed.

Further, the investment in Central sector projects should be dovetailed in a manner that would narrow down regional inequalities.

5.4 Deficit financing to the extent it does not generate inflationary pressures and is resorted to for financing productive expenditure may be accepted in a developing economy upto a limit.

There is no denying the fact that better control over expenditure both at the Central and State levels is necessary. In addition more revenue raising resources should also be tapped to the extent they do not inhibit investment.

The State Government is of the view that the scheme of devolution and transfers suggested above and in reply to subsequent questions coupled with evolving of a necessity oriented formula giving weightage to poor infrastructural development in backward States would ensfre adequate resources to the States and Centre would not be required to undertake deficit financing for meeting States' requieements. As a result, if at all, deficit financing is to be resorted to it would be wholly for Union purposes which can be contained within manageable limits through control over expenditure.

5.5 The State Government of Rajasthan is of the view that for distribution amongst the States *inter se* the total share attributable to States of the tota. receipts under shareable taxes—the twin criteria to be used should be adequacy and progressivity, Revenues from all taxes should be distributed on the same principles and the proliferation of formula as at present (the criteria for allocating share of income tax, Union excise duties and additional duties of excise etc. and the percentage share of various States for these taxes widely differ) avoided, since it cannot be argued that progressivity should be a feature of inter-State distribution of excise revenue but not of income tax.

With regard to the formula for distribution it may be pointed out that the criteria used are collection, population, per capita State domestic product and poverty proportion.

With regard to collection it may be pointed out that larger tax collection by a comparatively developed States stems from their stronger industrial base which is due to historical and natural factors and due to the fact that in recent years flow of institutional funds has been disproportionately favourable to these States. Collection criteria is particularly unfair because it only perpetuates disparities. The State Government is of the view that it should never be used as a criteria for devolution of funds.

The estimates of State domestic product suffer from serious limitations in view of the weak data base and absence of appropriate norms for estimation particularly for tertiary sector. Poverty ratio had been under severe criticism from various quarters due largely to the use of calorific intake. Both these criteria are thus not appropriate.

The State would submit that levels of development should be considered while recommending distribution of division of divisible proceeds of tax among the States *inter se*. The appropriate formula could be (i) 50 percent on the basis of population weighted by areas and 50 percent on the basis of inverse of index of infrastructure treating all India index to be 100. The element of area has been introduced in the scheme in view of the fact that vastness of area increases the unit cost and constrains the growth of infrastructure which is pre-requisite for the development of the economy. The index of infrastructure would highlight the fiscal needs of States to make more investments in relations with the available infrastructure in order to promote growth. This index of infrastructure is the only index which can take care of the future requirements for developments of infrastructure as well as production.

This formula alone (50 percent on the basis of population weighted by area and 50 percent of infrastructure) appears to be progressive enough to meet the requirements of backward States.

In respect of plan assistance the State Government feels that there is need for restructuring the mechanism of transfer of Central assistance since the formula assistance has not been found to be effective as is revealed by the fact that the regional disparities continue to persist. The State Government would suggest that assessment of funds for raising the levels in key social economic sectors to the levels of developed States be made and the full requirements of funds for this need based plan be met by Central Government after deducting the States own resources.

The balance may be distributed on the same basis as has been recommended for tax devolutions.

Non-Plan assistance need to be given in full for meeting year to year deficits, if any (although with the scheme of transfers suggested above there is little likelihood of deficits) and the expenditure incurred to mitigate the regours of natural calamities and the like. This assistance should be in the form of Non-Plan grant.

5.6 The idea of having a special federal fund for faster development of underdeveloped area relative to other underdeveloped areas of the country is quite laudable. It is true that the recommendations of Commissions and the devolution of plan funds had generally been to the advantage of better off States and the regional disparities persist. In the per capita transfers, Rajasthan State was placed at serial No. Six by Second Finance Commisson. It was relegated to 19th position in per capita transfers by Seventh Finance Commisson. Similar is the case with plan transfers. The State Government may have no objection to the creation of a fund on Yugoslavian pattern provided it is ensured that the entire Central investment is routed through this fund and the Central public sector undertakings would also be governed by this fund. The investments out of the fund in the various States should be made in relation to requirements of each State. This fund should be administered by a statutory body to be defined in the Constitution it self where if all the States cannot be represented then atleast each state should be included on the Governing Council by rotation. A provision for redressal of States grievances through judicial process should also be introduced.

5.7 The State would urge for restoration of powers to levy additional excise duties in respect of commodities liable to sales tax, *viz.* textiles, sugar & tobacco. The logic is quite simple. The total receipts under additional excise duties on all these commodities has not been commensurate to the increase in total tax revenue from other commodities by all the States taken together. This proves the point that administration of a tax by the States which have a direct involvement in revenue is better. It may not be out of place to mention that even the commitments made in respect of the ratio between basic and additional excise duties has not been honoured. The State would prefer the existing arrangements with regard to other taxes. It would however, like to increase the list of wholly assigned taxes as earlier pointed out.

5.8 The State would subscribe to the Central levy of taxes like corporation tax, wealth tax, estate duty and customs duty. Income tax and union excise duties should be assigned wholly to States, although for purposes of uniformity these may be collected by Central Government. It also feels that such a body may be statutorily established whose recommendations should be treated to be final.

The State does not favour Central levy in any term in respect of sales tax.

5.9 The State would suggest for year to year review of the capital and revenue needs of each State. The State would prefer one organisation dealing with all financial transfers both plan and non-Plan on an assessment of capital and revenue resources. This organisation should be statutorily constituted and arrange for providing the full requirements based on physical plan of action.

5.10 Public expenditure is conditioned by the receipts. Narrowing down of disparities in Pubic expenditure among the States is, therefore, also directly dependent on the availability of funds. Since the reports of the successive Finance Commissions have failed to narrow down disparities in resource transfers as much there is no impact of the report on narrowing down of disparities in public expenditure. The non-Plan grants for upgradation have been so inadequate as to make any visible impact on the levels of public expenditure.

Efficiency and economy in expenditure is not related to recommendations of finance Commission.

5.11 The State does not subscribe to the view that present mechanism of transfer of resources has inbuilt propensities towards financial indiscipline and improvidence in terms of exaggerated revenue deficit forecasts of adoption of populist measure resulting in revenue loss, and incurring expenditure unmatched by available resources. The position has been other way round. Finance Commissions have not been fair in assessing the forecast of revenue receipts and expenditure which has resulted in deficit and over drafts as would be evident from the fact that as against the revenue surplus of Rs. 220 crores assessed by the 7th Commission the State would be registering a deficit of Rs. 30 crores. No. populist measures had been taken up by State Government of Rajasthan so far. It is wrong to say that Rajasthan State tend to incur expenditure unmatched by available resources since every penny saved adds to the availability of funds for development since the State is always starved of funds. The stakes of the States are very high since they come directly into contact with the public and can ill afford to be imprudent in spending.

5.12 The State broadly agrees to the views of the Seventh Finance Commission suggesting that the bulk of resource transfers should be done through tax sharing and the role of grants-in-aid, under Article 275 in the scheme of total revenue transfers should as far as possible be supplementary.

5.13 The principles laid down by the Seventh Finance Commission with regard to grants-in-aid under Article 275 appear to be alright, however, in

practice lot of shortcomings have been observed in its application. In the first place the assessment of receipts and expenditure on revenue account to arrive at the fiscal gap was quite off the mark. As against an estimated revenue surplus of Rs. 220 crores, the State had a deficit of Rs. 30 crores from balances of current revenues. The grants-in-aid made to Rajasthan for narrowing disparities in the availability of various administrative and social services between the developed and the less developed States have not been adequate enough to enable the State to come up to the levels of developed States.

Similarly grossly inadequate grants were given to meet special burden on the Finances of the State because of the peculiar circumstances due to drought and scarcity conditions which are, matters of national concern. The total requirements as assessed by the State Government and the assistance given by the Central Government for relief operations differed widely. There had been heavy shortfall and the Union Government had failed to give adequate grants-in-aid as suggested by the Seventh Finance Commission.

The State Government would urge that adequate grants be paid to all States for equalisation of the standards of administrative and social services including municipal services on the basis of nationally accepted programmes and to meet the burdens on the State finances on account of special situations like financing of relief expenditure.

5.14 Government of India had been raising substantial resources by revising the administered prices of item of mass consumption like petroleum products, coal, iron, steel. Since the additional receipts on account of increased prices are wholly appropriated by Union Government because these are outside the excise net, the States are denied a share in it. The rates of cesses which are not shareable with the States are increased to the detriment of States. Instead of increasing the cess if the basic excise duty is increased, the States would have got a share in it.

There is no denying the fact that yield from Special Bearer Bonds Scheme and the revenue accuring from administered prices of items like petroleum, coal, etc. should be brought within the divisible pool of the resources. The logic is quite simple. Special Bearer Bonds were issued to unearth unaccounted wealth or black money which earlier escaped the tax net. Had the Income-Tax Department which is administered and controlled by Union Government been vigilant enough this income would have been added to the total proceeds and formed part of the divisible pool to be shared by the States. It is only a case of bringing income to the taxation field and should be shareable like other receipts under Income Tax Act. The raising of administered prices of item like petroleum products and coal etc. is a subtle attempt to raise revenues which are kept out of the divisible pool although in their very nature and content they are identified with the Basic Union excise duties. If the Union Government had raised the basic excise duties to the level at which it raised the administered prices the additional accretion would have gone to the divisible pool to the extent recommended by the Finance Commission and States would have get a share in it. The entire revenue accruing to the Union Government by raising the administered prices should be added to the divisible pool and allocated to States as per devolution formula for Union excise duties recommended by Finance Commission.

All cesses should be merged with the basic excise duties.

5.15 Obviously the savings of the Community would be shared by the private and the public sectors. The public sector can mop up savings through institutional sources to the extent of its capital requirements and response of the public. The methods through which such distribution is effected are not considered to be satisfactory because the share of less developed States is highly inadequate for undertaking investment expenditure that could uplift their economy. Allowing a 10 percent increase in market borrowings over the preceding year is perpetuating the backwardness. Further, tying up of LIC finance to plan resource does not permit undertaking a bolder plan. Even the bank advances are tilted in favour of developed States.

The share of the States should be in proportion to the capital expenditure, to be worked out on the basis of needs of each State for attaining a particular level in terms of infrastructural development and creation of production potential.

In respect of small savings mobilised in the States the entire sum should be allowed to be used as a plan resource instead of two-third share as at present.

The State would also like to suggest for modification of the present method by allowing an increase in market borrowings over previous years to the extent the economy can absorb. LIC funds should be de-linked with plan resource.

5.16 It is true that the fiscal imbalance of States is on the increase manifesting in their mounting indebtedness. The obvious reason is that the States have been saddled with the responsibilities for economic development and provision of social services besides their normal regulatory functions. In addition, expenditure has to be incurred for relief operations when the State is affected by natural calamities like drought. Unfortunately the State had witnessed severe droughts consecutively for five years begining from 1979-80. In fact there was not a single district which was not affected by drought.

The State is perilously dependent on the Central Government for financing its developmental expenditure and for meeting the non-plan liabilities mainly because of the very limited resource potential because all elastic sources of revenue are with the Central Government. Further, the assessment of Finance Commission for assessing its requirements have been unfair and the devolutions inequitable. The inroads made into State's spheres through the levy of additional excise duty on textile, tobacco and sugar, and the restriction on inter-State trade and the levy of Central Sales Tax etc. have further contributed to erosion of State resources. The inflationary trend witnessed in the economy over which the States have little control because monetary and fiscal policies are determined at the Central level tend to increase the cost of providing services

to the community. It is the liability on account of payment of dearness allowance and other payments including pensionary benefits for which usually the Union Government is the pace setter which further adds to the mounting cost. The States have no other alternative but to seek accommodation from Government of India. The mounting debt burden is thus not due to imprudent spending but because of mechanism of transfer of resources as per the existing scheme of the Constitution and can be reduced by writing off all loans which do not give return adequate enough to repay.

5.17 The most disquieting feature of the Central-State financial relations had been that the reverse transfers from State to Central Government in the form of repayment of loan and interest therein would be larger. Yearwise particulars given below would reveal that over the years the situations had been going from bad to worse.

(Rs. in Cores)

Year	Loan received from Central Govt. (excluding ways & means advance)	Loans repaid to Central Govt. (excluding ways & means advance)			Difference (Column 2—5)
		Principal	Interest	Total	
1	2	3	4	5	6
1977-78	75.68	39.93	40.93	80.32	4.64

The factors responsible for mounting indebtedness have been indicated briefly in reply to question 5.16. It may be added here that the funding arrangements need to be modified for rectification of a situation where reverse transfers to Union Government exceeds the loan assistance from Central Government.

The imminent modification relates to assistance for State Plan schemes, externally aided projects and financing of relief expenditure. The State Plan assistance stipulates a loan grant ratio of 70 : 30.

This proportion is not based on sound logic and has to be viewed in the background of the end use which is largely meant for infrastructural and social services where the return to State is negligible. To transfer the assistance as loan, therefore, does not appear to be appropriate.

The assistance provided in respect of externally aided projects also add to States indebtedness because the additionality of resources given to States is given in the loan grant ratio of 70:30 like normal State Plan Assistance.

Another contributing factor is the financing of expenditure on account of relief in case of natural calamities since half of the assistance is in the form of loan. The expenditure does not lead to creation of durable assets since the basic objective is also provision of employment that has to be made available in widely dispersed locations. The remedy lies in writing of unproductive loans as suggested by Seventh Finance Commission. On this basis outstanding loans be classified into two categories *viz.* productive and un-productive. Productive loans may be those which yield return adequate to pay principal and interest thereon. Rest of the loans may be treated to be un-productive. The un-productive loans may be written off.

For future also the Central assistance need not be provided on the basis of a fixed loan grant-ratio but should be on the pattern suggested above *i.e.* total plan assistance should be given as grant except that for productive purposes which may be given as loan repayable in fifteen instalments as at present.

5·18 Any major change in respect of the policy of market borrowings is not being suggested.

However, presently restrictions have been placed on State's freedom to borrow which could be relaxed atleast in respect of borrowings from financial institutions like NABARD and LIC for approved plan schemes.

5.19 For most of the projects aid is made available to Government of India at a nominal service charge of 0·75 to 1·25 percent and is repayable in 40 to 50 annual instalments. The State Government however is expected to repay the additional central assistance on account of these projects in 15 annual instalments carrying an interest rate of 5.50 to 6.25 percent per annum applicable to plan assistance which is much higher. Charging of higher rate does not appear to be justified. The State is strongly of the view that loans given as additional plan assistance to States undertaking externally aided projects should be advanced on the same terms and conditions on which the loans are received by the Government of India from the external agencies.

5.20 There does not appear to be any necessity of constituting a Council on Australian pattern. The Reserve Bank of India should coordinate the

entire process of market borrowing of the Centre, States and the private sector. At present the Reserve Bank of India can purchase securities of Central Government only but not of the State Governments. The Reserve Bank of India should be permitted to purchase securities of State Government also.

5.21 The factors contributing the overdrafts are besides inadequate transfers of resources to backward and less population density States like Rajasthan, unrealistic assessment of forecast of revenue receipts and expenditure by the Finance Commissions, mounting interest liability on Loans, Compulsive expenditure on account of dearness allowances and payments to employees for which the Union Government is the pace setter, expenditure on relief operations to mitigate the rigours natural calamities for which the financing pattern is unfavourable to States and inadequate provision for maintenance of capital assets.

The remedy lies in adequate transfer of funds to States through addition of Union excise duties in fully assignable category to States, and bringing in its fold items of like. Surcharge on Income-tax Bearer Bonds, increase on account of raising the administered prices of petroleum and Coal etc. In addition, a mechanism of annual review of States finances would solve the problem since the deficits, if any, on account of compulsive needs would be made good and the ways and means limits modified accordingly.

5.22 The view that States are not exploiting adequately their own sources of revenue cannot be generalised for all the States. So far as Rajasthan is concerned this view is not correct as would be evident from the fact that the target of additional resource mobilisation for Sixth Plan was fixed at Rs. 750 crores by the Planning Commission which has been achieved.

5.23 It is true that inspite of reaching commanding heights as intended the Central Public sector has not yielded the expected returns on investment. Of the 193 running central/sector public enterprises in 1982-83, 110 had made pre-tax profits amounting to Rs. 2520 crores, of which Rs. 1628 crores were contributed by 12 petroleum companies. The remaining enterprises made a loss of Rs. 975 crores. Thus, if petroleum companies are excluded then the operations of public enterprises revealed a loss. Data available for the first half of 1983-84 indicate that all public enterprises taken together had incurred a net loss of Rs. 113 crores. The community expects a financial return comensurate to the sacrifice made to the extent of the investment made. The State Government does not have data to comment about the substantial leakage in Central taxation. However, certain press reports suggest that efforts are being made to plug the loop holes. Further, the realisations from the issue of special bearer bonds point out that there were leakages earlier. The remedy lies in close monitoring and effective tight controls over the functioning of the enterprises as also over tax realisations.

5.24 The State would prefer prior consultation with the State Government before moving a bill to levy or vary the rate structure or abolishing any of the duties and taxes enumerated in Articles 268 and 269. The State would further suggest amendment of Article 274 to include 'states' besides the President for introducing or moving any Bill or amendment in which States are interested.

5.25 Article 269 of the Constitution could be better exploited to augment the resources of the State particularly by reimposition of taxes on railway fares and freights, levy of terminal taxes on goods or passengers carried by railway, sea or air, tax on the sale or purchase of news papers and on advertisements published therein.

The State would also like the pooling of entire net proceeds from any tax to be allocated to States in the ratio prescribed for Union excise duties.

5.26 The grants in lieu of Railway Passenger Fares Tax should be revised enhanced in proportion to rise in collection of railway fares.

5.27 Since the responsibility of entire expenditure of Union territories is that of Central Government there is no question of giving any share in taxes to Union territories.

5.28 The present arrangements with regard to provision of Central assistance to States for dealing with natural calamity are highly unsatisfactory and the quantum given to States for drought relief is highly inadequate. The discriminatory treatment in case of natural calamities due to flood and due to drought is also unjustified. The financial arrangements, suggested by the Finance Commission stipulate that assistance from Central Government is to be made available of which not more than 5 percent of the annual plan could be deemed to be a contribution from plan and balance requirement was to be made available by the Central Governement on the recommendations of the Central Study Team. The Commission had indicated that if the expenditure requirements cannot be adequately met by plan contribution the extra expenditure should be taken as an indication of the special severity of the calamity which could justify the Central Government assisting the State Government to the full extent of the extra expenditure to be made half as grant and half as loan.

It is not appropriate to link the expenditure on relief works to plan. The type of relief works that become necessary in a drought year cannot be said to contribute to durable assets or to be capable of providing any financial return. The compulsion to apportion a large proportion of expenditure for wages and to limit the material component to not more than 40 per cent makes any durable asset formation difficult. Any effort made to link these decentralised employment oriented relief work as plan programmes only disport the plan priorities and cast a future liability on the plan programmes to make investment for completion or improvement in order to make some of these works of permanent benefit. Even this is not possible in most cases, because the type of works that are available in these decentralised locations do not lend themselves to development in a way that may lead to any future economic benefit as visualised in the national or State Plan.

The State Government is, therefore, of the view that Central assistance drought relief should not be treated as plan expenditure. Further, Central assistance in full should be given as non-plan grant since there is no justification for treating its any component as loan as mentioned above. By providing the assistance as loan avoidable burden is cast on the weakness resources of the State on account of expenditure which, in no way, can yield a financial or economic return.

The State would also like to submit that in the assessment of the requirements of expenditure by the Central Study Teams the representatives of the concerned State should invariably be associated.

5.29 The Reserve Bank may continue to play the overall Coordinating role with regard to financing of developmental projects through NABARD and IDBI on which the States should be given representation. The Reserve Bank of India should work under the directions of the National Development Council which should be Statutory body consisting of all Chief Ministers of States.

5.30 There is no denying the fact that the funds are spent prudently and the benefits go back largely to the people. The accountability of public money is well taken care of under the existing provisions of Constitution.

5.31 We agree with the view that the expenditure of the Union should be reviewed every year by the same organisation that would be responsible for annual review of State finances.

Rajasthan State has not incurred expenditure on any measure of populist nature. Whatever developmental expenditure has been incurred has been done as part of plan discussed with the Planning Commission and keeping in view the needs of the State which has an abysmally low level of social services.

National expenditure Commission may create more confusion and is not favoured. Earlier, a Committee was constituted in 1978 for studying public expenditure which was disbanded during 1979, apparently because it was not found to be useful.

5.32 It has been observed that there is delay in rendering of accounts by the Accountant General, with the result that State Government finds it difficult to have an effective system of financial control. The State Government is of the view that there should be separation between audit and accounts. The audit part may continue with the Comptroller and Auditor General of India and the account part should be transferred to the States.

5.33 Voucher audit cannot be completely dispensed with and has to continue. However, the system of evaluation audit should be gradually built up to make audit more meaningful and purposeful.

5.34 Gradually the emphasis should be towards evaluation audit. The existing power of the Comptroller and Auditor General conferred by the Parliamentary Legislation in 1971 are adequate to enable him to discharge his duties effectively.

5.35 The reports of the Comptroller and Auditor General are considered to be comprehensive enough and reasonably accurate.

5.36 The existing arrangements by which Public Accounts Committee alongwith the Public Undertakings Committee examines the reports of the Comptroller & Auditor General are adequte for exercising checks to answer the voiced complaint of insufficent expenditure control.

5.37 Yes, the Estimates Committee acts as a watchdog to give useful legislative and administrative advice to the administration.

5.38 We are not in favour of an Expenditure Commission as already indicated in reply to question 5.31.

5.39 It is true that clearance of the plan of action by administrative machinery concerned is an irritant and a source of considerable delay, The role of the Union Ministry should be confined to laying down broad policy guidelines and assessing the results once expenditure has been incurred. The existing arrangements of audit by the Comptroller & Auditor General can ensure that funds meant for a specific purpose are, in fact, utilized for that purpose.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 For seeking the full commitment of States in the plan it is necessary that the consultation and association of the States is made more meaningful. For this it would be necessary to feed the States with full details of the various alternatives and the models worked out by the Planning Commission before arriving at the suggested model to be placed before the National Development Council. These models should be discussed first at official level with the Planning Secretaries of the States for a meaningful dialogue. Besides the models, the details of the draft proposals contained in the Plan should also be placed before the official level committee consisting of the Planning Secretaries so that the States view could be reflected in the plan proposals to the extent possible where a political decision at that stage is not considered to be necessary.

Sub-committees of the National Development Council may be formed for detailed deliberations on the notes of discussions of the official level meetings and finally the NDC may be approached for decision on the basis of the recommendations of the official level committee and sub-committees to be formed as suggested above.

The client relationship as mentioned in the question is due largely to the fact that central ministries tend to work in isolation for their respective departments. The remedy lies in identifying the needs of various States in the light of guidelines or norms prescribed by the NDC to ensure that the less developed States are provided with adequate funds to come up to the level of their better developed counterparts. This would automatically do away with the needs the building up client relationship since very little discretion would be left with the State or the Union Ministies

The Central role in planning should be to the extent of laying down basic policy framework in close association and consultation with the States and once the key targets are finalised it should be left to the States to decide the modalities of achieving the fixed targets.

6.2 The National Development Council need to be given a statutory status. A system should be evolved through which regular review is done every year to determine the financial needs of the States in the light of their compulsive requirements.

6.3 With the passage of time, the Planning Commission has grown into a Centralised agency for planning, though not a part of the ordinary machinery of the Government of India deciding every programme of work. Both the Central level Ministries and State Level departments have come to depend on the Commission for advice and support increasingly. As regards association of State Governments in the process of planning, not much consultation is made. In fact with the present set up, the Planning Commission functions more in a fashion of an authority than an Advisory body. To make the State feel that they are also very much part of the planning process at the national level, it is imperative that a system is evolved to ensure active and close cooperation of the States at each important stage. It should be enjoined upon the Planning Commission that before taking any decision on matters of national/State importance, views of the States are invariably obtained and given due weight. In matters that are wholly within the State List or even the Concurrent List the views of the States should prevail unless these are against national policy security or international commitments. Further, there should be representation from all the States on each working group constituted by the Planning Commission and Central Ministries.

Representing all the States on the Planning Commission may make its composition too large, but a system need to be devised to have rotation of States on the Planning Commission.

6.4 It should have besides the Prime Minister as the Chairman, the Ministers of Finance, Agriculture, Industry and Commerce as regular members. Administrators, Economists and Technologists should also be represented, besides two or three persons to be drawn from States on the basis of recommendations of State Chief Ministers by rotation.

6.5 Planning Commission may continue to be a department of Government of India as at present.

6.6 Since States are the constituent units, logically national priorities need to be reflected in State Plans. These national priorities should be one of a few broad alternative plans of development worked out by the Planning Commission which has been duly supported by the Government. However, to ensure that national priorities are reflected in State Plans, the Planning Commission should not assume executive and decision making powers in respect of State plans of development. Instead, it may advise States regarding the manner in which State Plans should be formulated and suggest the targets keeping in view the regional disparities and needs of the States, in accordance with the laid objectives, alongwith provision of necessary funds, with due association of the States at the initial stage. This would leave a comparatively larger scope for States to plan ther own priorities on various State matters and the Planning Commission would be looked upon as an important guide, friend and philosopher.

6.7 There are following three types of Central assistance available to States :

(i) Block plan assistance for State Plan.

(ii) Central assistance for externally aided Projects.

(iii) Central assistance for drought relief.

The State debt burden is increasing year after year largely because of the mechanism of transfer of Central assistance for plan, including drought relief. Presently the debt burden of the State is the highest in the country, excepting that of Punjab and Haryana. The transactions in loans and advances involve revenue transfer to Central Government in the form of repayment of principal and interest. The trend that has emerged over the last few years in Rajasthan left very little amount as net accretion in transfer from Government of India.

Presently, the loan-grant ratio for block plan assistance is 70 : 30. This ratio is grossly in favourable to the State, particularly, the less developed States like Rajasthan. In fact the mounting burden of outstanding loans to States call for a fresh look into the problem. It is indisputable that the Union Government also derives a share in the benefit of the development efforts made by the States through increase in its financial resources in the form of taxes etc. The Central Government should, therefore, also logically bear some responsibility. Besides, it is also not justified to treat State investment to yield returns sufficient to recoup the investment made. Considering all these aspects, the State feels that the loan-grant ratio for block plan assistance be revised.

The mode of transferring the assistance received by the Government of India in respect of externally aided projects implemented by States also needs to be modified. These projects are provided for wholly under the State Plan but only 70 per cent of the reimbursement received by the Government of India is transferred to the States in the form of 70 per cent loan and 30 per cent grant. Excepting service charges of about 0.75 per cent the Government of India generally has not to pay any interest charges and usually the repayment period of loan is 40-50 years. The State Government on the other hand, has to repay the loan component within a period of 15 years, on a rate of interest of about 5.25 to 6.5 percent. Further, as the entire project cost of such projects forms part of the State Plan ceiling, a sizeable plan outlay consequently gets tied up to specific projects. The State would, therefore, plead that the entire assistance received from the external agencies against specific projects should be passed on the State Governments on the same soft terms.

By its geographical location, Rajasthan is most vulnerable to drought conditions. The existing financial arrangements include provision for margin money and, in addition, assistance is made available

by the Government of India under Plan. However, it is felt that it is not appropriate to link the expenditure on relief measures to plan because of very nature, these decentralised employment oriented works are not capable of providing any financial return. Their inclusion under plan only leads to distortion of Plan priorities and entail a burden on plan to make further investments on these works for their completion. These works, as such, have to be viewed from the angle of providing only relief and employment to effected population. It is also not justifiable to provide the assistance for expenditure as loan. Therefore, the assistance for drought relief should be provided by Government of India as cent-per -cent non-plan grant.

6.8 & 6.9 One of the prime objectives of planned development is to ensure reduction in the regional imbalances in development. This basically would require concerted efforts and availability of adequate finances to meet gaps in development. Available resources of the State Governments are grossly inadequate to meet their responsibilities. To remedy this, the Centre provides loans and grants from time to time on ad hoc basis. Certain formula evolved for transfer of funds from Central Government to States also affect backward States adversely. The modified Gadgil formula with highest weightage to population factor gives an undue weightage to high density States whereas States with larger area and a higher per unit cost for providing services are put to great disadvantage. The States with larger area have necessarily to spend comparatively larger sum of money for social services. The system of determining of a State Plan size within the scope of availability of resources to finance the State Plan, including Central assistance, do not take into account the relative backwardness of the State, which is mainly on account of their low potential of raising financial resources. If the backward States with poor resources are to plan within the scope of their own financial resources such States being in a disadvantageous position find it rather difficult to gear up the pace of development and regional imbalances are bound to get accentuated, thus defeating one of the basic objectives of planning i.e. reduction in regional imbalances and dispari ies in development.

The pattern of assistance for financing the State Plans should be determined in relation to physical needs of each State, ensuring that each State has adequate funds for achieving the fixed targets. The State, therefore, will favour evolving a formula which would result in considerable higher share of allocations to sparsely populated backward States than that based on population alone. Reasonable weightage is required to be assigned to area of the State by reducing the share of population in the scheme of devolution of Central assistance for plan.

It is also necessary that the total Central assistance is broken into two parts viz., non-formula assistance and formula assistance. An assessment of the funds required for raising the levels in key socio-economic sectors of less-developed States to the levels obtaining in more developed States be made and after deducting the States own resources, the entire requirement should be provided in fnll as Central assistance under the non-formula part,

Under formula assistance population has to be weighted by area and the factor of infrastructure index be introduced for determining the share in devolutions to the various States.

It may be added that poverty has been included as a criteria for devolution of resources in certain cases. The criteria of poverty based on calorific intake is susceptible to totally erroneous estimates because of variations in climate, working conditions and food habits. Further it only takes into account caloric intake but does not consider the off take required. Poverty criteria should not be used for determining devolution to the States.

The special area development programmes have been initated on the logic that certain geographical areas present some very special ecological and social economic feature, which unless specifically taken into account, do not permit the present planning process and the schemes developed within it, to make a sizeable impact. Hill areas have already been recognised to belong to this category. The Desert areas in Rajasthan also square come in this very category and require special attention urgently. Development of desert areas requires large investments which are beyond the means of the State. It is, therefore, absolutely essential that the special development programmes are extended to desert areas and assistance provided on hill areas pattern.

6.10 Basically, the centrally sponsored schemes are floated by the Union Government with an All-India perspective, but for observing a more practical view centrally sponsored schemes should take peculiar problems of regions and all schemes should not be uniformally applicable to all the States. A wide scope should, therefore, be provided in such schemes for suitable accommodation and some of the centrally sponsored schemes should be designed to cater to the peculiar needs of specific regions. So long these schemes are instrumental in bringing about speedy development of backward States and dealing with the local problems effectively, the system is most welcome. On the basis of past experience, it may however, be appropriate not to vest all the powers of sanction and review of such schemes in various central ministries, and allow a mere flexible approach, and the procedure of reimbursement made simpler. Also the pattern of assistance alongwith quantum of assistance likely to be made available for centrally sponsored and central sector schemes may be decided before finalisation of the Five Year Plan. The pattern of assistance including matching contribution should not be changed to the detriment of the States during the course of the Five Ye r Plan, and there should be a preferential pattern for sharing expenditure in the case of backward States.

At least, the important schemes having relevance to backward areas should be centrally funded in full.

6.11 A system of concurrent monitoring needs to be introduced for major project in close collaboration of field officers and economists.

Use of computers and data processing equipment needs to be introduced for expeditious processing and retrival.

Close links need be developed between the Central and State Government for exchange of information having a bearing on programme implementation, monitoring and its evaluation.

6.12 Presently there is not much interaction between the Centre and States in matters of Planning. The draft State Plans as prepared by States in accordance with the policy guidelines from Planning Commission, are examined and discussed by the working groups constituted by the Planning Commission and plan size determined keeping in view the availability of resources to finance the plan. There is not much freedom to the States.

As has been indicated above elsewhere, there is need to have more active involvement of States right from the initial stage of plan formulation through constitution of some sub-committees of the NDC and enjoining upon the Planning Commission to involve the States in preparation of plan. Once the plan is approved, the States should be left free to implement it. The decentralisation of planning process, thus, will no doubt create a sense of active participation and cooperative federalism amongst the States. Adequate financial support needs to be ensured to the States an implementation is to be left to the States without any condition in accordance with the approved plan and the pattern thereunder.

With the last more than three decades of planning in the country, considerable planning experties has been created in the States. Plan formulation is not merely an exercise of putting together the demand of the States at one place, but it is now rather a well conceived and thought out excercise keeping in view the potentialities and the regional requirements in the areea in consideration of the basic objectives and priorities of Plan. In Rajasthan there is a full fledged department at the State level to take of plan formulation, implementation and review. The important Core Sector Departments have their own setup for plan formulation, implementation and review of their sectoral programmes. Concurrent and expost facto evaluation is also undertaken by the separate organisation created in the State for the purpose. The State Planning Board is in the process of reorganisation.

PART VII

MISCELLANEOUS

Industries

7.1 It is agreed that the extension of First Schedule has been much beyond the original scope and as a result industries have become virtually a Union subject. The original idea was to extend the licensing procedures only to core industries which were of vital importance and not that Schedule should cover practically all industries.

It can be argued that industrial licensing is a tool to promote development of backward areas. However, past experience does not show that industrial licensing has been an effective instrument of development of backward areas. In fact most licences have gone to the already developed States and that trend continues even today. It has also been established that incentives offered by Central and State Governments and concessions given by financial institutions are more effective instruments of ensuring industrial dispersal and diversification of industrial units into backward regions. We, therefore, feel that the Schedule should be restricted to only core industries of vital importance to the economy of the country.

Even according to the existing general pattern of licensing adopted by the Government of India, the large scale industries involving an investment of Rs. 5 crores or more are licensed by the Government of India and the medium and small scale industries, not covered by the above-mentioned definition of large scale industries, are left to be handled by the State Governments. But even this general rule is often not adhered to; many of the individual Ministries have acquired the powers of giving the licenses permissions/clearances, even in cases where the investments involved are very small. Some of the instances are wheat-milling, electronic industries and power-looms, which require permission from the Central Ministries or departments. This leads to avoidable delays as also diminishes the role of the States which they should be expected to play.

7.2 (i) The State Government is not in favour of any rigid norms. The term "National Public Interest" should concern only with industries of vital importance to the eeonomy of country. This test should be applied to all legislations which seek to regulate industry.

(ii) Without going into the merits of each entry in the Schedule, we reiterate that the general principle that should govern inclusion of any industry in the Schedule is that it should belong to the core sector and should be important for the economy of the country as a whole. By applying this test the Schedule can be appropriately pruned.

7.3 As explained earlier, industrial licensing should not be a mandatory provision for our industries. Our industry is generally over regulated and better results can be achieved by indirect controls by issuing guidelines to public financial institutions and by offering suitable concessions and incentives. Except for industries in the core sector anybody should be free to establish any industry without a licence provided the State Government concerned can assure him of necessary infrastruture facilities. This would be applicable to industries which do not require imported raw-materials. Central clearance for capital issues, import of capital goods and foreign collaboration should continue to be done as hithertofore as the present procedures are quite satisfactory.

7.4 In the small scale sector, the greatest deficiency is in marketing. Individual units find it very difficult to find their markets and except in a few State support in this regard is nominal. Every State has to organise marketing support for small scale and Village industries in a much more purposive manner there should also be an apex organisation for this purpose at the national level. As far as raw-material is concerned, the existing arrangements made through the Small Industries Corporation appear to be more or less adequate.

However, many of the raw materials like iron-steel, other metals, coal, chemicals and some petroleum products being scarce or which are being produced under Central sector, are allocated to the States by the Government of India. Some of the States which for historical reasons being late starters in the matter of industrialisation, are getting less of allocations. The system should be made more equitable. It sholuld also promote the development of industries in industrially backward regions by giving them adequate scarce raw materials.

7.5 The Central financial institutions are not giving loans to State Plans but to individual industries either directly or through the State finacial institutions. The Central financial institutions have, however, been channelising a major part of their assistance to more developed States from where a majority of the applications emanate. This acts to the disadvantage of the backward States. The Central financial institutions have to take a more active interest for the development of industrially backward States and give priority to the investment proposals for such areas.

They should not merely play the passive role awaiting the applications from the States but should in fact play more positive and promotional role. As an analogy it may be mentioned that as a result of requests of large number of States, RBI has persuaded the banks to play a more active role in bringing the deficient States upto the national average. The same policy presently does not seem to be visible in case of national financial institutions. The Government of India or the IDBI as the apex financial institution, should adopt a similar approach.

The follwing table would statistically indicate the present disparities and high-lights the facts that well-to-do States are getting more assistance and are further improving their economic position whereas deficient States are getting less and are further lagging behind; the gulf between the advanced and the backward States is widening:

Assistance Sanctioned during 1984-85 and Cumulative up to End-March, 1985

(Rupees Crores)

Sl. No.	State/Institution	Cumulative up to end of March, 1985							
		I.D.B.I.	I.F.C.I.	I.C.I.C.I.	L.I.C.	U.T.I.	G.I.C.	Total	P. C. to Total

7.6 It is true that in the location of Central public sector industries. the States are not always taken into confidence. Also, these decisions are taken apparently sometines on other than purely economic considerations. The instrument of investment in Central public sector should be utilised for developing industrially backward states.

It may be observed that in Rajasthan, covering 1/10th of the country's areas, in last almost two decades, not a single new Central sector project has been set up. The following table would reveal this kind of a trend which needs to be corrected and made equitable.

Percentage share of States in Commulative Investment (Gross Block) in Central Public Undertaking (1963-1983)

Year	STATES							
	A. P.	Assam	Bihar	Gujarat	Haryana	H. P.	Karnataka	Kerala

SOURCE : Bureau of Public Enterprises Annual Report on the working of Industrial and Commercial Undertakings of the Central Government. Government of India, various issues.

7.7 There is ground for criticism that certain States have been neglected in Central public investment. The proportion of Central public sector investment in Rajasthan has been only 2.0 % although it is admittedly an industrially backward State. There is also a tendency for Central public sector investments to divert towards more affluent States which can offer better incentives and concessions.

This tendency needs to be arrested and a more equitable distribution with emphasis on development of backward States should be stressed in location of central public sector industries.

7.8 The methodology adopted for identification of industrially backward areas has become obsolete and requires a careful review. In any case, there has been a major change in the level of development of areas classified as backward and, therefore, reclassification of backward areas is an urgent necessity. The incentives given by Central Government and financial institutions in development of backward areas have been partially successful particularly, where necessary infrastructure facilities were available.

In the present methodology the entire district is identified as industrially backward. In some cases the entire district may not be found industrially backward but a certain pocket/area of the district may be industrially backward. The present methodology may, therefore, be suitably modified to identify and declare industrially backward pockets/areas like development block within the district also.

Trade & Commerce

8.1 There has not been any serious restriction on inter-State commerce and trade nor has there been any charge of discrimination between one State and the other in this regard. In the present circumstances an authority as provided for under Article 307 of the Constitution does not appear to be necessary.

Agriculture :

9.1 The State is strongly of the view that Central attachment in the scope of the assumption of responsibility for substantive activity should not be permissible in agriculture and it should continue to be treated as a State subjet.

9.2 The Centrally sponsored schemes are usually sponsored with an all India perspective in view and quite often without appreciating the specific needs of the States. Further the committed liability after the scheme period is over has got to be borne by the State Governments since the staff cannot be disbanded. The All India pattern also created distortions in the staffing scale because of the insistence by Union Government to provide staff under specific schemes.

The State, therefore, feels that Centrally sponsored schemes should be kept to the minimum in respect of items of basic national importance. These should not be tied to State resources and should be fully financed by Union Government, in case these are sponsored during mid-year or mid Five Year Plan since State Plan funds are already ties to other programmes.

9.3 The required cooperation is lacking. The State would welcome the constitution of Joint Working Groups and a continuous dialogue between Central and State Working Groups.

9.4 The item relating to fixation of minimum or fair price of agriculture items has been dealt with in reply to Question 4.7.

With regard to Irrigation, the State would like to point out that for inter-State waters it is advantageous to retain the need for approval by Central agencies. It may also be added that inter-State disputes over sharing river waters are older than the Constitution. The founding fathers of the Constitution were aware of this problem and, therefore, in Article 262 authorised the Parliament to legislate for inter-State water disputes. This was done by Parliament by enacting the Inter-State Water Disputes Act, 1956.

Over the years the Central Government has preferred to settle inter-State disputes by negotiations, thereby retaining its ability to arbitrate between the disputant States. Delay occurs on two accounts, firstly over reference to the Tribunal and, thereafter in the award of the Tribunal constituted for a particular dispute.

The alternatives to the present arrangements could be to enact legislation for settlement of the disputes by the Supreme Court in the same manner as the provision for the settlement of other disputes is there in Article 131, or transfer of rights in rivers to Centre. In United States of America, Australia and West Germany settlement of inter-State water disputes through judicial process is acceptable.

The State Government would favour tightening of the existing provisions for expeditious disposal of the inter-State water disputes including central of head works so that participant States do not feel aggrieved.

With regard to Forestry policy and administration it may be pointed out that there is too much of centralisation after the enactment of Forest Conservation Law. The State Government would suggest for declaring the Chief Conservator of Forest of the State as the authority responsible for administering the Forest policy in each State for expediting the matters so that reference to Government of India is not necessary in all cases.

9.5 No problem.

Food Civil Supplies

10.1 By and large the present arrangements are consistent with regard to the States obligations for maintaining regular supplies of foodgrains and other essential commodities under the public distribution system.

Consultations while deciding the allocation of the foodgrains and other commodities are not made with the State Governments. It is necessary and should be made on a quarterly basis so that allocattion on a realistic basis could be made. Another area where scope of improvement for Centre-State liaison appears desirable is particularly in regard to movement of foodgrains and sugar. Thus before deciding upon despatches to other States, consultation by the Central Government with the State Government is considered desirable. The Central Government should also consult the States in the matter of movement of levy sugar from factories located outside the State to obviate delay in receipt of consignments.

10.2 This appears necessary so that practical difficulties in the implementation can be sorted out and where deemed necessary, requisite comments/substitutions/ deletions could be considered. To achieve this end yearly meetings should be held at the level of the Central Government.

Education

General

In universalising primary education in backward States and districts there is need for financial role for the Centre. This compensating finance for the educationally backward districts in any State should form part of the total Central assistance.

The Centre has also the responsibility to bring about a technological revolution in education and to facilitate and finance it, as it has done in agriculture. It is true that there is no distinct, visible and immediate pay off for the human and financial investment in educational technology as in the augmented net income per hectare in agriculture. However, the pay off will be in helping education regain its vocation and in raising the labour force skills of the people.

The rational and effective division of the financial resources of the country meant for education must be a function of the size of their, relative responsibilities allowing special weight for the backward States and districts.

11.1 The States have sufficient initiative and authority available for academic growth and development. Important decisions which are taken at the Central level are arrived at after consultation in All India conferences convened by the Ministry of Education. The Centre's efforts at the standardisation of education had been mostly positive and have not stood in the way of States adoption of progressive policies. The criticism with regard to 'Centralisation' and 'Standardisation' appears to be unjustified except in the case of University Grants Commission.

11.2 University Grants Commission has failed in its role of providing lead to the Universities in academic as well as administrative matters by taking arbitrary decisions which create complications for the States. It has not been able to evolve a policy of—

(i) proper coordination between quantitative growth and qualitative excellence,

(ii) determination of optimum size for Universities of different types like unitary, affiliating, etc. and

(iii) laying down proper indices for assessment of financial needs of universities in different regions.

The role of UGC in extending financial assistance had been too faulty and disbursement of grants does not follow any set pattern.

The State Government feels that States should invariably be consulted by UGC before it takes important decisions. Financial assistance should be fairly distributed to all Universities irrespective of the fact whether it is a Central University or not.

11.3 Present institutional arrangements appear to be adequate provided the conferences are held every year. The role of States in affairs of UGC needs to be strengthened. Similarly, the Association of Indian Universities needs to be strengthened.

11.4 No difficulty has been experienced.

11.5 No difficulty has been experienced.

Inter Governmental Coordination

12.1 A separate commission or council is not considered to be necessary.

Views of Chief Minister of Rajasthan presented before the Commission on 19th March, 1987.

Justice Sarkaria and Friends,

I am grateful to you for inviting us to present our views in person on the Questionnaire of the Commission on Centre-State relations. The written reply to the Questionnaire had been sent by us to the Commission earlier. Here I would like to highlight important points which require special emphasis or consideration by the Commission.

2. Our position regarding basic structure of the Constitution is crystal clear. We want a strong Centre. An effective Centre alone can control hydra-headed, fissiparous tendencies like linguism, regionalism and religious separatism etc. which threaten unity, integrity and the common composite culture of the

Country. The long histrory of the Country establishes this fact beyond doubt. The Country had stood united and thrived only with strong Centre. In view of this our views are that—

(a) Article 256, 257, 354 and 357 and 365 which deal with the administrative and emergency powers of the Centre are reasonable and necessary.

(b) The present system of the Union, State and concurrent lists in non-tax matters should continue though with some change which is as follows. Water and power, which, with the process of development have become very crucial, should be declared national resources and only Parliament should be competent to legislate on them. The actual control of all rivers and power projects should be with the Centre. This would be the most important step to promote national interest. In a manner of speaking, the canals and power lines, like ropes, would bind the various States of India together. For this, entry 56 of the list of the VII Schedule and Article 262 needs suitable amendments. There should be a legislation for judicial settlement of disputes relating to power and water by the Supreme Court. Article 131 of the Constitution already provides for similar settlement of disputes relating to other matter by the Supreme Court.

In countries like America, Australia, settlement of Inter-State disputes by their Supreme Court is accepted.

In case our more fundamental suggestion given earlier is not accepted, the State Government would atleast favour tightening of the existing provisions for expeditious disposal of the Inter-State water disputes including Central control of head-works so that participant States do not feel aggrieved.

3. In case, the Commission is also examining the Anandpur Sahib Resolution, we are of the following views :—

(a) In relation to Resolution No. 1, the Centre should be made stronger in the interest of national integrity;

(b) Regarding the Resolution No. 2(b), we oppose any merger of any part of the State of Rajasthan in the State of Punjab. We are totally opposed to any such policy of expansionism and aggrandisement.

(c) The Resolution No. 2(c) relating to the control of the head-works by Punjab is also totally unacceptable to us. We also emphatically oppose the Resolution as far as Rajasthan's share in water is concerned.

(d) We are similarly totally against the Resolution No. 2(d) which demands revision of the Award given by the late Prime Minister Shrimati Indira Gandhi on the distribution of Ravi-Beas waters, accepted by the Chief Ministers of Punjab, Haryana and Rajasthan without reservation on behalf of their States.

Even at the expense of repetition I would say that we should promote centripetal rather than centrifugal forces.

4. The office of the Governor in its present form deserves to be retained as it constitutes an important link between the Centre and the State.

On the basis of the experience, we are also of the the view that Governors have acted fairly and unbiasedly in exercise of their powers under various provisions of the Constitution including those relating to emergency provisions.

The power of inviting particular party leader for forming Government in a disputed situation, has by and large been exercised justly and fairly by the Governors. However, we would like to make the following two points :—

(i) There is no necessity for the Governor to check and verify the number of legislators in a disputed situation. For this, the appropriate and democratic forum is the State Assembly. However in complicated situations the Governor should continue to have his usual discretion.

(ii) A reasonable time limit should be prescribed for giving assent or reject a Bill under Article 201 of the Constitution. The same principle should apply at the national level.

5. In financial matters, we would like to emphasise one particular aspect from which many of our points would flow. Under the present scheme of the Constitution, most of the developmental programmes, directly affecting the common citizens of the Country, are to be funded and executed by the State Governments. On the other hand, the resources available with the States are disproportionate to such developmental needs. Unity and integrity of the country and the Constitutional set up would be properly maintained only if the basic needs of the common citizens of the country are satisfied. But most of the taxes available to the State Governments are inelastic. Thus, there is a need for revamping the fiscal system provided in the Constitution.

It may be added here that, presently, among the States also because of the different levels of development, the availability of resources vary. The result is that the people living in different States have access to different standards in respect of basic needs. Thus, in actual terms, the basic requirements of the people are met on the basis of the domicile in a particular State rather than common citizenship of the country. Our view is that the aspect of common citizenship needs to be promoted and the concept of domicile derated. This would mean that every citizen of the country must have access to basic needs of life irrespective of domicile. In this context, we would like to make the following suggestions for giving more financial resources and powers to the States :—

(i) Under the existing constitutional arrangements the gap between the fiscal needs of States and the resources has widened. Thus, for financing the developmental expenditure, States have to depend more and more on the Central Government. The periodic assessment of revenue gap, made by a constitutional agency like Finance Commission has not been realistic. The forecast of the Finance Commission does not generally take into account the future

increases in the cost of goods and services. On the presumption that these would be fully covered by the buoyancy in the revenue. With tax rate being almost highest in the country and with the slow pace of development, this has not turned but to be true. Consequently, the devolution of Central assistance has been inadequate and even the essential and compulsive expenditure has to be kept low affecting the quality of development and administration. The Government is strongly of the view that constitutional mechanism for transfer of funds should be so revised as to eliminate or atleast to minimise the existing gap between the resources and fiscal needs of the States to be worked out to ensure a minimum level of development and facilities for all the citizens of the country irrespective of the State to which they belong.

(ii) Following are the three ways of bridging the gap between the fiscal needs of the State and the resources available with them :—

(a) Share of Taxes

(b) Plan Assistance

(c) Non-Plan Assistance.

(iii) The present formula of distribution of shareable resources among the States based on the criterion of collectional population per capita domestic product and poverty proportion deserves to be changed. The collection formula favours the developed States with ports and marketing centres wherein most of the industries are set up. The estimates of the States domestic products also suffer from serious limitation in view to weak data base and appropriate norms for estimation particularly, of tertiary sector. Poverty ratio too has been under serious criticism from various quarters because of the use of calorific intake. The unrealism of this criterion is palpable from the fact that the percentage of persons below poverty line in advanced States like Maharashtra and Gujarat is more than that of a poor State like Rajasthan. As a result of the present formula, the rich States have become richer and the poor poorer. In our view, the appropriate formula of sharing should be :

(a) 50% on the basis of population weighed by area and 50% on the basis of inverse of index of infrastructure (treating All India Index to be 100).

The element of the area has been proposed in view of the fact that vastness of the area increases the unit cost and limits the growth of infrastructure which is a pre-requisite and indicator of development of economy.

(iv) The formula for Plan assistance from the Government of India needs to be restructured particularly because it has lead to greater regional disparities. In our view the basic criterion for determining the assistance should be the need for funds for raising the level in key social and economic sectors in all the States to the levels of the developed States. Funds so assessed should be made available in full by the Central Government after deducting the State's own resources. The balance of the Plan assistance may be distributed on the same basis as has been recommended earlier for tax devolution.

(v) Non-Plan assistance needs to be given in full for meeting deficit, if any, (although with the scheme of transfer suggested now, there is little likelihood of deficit) and the expenditure incurred in mitigating the rigours of natural calamity and the like. This assistance should be in the form of Non-Plan grant.

(vi) The State Government welcomes the idea of setting up a special "Federal Fund" for ensuring development in economically under-developed areas.

(vii) The State Government would urge for the restoration of power for levying Sales-tax in respect of commodities presently liable to additional excise duty, namely, textile, sugar and tobacco. The income from such excise duties is proportionately less than the income to the Central Government from excise duties or income to the State Government from Sales-tax on other commodities. Had Sales-tax continued the State Governments would have earned more on these items.

(viii) Union excise should also be statutorily shared like income tax with the States in full.

(ix) The grants in lieu of the Railway passenger fare should be in proportion to the rise in collection of railway fare.

(x) The power to levy royalty on minerals (which belong to State) should be given to the States to be exercised in accordance with the guidelines to be given by the Government of India. Under the present system, the royalty rates cannot be legally increased before four years. In actual practice, the Government of India does not increase it before six to seven years.

(xi) The Central investments in industries lead to the increased production which in turn mean greater tax revenues to the State Governments. Presently, this investment is unevenly distributed among the States. A State like Rajasthan has hardly 2 per cent of the total Central investment. This needs to be increased in accordance with the formula which takes into account both the area and the population of the State. Our logic is simple. All parts of the country are entitled to share the prosperity of the country in an equitable manner.

(xii) The Government of India has been raising substantial resources by revising the administered prices of items like petroleum products, coal, iron, steel etc. The additional revenue so accruing are wholly appropriated by the Union Government being outside the divisive pool. Instead of increasing the administered prices, the excise duties should be raised so that States are also entitled to get share out of the additional revenues. Similarly, the State do not get share out of additional revenue accruing to the Central Government by

revision of rates of cesses. Instead of increasing the cess, if the basic excise duties are increased, the States would also get benefit from additional revenues accruing to the Central Government.

(xiii) The entire sum mobilised by the State Governments as small savings should be allowed to be used as a Plan resource instead of 2/3rd share as at present.

(xiv) The maximum community savings are earnered by the nationalised banks. It is gathered that the present deposits of the banks are over one lakh crores of rupees. Apart from some market borrowings or funds spent in priority sector, underdeveloped States like Rajasthan have limited share in such a substantial community saving. A suitable mechanism should be worked out so that this saving is equitably shared by the States with the Government of India and among themselves.

(xv) Another area in which attention of the Commission is solicited is the existing arrangement in regard to financing of relief expenditure by the States affected by natural calamities. Under the existing arrangement, in case of drought if the expenditure on relief operation is in excess of the margin money the State Government is required to make a contribution from its Plan to the extent of 5% of the Annual Plan Outlay. This Plan contribution of the Government is covered by Advance Plan Assistance and is adjusted against the ceiling of Central Assistance within 5 years following the end of the drought. If expenditure requirement as assessed by the Central Team and the High Level Committee cannot be adequately met in a particular case if the State Plan contribution is taken into account, the extra expenditure is taken as an indication of the special severity of the calamity which warrants assistance from the Central Government to the State to the full extent of the extra-expenditure half as grant and half as loan.

It is not appropriate to relate the expenditure on relief measures with Plan since by the very nature these decentralised employment oriented works are not capable of providing any financial return. Their inclusion under plan distorts the plan priorities and entails a burden on plan to make further investment on these works for their completion.

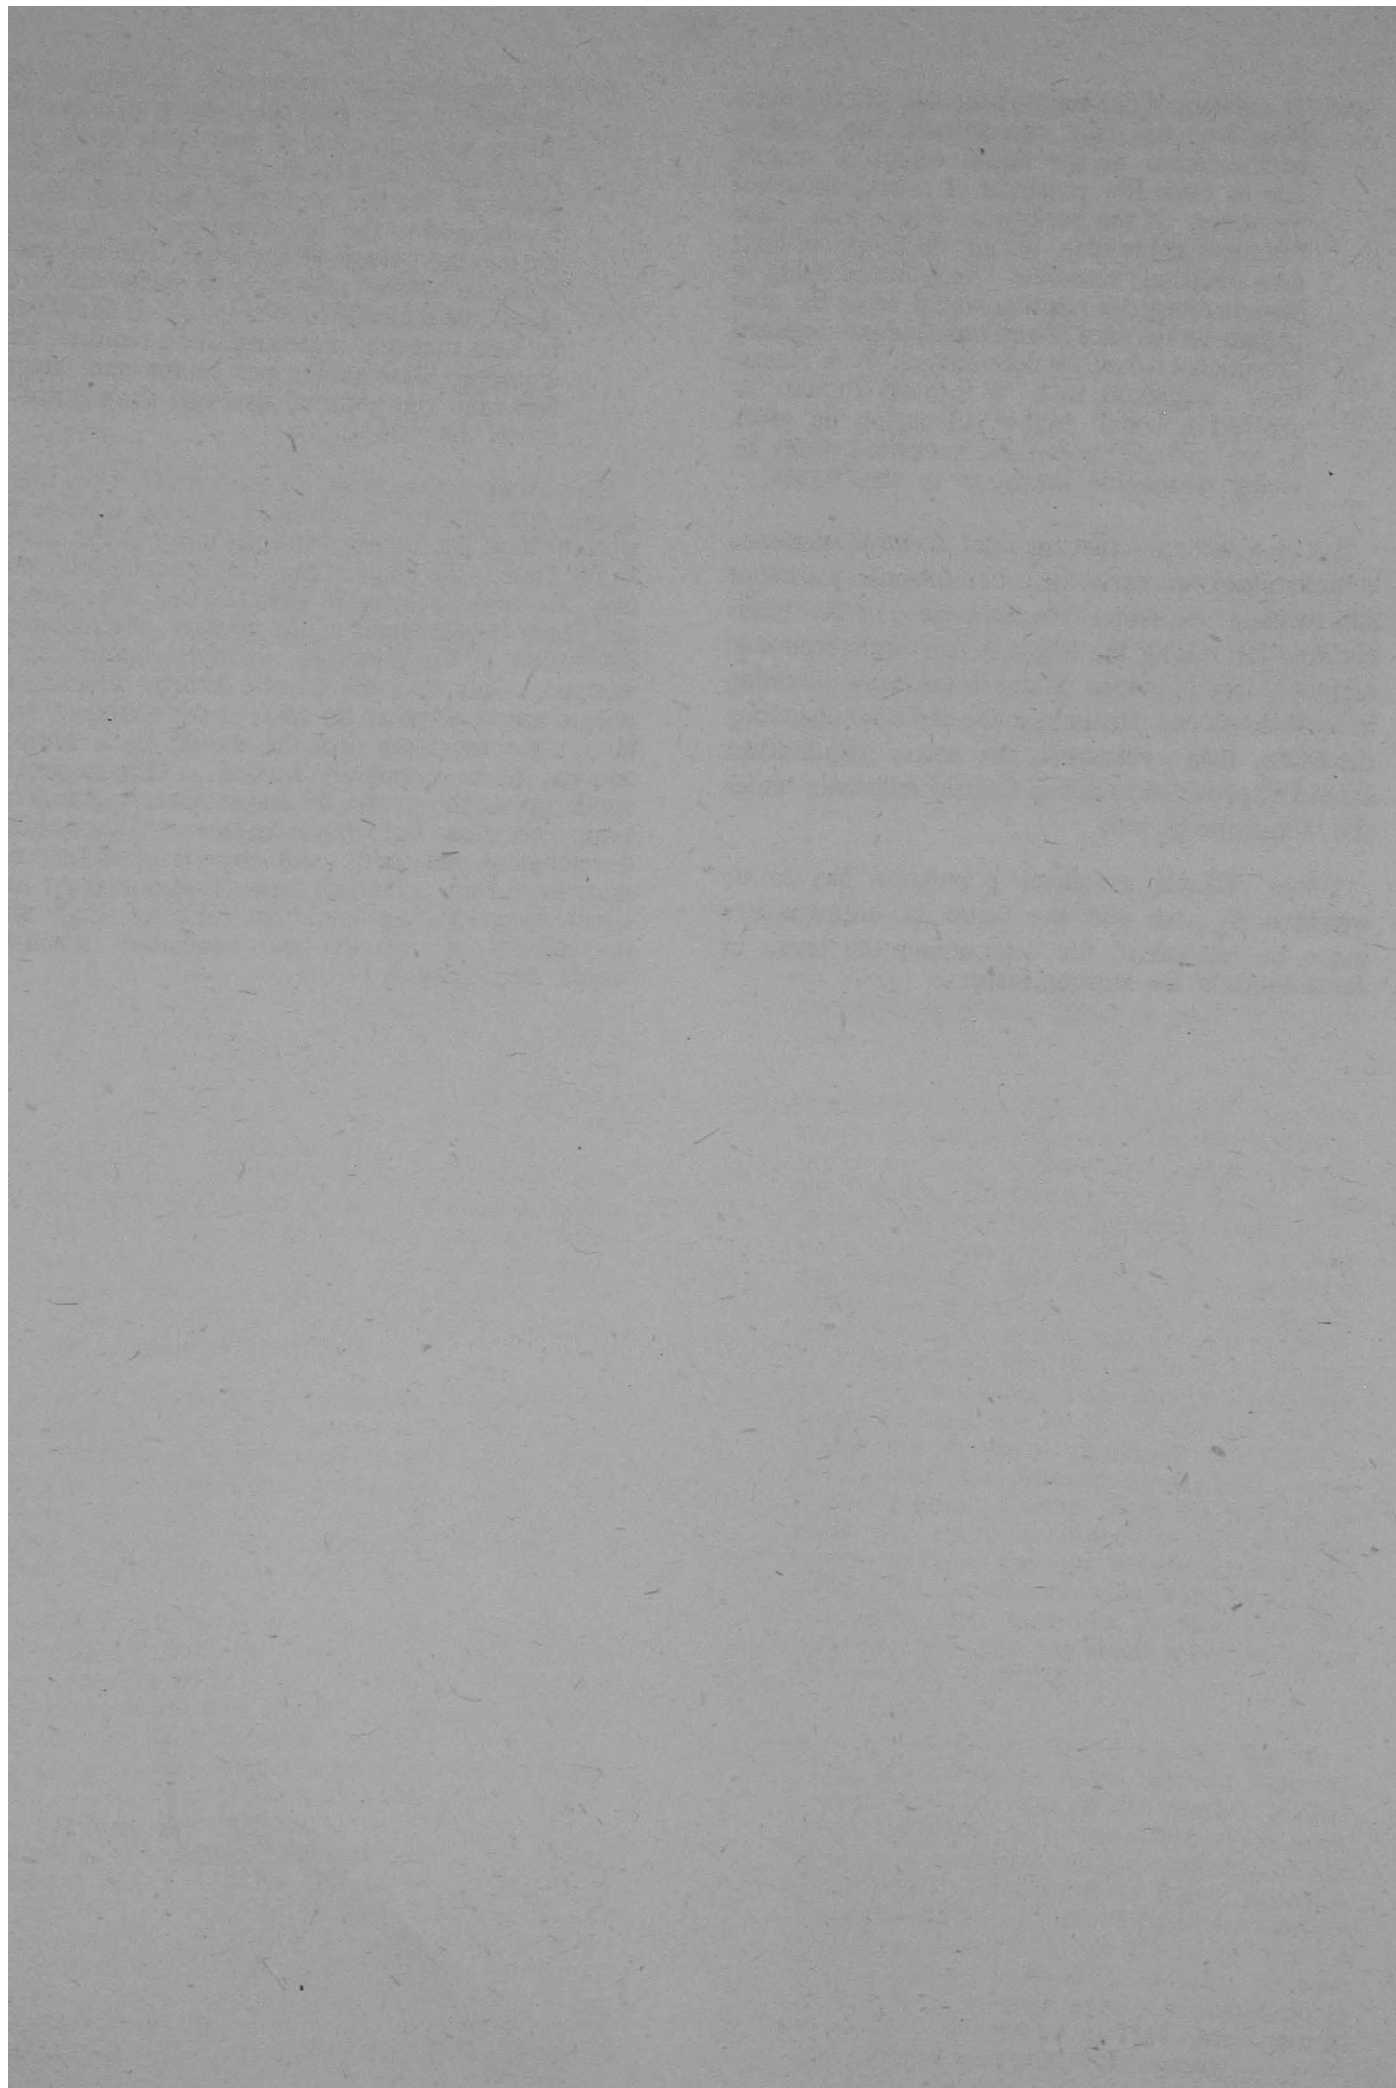
It will be seen from the above that the financial assistance by the Centre to the States in respect of expenditure on drought relief is largely as loan. This casts a very heavy burden on the States such as Rajasthan where drought is a recurrent feature. The current famine is the third consecutive and eigth famine in the last nine years. From 1st April, 1980 to September, 1986, the State Government has had to avail of Advance Plan Assistance of the order of Rs. 370 crores creating a liability of Rs. 245 crores on the State Government. In addition to this, the State has to provide relief by suspension of recovery of loan and other dues in the drought affected areas. In case of drought; occurring continuously, the calamity should be treated as calamity of rare severity and the entire assistance for relief expenditure should be provided as grant. Besides, such calamities should be a national concern and should be met by national effort rather than by a financial weak State.

6. Regarding economic and social planning, I have to make the following observations:

(i) Rajasthan is in favour of Planning Commission's continuance as a department of Government of India as at present for performing its role towards country's economic and social planning. It is, however, suggested that the five year Plan and Annual Plans should first be discussed at official level with planning Secretaries of States and thereafter a Sub-Committee of the National Development Council may be formed for detailed deliberations on the notes of discussions of official level meetings and finally the National Development Council may consider the draft. It is further suggested that needs of various States in the light of guidelines or norms prescribed by the National Development Council be identified to ensure that the less developed States are provided with adequate funds to come-up to the level of their developed counter-parts. The Central role in planning should be to the extent of laying down basic policy framework and the modalities of achieving the fixed targets should be left with the States. It appears to be imperative to evolve a system to ensure full and close cooperation of the States at each important stage.

(ii) As already stated there is a need for re-structuring the system of channelising Central assistance by way of loans and grants through the Planning Commission to the States. The present system of providing block Central assistance in the loan grant ratio of 70:30 is grossly unfavourable, particularly for backward States like Rajasthan, whose mounting debt burden calls for a fresh look into the problem. It is undisputed that the Union Government also derives a share in the benefit of development efforts made by the States through increase in its financial resources and logically the Central Government should bear some responsibilities. Further, it is not justified to treat the entire investment to yield sufficient returns to repay the loan liability incurred for making the investment in view of the long gestation period and therefore the State feels that the loangrant ratio for block plan assistance be reversed to 30:70.

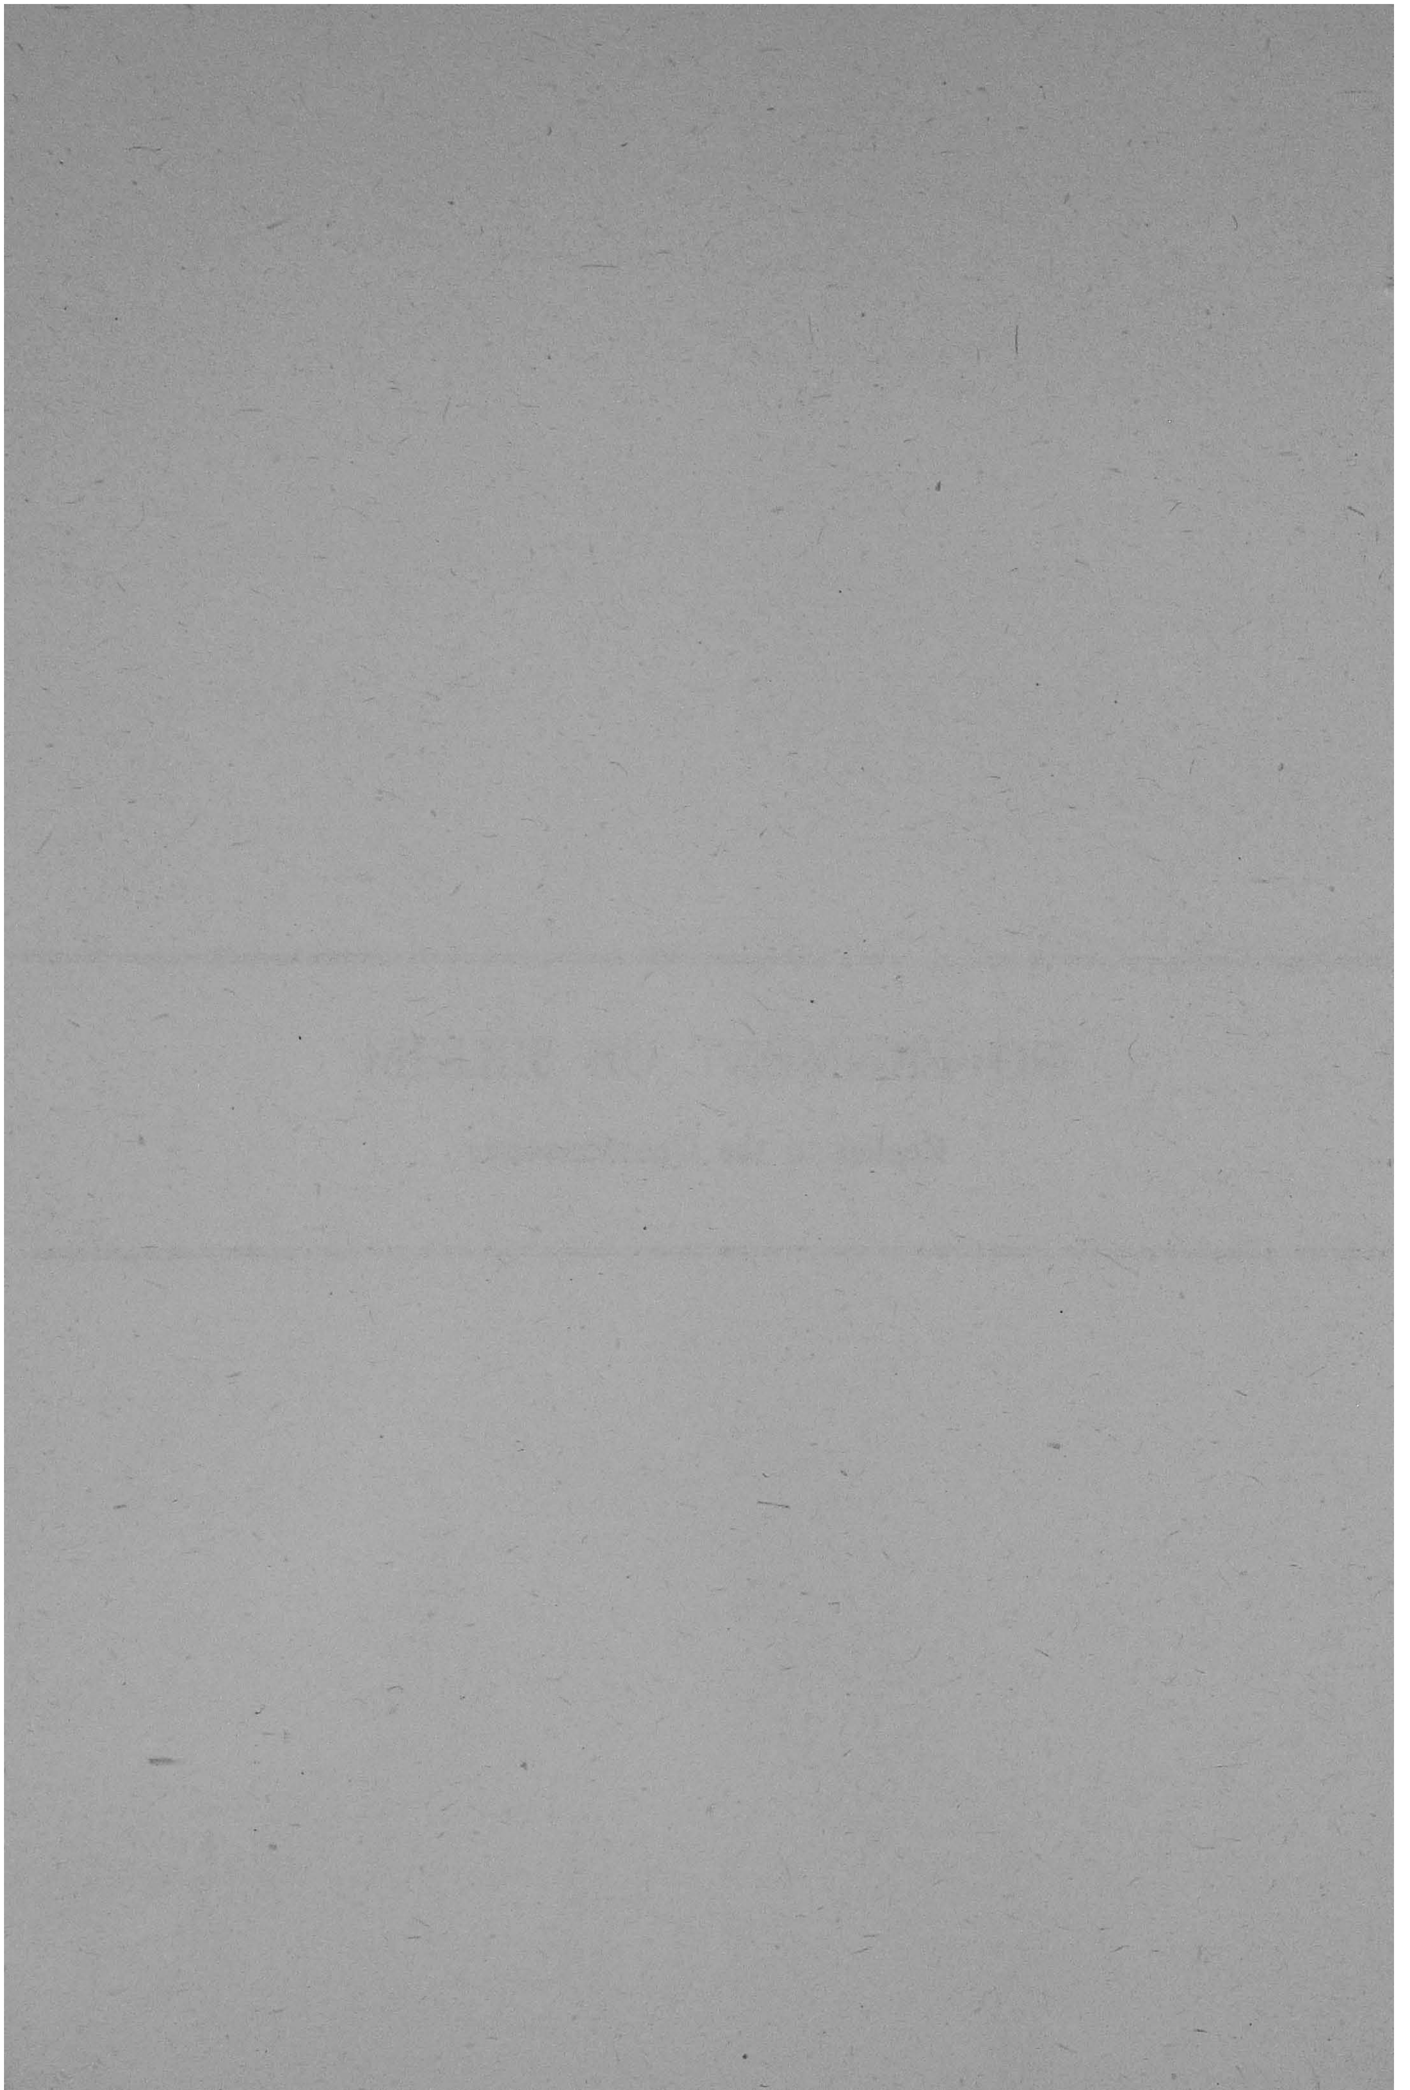
(iii) For the externally aided projects, the State would plead that the funds received from the external agencies against the specific project should be passed on to the States on the same terms and conditions as are available to the Government of India from these agencies. Atleast the entire amount of assistance received should be passed on to the States. As per the existing pattern only 70% of loan amount received from external agency is passed on to the State Government as Plan assistance in which 70% is loan and 30% is grant.



(iv) The system of determining the size of the State Plan does not take into account the relative backwardness of the States which is mainly due to their low potential of raising financial resources. If the backward States with poor resources are to plan within the scope of their own financial resources such States being in dis-advantageous position would never be able to gear-up the pace of development and regional imbalances would get accentuated. It is therefore, suggested that a formula should be evolved in which higher allocation be given to the sparsely populated backward states by giving reasonable weightage to their areas.

It is also necessary that the total Central assistance is broken into two parts *viz.*, non-formula assistance and formula assistance. An assessment of the funds required for raising the levels in key socio-economic sectors of less developed States to the levels obtaining in more developed States be made and after deducting the States own resources, the entire requirement should be provided in full as Central assistance under the non-formula part.

Under formula assistance p pulation has to be weighted by area and the factor of infrastructure index be introduced for determining the share in devolutions to the vairous States.



(v) For the Centrally sponsored schemes, it may be pointed out that the pattern of assistance along with quantum of assistance likely to be made available may be decided before finalisation of the five year plans and it should not be changed to the disadvantage of the States during the course of the plan. The important schemes having relevance to backward areas should be centrally funded in full. It should also be seen that the matching share required from a poorer State having per capita state income less than the national average, should not be more than 25%.

To sum up we are firmly of the view that the Union should continue to be strong as nothing is more important than the integrity and the unity of the country. In the States, the office of the Governor should continue. However, keeping in view the need for equitable and faster development of the country, the scheme of devolution of the financial resources should be revamped. Only than the scheme directly affecting the people would be taken up all over the country. Similarly, the recurring drought should be a national concern to be nationally funded. This suggestion would up-set the *status-quo* and as such might attract some resistance. But what is important is the national development and unity. All citizens of the country must have their minimum needs met and must have equal access to the minimum facilities. Only then the concept of common and contented citizenship would be achieved.

GOVERNMENT OF SIKKIM

Replies to the Questionnaire]

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 The Constitution of India is neither purely Federal nor Unitary. It is a combination of both, with greater weightage given for a strong Centre. The object of the framers of the Constitution has been to build a strong central authority which may resist external aggression and also to check internal disruptive forces that may tend to undermine the nascent state.

1.2 There cannot be two opinions about the need to develope more powers and responsibilities to the States. However, care has to be taken that these do not conflict with the responsibility to maintain national unity and integrity. It is in this context that the views of the Rajmannar Committee have to be examined. The question of deletion, revision or substantial modification of provision mentioned in the aforesaid Articles need to be studied thoroughly and in greater detail before coming to hasty conclusion.

Regarding appeals to the Supreme Court, it is the highest Court in the country and it has so far been functioning with credit and dignity. Hence its powers should not be disturbed.

1.3 It is true that India is a large and heterogenous country. This size of the country and the inherent diversities demand devolution of more powers and responsibilities to States, so as to enable them to develop in all spheres of activities within the parameters of National Unity. It may be mentioned that the Administrative Reforms Commission has also recommended that powers should be delegated to the maximum extent to the States for carrying out projects in which the Centre is directly interested or which are carried out by states as agents of the Centre.

1.4 In theory, a Federal Constitution envisages that the Central and Regional governments are independent in their spheres of activities. But reality of the situation has shown that this compartmentalisation is not there. One can cite the federal constitution of the United States of America, Australia and Canada.

1.5 There is no doubt that the Constitution is basically flexible enough to meet the challenge of the changing times. One should bear in mind that no constitution is perfect and indeed can never be perfect. Hence there are amendments to meet new challenges and new situations. What is important is evolution of healthy conventions and procedures. There is therefore, the need for functional cooperation leading to harmonious Centre-State relationship in accordance with the spirit and intent of the Constitution.

1.6 There can be no two opinious on the overriding importance of protecting the independence and ensuring the Unity and Integrity of the country. This was uppermost in the minds of the founding fathers of the Constitution. Hence there are number of Articles in the Constitution which have made a strong Centre to discharge this responsibility.

1.7 Obligations of the Union and the States need to be carefully reviewed in the light of experience gained in the working of the Articles mentioned in your question. It must however be said that much of the tension in the Centre-State relationship can be avoided if there is trust and confidence between them.

1.8 The Constitution empowers the President to establish an inter-State Council if at any time it appears to him that the public interests would be served thereby. One of the functions of the council would be to investigate and discuss subjects of common interest between the Union and the States or between two or more states. It would be desirable that such a matter as mentioned in your question should be left for the examination of all aspects to the inter-state council.

PART II

LEGISLATIVE RELATIONS

2.1 The subjects is the State List such as forest, education, agriculture have been included in the Concurrent List. In our view Entry in the Concurrent List should be confined to :

(a) National security;

(b) National integrity; and

(c) freedom of trade.

Barring the Entry touching upon these entries the Concurrent List must be reviewed to give more liberal power of legislation to the State.

2.2 It is in the interest of ensuring better relations between the Union and the States that the Central Government consults the State Governments before hand while undertaking legislation of a subject in the Concurrent List. There should be such a provision in the Constitution.

2.3 The Union Government's power to legislate on any subjects within the exclusive competence of the states in 'national interest' or 'public interest' should not be a perpetual nature. A time limit has to be fixed.

2.4 In the legislative sphere the following reference may be considered :—

(a) review of the Concurrent List;

(b) review of articles empowering legislation by the Parliament on the State Subjects;

(c) reviewing the applicability of the proviso to article 254;

(d) the transfer of the Subjects relating to incorporation of association, agriculture, education etc. to the State List.

PART III

ROLE OF THE GOVERNOR

3.1 The role of the Governor in the context of Centre-State relations needs to be reviewed thoroughly. It is true that some governors have acted with utmost impartiality but there were also some Governors whose actions have not been quite in keeping with the spirit of the Constitution. Hence there have been instances of the abuse of powers by governors. Sikkim had a bitter experience of it in May, 1984, Such instances are not conducive to the existence of better Centre-State relations. Hence the case for review.

3.2 The Governor will be a link between the State and the Centre so far the administrative undertaking is concerned. The Governor can not overdo the Council of Ministers.

3.3 These (a), (b) and (c) deal with matters of vital importance to the State. While making report to the President under Article 356(I) the Governor has to be very objective and has to act independently. The Governor should appoint only that person as a Chief Minister who commands majority on the floor of the Assembly in the Legislative Assembly. There should be no two opinions about it. In a situation where no party commands majority of seats, the Governor should ask the leader of that party which has the largest number of members to form the Government. The State Assembly must be convened within a fortnight of the appointment of the Chief Minister.

The words, pleasures of the Governor should mean the ministry remaining in office with full confidence of the legislative assembly. The pleasure of the Governor should not be allowed to be misused so as to enable the Governor to act according to his likes and dislikes.

Regarding Article 174(2) the Governor should be guided by the advice of the Chief Minister.

3.4 These Articles give discretionary powers to the Governor unfortunately some of the Governors have not used these powers independently and objectively. There must be a time limit for the Governnor and the President to make up their minds under Article 200 and Article 201 respectively. Ordinarily bills passed by the Legislative Assembly must be given assent to by the Governor.

We wish to add that article 201 has to be reviewed with specific provision as to what are the circumstances under which a bill is to be reserved for the assent of the President.

3.5 The case study conducted under the auspices of the Indian Law Institute is really revealing and disturbing. This process needs to be checked. A time limit should be there within which the process of consideration of and assent to should be completed.

3.6 As mentioned earlier some of the Governors have not acted impartially and fairly in accordance with the spirit of the Constitution. For them the question of establishing healthy conventions does not arise. Indeed they have gone against the very principles of constitutional democracy. Sikkim is one of the glowing examples of such acts of omission and commission on the part of the Governor in May, 1984. The Governor referred to is Shri Homi J. Talyarkhan.

3.7 The President should straightway remove the Governor as the Governor is appointed by him.

3.8 We agree.

3.9 The procedure postulated in the Constitution of the Federal Republic of Germany is not suitable for us. In a democracy what is important is the quality of a person who holds the high office of the Governor.

3.10 Going by the actions of some of the Governors in dealing with such important matters coming within his perview one is inclined to accept the recommendations of the Administrative Reforms Commission.

PART IV

ADMINISTRATIVE RELATIONS

4.1 The State Government sees no objection for keeping Articles 256 and 257, when powers under 365 are invoked by the Centre. The State concerned must be given an opportunity and powers must be passed on facts and not an imagination.

4.2 State Government is not opposed to retaining Article 365.

4.3 State Government agrees with Administrative Reforms Commission.

4.4 While exercising powers under Article 365 Centre shall not be guided away by the report of government along or its own assessment of the situation. Extreme care should be taken. The manner in which President's Rule was introduced in Sikkim itself is an experience.

4.5 President's rule must be limited to as shorter period as possible.

Clauses 4 and 5 of Article 356 have to be suitably amended so that in no circumstances President's rule in State can be extended for more than one year.

4.6 The present arrangements may continue as they have been working satisfactorily.

4.7 The need for review of the working of these agencies has been felt as there have been inroads in the domain of the state thereby impeding the pace of development. It has been keenly felt that some of their functionings should be vested in the state governments.

4.8 By and large the All India Services have fulfilled the expectations of the Constitution makers. However, it has to be ensured that officers of these services, while serving in the state, must be under the supervision of the concerned State government.

4.9 As a general policy concurrence of the State Government must be there before the use of Central force in the State. Only in cases of extreme situation, the Union Government can take *suo motu* decision.

4.10 One would agree with the view that' Broadcasting should continue to remain in the Union list but as was suggested the broadcasting and television facilities should be shared between the Union and the States on a fair basis, giving equal importance to the social, economic and cultural ethos of the people of each state. The present situation of heavily loaded newscast in favour of some states must go and equal importance needs to be given to news from other regions of the country as well.

4.11 Eastern Zonal Council has not served any purpose.

4.12 As things stand to-day, an Inter-State Council should be established as such a body will be desirable to iron out inter-state and Union-State differences.

About its functions and composition, it can be worked out later after discussions between the Union and the States.

PART V

FINANCIAL RELATIONS

5.1 By and large the scheme of devolution envisaged by the Constitution-makers has worked well However, the need for small and backward state like Sikkim and other North-eastern states has to be considered in proper perspective. While some big states are becoming richer because of their resource mobilisation potential, the backward States sorely lack that potential. Unless the Centre comes to the aid of these States in a big way it will be impossible for them to make progress. Hence this aspect of the situation has to be borne in mind in the process of devolution.

It will be in the fitness of things that Finance Commission must give greater weightage to backward States in the distribution of Financial resources.

5.2 The observation of ARC Study Team on Centre-State Relation would continue to hold good as dependence of States on the Union continues to increase. It is necessary to bring Corporation Tax, Custom Duty and Surcharge on Income Tax into the shareable pool but at the same time backward states should not be discriminated while sharing. The need for fiscal discipline both by the Centre and the States cannot be over-emphasised.

Certain elastic taxation heads should be brought under State so that the State resources increase.

5.3 We fully agree with the above observations and also with the view that regional balance can be reduced by a strong Centre having elastic sources of revenue. It must have discretionary powers to use the funds available with it for the development of poorer States. Only then the Centre can fulfill its obligations and responsibilities as mentioned in the Directive Principles of State policy. Otherwise, the rich States will become richer and the poor States poorer.

5.4 There is no doubt that richer states have to contribute to the Central pool through subvention. There is also no doubt that there is absolute need to have better control over expenditure.

Deficit financing has to be resorted to when it is a must in the interest of developing economy.

5.5 Whereas the Finance Commission assesses the resources and requirement of funds on the non-plan side, the Planning Commission assesses the developmental needs of the States. Both these bodies have to be more objective while assessing the needs of backward and poor States. The growing expectations of the people of backward states have to be given due consideration so that with adequate assistance from both these bodies, these States can accelerate their pace of development to catch up with the rest of the States. It is clear that the pattern of devolution of financial resources has not been equitable.

The criteria laid down should be planned assistance and not merely sharing of taxes.

5.6 State Government is not basically opposed to constitution of special federal fund from which the weaker states can be given aid.

5.7 Certain elastic taxable items need to be changed so that State Governments have good resource mobilisation.

5.8 Federal Taxes and State Taxes should be separate. State governments should be given liberty to have its own taxes. State Government is in favour of having more taxation power.

5.9 As things stand today, the roles of Planning Commission and Finance Commission are complementary. No doubt the suggestion for a Permanent Finance Commission to undertake the duel role of fiscal transfers deserves consideration It is known that some states are not happy with the views of various Finance Commissions. Also some States have opined that the Planning Commission has not been fair to them. Under the circumstances, the constitution of one Body has some merit. In the ultimate analysis it will be beneficial if these two bodies and the States make their assessments objectively and fairly.

5.10 The State Government totally agrees with the view. Transfers, both statutory and discretionary, have narrowed down the disparities in public expenditure.

5.11 We are in agreement with the view expressed in the question. Financial discipline is a must. All progressive schemes have to be implemented within the available financial resources. At the same time,

it is to be ensured that the pattern of allocation between the Centre and the State has to be in such a way as to give greater assistance to backward states so as to help them to accelerate their pace of development. Care also should be taken that these States do not indulge in financial indiscipline.

5.12 The State Government is in agreement with the 7th Finance Commission.

5.13 The State Government agrees with the views.

5.14 There is reasonableness in the suggestions that yield from the Special Bearer Bonds Scheme and the revenue from raising administered prices of items should be brought within the divisible pool of resources. If these were done, the financial resources of the States would have been further augmented to enable them to give more thrust to implement some pressing progressive schemes. Some States are of of the view that all revenues raised by the Centre should be shared with the States. Although we would not fully subscribe to this view, we would like to say that interest of States should be uppermost in the minds of the Centre in the sphere of resource sharing.

5.15 There should be equitable and the rational criteria in the distribution of savings available in the community. The savings belong to the country as a whole and as such the share of States in the sharing should not be guided only by area, population and resource mobilisation potential. Otherwise, small states like Sikkim will be in a terrific disadvantage.

5.16 We are aware of the responsibilities of the State and we are equally aware that the responsibilities are increasing. The centre should also realise that in a democratic socialist Country, the responsibilities of the State are always on the increase as they have to undertake various welfare measures for the well being of the society. Hence this aspect also needs to be considered. Also in times of certain conditions like inflation or any natural calamities it will be difficult for the states to do the job within the financial resources. Consequently deficits do arise but that should not be advanced as an argument for indulging in financial indiscipline resulting to large extent in fiscal imbalance.

5.17 We are in full agreement that a periodical review of the problem of growing indebtedness of the States is absolutely necessary. Perhaps it would be worthwhile to constitute an independent body to look into this matter in depth.

5.18 Sikkim being a small State and its borrowing capacity being negligible we can only suggest that the State should not exceed the limit of sound finance.

5.19 We are of the opinion that on foreign borrowings the Centre should not charge from the state a higher rate of interest than what it pays to the foreign lender. We are also of the opinion that projectied external aid should be passed on to the States. Indeed it would be worthwhile to make a review of the entire present arrangement.

5.20 In view of the different approaches of various States in this matter it would be desirable to have loans council, keeping in view the country's condition. There will be no justification to copy loan council as it exists in Australia. The Reserve Bank of India should be given more freedom in its functioning to fully meet its obligations and responsibilities.

5.21 Since there is no system of over-draft prevailing any more, the State Government has no comments to offer.

5.22 The State of Sikkim has limited areas of resources of revenue hence even if all the areas are exploited it is not possible to find adequate finances.

5.23 There is tremendous scope for improvement in the performance of public sector undertakings as the public sector has so far not yielded the expected returns on capital-investment.

About substantial leakage in Central taxation, the Central authorities should take adequate precautions to close those leakages.

5.24 It will definitely be a healthy convention if the suggestion is given effect to.

5.25 We agree with the suggestion that article 269 should be better exploited to augment the resources of the States.

5.26 No comments.

5.27 No comments.

5.28 It is a fact that this is one of the areas in which States have been experiencing great difficulties. In our State of Sikkim every year there are natural calamities in the form of landslides and hailstorms. Such calamities should be treated as national problem and the Centre must come forward with adequate funds to deal with such situations. The formula suggested by the Seventh Finance Commission seems to be inadequate. It is also necessary that Central officials must visit the areas to ensure that relief assistance is utilised properly and effectively.

5.29 We have no objection to the setting up of National Loan Corporation, National Credit Council and National Economic Council.

5.30 We fully agree that the funds are spent prudently and that the benefits go back largely to the people. At the same time collection of funds and their distribution are also important matters that need consideration.

5.31 (a) We agree that periodical assessment of expenditure of the Union is necessary. Such an exercise will satisfy everyone. We are also in full agreement with the view that additional resources should be found for helping the States, particularly the poorer ones.

(b) What is needed is strict financial discipline. Those States which indulge in Financial indiscipline despite repeated requests should not be bailed out by the Centre.

(c) We are not in favour of a permanent National Expenditure Commission. We believe that both the Centre and the States have the capacity to discharge their respective responsibilities to the satisfaction of the people.

5.32 The present system should continue.

5.33 "Evaluation Audit" at this stage cannot be accepted unless the system is scientifically based. 'Voucher Audit' system is in vogue now and is already under implementation. 'Evaluation Audit' system can be introduced when :—

(1) it is developed as a science of audit.

(2) the method is developed on the basis of accepted scientific norms.

5.34 We believe the Parliament has conferred sufficient powers and enjoined adequate duties on the Comptroller and Auditor General to enable him to keep an effective watch on the expenditure of the Union and the States.

5.35 We are satisfied that the reports of the Comptroller and Auditor General are comprehensive and reasonably accurate. At the same time we feel that if need be some powers may be given to him to enlighten the public on the pattern of and trends in public expenditure.

5.36 We have already expressed our views in reply to Question 5.35.

5.37 The existing arrangements may continue.

5.38 We are of the view that an expenditure Commission is not needed.

5.39 We fully agree with the view that there should be monitoring of accounts of utilisation after the expenditure is made. At the same time in some cases there has been considerable delay in the clearance of the plans of action formulated by the States from the Ministry concerned. Such undue delay which comes as an irritant must be avoided.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 We agree that in the process of planning, the consultation of the State Governments is not adequate and the special needs of smaller States is not really taken full care of. While this is partially dependent on the fact that some of the State Governments have not as yet evolved a full fledged planning and development machinery, a great deal can be achieved by more comprehensive consultation with the State Governments. It is also felt that standards evolved by the Central Government which are applied universally for all States, have to be suitably moderated so that the special requirements of smaller States is fully taken care of.

6.2 We do not see any special advantage in converting the National Development Council as a Statutory Body. The National Development Council as it exists today represents at the highest political level of the Central Government and the State Government and has been given the authority to finally approve development plans for the nation. This arrangement can be allowed to continue provided much more time is devoted to detail consultation with individual State Governments and full consideration by NDC itself of the development plans.

6.3 We are of the view that the composition of the Planning Commission should be that of an independent body and Economists, technologist and management experts as well as administrators who on the basis of a full understanding of the country's economic needs submit recommendations both short-term and long-term in order to see that the country's economic growth takes place at a rapid basis. Such a body may no doubt consult all concerned including the State Governments so that the plans formulated are as realistic as possible.

6.4 We are of the view that the composition of the Planning Commission should be that of an independent body and Economists, technologist and management experts as well as administrators who on the basis of a full understanding of the country's economic needs submit recommendations both short-term and long-term in order to see that the country's economic growth takes place at a rapid basis. Such a body may no doubt consult all concerned including the State Governments so that the plans formulated are as realistic as possible

6.5 In our view, the Planning Commission should be an autonomous body and should be created as a statutory institution so that the functions it performs have proper legal sanction. At the moment even though the Planning Commission functions in a manner which impinges on both the Union Government and the State Government, there is no proper statutory sanction for such functions.

6.6 We agree that the National priorities must find a place in the State Plans. However, we find that in deciding on national priorities the particular requirements of the State Governments especially those which are small in size are not fully kept in mind. For example, irrigation is considered an important national priority but to apply national standards on a State like Sikkim such a subject becomes an exercise which can result in mis-application of funds. We would advocate that while applying national priorities close consultation should be held with the State Governments.

6.7 While we consider that the present system of advancing central assistance through the Planning Commission to the State is generally satisfactory, we find that in case where a particular State execute schemes which are of benefit to a number of States, the particular State is made to bear a disproportionate burden in terms of interest when loans are sanctioned. For such schemes we advocate that the assistance should be primarily in the form of grants.

6.8 By and large the system of determining the size of the State Plan has been satisfactory except that when due to financial constraints the size of the Plan is sought to be reduced even though an economic consideration the programme defined by the State Government is fully justifiable and sound. We would, therefore, suggest that in the case of more economically backward States much more consideration should be given to accommodating their requirements in full so that the basic plan objective of bringing up the backward States to a level achieved by the advanced States is fully catered to.

6.9 By and large the system of determining the size of the State Plan has been satisfactory except that when due to financial constraints the size of the

plan is sought to be reduced even though on economic consideration the programme defined by the State Government is fully justifiable and sound. We would, therefore, suggest that in the case of more economically backward States much more consideration should be given to accommodating their requirements in full so that the basic plan objective of bringing up the backward States to a level achieved by the advanced States is fully catered to.

6.10 It is true that large number of Centrally sponsored schemes have to a certain extent distorted plan priorities of States, the situation cannot altogether be changed, we would recommend that before deciding on a subject which will be centrally sponsored close consultation should be held with the State Governments and the possibility of accommodating this item as a priority item within the State sector explored.

6.11 While the monitoring and evaluation machinery in the Planning Commission has been greatly strengthened the machinery at state level needs to be improved to a very great extent.

6.12 While decentralised planning is of great importance, the trend unfortunately has so far been towards more and more centralised planning. This is not only because of the fact that Union Government has an over-whelming share of the resources, but also because of the fact at the State levels, the Planning machinery has not been established in a manner which will enable the State Government to produce plans which are technically of a high quality and which can stand scrutiny. The required expertise consisting of economists and technocrats will have to be built up at the State levels. It is only a few States that have succeeded so far in this regard. Central assistance in helping States to build up such a planning mechanism will go a long way in enabling the states producing plans which can find full acceptability. The States also will have to acquire gradually the capability of finding their plans to a larger extent than at the moment.

6.13 The question whether the national plans should become progressively more indicative plans depends not only on the extent which the State Govt. can effectively participate in the Planning process but also in the areas in which we believe, government intervention is essential. After implementing seven plans the country has reached a state of industrial and agricultural maturity where we need to release a larger area for private initiative so that as has happened in several other countries we can hope to increase the rate of growth of the economy as a whole. This will also help in bringing down the bourgeoning government expenditure which is already proving to be a burden on the country. This especially seems to be of great importance in the context of the fact that at the moment the Central government finds it difficult to meet even its current liabilities out of current revenue and the establishment expenditure has reached a disproportionate share of the national budget.

PART VII

MISCELLANEOUS

Industries

7.1 We are in agreement that the extension of the first schedule to cover a very high proportion of industries in terms of value of their output has gone against the interests of the States. One can imagine the situation in which States are placed if they have to run to the centre for a licence to start a soap factory. One can understand that in respect of core industries related to defence purposes or where massive investment is needed, the Centre's jurisdiction to issue licences is quite understandable. Unfortunately a large number of consumer items as mentioned in the above question are union subjects. Such Industries should be transferred to the States' jurisdiction. Consumer Industries should be left outside the purview of Industries Development and Regulation Act, 1951.

Despite Sikkim Government's repeated requests, Centre failed to issue/renew licences due to mistakes in grant of licences.

7.2 Within the parametres of national public interest, defence industries and core industries and also such other industries, where investments are beyond the financial capability of the State Government should be included. The Union Government at the same time should have confidence in the States. It is therefore felt that a large number of items in the First Schedule to the Industries (Development and Regulation) Act 1951 can be shifted to the States jurisdiction.

1. **Metallurgical Industries :**
   - (i) Iron and Steel Structurals
   - (ii) Iron and steel pipes
   - (iii) Other products of iron and steel
   - (iv) Iron and steel castings and forgings.
2. **Electrical Equipment :**
   - (i) Electrical motors
   - (ii) Electrical lamps
   - (iii) Electrical fans
   - (iv) X-ray equipment
   - (v) Electronic equipment
   - (vi) Household appliances such as electric irons, heaters and like
   - (vii) Storage batteries
   - (viii) Dry cells.
3. **Telecommunications :**
   - (i) Radio receivers, including amplifying and public address equipment
   - (ii) Television sets.
4. **Transportation :**
   - (i) Motor cycles, scooters and the like
   - (ii) Bicycles
   - (iii) Others such as fork lift trucks and the like.

5. **Agricultural machinery :**
   (i) Agricultural implements.
6. **Miscellaneous Mechanical and Engineering Industries :**
   (i) Plastic moulded goods
   (ii) Hand tools, small tools and the like
   (iii) Razor blades
   (iv) Pressure Cookers
   (v) Cutlery
   (vi) Steel furniture.
7. **Commercial, Office and Household Equipment :**
   (i) Typewriters
   (ii) Calculating machines
   (iii) Vacuum cleaners
   (iv) Sewing and knitting machines
   (v) Hurricane lanterns
8. **Medical and Surgical Appliances :**
   (i) Surgical instrumets—sterilisers, incubator and the like
9. **Mathematical, Surveying and Drawing Instruments :**
   (i) Mathematical, surveying and drawing instruments.
10. **Fertilisers :**
   (i) Mixed fertilisers.
11. **Chemicals (other than fertilisers) :**
   (i) Paints, varnishes and enamels.
12. **Paper and pulp including paper products :**
   (i) Paper for packaging (corrugated paper, craft paper, paper bags, paper containers and the like)
   (ii) Pulp-wood pulp mechanical, chemical including dissolving pulp.
13. **Soaps, Cosmetics and Toilet Preparations :**
   (i) Soaps
   (ii) Cosmetics
   (iii) Perfumery
   (iv) Toilet preparations.
14. **Rubber goods :**
   (i) Tyres and tubes
   (ii) Surgical and medical products, including prophylactics
   (iii) Footwear.
15. **Leather, Leather Goods and Pickars :**
   (i) Leather, Leather Goods and Pickars.
16. **Glass :**
   (i) Hollow ware
   (ii) Sheet and plate glass
   (iii) Optical glass
   (iv) Laboratory ware
   (v) Glass wool
   (vi) Miscellaneous ware.
17. **Timber Products :**
   (i) Plywood
   (ii) Hardboard, including firbre-board, chip board and the like
   (iii) Matches
   (iv) Miscellaneous (furniture components, bobbins, shuttles and the like).
18. **Food Processing Industries :**
   (i) Canned fruits and fruit products
   (ii) Milk goods
   (iii) Malted foods
   (iv) Flour
   (v) Other processed foods.

7.3 State Government shall be interested with the function of licensing subject to overall supervision of Central Government.

7.4 There is need to have appropriate planning before hand for the allocation of raw materials. This aspect needs to be streamlined. As things stand today there is ample scope for improvement by bringing out more coordination between various institutions and greater financial support. There is also the need for decentralising the structure of planning to serve the desired objectives.

7.5 Sikkim is the smallest State in the country and its resource generating capacity is insignificant. State plans are financed from the Centre, Therefore. the implementation of the State plans has to be within the Centre's, allocation. As there are no public sector industries in the State worth mentioning, the question of securing loans from Industrial Development Bank or Industrial Finance Corporation for other Centrally controlled financial Institutions has not arisen.

7.6 Hardly there are any Public Sector Industries in Sikkim. Therefore, the question mentioned above has only academic interest so far as this State is concerned. The location of public sector industries is of crucial interest to the States. However, since there are none in this State at the moment, no comments can be offered on this issue.

7.7 So far as Heavy Industries are concerned, Sikkim is out of the picture. As a matter of fact Sikkim wishes very much to have Industries, heavy or medium in public or private sector in the State to exploit its potential. So long such industries are not there. the question is irrelevent.

No heavy industries have been set up in this State so far. As a matter of fact Sikkim wishes very much to have such industries established in the State but till now no Central schemes have been forthcoming.

7.8 It is true that Sikkim has been identified as industrially backward State. But unfortunately the Centre has not come forward to set up industries in

the State to remove its backwardness. The State has very limited resources to go in for setting up of industries on its own. This can alone be done with the Centre's assistance which unfortunately is not forthcoming. The result is there are hardly any industrial units worth mentioning. What is more important is development of infrastructure to attract entrepreneurs from outside. Unless there is investment, either from the public or private it will be very difficult for Sikkim to go in for industrialisation alone.

In land locked hill State like Sikkim the criteria laid down for declaring districts/areas backward shall not be only to declare it backward and leave it. A liberal investment of Central finances in Public Undertaking and extension of soft loans must be considered.

Trade and Commerce

8.1 Yes, State Government is in agreement with setting up of a Inter State Council and implement the clauses (a), (b) and (c).

Agriculture

9.1 The present status of agriculture as far as its placement in the list is concerned it is desirable to maintain *status quo*. The Centre should have equal say in the formulation of Plans and programmes for the development of agriculture in the country. The agriculture development should take place as per the priority fixed jointly by the state and the centre. However, in the recent past the Centre has been playing dominating role in deciding agriculture schemes to be implemented by the State Government. This is not desirable as it is not possible for such a big country to prepare developmental schemes in agriculture in the centralised pattern. The suitability of crops in different regions of the country vary greatly and this holds true even within narrow range making it necessary to formulate schemes on a regional basis. The Centre's role should be confined to formulating strategies, priorities and guidelines. The State Government must be empowered to execute independently within the policies and guidelines of the Centre.

9.2 We have large number of centres and centrally sponsored schemes in operation in the state. Such schemes have been in the increase year after year. The schemes controlled 100% by the Centre are not to be handed ever to the State Government as such schemes have been given to the State based on needs and requirements. The Centre would be in a much better position to operate such schemes directly. In case of other centrally sponsored schemes, it would be more desirable to transfer the same to the State Government. The centraly sponsored schemes, most of the time do not meet the needs of the State. Such schemes have less flexibility resulting into improper implementation by the State Government. Considering the size of the country variation in agro-climatic conditions, tremendous differences in topography etc., we could never have uniform central sponsored schemes for the whole country. Only those centrally sponsored schemes could be retained by the Centre that could be implemented uniformly throughout the country. However, there should be proper assessment of the programme on a regular manner by the centre.

The State Government has been constantly facing administrative constraints in the implementation of Centrally sponsored schemes particularly with the timely release of funds. maintenance of accounts, volume of work involved in preparing reports for submissions to the concerned Directorate. State sectors should be as minimum as possible in reference to centre sponsored schemes.

9.3 (1) In the formulation of Centrally sponsored schemes the State should be associated, while preparing the schemes because the states are the ultimate beneficiaries of such schemes. If this is not done than such schemes may not prove suitable for the States and this may result into unproductive expenditure.

(2) We agree with the suggestion that there should be a continuous dialogue between the Centre and the State Working groups for the purpose. The Cooperation between the centre and the state, has considerably improved in the formulation of Plans and programmes for the development in agriculture. The Centre has been organising regular meetings, conferences etc. not only for increasing crop production but also for arranging and distributing agricultural inputs, besides regular review of progress made by the State. For the north eastern state including Sikkim, such meetings, conferences, etc., should be organised in the state itself on a rotation basis because these states have similar agro-climatic situation topography, backwardness, concentration of tribal population etc. and also these states being at a great distance from Delhi. With minimum number of subject matter species, available in these states it becomes rather very difficult to depute officials to participate in all the meetings organised by the Centre. These States need to be treated on a different footing on account of the reasons already stated above.

9.4 (a) The cost of production of various agricultural commodities vary from states to states, from regions to regions and from blocks to blocks because of which we could never conceive of a uniform price structure for the whole country. The prices for different commodities should be arrived at taking into accounts the production cost and should be based on average but on actual basis for different regions. The agricultural price commission fixes prices only for selected commodities because of which the benefits flow to the farmers of certain state only. The farmers growing commercial or cash crops like ginger, potato, cardamom, oranges, fruits and vegetable etc. should also be brought under the purview of the agricultural price Commission. The centre should arrange procurement and marketing of items in the same manner as has been done in other commodities.

(b) The states having water resources should receive adequate revenue from the benefiting states for sharing the water resources.

(c) The centre has been playing decisive role in supply and managing the vital inputs including credit. Hence the centre's activity in such inputs greatly affect the developmental activities of the state. Here efforts of the centre is very important in timely arrangement of inputs for developmental programmes.

9.5 The central research Institutions and financial Institutions have been discharging their responsibilities satisfactorily. It is, however upto the state government,. to take full advantage of such organisations. The functioning of the ICAR Research Organisation, could be improved upon considerably if these are provided with adequate incentives and physical facilities including mobility. There is need for having better cooperation and coordination between the State and the Central Research Institutions.

Food and Civil Supplies

10.1 There is greater scope for improving Centre-State liaison in the areas of procurement, pricing, storage movement and distribution of foodgrains as well as other essential commodities. There must be prior consultation with State Governments while formulating the policies regarding these matters.

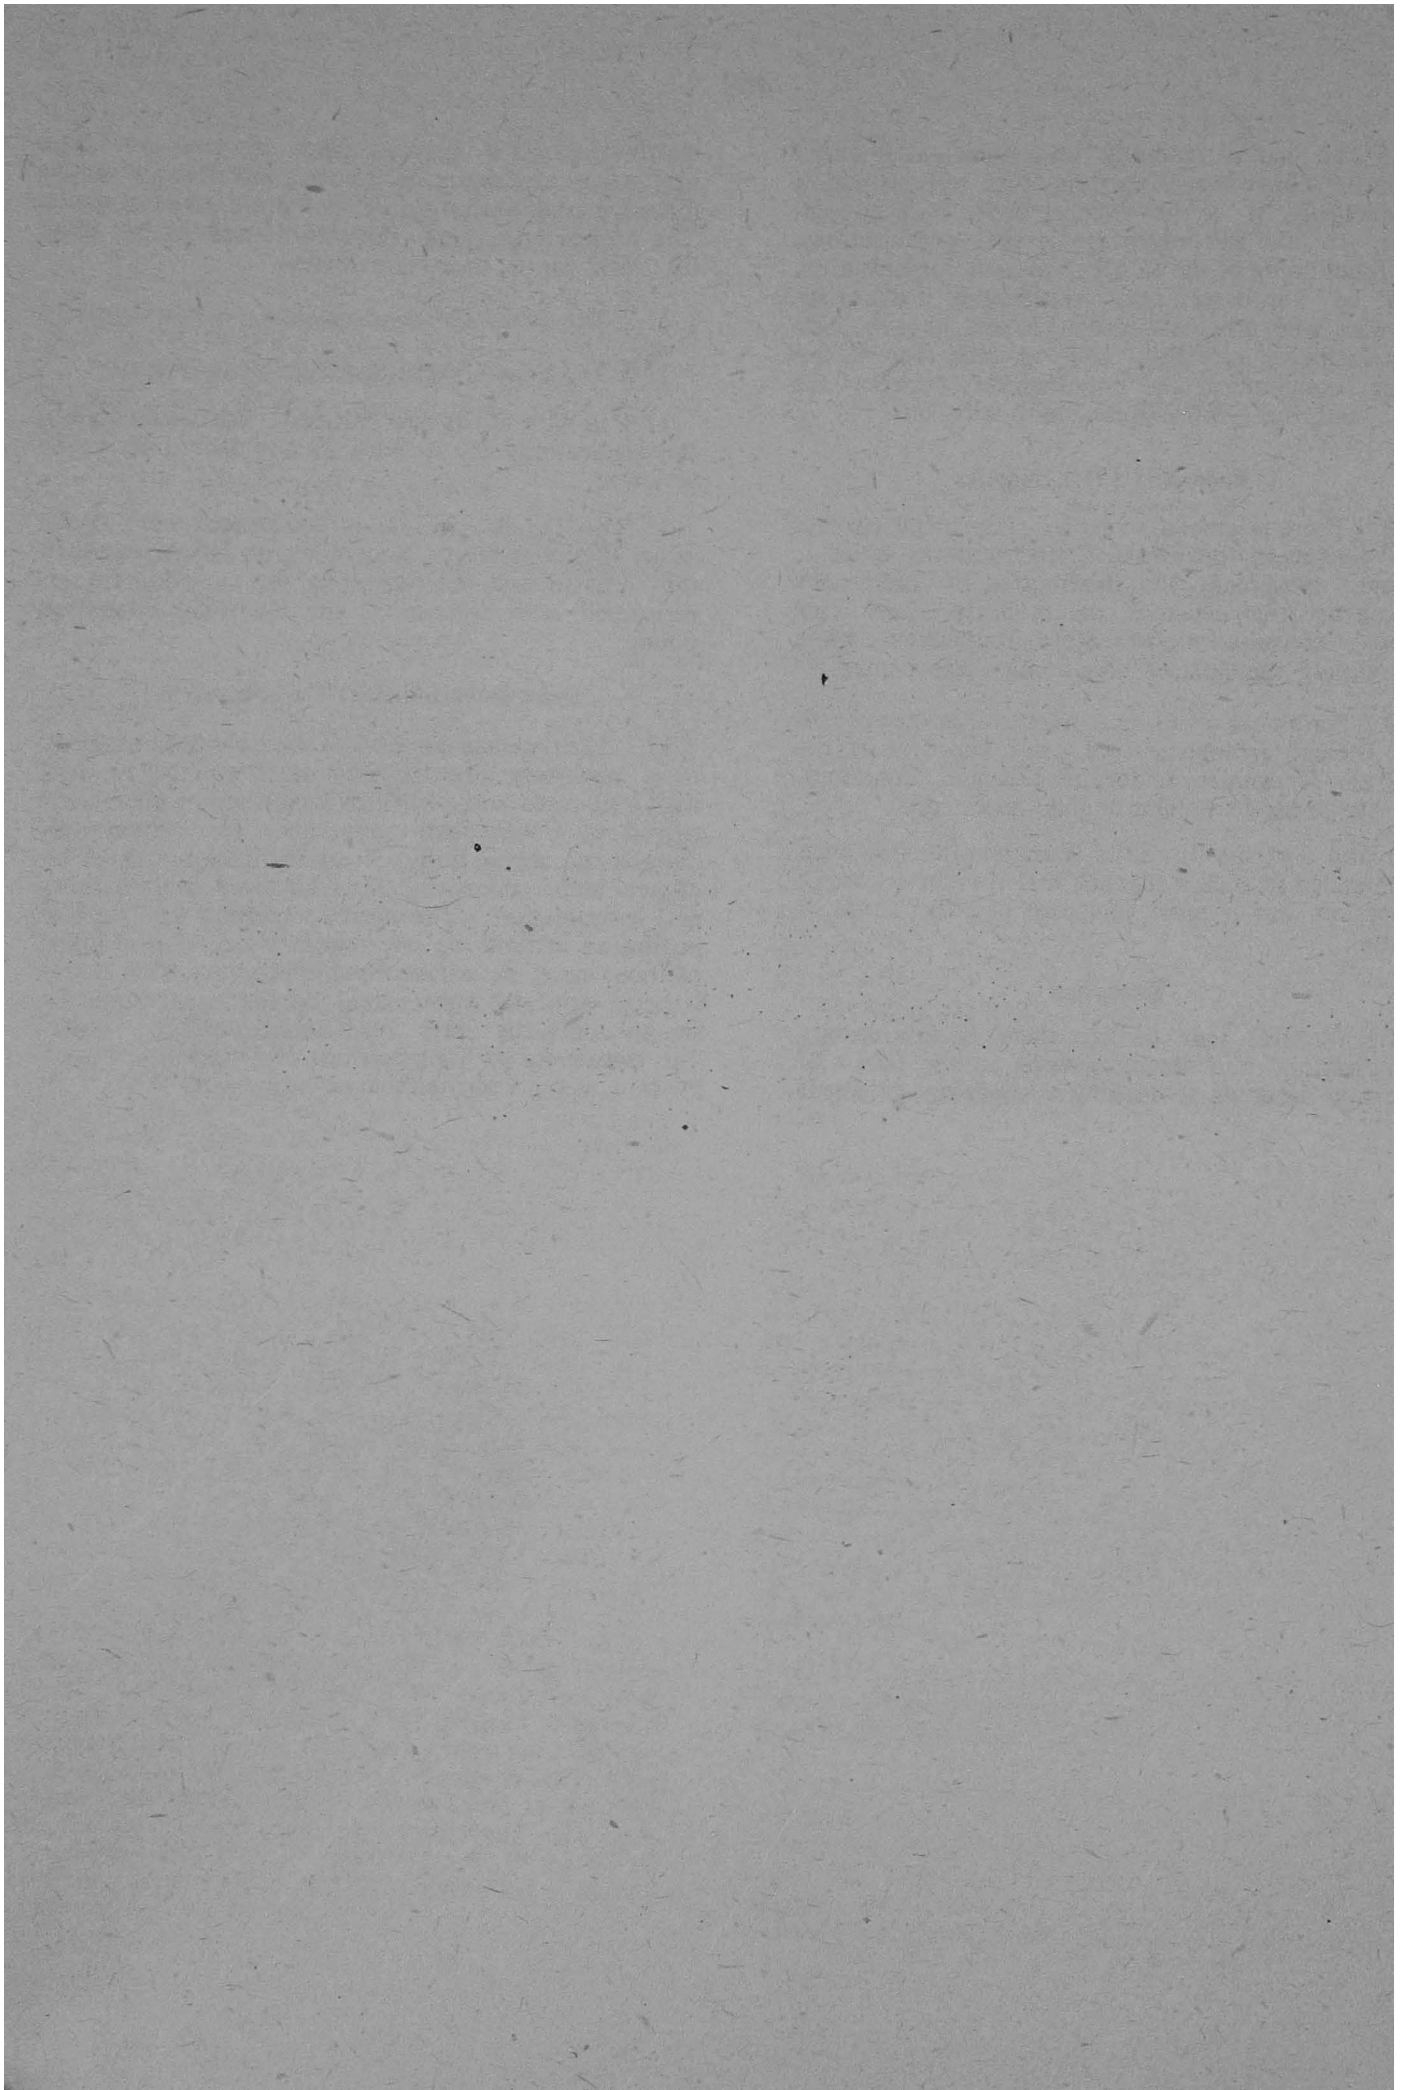
10.2 Periodical review is a must as it is very useful. The present arrangement of prior approval of the Central Government under the Essential Commodities Act needs to be thoroughly reviewed.

Section 5 of the Essential Commodities Act must be amended in such a manner that it is not a case of delegation but it must be a case of either State or Centre.

Education

11.1 We feel that to say there is unnecessary centralisation and standardisation in the field of education amounts to making a sweeping statement which could have been avoided. At least our State has had no experience of Centre interference in the initiative and authority of the State Governments. The proposal to bring Education back to the State list calls for a thorough review.

11.2 The State Government has no comments.



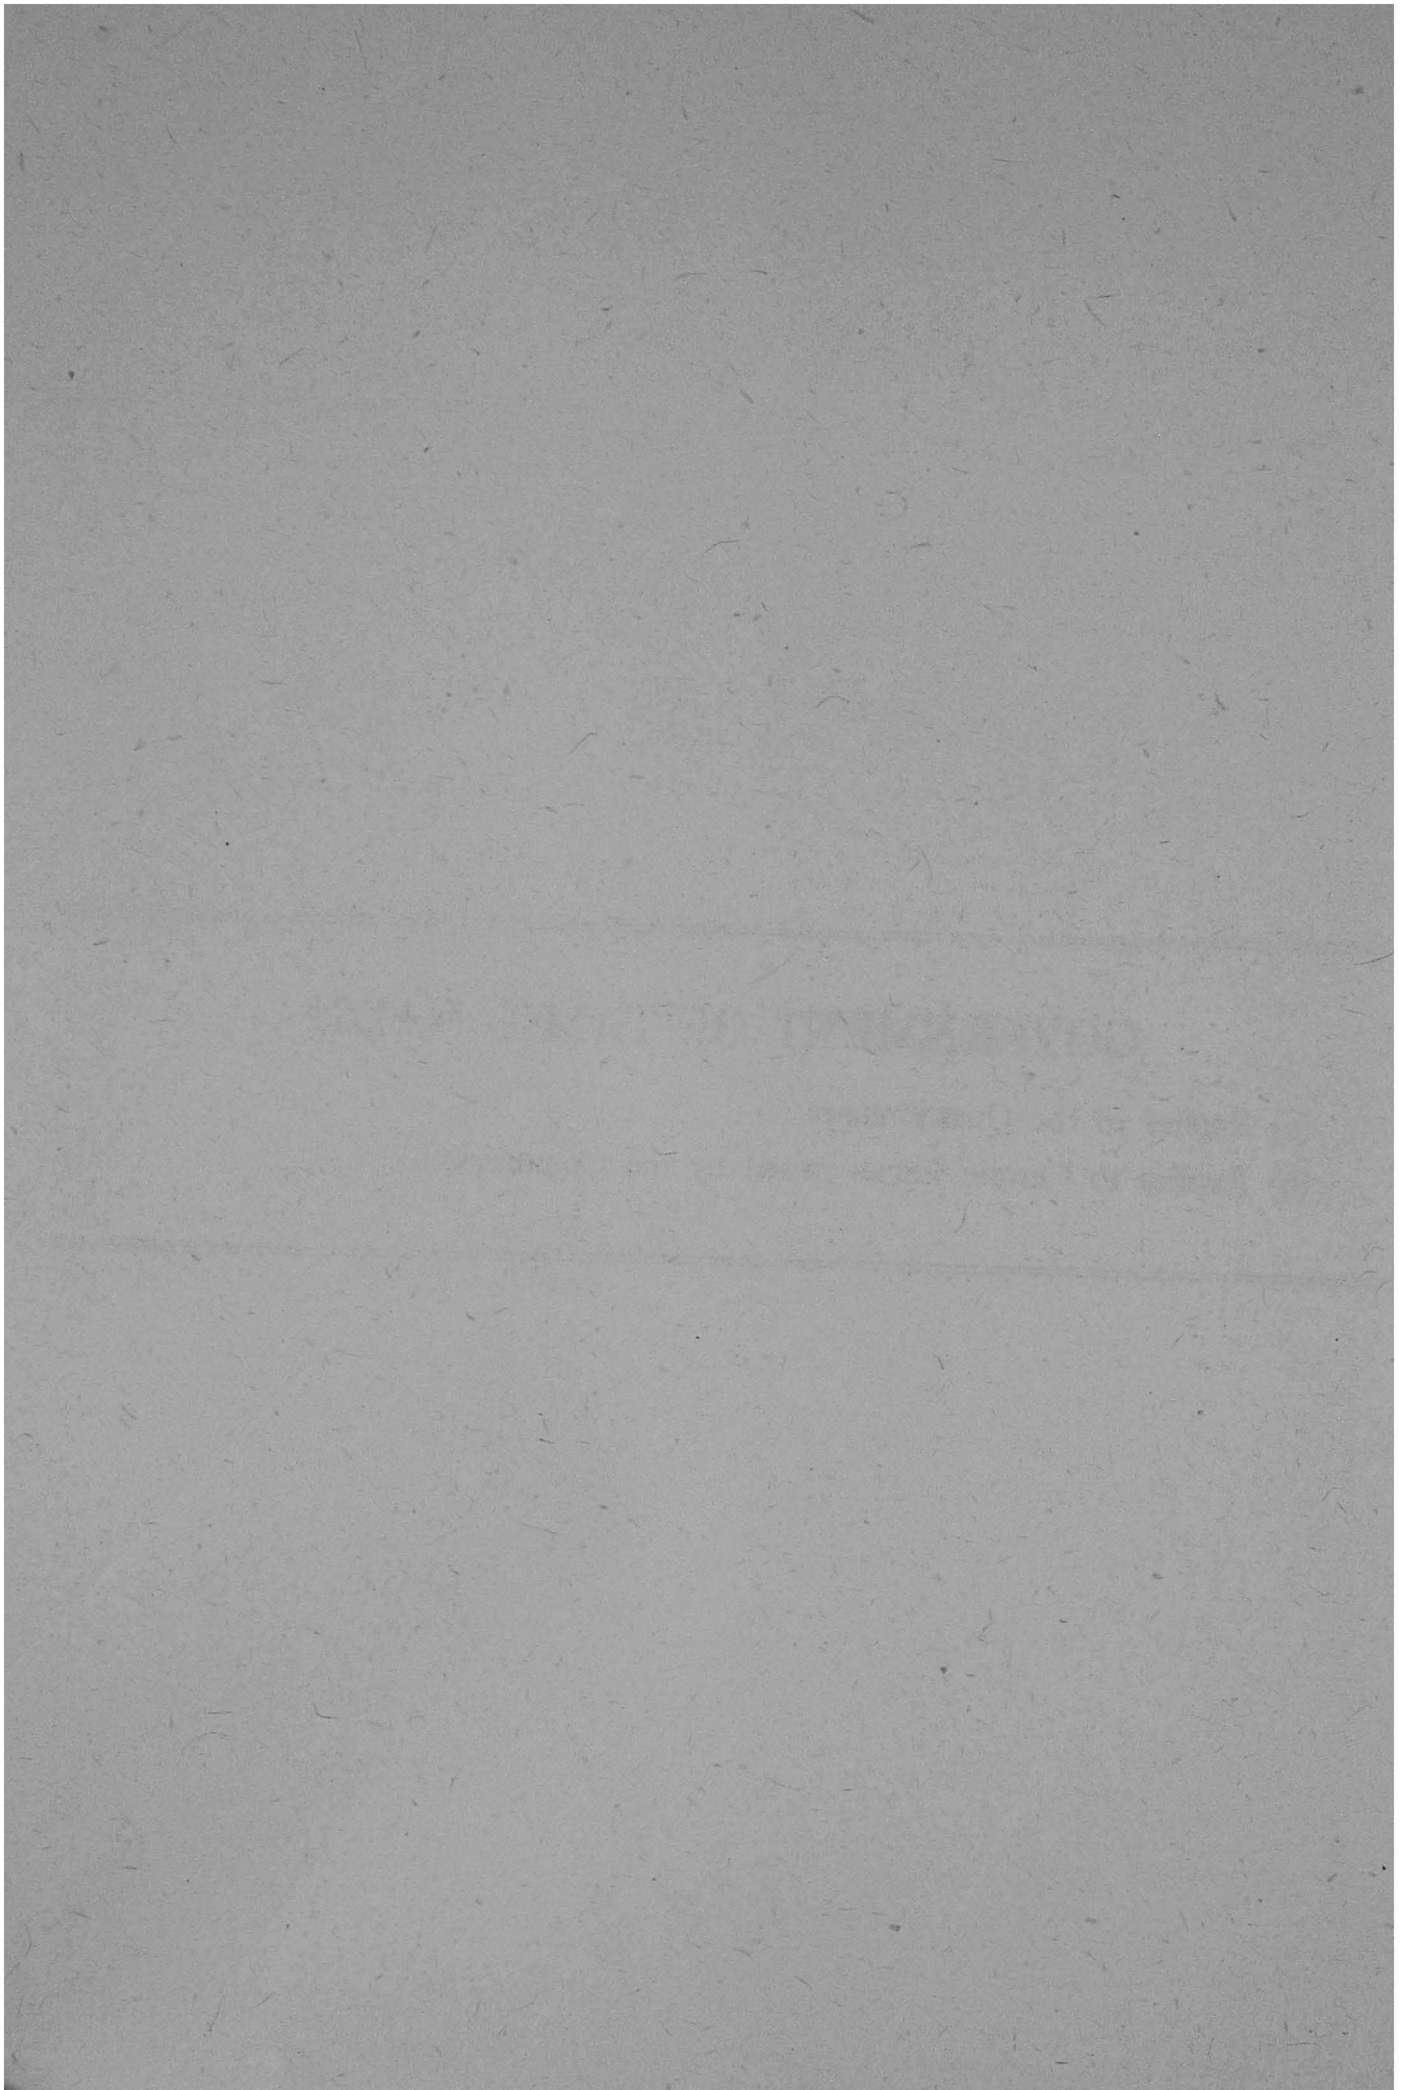
11.3 The State Government has no comments.

11.4 In view of the new National Education Policy, the applications of Articles 29 and 30 require to be reviewed.

11.5 So far as Sikkim is concerned, we are not aware of any instances of conflicts on issues between the Centre and the States so far as education is concerned also because of the National Education policy.

Inter-Governmental Co-ordination

12.1 The time has come when there should be a body or a machinery like the inter-state council to deal with irritations and problems which might arise with regard to Centre-State relations. The recommendations of such a body or an institution would be of great help in improving inter-governmental relations and coordination. The need for setting up such a institution cannot be over-emphasised. Centre-State relations must be constantly monitored. This work is being done to some extent by the zonal councils set up under the State Reorganisation Act, 1956. The setting up of Commissions like Sarkaria Commission at regular intervals is suggested.



GOVERNMENT OF TAMIL NADU

(a) Replies to the Questionnaire

(b) Replies to Certain Points raised by the Commission

60—288/87

PART I

PRELIMINARY

Dr. C. N. Annadurai former Chief Minister of Tamil Nadu, in his speech in the Legislative Assembly and elsewhere has emphasised the need for a review and reappraisal of the Constitution of India so as to remove the serious imbalance in the distribution of resources and to ensure larger powers to the States in the legislative, financial and other spheres and with a view to achieve true federalism. The present Chief Minister Dr. M. G. Ramachandran has also pointed out the essential need for review of the Constitution in regard to the Centre-State relations and in particular for giving more powers to the States in the legislative, administrative and financial spheres. The Government of Tamil Nadu therefore welcome the constitution of a Commission by the Government of India in June 1983 on Centre-State Relations headed by Justice Sarkaria.

2. According to K. C. Wheare, the federal principle means the method of dividing powers so that the general and regional governments are each, within a sphere, co-ordinate and independent. (Federal Government-Fourth Edition—by K. C. Wheare).

3. In the United States, the States retain their Constitutions, and the powers of the State are limited only to the extent that certain powers are denied to the States, or have been surrendered to the Federal Government, which is a government enumerated powers. The position of Australia is the same, that is to any the residuary power vests with the States both in the United States and in Australia. In the Swiss Constitution, the powers of the Government have been divided between the national and the Cantonal Governments on the American pattern. The Federal Government has been vested with powers of national importance and the residuary powers have been left to the Cantons. The Cantons, however, enjoy supremacy in their own sphere, though some restrictions have been imposed upon them; (a) they must have Republican Constitutions; (b) their Constitutions must not be contrary to the federal Constitution; (c) they must be subject to revision or amendment by popular vote. The spirit of local autonomy still prevades in Switzerland. The Cantons still possess the residuary powers.

4. In the Objective Resolution which was moved by Pandit Jawaharlal Nehru on 13th December, 1946 in the Constituent Assembly of India, it was mentioned that the provinces should possess and retain the status of autonomous Units, together with residuary powers and exercise all powers and functions of Government and administration, save and except such powers and functions as are vested in or assigned to the Union, or as are inherent or implied in the Union or resulting therefrom. The following is the text of the Objective Resolution moved by Pandit Jawaharlal Nehru :

I beg to move :—

"(1) This Constituent Assembly declares its firm desire and solemnly resolve to proclaim India as an independent Sovereign Republic and to draw up for her future governance of Constitution;

(2) WHEREIN the territories that now comprise British India, the territories that now form the Indian States, and such other parts of India as are outside British India and the States as well as such other territories as are willing to be constituted into the Independent Sovereign India, shall be a Union of them all; and

(3) WHEREIN the said territories, whether with their present boundaries or with such others as may be determined by the Constituent Assembly and thereafter according to the law of the Constitution, shall possess and retain the status of autonomous Units, together with residuary powers, and exercise all powers and functions of government and administration, save and except such powers and functions as are vested in or assigned to the Union, or as are inherent or implied in the Union or resulting therefrom; and

(4) WHEREIN all power and authority of the Sovereign Independent India, its constituent parts and organs of government, are derived from the people ; and

(5) WHEREIN shall be guaranteed and secured to all the people of India justice, social, economic and political; equality of status, of opportunity, and before the law; freedom of thought, expression, belief, faith, worship, vocation, association and action, subject to law and public morality; and

(6) WHEREIN adequate safeguards shall be provided for minorities, backward and tribal areas and depressed and other backward classes; and

(7) WHEREBY shall be maintained the integrity of the territory of the Republic and its sovereign rights on land, sea, and air according to justice and the law of civilised nations, and

(8) this ancient land attains its rightful and honoured place in the world and make its full and willing contributions to the promotion of world peace and the welfare of mankind."

5. Thiru L. Krishnaswamy Bharathi (Madras : General) in his speech in the Constituent Assembly on 9th November 1948 has criticised that the Indian Constitution has over burdened the Centre that there is a tendency towards over-centralisation. The following portion of his speech is relevant in this context :

"The Draft Constitution, Dr. Ambedkar said, is the federal in composition. A careful reader of the whole Constitution would find that it is more unitary than federal. If I am to express my idea in terms of percentage, I am inclined to think it is 75 percent unitary and 25 percent federal. Many Honourable Members spoke strongly on the need for a strong Centre. I do not think there was any need for this kind of over-emphasis, for it is an obvious think that the Centre ought to be strong, particularly, in the peculiar context of the circumstances prevailing in the country, but I am afraid they are overdoing it. I feel a strong Centre does not and need not, necessarily mean a weak province. An attempt seems to be made and I find there is a tendency over-burden the Centre and there is a tendency towards over-centralisation. I am glad Dr. Ambedkar has given a kind of warning. I am inclined to think that in actual working of the Constitution this course of taking more powers over to the Centre will be a fruitful source of friction. After all let it be remembered the strength of the chain is in its weakest link and the provinces should not be considered as a rival Governmental organization. The Centre is trying to chew more than it can digest. I find the transitory provision there is an attempt for the first five years to take over even the provincial subjects."

Professor N. G. Ranga (Madras : General), in his speech in the Constituent Assembly on 9th November 1948 has pointed out that he was not in favour of the so called slogan of a strong Centre and that it is superfluous, indeed dangerous, to proceed with this initial effort to make the Centre specially strong and that in the Objectives Resolution, they wanted provinces to have the residual powers. The following is the relevant portion of his speech :

"Mahatma Gandhi has pleaded over a period of thirty years for decentralisation. We as Congressmen are committed to decentralisation. Indeed all the world is today in favour of decentralisation. If we want on the other hand centralisation, I wish to warn this House that that would only lead to Sovietisation and totalitarianism and not democracy. Therefore Sir, I am not in favour of the so-called slogan of a strong Centre. The Centre is bound to be strong, is bound, to grow more and more strong also on the lines of modern industrial development and economic conditions. Therefore, it is superfluous, indeed dangerous to proceed with this initial effort to make the Centre specially strong. In the Objective Resolution that we passed in the beginning we wanted provinces to have the residual powers, but within a short period of two years public opinion rather has been interpreted by those drafters to have swung to the other extreme to complete centralisation at the Centre and strengthening the Centre overmuch.

I am certainly not in favour of having so many subjects as concurrent subjects. As Mr. Santhanam has rightly put it the other day, what you consider to be a concurrent subject today is likely to become an entirely federal subject in another five or ten years. Therefore, although I am quite ready to leave the residual powers to the Central Government, I certainly do not want the provinces to be weakened as this Draft Constitution seeks to do.

Sir, one of the most important consequences of over-centralisation and the strengthening of the Central Government would be handling over power not to the Central Government, but to the Central Secretariat. From the chaprassi or the duffadar, at the Central Secretariat to the Secretary there, each one of them will consider himself to be a much more important person than the Premier of a Province and the Prime Ministers of the provinces would be obliged to go about from office to office at the Centre in order to get any sort of attention at all from the Centre. We know in parliamentary life how difficult it is for ministers to have complete control over all that is being done by these various Secretaries at the Secretariat. Under these circumstances, it is highly dangerous indeed to enslave these Provincial Governments and place them at the mercy of the Central Secretariat and the Central bureaucracy."

Thiru M. Thirumala Rao (Madras : General), in his speech in the Constituent Assembly on the 9th November 1948, has stated that a strong Centre should not mean weak provinces and that the provinces also should be equally strong to enable them to perform their multifarious duties and to develop schemes and that they should be left with sufficient financial resources to discharge their duties and contribute to the strength of the Centre. The following portion from his speech is relevant :

"We require no doubt a strong Centre, but a strong Centre should not mean weak provinces. The provinces also should be equally strong to enable them to perform their multifarious duties and to develop schemes. They should be left with sufficient financial resources to discharge their duties and contribute to the strength of the Centre."

Thiru Mahaboob Ali Baig Sahib Bahadur (Madras : Muslim), has pointed out in his speech in the Constituent Assembly on 9th November, 1948 that the provisions in the draft Constitution clearly show that the federal system can easily be converted into unitary system. The following is the relevant portion of his speech :

"Now, Sir, with regard to the form of Constitution, I am unable to agree with the Constitution that is embodied in the Draft Constitution. People seem to think that the Centre must be strong and that unless the Centre is very strong

the provinces will always be an impediment in the way of the Centre becoming strong. That is a wrong view. If provinces are made autonomous, that does not necessarily mean that the Centre will be rendered weak. What do we find here ? My view is that the provinces will be nothing but glorified District Boards—Look at Article 275 where in an emergency all powers can be usurped by the Centre. Look at articles 226, 227 and 229. The Centre can legislate for the provinces in all matters; and again look at the long Union List and the Concurrent List. All these clearly show that in the hands of a Central Government which wants to override and convert this federal system into a unitary system, it can be easily done. Now there is a danger of this sort of Government becoming totalitarian. This is the danger in the form of the Constitution that is embodied in the draft Constitution."

Thiru K. Santhanam (Madras : General) has pointed out in his speech on 6th November 1948 that they should reflect whether the Concurrent list was desirable or in alternative they should have to see that the Concurrent List is restricted to the minimum or they should define the scope of the Central and Provincial jurisdiction in regard to the matters mentioned in the Concurrent List. The following portion from his speech will be relevant :

"Sir, Dr. Ambedkar spoke of the dual polity. Now we have got three Lists—the Federal List, the Provincial List and the Concurrent List. The Drafting Committee has expanded the scope of the Concurrent List. We have had experience of the Concurrent List. It tends to blur the distinction between the Centre and the Provinces. In the course of time it is an inevitable political tendency of all Federal Constitutions that the Federal List grows and the Concurrent List fades out, because when once the Central Legislature takes jurisdiction over a particular field of legislation, the jurisdiction of the provincial legislature goes out. Therefore we may take it that in ten years or fifteen years' time the entire Concurrent List would be transferred automatically to the Federal List. We must reflect whether this is what we want and whether it is desirable. If we do not want it we will have to see that the Concurrent List is either restricted to the minimum or define the scope of the Central and Provincial Jurisdiction in regard to matters mentioned in that List."

6. Dr. Anna felt in 1963 that the working of the federal structure as embodied in the Constitution for the past 13 years prior to 1963 had created a sense of frustration in the minds of the States and that the States were fast becoming dole getting corporations. The following portions are relevant in this context. In his speech in the Rajya Sabha in December 1963, Dr. Anna spoke as follows :

"We have a federal structure. That is why framers of the Constitution wanted a federal structure and not a unitary structure, because as many political philosophers have pointed out, India is so vast—in fact it has been described as a sub-continent—the mental health is so varied, the traditions so different, the history so varied, that there cannot be steel frame unitary structure here. My complaint is—and it has been endorsed by the P.S.P. Member Mr. Gurupada Swamy and others—that the working of the federal structure all these thirteen years has created a sense of frustration in the minds of the States. They feel they may not be with me, that the States are fast becoming dolegetting corporations. They feel that they are relegated to the background and there is the very natural instinct in them that they should be given more power..........What I want to say is that the working of the federal structure is in such a way that the States are feeling more and more frustrated, and their demand is to make the Union Government think that there should be a review of the Constitution a reappraisal of the Constitution. And in that I am supported by a very presentable personality, a personality who can, when he wants, get out and get into Cabinet. I am referring to the Hon. Mr. T. T. Krishnamachari, Minister of Economic and Defence Co-ordination. On September 8, 1962, delivering an address in one of the institutions in New Delhi in memory of a great soul, the late lamented Feroze Gandhi, he has stated that as framers of the Constitution they have failed to incorporate a provision for a decennial review of the Constitution. Not only that, he said that public opinion should assert itself for that.................make the Federation become a real Federation."

"I sympathise with his inability but I would like to tell him that I plead for English, I speak for English not because I am enamoured of it, not because I think English ought to be given a higher Place than my own mother tongue but because it is the most convenient tool, it is the most convenient medium which distributes advantages or disadvantages evenly. Very many arguments have been advanced to say that India has got to have a common language and if that base is accepted, one of the Indian Languages alone can become the common language. Nobody doubts it. If India is a unitary State, this argument is logical. India is a federal State. Indian society is plural, our political system is composite and in a plural society and composite political system to plead for a single common language will. I think, create injustice unawares, create handicaps unawares to some section of the society.

"It was stated that Hindi has got the claim to become the official language because it was spoken by 42 percent of the population. If this 42 percent were to be scattered throughout the length and breadth of India, the argument would be logical and it would be ethical also but this 42 percent is concentrated in compact and contiguous areas. It is not spread over. Therefore, if 42 percent is taken into consideration you are conferring a permanent, perennial advantage on a compact and contiguous area in India and conversely a permanent disadvantage to other areas. And therefore it is that this 42 percent cannot be taken into consideration. If Hindi were to be spoken throughout India even by 20 percent of the people, then we can say that of all the languages

Hindi is known from Cape Comorin to the Himalayas. Twenty percent of our population do know Hindi and therefore, let Hindi become the official language. I can understand it, though I cannot support it, I can understand the logic behind it. But what is the logic behind presenting this 42 percent, in a compact area of U.P., Bihar, Rajasthan and Madhya Pradesh as an argument. It was Mr. T. T. Krishnamachari who oncé said 'India, that is Bharat, that is U.P'............

Well, the Prime Minister stated that English would continue. English continues How ? Not as an associate official language along with Hindi, but for some purposes which the Government will decide. But the Prime Minister has stated that English will remain as an associate official language, and if the Prime Minister's assurance is to be fully carried out, I would request the Home Minister to drop this Bill, gird up his loins, take the consequences that may arise out of it because they are courageous people, and bring forward an amendment of the Constitution maintaining the *status quo*, that is keeping English as the official language. Please do not think that because it is foreign we should discard it ....Therefore, I plead before the Home Minister for a reappraisal of the language issue, pending that reappraisal, for an amendment of the Constitution for maintaining the *status quo* and keeping English as the official language."

In his speach in March 1965, Anna spoke in the Rajya Sabha as follows :

"Therefore, till such time we should not disturb the present *status quo* of keeping English as the official language till we arrive at a stage when all the fourteen national languages become the official languages. Perhaps multi-lingualism is the price that we have to pay for keeping India one and united. You can have India disunited through Hindi. But if you want, to have contented India, if you want to have an India which does not feel that one region will dominate over another, if you do not want genuine apprehension to get into the minds and hearts of millions of people, if you want an India about which everyone of us could be proud, you will have to take into consideration the problem of multi-lingualism."

7. In 1965, there was a popular upsurge among the people of Tamil Nadu against the imposition of Hindi on the non-Hindi speaking people in general and on the Tamil speaking people in particular. Several lives were lost in Tamil Nadu in the agitation and thousands of persons were sent to prison in connection with the agitation. There was turmoil in the whole of Tamil Nadu. The imposition of Hindi in 1965 did have an adverse effect on national integration. As a consequence, the Official Languages Act, 1963 was amended in 1968. In the Statement of Objects and Reasons to the Amending Bill, it was specifically stated by the Central Government that it was considered necessary to give statutory recognition to assurances of the late Prime Minister regarding the continued use of English language as long as the non-Hindi speaking people did not desire a change and that it was also proposed to provide for obligatory use of English language in addition to Hindi in certain cases. It is to be noted here that what was demanded by the Non-Hindi speaking people in general and the people of Tamil Nadu in particular was an amendment of the Constitution to give effect to the assurance given by late Pandit Jawaharlal Nehru that English Language shall continue to be used as the official language of the Union as long as the non-Hindi speaking people did not desire a change. But this Constitution amendment was not given effect to. Instead, a statutory amendment of the Official Languages Act, vix. Section 3 was undertaken which can be amended or nullified by a simple majority of those present and voting in the Parliament. Even in that amendment, the use of the word "may" in the expressi n "The English Language may, as from the appointed day, continue to be used, in addition to Hindi" led to different interpretations *viz.*, whether it is obligatory or merely discretionary.

8. In the Governor's speech, when Dr. Anna was the Chief Minister in 1968, it was mentioned as follows :

"5. The language problem is in a sense part of, the bigger problem of evolving a truly cooperative federal polity, in which the States representing different cultures and ways of life are assured of their rightful place. The serious imbalance in distribution of resources, in relation to responsibilities as between Centre and the States, has distorted the healthy relationship which should exist between the Centre and the constituent units in a large federation. True federalism means that the Centre as well as the units should have adequate resources for the discharge of their respective responsibilities, and that discretionary loans and grants from the Centre in respect of matters falling constitutionally within the competence of the State should play only a peripheral role............It is the firm view of my Government that in the light of the experience of the last fifteen years, a high level review of the provisions of the Constitution dealing with the delimitation of resources and powers as between the Centre and the State is essential. Such a review will obviously take a little time and the scope of the review will have to be defined with care in consultation with all concerned."

9. Speaking on this subject in the Legislative Assembly, Arignar Anna spoke as follows :

"In the Governor's address he has specifically placed the views that the relations between the Centre and the States should be reorganised. Inasmuch as it has been indicated in a good manner in the Governor's address, the conveying of gratitude by the members of our party is proper."

If it is argued that integrity would be spoiled if that (Centre-State relations) is spoken, then I expressly state that integrity would be spoiled only if it is screened secretly. Unless there arises an open view in matters such as living together in such and such ways, the ditribution of powers in such and such ways, the screening of it would be as much difficult as the difficulty in residing with a snake put in a vessel, as occuring in Thirukkural. Without rectifying the relationship in regard to the powers

among ourselves after discussing about them: it would not be good to talk about integration and it would not give any benefit. When a resolution in regard to language question based on that was brought, Thiru Ma. Po. Si. has explained that this question would be solved only if there is a decentralisation of all the powers accumulated at the Central Government. The Governor in his address has pointed out that the relationship between the State Government and the Central Government should be reorganised and for that even the Constitutional law should be examined. This is the very policy of this Government. In the Kerala State, where Thiru. Namboodripad was the Chief Minister, this demand has been growing very rapidly. During the Chief Ministers' Conference held two months ago, Thiru. Namboodripad released a book on decentralising powers in such and such ways in economic field and he placed the book for scrutiny in the Chief Ministers' Conference. Likewise, that concept had spread over in many other places and in many other States. As far as I know, I certainly feel that in the next ten years, it would be this issue which would be prevalent predominently in the minds of all people. In view of the fact that I feel it in such a way, I am very much happy as one who expresses the feeling in front of others. In order to strengthen the decentralisation as mentioned in the Governor's address, this Government have rejected the view expressed that Hindi language should be the official language. That is also mentioned in the Governor's address. A false notion —but followed by many with force. To express in English, it is "the inevitability of Hindi". Therefore Hindi must come in any way, we have been ourselves cultivating the idea that Hindi is inevitable.

The Government have not accepted the alarm about "Inevitability of Hindi—Hindi must come". If it is contented that a common language is a necessity then it should also be explained as for whom the Common language ? and for what purpose the common language ? If my mother-tongue is Tamil and my friend Hande's mother-tongue is Canarese and my friend Vinayakam's mother-tongue is Telgu, then, a language for all the three persons cannot be either Canarese or Tamil or Telgu".

(29th February 1968). "Under the Constitution, the expanding revenue opportunities have been assigned to the Central Government and on the contrary, expenditures like education and public health and vast responsibilities of an expanding nature have been assigned to State.

(6th March 1968) When it is said that "I", "Ours", "Ourselves" I request you to kindly forget the political parties and to co-operate in a united manner for pleading with Central Government and not even for fighting in so far as the financial issue is concerned.

(8th March 1968) "He has indicated that whatever be the relief for whatever, issue, there should not be any danger to national integrity and Indian unity, I welcome that very much. I support that. It should not be thought that secession is asked for whenever any grievances are spoken. I had spoken on several occasions that the occurance of such an idea should be avoided. I still say further. I have been examining several issues having regard to and on the basis of national unity and national strength. This is not stated with a view that national strength should be reduced or unity should be destroyed."

10. It may be mentioned that the system of Government enshrined in the Indian Constitution is a democratic form of Government with adult franchise. The members of the Legislative Assembly are elected by the people on the basis of adult suffrage. The person who enjoys the confidence of the Legislative Assembly has to be appointed as the Chief Minister by the Governor. In other words, the Chief Minister represents the people of the State and he is the executive head of the State. So long as the Chief Minister enjoys the confidence of the Legislative Assembly, he is entitled to continue in office.

11. But the unfortunate experience in the past several years has shown that the power conferred under Article 356 to impose President's rule after dismissing the Ministry in office has been excercised indiscriminately and is often politically motivated. The Central Government have invoked the power under Article 356 about eightyseven times against the States in the country. The instances wherein President's rule has been imposed under Article 356 after dismissing the popularly elected Government are illustrative of the point made that Article 356 has been indiscriminately and arbitrarily invoked by the Centre. Such instances have been specified under Part IV Administrative Relations.

The imposition of President's rule in Punjab after dismissing the Ministry led to very unexpected consequences which would have been avoided if the popular Ministry was allowed to continue in office. The dismissal of the N.T. Rama Rao Ministry by the then Governor Thiru Ram Lal in Andhra Pradesh was a destruction of democracy.

12. Though it is stated that Indian Constitution is quasi-federal or that India is combination of federal structure with unitary features, the unitary feature has assumed predominance over the past 35 years and the States have been reduced to the status of mere dole getting corporations or municipal authorities which was not envisaged by the founding fathers of the Constitution. India is a country with people having different cultures, having plural societies predominantly casteridden, with different religions and different languages. India is a country of multi-lingualism and one language of a region, even if that region consists of two or more States, cannot and should not be given a dominance over the other languages of the country. Prior to independence, English was the official language and after the Constitution of India came into force, Hindi has been made the official language. Though English has also been permitted to be used statutorily under the Official Languages Act, for certain purposes specified in that Act, the Constitution as such does not recognise English as the official language. Nor does English find a place in the Eighth Schedule. It is the view of the Government of Tamil Nadu that English should find a place in the Eighth Schedule and all the languages in the Eighth Schedule should be made as the official

languages of the country. Till then, the assurance of Nehru that English shall be continued as the official language so long as the non-Hindi speaking people did not desire a change should be given a Constitutional guarantee and for this purpose, a suitable provision should be incorporated in the Constitution itself by way of an amendment.

13. The Government of Tamil Nadu is headed by Dr. M. G. Ramachandran, founder-leader of the All India Anna Dravida Munnetra Kazhagam Party which adopts as its basis policy the policies of late Dr. Anna as given expression to in the speeches mentioned at pages 3—6 ante. Consistent with this policy, the Tamil Nadu Government is of the firm opinion that the Constitution should be amended making the States and the Union co-ordinate and true f·deration should come into existence both Constitutionally and administratively. While asking for more power for the States, both in the legislative and financial spheres, the Government of Tamil Nadu does not want in any way that the unity and integrity of the nation should be impaired. Whatever suggestions are made by the Government of Tamil Nadu, they are made of the fundamental and basic principle that India is one nation and that under all circumstances, the unity and integrity of the nation should be kept intact and wherever danger arises for the unity and integrity of the nation, the Tamil Nadu Government will fight the danger with all its strength.

14. The Supreme Court in *Satpal* V. *State of Punjab* (1982 1 SCC 12) has held "Ours is a Constitution where there is a combination of federal structure with unitary features". The Government of Tamil Nadu are of the view that these unitary features found in the Constitution have been made use of by the party in power in the Centre to destabilise State Governments in which a party different from the ruling party at the Centre is in power.

15. The Government of Tamil Nadu are of the firm view that India should be made a true federation wherein the Central Government and the State Government will be equal and independent partners and where the residuary legislative powers including the residuary taxing power will vest in the State Government and the Centre should have only limited powers like foreign relations, defence, customs, currency, U.P.S.C. and citizenship. A division of powers should be so made that the general and regional Government should, within their own sphere, be co-ordinate and independent according to the true federal principle enunciated by Prof. K. C. Wheare. But it will take some years in the present circumstances prevailing in India to achieve the true goal of federalism as in the United States of America. Till that goal is achieved, the existing Constitutional set up should be modified so as to ensure decentralisation of the powers which are now in the hands of the Centre and the States should be made more autonomous both in the legislative as well as in the financial and administrative spheres.

16. The Government of Tamil Nadu are of the view that in respect of legislative sphere, the residuary powers including the residuary taxing power should be vested in the State Government.

No Bill falling within the scope of Article 31-A or Article 31-C need be reserved for the consideration of the President, The first proviso to Article 31-A, the proviso to Article 31-C, the two provisos to Article 200 and the proviso to Article 201 should be omitted. The provision relating to the with holding of the assent by the President under Article 201 also should be omitted.

The proviso to Article 304(b) (which requires sanction of the President in the case of certain Bills) should also be omitted.

Article 249 (which empowers Parliament to legislate with respect to a matter in the State List in the national interest) should be omitted.

Article 252 (which empowers Parliament to legislate for two or more States by consent and adoption of such legislation by any other State) should be omitted. Alternatively, the provisions of Article 252(2) should be so amended so as to make the power as between the Centre and the State mutual and not exclusive.

It is also suggested that Articles 154(2)(b) and 258(2) should be so amended that if the Union were to exercise the power as contemplated in both these Articles, consent, of the State should be obtained.

The legislative entries in the Concurrent List should be brought to the absolute minimum and the subjects which now find a place in the Concurrent List should be transferred to the State List as enunciated in the answer to the questionnaire under the legislative relations.

In regard to the administrative relations, the Government of Tamil Nadu suggest that Article 256 (obligation of States and the Union), Article 257 (control of the Union over States in certain cases), Article 356 (Provisions in case of failure of Constitutional machinery in States), Article 357 (exercise of legislative powers under proclamation issued under Article 356) Article 360 (provisions as to financial emergency) and Article 365 (effect of failure to comply with, or to give effect to, directions given by the Union) should be deleted.

Article 263 (provisions with respect to an Inter-State Council) should be deleted.

Article 339(2) must be deleted because the welfare of the Scheduled Tribes in any State is as much the concern of the State Government as that of the Union Government. So, there need be no direction to any State as to how the welfare of the Scheduled Tribes should be promoted.

Article 344(6) must be deleted because the directions issued by the President on such sensitive issues like use of Hindi language, reduction of English language, etc., will offend the dignity and individuality of the State.

In Article 350-A (facilities for instruction in mother tongue at primary stage) the provisions relating to the President's direction to any State must be deleted because it is the duty of the State to provide adequate facilities for instructions in the

mother tongue at primary stage of education to children belonging to linguistic minority groups and the State can be relied on to discharge this duty faithfully without any instruction or direction from the President.

So far as financial relations are concerned, the State should be made more financially autonomous and the taxing base of the State should be increased and the State should not continue to be a mere dole getting corporation. The Government of Tamil Nadu would suggest that Corporation tax as well as surcharges on income-tax should be divisible and ear-marked for the concerned State as in the case of income tax. The power to levy the duties under Article 268 may be given to the States. The Union Government must give a substantial amount to the States in lieu of the non-levy of certain taxes mentioned in Article 269 of the Constitution.

The increase in administered prices actually reduce the revenue and to the extent widen the gap between the resources and commitment and therefore logically speaking, this should be compensated by increasing the devolution in taxes.

So far as Planning Commission is concerned, the present Planning Commission should be replaced by a Central and State Planning Commissions which should be constituted on a statutory basis as in the case of Finance Commission. The present Planning Commission does not fit in within the Constitutional scheme and is an extra consitutional authority and therefore it has to go.

The Constitution will require a review after a period of 10 years to make the States again more independent. For this purpose, a new constituent Assembly consisting of an equal number of representatives for each State will have to be constituted.

17. In the light of the above position, the Government of Tamil Nadu offer the views as in the Annexure of the questionnaire issued by the Sarkaria Commission.

ANNEXURE

PART I

INTRODUCTORY

1.1 to 1.8 This Government prefer to answer the Questions in Part I taking the real purpose of the questionnaire instead of attempting to answer the questions seriatim.

Even though it is declared that the soundest frame work for our Constitution is a federation with a strong centre, yet, such an expressive purpose has not been exhibited in the working of our Constitution, which our Supreme Court in State of West Bengal v. Union of India (AIR 1963 SC 1241) has rightly characterised as not truly federal in character. We respectfully adopt the formula enunciated by Justice Subba Rao, who said in the said case, "the real test to ascertain whether a particular Constitution has accepted the federal principle or not is whether the said Constitution provides for the division of powers in such a way that the general and the regional Governments are each within its shpere substantially independent of the other". Experience has shown that the people of India placed, as they are, in different parts of the country, in different environments, have consciously felt the departure from the true principles of federalism due to consistent creative effort to project a strong Centre making almost incipient and subservient, the States, which are its limbs. On account of such uncertain and visible deviations in the working of the federation in India, Sir Ivor Jennings has described the Indian Constitution as a federation with strong centralised tendency. The essence of federalism lies in the distribution of Governmental powers in their respective spheres between the Centre and the States. Dicey explains that "Federalism constitutes a complex Governmental mechanism for the governance of a country........ Federalism seeks to reconcile unity with multiplicity, centralisation with decentralisation and nationalism with localism. The regionality of the federal system which lies in that power is, at one and the same time, concentrated as well as divided".

Though the basic structure in our Constitution is said to be federal in nature certain provisions which are not found in other Constitutions, do make our Constitution to a certain extent unitary and not federal. Provisions such as Articles 256, 257, 356, 365, 200 and 201, 31-C, 31-A(1); 254(2) and 304(b) proviso, lend support to the perpetual comment by the people and by jurists that our Constitution is not truly federal. A federal State should be a political contrivance intended to reconcile national unity and power with the maintenance of State's rights. It was this essential ingredient in federalism which prompted the 10th Amendment in the Constitution of the United States which enacted that powers not delegated to the United States by the Constitution, nor prohibited by it to the States are reserved to the States respectively or to the people. National unity can be reconciled with State's independence by division of powers under a common Constitution between the nation on the one hand and the individual States on the other. From this notion flow the three leading characteristics of completely developed federalism, namely the supremacy of the Constitution; the distribution among bodies with limited and co-ordinate authority of the different powers of Government; the authority of the Courts to act as interpreters of the Constitution. A bare expectancy to respect the principle of 'each for all and all for each' is not by itself sufficient. It should be worked in practice and not maintained only in precept.

This Government have in their report, considered in detail how the autonomy of the States has been eroded by the invocation of certain unpalatable Articles in the Constitution introduced by the Founding Fathers nearly 35 years ago. It is therefore clear that our Constitution cannot be called strictly federal and the presence of the rigid provisions in our Constitution and the convenient invocation of those unhealthy Articles which are conspicuously absent in other federations leads us to the conclusion that the absence of the unique features present in other Constitutions is slowly disrupting

the foundation of the federal principle in our Constitution. This Government have elaborately dealt with the subject 're-distribution of legislative powers' either contained in the Articles or Entries in the three Lists while dealing with Part II 'Legislative Relations' and Part IV 'Administrative Relations'. As regards the allotment of more tax revenues in List II of the States we have given our expert comments while dealing with Part V, 'Financial Relations'. The impact of the Centre over matters which are essentially State subjects and within their competence to deal therewith, is being felt. Thiru Setalwad has pointed out that under the stress of changing circumstances, the theoretical barriers erected by Federalism have broken down and the Central and Regional powers have been flowing one into the other.

The Government are of the view that the difficulties issues, tensions, and problems that have arisen in Union-States relationship are due to substantial defects in the schematic plan and the fundamental fabric as envisaged at present in our Constitution. State's autonomy cannot be made to rest on the good-will of the Centre. A declaration flowing from pious intentions on the part of the States to believe in their so-called autonomy on the basis of the doctrine of true spirit and intent of the Constitution is extremely slippery as it is incapable of enforcement. In our discussion in the chapters to follow, we have suggested that it would be salutary to evolve healthy conventions and procedures and time has not come for removing the tensions and frictions between the Centre and the States by suitably amending the provisions of the Constitution wherever necessary and restore the amity and harmony between the Centre and th State to achieve a geometrical progression concerning the prosperity and development of our country. We have also expressed in the views given infra that the consultative body which has to be formed under Article 263 would be ineffective as the very creation of that council is again wrought with irritant controversies. We have touched upon this aspect while dealing with the Chapter on 'Administrative Relations'.

Under Article 3 of the Constituion, Parliament is empowered to form a new State by separation of territory from any State or by uniting two or more States or parts of States or by uniting the territory to a part of any State or to increase the area of any State or to diminish the area of any State, or to alter the bundaries of any State or alter the name of any State. Where the proposed Bill affects the area, boundaries or name of the States, the Bill has to be referred to the Legislature of the State by the President for expressing its views thereon within a specified period. What is now required under the Constitution is only to ascertain the views of the State Legislature. The present scheme under Article 3 militates against the federal structure of the Constitution. Unless the States, whose area boundaries or name, are affected express their consent for the Bill, no Bill should be introduced in the Parliament. Article 3 may, therefore, be amended so as to require the consent of the States concerned, as a condition precedent for the introduction of the Bill in the Parliament.

As far as the abolition of appeals to Supreme Court, except in constitutional matters is concerned, it is a fairly good suggestion because such system is found in the American Constitution. If we are emulating the provisions of the American Constitution in this respect, then we must bring in all the provisions relating to American federal courts into the Indian Constitution. In that case, we have to divide the country into several judicial districts and create a district federal court for each such district. Thereafter we must create a circuit court which will have jurisdiction over specified number of judicial districts and finally at the apex, the Supreme Court may be installed. Besides, the Supreme Court must have a definite Constitutional Bench of nine or eleven judges to decide all constitutional matters as is done in the United States. When such modifications are brought about in the Indian Constitution regarding the federal courts, the existing High Courts will be able to function as the highest court in each State for all purposes as the Supreme Court of every State in the United States does. So, mere abolition of appeals to the Supreme Court, except in constitutional matters is meaningless unless we bring about drastic changes in the structure of the Federal Courts to bring them in conformity with the structure of the Federal Courts in the United States.

An elderly statesman Thiru K. Santhanam has rightly said that the tendency towards vague unhealthy paternalism which has come to envelop Indian Federalism as a result of the dominance of single party during the first two decades of independence is as bad for the Centre as it is unpleasant and provocative to the States.

In the light of our comments and recommendations on the other parts of the questionnaire, this Government are of the view that the adoption of such recommendations would certainly make our Constitution truly federal.

The Governments are of the view that this introductory note answers the purpose of the questionnaire in Part I. As already sta ed, the questions are not answered seriatim in view of the comments and views expressed in the other parts to the questionnaire.

PART II

LEGISLATIVE RELATIONS

2.1 to 2.5 Inter-relationship between the Union and the States contained in Part XI of the Constitution and more particularly in Articles 245 to 255 though laying down a scheme for the demarcation of legislative relationship between the Union and the States, yet, experience dictates that the States have felt in many operational fields difficulties in implementing its policies consistent with the need and requirements of the people of the concerned State. When the ruling party at the Centre and the States were the same, then possibly there cannot be a friction in the matter of the policy decisions and in its implementation. But as matters stand today, several States having diff r nt political ideologies and the springing up of regional parties,

whether at a regional or of a national level, has generated friction and indeed heat in the Centre-State Relations particularly in the legislative field.

The relevant needs of each State in order to make it progressive, varies with its situation, the people's aspirations, the welfare measures required and the socio-economic measures to be thought of. In recent times, when urgent legislation was brought in the interest of State-welfare, the processual mandates under the constitutional law have made it both impracticable and sometimes impossible for the State Governments to adhere to their objectives based on their accredited adopted policies. Instances are not wanting, in which the Central Government delayed the much needed legislation of a particular State over a particular subject.

To cite one instance in respect of the Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Second Amendment Bill, 1980 which sought to plug the loopholes in the matter of benami transactions solely to implement agrarian legislation, the assent was refused by the Centre. The Industrial Disputes (Tamil Nadu Amendment) Bill, 1981 and the Tamil Nadu Hindu Religious and Charitable Endowments (Amendment) Bill, 1981, which were sent to Government of India on 10th June 1981 and 23rd September 1981 respectively are yet to receive the assent of the President. Further, the Tamil Nadu Recognition of State Register of Practitioners of Indian Medicine Bill, 1983 and the Tamil Nadu Patta Pass Book Bill, 1983, sent to Government of India on 14th February 1983 and 29th December 1983 respectively and the Tamil Nadu Building and Construction Workers (Conditions of Employment and Miscellaneous Provisions) Bill, 1984 forwarded to the Government of India on 8th November 1984 are still awaiting Presidential assent. These are some instances to justify the apprehension of the States that the Central Government is attempting to sit in appeal or in judgement over the intended legislation, which has the support of both the Houses of the State Legislature. The progress of Legislations undertaken by the State Legislature, which are primarily to obtain certain well-known stated and progressive objectives, has been stalled by the Centre and it is therefore felt that the present role assumed by the Centre in either delaying the Bill sent for assent by the President or rejecting the same, should not be permitted and the Constitution should be specifically amended to the effect that where the State Legislature have passed a legislative measure and it has secured the blessings of both the Houses in the State where both the Houses are functioning, the President should be advised to give his assent to the Bill without any reservation whatsoever. Though in a federal system the territorial nexus theory has to be liberally interpreted, yet, having regard to the past experience and particularly for the reason that the States had not enjoyed the benefit of having the same ruling party, both at the Centre and in the State, the principle of activity within prescribed limit has to be applied in the light of experience and in accordance with the needs and wishes of the people.

It would be convenient at this stage to deal with such of these provisions in the Constitution as to how the Bill passed by the State Legislature should find its level and its course without the present "Democle's Sword" of dissent by the President. Under Article 201 when a Bill is reserved by the Governor for the consideration of the President, the President has the option either to give his assent or withhold the same. It is, however, undeniable that the President while acting in the manner stated, he acts on the advice of his Council of Ministers at the Centre. In the absence of any conventions or guidelines to be followed by the President in refusing to give his assent to the Bill or withholding his assent thereto, it is our view that in certain contingencies as set out hereinafter, such a process need not be adopted.

It is in this context that the principle of prescribed limits of jurisdiction or nexus with such prescribed jurisdiction looms large. If the legislation falls within the State List as provided for in Schedule VII to the Constitution, then there appears to be no necessity to reserve the Bill for the consideration of the President. When, however, the subject falls in the Concurrent List, our view is that the Governor should automatically give his assent to it. As was pointed out in the Report of the Joint Parliamentary Committee relating to the Concurrent List tin the Government of India Act of 1935, "if matters were to stand as they are, then the State Legislature might feel that they are exposed to dangerous encroachment". The Committee went on to say that if the subjects themselves are essentially provincial in character, and would be administered by the Provinces mainly in accordance with the provincial policy, then such an affinity of the State Legislation to the particular subject ought not to be disturbed. In any event our answer to Question 2.3, is in the affirmative.

This Government are of the view that no law should be enacted by Parliament in respect of a matter falling within the Concurrent List except with the concurrence of the State Legislature. If no such concurrence is obtained, then the law made by Parliament in respect of a concurrent subject will not be applicable to that State.

With the above introductory remarks, this Government instead of answering the questions seriatim, are dealing with the Articles in our Constitution and the various entries in Schedule VII List I, List II and List III and are making recommendations in connection therewith as against the relative article or entry.

Article 31-A, 31-C, 200, 201, 246 and 254(2)

In our introductory remarks, we have touched upon the difficulties faced by the State when the assent sought from the President over important and essential legislations undertaken by the State was either refused or unreasonably delayed. The State Legislature being an independent legislative body is in no way subordinate to the Central legislature. It is also equally clear that the State Government is not subordinate to the Central Govenment in respect of matters exclusively allotted to

the State's sphere under the provisions of the Constitution and particularly in the Lists enumerated in Schedule VII. If the Central Government sits in judgement over the policy or the constitutionality or legality of an enactment passed by the State Legislature, that role should not be permitted. For this purpose, the Constitution should be specifically amended to say that

"where the State Legislature have passed legislative measure quite within its competence and consistent with and relevant to the local problems of the State, in relation to entries in List III the President should be advised to give assent to the Bill without a demur".

At this stage, Articles 200 and 201 of the Constitution have to be considered. Article 200 deals with the assent to Bills and vests the power with the Governor either to give his assent or with hold his assent or proclaim that he reserves the Bill for the consideration of the President. Article 201 deals with a situation where Bills are so reserved for the consideration of the President. As both Articles 200 and 201 are intended to serve a common objective, occasions have arisen when neither the Governor at the level of the State or the President at the level of the Union are enjoined to follow a written set of norms while the Governor refuses to give his assent for the Bill and even so the President. The Constitution is silent on this point. There is no provision for the reservation of the State legislation for the consideration of the national executive either in the United States or in Australia. Probably the Canadian Constitution have inspired the induction of such provisions in our Constitution. It is subversive of the true federal principle in as much as it affects the State autonomy in matters of legislations undertaken under the State List. It is not necessary for the Governor to reserve the Bill for the consideration of the President in cases where the legislation undertaken by the State fall exclusively within the State Legislative field.

No Bill falling within the scope of Article 31-A or Article 31-C need be reserved for the consideration of the President. Accordingly, the first proviso to Article 31-A, the proviso to Article 31-C, the two provis s to Article 200 and the proviso to Article 201 should be omitted. The provision relating to the withholding of assent by the President under Article 201 also should be omitted.

The Government suggest that Article 246 should read as follows :

"246, **Subject matter of laws made by Parliament and by the Legislatures of States.**—(1) Parliament has exclusive power to make laws with respect to any of the matters enumerated in List I in the Seventh Schedule (in this Constitution referred to as the "Union List").

(2) Parliament and subject to clause (1), the Legislature of any State also have power to make laws with respect to any of the matters enumerated in List III in the Seventh Schedule (in this Constitution referred to as the "Concurrent List"). Provided that no such law shall be made by Parliament except with the concurrent of the State Legislature.

(3) The Legislature of any State has exclusive power to make laws for such State or any part thereof with respect to any of the matters eunmerated in List II in the Seventh Schedule (in this Constitution referred to as the "State List").

(4) Parliament has power to make laws with respect to any matter for any part of the territory of India not included in a State notwithstanding that such matter is a matter enumerated in the "State List".

The Government are of the view that Article 246 should read as suggested, in order to preserve the prerogative of both the Parliament and the States in their respective legislative fields.

In the light of our recommendations as above, the Government suggest that the proviso to Article 254(2) shall read as under :

"Provided that Parliament shall have no power to enact at any time any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by Legislature of the State".

Article 246-A—We suggest the inclusion of a new Article 246-A reading as under—Vide our comments on Entry 45 of the Concurrent List.

"246-A. **Parliament to have no power to order a Commission of Inquiry into the conduct of a Minister of a State Government**—Parliament shall not have power to make laws to order a Commission of Inquiry in respect of the conduct of any or all the Ministers of the State Government, while in office or after demitting office".

Article 247—Administration of justice is a matter which the State Government can well be depended upon for the observance of the due process of law. Ever since the birth of the Constitution, the Parliament has not provided for the establishment of additional courts for the better administration of laws made by Parliament. Such exercise of power may be contemplated in cases where the national interest or emergency dictates such a provision for institution of additional courts. This has happened recently in Punjab. But Article 247 is so wide which enable the Parliament to establish additional courts for the exercise of normal civil and criminal jurisdiction also during peaceful times and this is for the purpose of better administration of laws made by Parliament. As such observance of due process of law is also the responsibility of a State, this provision may be omitted. We suggest—

However, a proviso can be inserted enabling the constitution of such courts by the Parliament in cases of national emergency or to subserve national interest provided, however, the expression "national interest" is defined in the Constitution itself. Our primary recommendation is that Article 247 as it stands may be omitted.

Article 248—This Article deals with residuary powers of legislation of Parliament with respect to any matter not enumerated in the Concurrent List or State List. This provision has no parallel

in other important Federal Constitutions. Even in the American Constitution, the federation has got only enumerated powers while the residuary powers are vested in the State. The 10th amendment to the American Constitution provides as follows :

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States are reserved to the States respectively".

Even so in the Australian Constitution, the residuary power is vested in the State Legislature. Such a vesting of the residuary power in the Union Parliament ignoring the vested rights of the State Legislatures runs contra to the expected notions of federalism. Consequently Article 248 of the Constitution will have to be substituted vesting the residuary powers of legislation in the State Legislature in matters not enumerated in the Concurrent List or in the Union List. Such power naturally includes the power of making any law imposing a tax not mentioned in either of those Lists. It is therefore necessary to omit Entry 97 in List I also. But a new entry has to be inserted in the State List.

Our recommendations therefore are :

(a) article 248 should be omitted.

(b) entry 97 in the Union List has to be omitted, and

(c) a new entry as entry 67 may be included in List II State List reading as under :

"67. Any other matter not enumerated in List I or List III including any tax not mentioned in either of those lists."

Article 249—This again is an article vesting power in the Parliament. This Article again refers to national interest which has not been defined. It enables the Parliament to legislate with respect to a matter in the State List in national interest. Such Legislation is made conclusive if a resolution by the Council of State is supported by not less than two-thirds of the members present and voting to bring in such legislation in national interest. This is the second condition precedent for the Parliament to legislate as contemplated in Article 249. Such assumed legislative competence is beyond the purview of judicial scrutiny as observed by the Supreme Court in State of West Bengal v. Union of India (AIR 1963 SC 1241). Prominent Indians who dissertated on the induction of this Article did not favour its adoption. Besides, this Article is an unprecedented one and no parallel provision is found in similar Constitutions in the globe. Such a carteblanche power given to the Council of States to circumvent State Legislatures in the name of national interest, which has no definite connotation, is certainly to be viewed as an overriding power over the States which could enact laws as envisaged within the frame-work of the Constitution itself. The retention of Article 249 will result in the perpetuation of the recognition of encroachment by the Council of States in matters exclusively reserved to the State Legislature. This would be so when the Council of States enojys the support of majority of members belonging to the ruling party constituting the Lok Sabha.

We, therefore, suggest that Article 249 may be omitted.

Articles 250 and 251—The Government are of the view that Parliament should not reserve for itself the power to legislate with respect to any matter in the State List if a proclamation of emergency is in operation. Notwithstanding the proclamation of emergency, the State functions through its popular legislatures. If the Parliament reserves for itself the power to legislate with respect to any matter in the State List, during the period of emergency, notwithstanding the availability of popular legislatures in the State, this Government feel it that is necessary that such legislation can be undertaken only if a resolution to that effect is passed by both the Houses of the State Legislature.

In fact, the text of Article 251 contemplates and visualise the possibility of the Parliament making laws during emergency or under Article 249. It may be inconsistent with the laws made by the legislature of the State. This is, therefore, an inbuilt clue to suggest that such laws even during the emergency should not be made by throwing overboard the laws of the State which duly reflect the wishes of the people. Consistency in laws is the touchstone for its continued observance.

Therefore, the Government suggest that Articles 250 and 251 also should be omitted.

Article 252—In the absence of mutuality as regards the power to amend or repeal the Acts made either by Parliament or by the States respectively, this Government feel that Article 252(2) should be altered so as to enable both the Parliament and the Legislature of the State to either repeal such a law or alter the same.

Having regard to the apex position in which the Union is placed under the Constitution, notwithstanding the adoption of the federal system, it will be easy for the Central Government to ask the State Legislatures to pass a resolution to satisfy their intention to legislate for two or more States. If the Central Government wants that any law should be enacted so as to make it uniform for two or more States it is open to the Central Government to send a copy of the model Bill to the State concerned for being enacted by the State Legislature after giving weightage to the opinion of the people and having regard to the welfare of the State and also keeping in view many ideologies which prevade each State in a different manner. In this context it is not even necessary to give power to the parliament to legislate in the State field even if a resolution is passed by the State Legislatures. The primary recommendation of this Government are to omit Article 252. The alternative suggestion is that Article 252(2) should be so amended so as to make the power as between the Centre and the State mutual and not exclusive.

Article 304—The proviso to Article 304(B) which requires sanction of the President in the case of certain Bills should be omitted. Please also see our remarks under Q. 8.1.

Articles 154(2)(b), 258(2) and 164—Legislative power has been conferred by the Constitution either upon the Union or States. Wherever such bi-cameral authorities are vested with the function of legislating then that delegated power cannot be delegated (Delegata potesta non-potest delegari). Thus, the power delegated under the Constitution on the Parliament cannot be redelegated. To this extent Articles 154(2)(b) and 258(2) needs a revision.

Under Article 154(2)(b), the Parliament can confer by law functions on any authority subordinate to the Governor. Even so under Article 258(2), the Parliament by law, can confer powers and impose duties upon a State or Officers and authorities thereof. This would in fact mean an extra-territorial exercise of legislative power by the Parliament. When Article 258(1) expressly provides for securing the consent of the Government of the State, while dealing with the power of the Union to confer powers on States, this provision is conspicuously absent both in Articles 154(2)(b) and 258(2).

We suggest therefore an amendment in both these Articles providing that if the Union were to exercise the power as contemplated in both the Articles, the consent of the State should be obtained.

Regarding Article 164, reference may be made to our recommendation in Part III "Role of the Governor".

The Government suggest additions, modifications and deletions of entries in the Union List (List I) State List (List II) and Concurrent List (List III).

List I—Union List

Entry 2-A—"Deployment of any armed force of the Union or any othe force subject to the control of the Union or any contingent or unit thereof in any State in aid of the civil power; powers; jurisdiction privileges and liabilities of the members of such forces while on such deployment."

Entry 2-A was actually introduced by the Constitution (Forty-second Amendment) Act, 1976 in order to confer on the Union Government power to control the armed forces of the Union such as BSF, CRP etc., when they are deployed in any State on the request of a State Government in aid of the civil power in such State. The State Government have the right to requisition Central Reserve Police Force when they have reason to believe that the State Police Forces will require to be adequately supplemented to deal with likely situations of serious disturbances. It is only the State Government who may call for the Central Reserve Police Force for the purpose of preserving public order and protecting property and of quelling disturbances. The Government suggests that entry 2-A should be omitted.

Entry 7—"Industries declared by Parliament by law to be necessary for the purpose of defence or for the prosecution of war."

The Government suggest that Entry 7 may be modified as follows: "Industries necessary for the purpose of armament."

Entry 24—"Shipping and navigation on inland waterways, declared by Parliament by law to be national waterways, as regards mechanically propelled vessels; the rule of the road on such waterways."

This entry is widely worded. This entry may take in shipping and navigation on inland waterways of rivers which are completely within a particular State. In other words, it may include shipping and navigation on inland waterways of intra-State rivers. Shipping and navigation on inland water ways intra-State rivers completely belong to the States over which the Union Government or Union Parliament should not have much power to intervene. Therefore, the language of Entry 24 should be modified. Besides, the phrase "declared by Parliament by law to be national waterways" must be deleted.

In the light of what we said here above, we suggest the modification thus: "Entry 24. Shipping and navigation on inland waterways in inter-State rivers; the. rule of the road on such waterways."

Entry 25—"Maritime shipping and navigation, including shipping and navigation on tidal waters; provision of education and training for the mercantile marine and regulation of such education and training provided by States and other agencies."

In view of the suggestions made by the Government in relation to entry 25 in the Concurrent List, the Government suggest that :—

in the above Entry 25, the expression "provision of education and training for the mercantile marine and regulation of such education and training provided by States and other agencies" should be deleted.

Entry 30— "Carriage of passengers and goods by railway, sea or air, or by national waterways in mechanically propelled vessels".

Since we suggested changes in Entry 24, consequential change is to be made in Entry 30. So the word "national" which is found between the words "by" and waterways must be replaced by the words "inter-State river".

After the amendment, the suggestion is that Entry 30 should read thus :

"Carriage of passengers and goods by railway, sea or air by inter-State river waterways in mechanically propelled vessels.".

Entry 31—"Posts and telegraphs; telephones, wireless, broadcasting and other like forms of communication."

Please see our remarks in answer to Question 4.10 in Part IV—"Administrative Relations".

Entry 32—"Property of the Union and the revenue therefrom, but as regards property situated in a State subject to legislation by the State, save in so far as Parliament by law otherwise provides".

The last phrase "save in so far as Parliament by law otherwise provides" is unnecessary. In fact such provision has been made in Article 285 itself. Article 285 clause (1) reading "The property of the Union shall, save in so far as Parliament may by law otherwise provide, be exempt from all taxes imposed by State or by any authority within a State" can also be usefully referred to. Independent of this provision, the Government recommend that the last phrase "save in so far as Parliament by law otherwise provides" may be deleted.

Entry 33 : In view of the ambulatory provision regarding the concept of acquisition and requisitioning of property, which were prevailing in the past and particularly as Article 31 of the Constitution has been omitted, this Government suggest the restoration of the Entry as it originally stood reading as follows :

"Acquisition and requisitioning of property for the purposes of the Union".

Entry 40—"Lotteries organised by the Government of India or the Government of a State.

Lottories organised by the Government of a State is purely a local matter. It does not become national in dimension or character. Therefore, there is no ryhme or reason in retaining "lotteries organised by the Government of a State" in the Union List.

The Government th refore recommend that the phrase "or the Government of a State" must be deleted from Entry 40 and a new entry namely, "Lotteries organised by the Government of a State" may be included in the State List.

Entry 45—"Banking"

In other federal countries like United States and Australia, the States also have established banks. Therefore, banking should not be exclusively given to the Union Government. Of course, the Central Banks, that is, the key bank which normally lays down rules and regulations for other banks, which is normally distinguished by the Economists as the Banker's Bank must be in the Union List. So we suggest that in entry 45, the word "Banking must be replaced by words "Central Bank or Reserve Bank".

The Government suggest that the entry "Banking" must be transferred to the Concurrent List.

Entry 48—"Stock Exchanges and futures markets".

Whatever may be said of 'Stock Exchanges', "future markets" which are essentially intra-S ate in character, dealing with local mercantile and commercial subjects, need not be in the Union List.

We recommend that this entry is so far as it relates to "futures markets" be transferred to the State List.

Entry 51—"Establishment of standards of quality for goods to be exported out of India or transported from one State to another".

In Entry 51, the Government recommend the deletion of the expression "or transported from one State to another". This is because each State can independently judge for itself the quality of the goods it is purchasing from the other States and a decision to accept such transportation of goods exported by them has to be left to the discretion of the States concerned.

The Government's view is that entry 51 should read as "Establishment of standards of quality for goods to be exported out of India."

Entry 52—"Industries, the control of which by the Union is declared by Parliament by law to be expedient in the public interest."

Under entry 52, of List I, 'Industries, the control of which by the Union is declared by Parliament by law to be expedient in the public interest' come within the exclusive legislative competence of the Parliament. The Industries (Developement and Regulation) Act, 1951 has been passed with reference to this entry. But Parliament has brought many of the items within the scope of the Industries (Development and Regulation) Act, 1951 with the result that the legislative power under entry 24 of List II, *viz.*, Industries subjects to the provisions of entries 7 and 62 of List I, becomes actually ineffective because, to the extent Parliament has included any industry within the scope of the Industries (Development and Regulation) Act, 1951 or any other Act under entry 52 as a controlled industry, the legislative competence of the State Legislature is deprived of. This certainly affects the federal structure of the Constitution in the sense that the State Legislature is made incompetent in respect of controlled industries coming under the Act enacted by Parliament under entry 52 of List I.

Further, the expression "in public interest" is so wide that any and every industry can be brought within the scope of entry 52. The Government of Tamil Nadu are therefore of the firm view that the 'core industry of crucial importance for national development, should be specified in the entry itself, Entry 52 may read as follows :

"52 Industries specified below :

1. Metallurgical Industries

A. Ferrous :

(1) Iron and steel (metal)

(2) Ferro-alloys

(3) Iron and steel castings and forgings.

(4) Iron and steel structurals.

(5) Iron and steel pipes.

(6) Special steels.

(7) Other products of iron and steel.

B. Non-ferrous :

(1) Precious metals, including gold and silver and their alloys.

(2) Other non-ferrous metals and their alloys.

(3) Semi-manufactures and manufactures.

2. **Fuels** :

(1) Coal, lignite, coke and their derivatives.

(2) Mineral oil (crude oil), motor and aviation spirit, diesel oil, kerosene oil, fuel oil, diverse hydrocarbon oils and their blends including synthetic fuels, lubricating oils and the like.

(3) Fuel gases—(coal gas, natural gas and the like).

3. **Steam Generating Plants** :

Steam generating plants.

4. **Prime movers (other than electrical generators)** :

(1) Steam engines and turbines

(2) Internal combustion engines.

5. **Telecommunications:**

(1) Telephones.

(2) Telegraph equipment.

(3) Wireless communication apparatus.

(4) Radio receivers, including amplifying and public address equipment.

(5) Television sets.

(6) Teleprinteres.

6. **Transportation** :

(1) Aircraft.

(2) Ships and other vessels drawn by power.

(3) Railway locomotives.

(4) Railway rolling stock.

7. **Fertilisers** :

(1) Inorganic fertilisers.

(2) Organic fertilisers.

(3) Mixed fertilisers.

8. **Chemicals (other than fertilisers):**

(1) Coal tar distillation products like napthalene anthracene and the like.

(2) Explosives including gun powder and safety fuses.

9. **Paper and pulp including paper products** :

(1) Paper-Writing, printing and wrapping.

(2) Newsprint.

(3) Pulp-Wood pulp, mechanical, chemical, including dissolving pulp.

10. **Sugar.**

Sugar

11. **Defence Industries** :

Arms and Ammunition.

Even these specifications should be restricted to industries of crucial importance for national devleopment or the core industries. Consequently, entry 24 of List II will read as follows :

"Industries other than industries specified in entries 7 and 72 of List I."

Entries 53, 54 and 55 :—

Entry 53 :—"Regulation and development of oil fields and mineral oil resources : petroleum and petroleum products; other liquids and substances declared by Parliament by law to be dangerously inflammable."

Entry 54 :— "Regulation of mines and mineral development to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest,"

Entry 55 :—"Regulation of labour and safety in mines and oil fields."

It is appropriate that these entries are transferred to the Concurrent list.

Entry 56 :—"Regulation and development of inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest."

This Government have already submitted its views touching this entry. This Government recommend that Entry 56 should read as follows :—

"56. Regulation and development of inter-State rivers and river valleys, diversion of the waters of inter-State rivers to any part of the territory of India and apportionment among the States (but not including the use within the States) of the waters of inter-State rivers, to the extent to which such regulations, development diversion and apportionment under the control of the Union is declared by Parliament by law to be expedient in the public interest."

Entry 58 :—"Manufacture, supply and distribution of salt by Union agencies; regulation and control of manufacture, supply and distribution of salt by other agencies."

In this entry, "regulation and control of manufacture, supply and distribution of salt by other agencies" are purely local activities. Inclusion of this item in Entry 58 does not conform to the basic principle of distribution of powers. So, this phrase must be deleted from Entry 58.

The Government recommend that Entry 58 will read as follows : "Manufacture supply and distribution of salt by union agencies".

Entry 60 :—"Sanctioning of cinematograph films for exhibition".

This entry should appropriately be in List II enabling the State Legislature to legislate on all intricacies connected with it. The current system of censoring by Board of Censors nominated by the Union which might or might not adequately provide for representation from each of the States, is a feature which has to be borne in mind while considering the real purport of this Entry. India has got now a linguistically based foundation with certain traditions, cultures, practices and habits peculiar to each State. Even the faith are some time radically different.

Cinematograph exhibition has now attained a peculiar position in the field of communication and information. Having regard to the different tastes, varied culture, mosaic habits of the people in each State in our country, the power to sanction cinematograph films for exhibition should be under the supervision and control of the States and should not be the subject matter of Legislation by Parliament.

The Government suggest that this entry, viewed in the light of independent developmental conscience of States, has to be transferred to the State List.

Entry 62 :—"The institutions known at the commencement of this constitution as the National Library, the Indian Museum, the Imperial War Museum, the Victoria Memorial and the Indian War Memorial, and any other like institution financed by the Government of India wholly or in part and declared by parliament by law to be an institution of national importance."

Keeping in view of our comments made earlier, the Government recommend

the deletion from Entry 62, the last phrase "or in part and declared by Parliament by law to be an institution of national importance."

Entry 63 :—"The institutions known at the commencement of this Constitution as the Banaras Hindu University, the Aligarh Muslim University and the Delhi University the University established in pursuance of article 371E; any other institution declared by Parliament by Law to be an institution of National importace."

In Entry 63, the Government recommend the deletion of last phrase "any other institution declared by Parliament by law to be an institution of national importance."

Entry 64 :—"Institutions for scientific or technical education financed by the Government of India wholly or in part and declared by Parliament by law to be institutions of national importance."

In Entry 64, the Government recommend that the last phrase "or in part and declared by Parliament by law to be institutions of national importance" must be deleted.

Entry 66 :—"Co-ordination and determination of standards in institutions for higher education or research and scientific and Technical institutions."

Entry 67 :—"Ancient and historical monuments and records, and archaeological sites and remains, declared by or under law made by Parliament to be of national importance."

The Government are of the view that these two entries should be transferred to the State List.

Entry 76 :—"Audit of the accounts of the Union and of the States."

Audit of the accounts of the States must be put in the State List. The Government therefore recomment that :

In Entry 76,the words "and of the States, must be deleted.

Entry 84 :—"Duties of excise on tobacco and other goods manufactured or produced in India except

(a) alcoholic liquors for human consumption;

(b) opium, Indian hemp and other narcotic drugs and narcotics,

but including medicinal and toilet preparations containing alcohol or any substance included in sub-paragraphs (b) of this entry."

The power to levy excise duty on medicinal and toilet preparations containing alcohol or any substance including alcohol should appropriately be under the control of the State Legislature. It may be noted that under entry 51 of the State List, the power to levy excise duty on alcoholic liquor for human consumption and opium, Indian hemp and other narcotic drugs and narcotics is exclusively vested in the State Legislature. But that entry excludes medicinal and toilet preparations containing alcohol or any substance included in opium, Indian hemp and other narcotic drugs and narcotics. The exclusion is not necessary. Consequently, the Government recommend that :

the exclusion in entry 51 of the State List should be omitted and the inclusion in entry 84 of the Union List should be omitted.

Entry 85 :—"Corporation tax."

For this entry our suggestions in Part V—'Financial Relations, may be referred to.

Entry 90 :—"Taxes other than stamp duties on transactions in stock exchanges and futures markers."

In view of our comments on entry 48, the expression "and futures markets" should be omitted and "taxes on future markets" should be transferred to the State List.

Entry 97 :—"Any other matter not enumerated in List II or List III including any tax not mentioned in either of those Lists."

This entry appears to be a corollary to Article 248. We have suggested while dealing with Article 248, that both Article 248 and Entreis 97 should be omitted and a new entry 67 has to be included in the State List—Vide our suggestion under Article 248. In the light of the recommendations and suggestions made while dealing with Article 248, the Government reiterate that both this entry 97 and Article 248 should be omitted.

List II—State List

Entry 1 :—"Public order (but not including the use of any naval, military or air force or any other armed force of the Union or of any other force subject to the control of the Union or of any contingent or unit thereof in aid of the civil power."

In Entry 1, the entire phrase "or any other armed force of the Union or of any other force subject to the control of the Union" must be deleted. In fact.

much of this provision was introduced by the Constitution (Forty Second Amendment) Act, 1976. After deletion of this phrase, Entry 1 will read thus :

"Public order (but not including the use of any naval, military or air force or of any contingent or unit thereof in aid of the civil power)".

Entry 2 —"Police (including railway and village police) subject to the provisions of entry 2A of List I."

In Entry 2, the phrase "subject to the provisions of Entry 2A of List I" must be deleted. After the deletion of this phrase, Entry 2 will read thus :

"Police (including railway and village Police)"

Entry 12 —"Libraries, museums and other similar institutions controlled or financed by the State; ancient and historical monuments and records other than those declared by or under law made by Parliament to be of national importance."

In Entry 12 "the phrase declared by or under law made by Parliament to be of national importance" should be deleted. Consequent on the recommendation of this Government to transfer entry 67 from the Union List to the State List, entry 12 will read thus :

Libraries, museumes and other similar institutions controlled or financed by the State; ancient and historical monuments and records and archaeological sites and remains."

New Entry 12-A—Consequent on the recommendation of this Government to transfer Entry 66 from the Union List to the State List, the following entry has to be inserted after Entry 12 :

"12-A. Co-ordination and determination of standards in institutions for higher education or research and scientific and technical institutions".

Entry 13—"Communications, that is to say, roads, bridges, ferries and other means of communication not specified in List I, municipal tramways; ropeways; inland waterways and traffic thereon subject to the provisions of List I and List III with regard to such waterways; vehicles other than mechanically propelled vehicles."

In Entry 13, the phrase "subject to the provisions of List I and List III with regard to such waterways" must be deleted.

Then Entry 13 must be reworded thus:

"Communications, that is to say, roads, bridges, ferries and other means of communication not specified in List I; municipal tramways; ropeways; inland waterways; intra-states rivers and traffic thereon, vehicles including mechanically propelled vehicles."

Entry 24—Please see our remarks under Entry 52 of List I.

Entry 26—"Trade and commerce within the State subject to the provisions of entry 33 of List III,"

As regards Entry 26, the Government decided to bring Entry 33 of Concurrent List to State List and that —

Entry 26 must be reworded thus:

"Trade and commerce within the State including trade and commerce in—

(a) the products of any industry and imported goods of the same kind as such products;

(b) foodstuffs, including edible oilseeds and oils;

(c) cattle fodder, including oil-checks and other concentrates;

(d) raw cotton, whether ginned or un-ginned, and cotton seed; and

(e) raw jute."

Entry 27—"Production, supply and distribution of goods subject to the provisions of Entry 33 of List III."

In Entry 27 also, it was decided by the Government to bring in the provisions of Entry 33 of List III and it was decided to recast Entry 27 as follows :—

"Production, supply and distribution of goods including the production, supply and distribution of—

(a) the products of any industry and imported goods of the same kinds as such products;

(b) foodstuffs, including edible oilseeds and oils;

(c) cattle fodder, including oilcakes and other concentrates;

(d) raw cotton, whether ginned or unginned, and cotton seed; and

(e) raw jute."

Entry 33—"Theatres and dramatic performaces cinemas subject to the provisions of entry 60 of List I; sports, entertainments and amusements."

In Entry 33, the phrase "subject to the provisions of Entry 60 of List I", must be deleted. After the deletion of this phrase Entry 33 will read as follows :—

"Theaters and dramatic performances; cinemas; sports; entertainments and amusements".

Entry 33-A—In view of our remarks under Entry 60 of the Union List this Government suggest, a new Entry 33-A reading : "Sanctioning of cinematograph films for exhibition."

Entry 33-B—In view of our remarks under Q. 4·10 this Government suggest a new entry 33-B reading "Broadcasting and Television".

Entry 36—This Government suggest the restoration of original Entry 36, excepting or the omission of the clause "subject to the provision of Entry 42 of List III".

Entry 36 will read as follows :

"Acquisition or requisitioning of property, except for the purposes of the Union".

Entry 51—"Duties of excise on the following goods manufactured or produced in the State and countervailing duties at the same or lower rates on similar goods manufactuted or produced elsewhere in India—

(a) alcoholic liquors for human consumption;

(b) opium, Indian hemp and other narcotic drugs and narcotics;

but not including medicinal and toilet preparation containing alcohol or any substance included in sub-paragraph (d) of this entry."

In view of our recommendation regarding Entry 84 in List I, Entry 51 should read as follows:

"Duties of excise on the following goods manufactured or produced in the State and countervailing duties at the same or lower rates on similar goods manufactured or produced elsewhere in India—

(a) alcoholic liquors for human consumption;

(b) opium, Indian hemp other narcotic drugs and narcotics."

Entry 57—"Taxes on vehicles, whether mechanically propelled or not, suitable for use on roads, including tramcars subject to the provision of entry 35 of List III."

The expression "subject to the provisions of Entry 35 of List III" may be omitted.

After the above omission, Entry, 57 will read as follows:

"Taxes on vehicles, whether mechanically propelled or not, suitable for use on roads, including tramcars."

The Government also suggest to add a new entry as follows:

"**Entry 57-A**—Taxes on mechanically propelled vehicles including the principles on which taxes on such vehicles are to be levied."

List III—Concurrent List

The Government are of the view that the Concurrent List, the object of which is to secure uniformity of Legislation and otherwise should be restricted to matters which are of All-India importance and interest to the country as a whole and should be reduced to the minimum and the other entries should be transferred to the State List.

Entry 3—"Preventive detention for reasons connected with the security of a State, the maintenance of public order, or the maintenance of supplies and services essential to the community; persons subjected to such detention."

The Government are of the view that except for the paranthesis "or the maintenance of supplies and services essential to the community" the rest of the entry may be transferred to List II. In th State List a new entry will be added as Entry 1-A, which will read as follows :

"**Entry 1-A**—Preventive detention (List II) for reasons connected with the security of a State or the maintenance of public order; persons subjected to such detention."

After the above modification, the existing Entry 3 will read thus :

"Preventive detention for reasons connected with the maintenance of supplies and services essential to the community; persons subjected to such detention."

Entry 4—"Removal from one State to another State of prisoner, accused persons and persons subjected to preventive detention for reasons specified in Entry 3 of this List."

This entry may be transferred to the State List with a condition that transfer of prisoners from one State to another State should be made with the consent of the other State.

Entry 5—"Marriage and divorce; infants and minors adoption; wills, intestacy and succession; joint family and partition; all matters in respect of which parties in judicial proceedings were immediately before the commencement of this Constitution subject to their personal law".

This entry may be transferred in its entirety to the State List as the subject-matter concerning the entry has a positive impact on the personal law of the subjects of the State which undoubtedly varies from State to State.

Entry 8—"Actionable wrongs."

The Government suggest that this entry may be transferred to the State List for the purpose of greater administrative efficiency.

Entry 10—"Trust and Trustees" and **Entry 11**—"Administrators-General and Official trustees."

The Government suggest that these entries may be transferred to the State List for the purpose of greater administrative efficiency.

Entry 11-A—"Administration of justice, constitution and organisation of all courts, except the Supreme Court and the High Courts."

This entry was inserted by the Constitution Fourty-second (Amendment) Act, 1976, with effect from 3rd January 1977. This entry should be restored to the State List as Entry 3 as originally found before 3rd January 1977. There is no justification at all for bringing this entry in the Concurrent List. This was done during the Emergency period and it is no longer desirable to have this entry in the Concurrent List. This entry may be transferred to State List and numbered as Entry 3-A.

Entry 15—This entry may be transferred to State List (Entry 9-A).

Entry 16.— "Lunacy and mental deficiency, including places for the reception or treatment of lunatics and mental deficients."

This entry contains subject-matters which are purely local in character. So, Entry 16 can be transferred to State List and numbered as Entry 9-B.

Entry 17—"Prevention of cruelty to animals."

This entry deals with "Prevention of cruelty to animals", which is also a local subject-matter. Therefore this entry can be transferred to State List and numbered as Entry 15-A.

Entry 17-A—"Forests".

"Forests" which was inserted in the Concurrent List by the constitution (Forty-second Amendment) Act 1976 with effect from 3rd January 1977 should also be restored to the State List. There is no justification whatsoever for having this entry in the Concurrent List. The position obtaining until 3rd January 1977 was that 'forests' was the subject of State Legislation. The Government therefore recommend that Entry 19 of the State List may be restored therein.

Entry 17-B—"Protection of wild animals and birds."

This entry was inserted by the Constitution (Fourty-Second Amendment) Act, 1976 with effect from 3rd January 1977. Till 3rd January 1977, this subject-matter was exclusively within the competence of the State Legislature with reference to the original Entry 20 of the State List. The Government therefore recommend that Entry 17-B may therefore be restored as Entry 20 of the State List.

Entry 19—"Drugs and poisons, subject to the provisions of entry 59 of List I with respect to opium".

We have already expressed while dealing with Entry 52 of List I that even alcohol which is the base for intoxicating liquor should be the State subject. The inclusion of this entry in the State List can also be justified by the fact that the State Government will be in a better position to appreciate the needs in respect of matters covered by this entry.

We therefore recommended that this entry may be transferred to the State List and numbered as Entry 8-A of the State List.

Entry 22—"Trade unions; industrial and labour disputes."

Entry 23—"Social security and social insurance; employment and unemployment."

Entry 24—"Welfare of labour including conditions of work, provident funds, employers' liability, workmen's compensation, invalidity and old age pensions and maternity benefits."

The subject-matters of these entries should appropriately be the subject-matter of the State Legislature. As the State Government will be in a better position to appreciate the needs in respect of matters covered by these entries, these entries should be transferred to the State List and numbered as entries 10A, 10B and 10C respectively.

Entry 25—"Education, including technical education, medical education and universities subject to the provisions of Entries 63, 64 and 65 of List I; vocational and technical training of labour."

This entry should be transferred to State List as Entry 11.

The Government further recommend that a new Entry as Entry 11-A should be inserted in the State List reading as :

"**Entry 11-A**—Provision of education and training for the mercantile marine and regulation of such education and training provided by States and other agencies."

Entry 27—"Relief and rehabilitation of persons displaced from their original place of residence by reason of the setting up of the Dominions of India and Pakistan."

The Government recommend that—the expression "by reason of the setting up of the Dominions of India and Pakistan" may be omitted.

Entry 28—"Charities and charitable institutions, charitable and religious endowments and religious institutions."

In the State of Tamil Nadu in particular various beneficial legislations are being undertaken and policies laid down in connection with better administration of charitable and religious endowments and religious institutions. Even before the introduction of our Constitution such subjects were within the exclusive sphere of the constituent units. This entry may therefore be appropriately transferred to the State List and numbered as Entry 34-A in that List.

Entry 30—"Vital statistics including registration of births and deaths."

There were independent Acts in Tamil Nadu in connection with the registration of births and deaths. The Centre repealed the local Act to achieve no purpose other than that intended by the earlier Act which was prevalent in the State.

Even before the Constitution this was being legislated upon exclusively by the provinces. The Government therefore suggest that this entry should be appropriately the subject-matter of State legislation. The Government recommend that this entry may be inserted as entry 6-A in the State List.

Entry 31—"Ports other than those declared by or under law made by Parliament or existing law to be major ports."

Apparently this entry refers to minor ports. The Government suggest that—

Minor ports which were prior to the Constitution in the Provincial List may be transferred to the State List and numbered as Entry 13B.

Entry 32—"Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such waterways, and

the carriage of passengers and goods on inland waterways subject to the provisions of List I with respect to national water-ways".

This Government recommend that—this entry may by transferred to State List as Entry 13-A.

Entry 33—Please see our remarks under Entries 26 and 27 of State List.

Entry 33-A—"Weights and Measures except establishment of standards".

This entry was inserted by the Constitution (Forty second Amendment) Act, 1976 with effect from 3rd January 1977. This entry was originally found in the State List as Entry 29. The Government therefore recommend that—this entry may be restored to the State List as Entry 29.

Entry 34—Please see our remarks under Part VII Miscellaneous.

Entry 35—"Mechanically propelled vehicles including the principles on which taxes on such vehicles are to be levied".

While making our comment on the language of Entry 57 of the State List, which is made subject To Entry 35 of the Concurrent List, we recommended Entry 57 may be appropriately amended. Further mechanically propelled vehicles are virtually under the control of the State Government and it is the State administration which is responsible for its licensing, taxes, etc. The Government therefore recommend that this entry may be transferred to the State List and numbered as Entry 57-A.

Entry 36—"Factories".

Entry 37—"Boilers"

These two entries have an impact on the developmental activities of the State including setting up of industries, etc. The Government therefore recommend that these entries should be transferred to the State List as Entries 25-A and 25-B respectively.

Entry 39—"Newspapers, books and printing presses."

Whether it is in the name of public order or from the point of view of educational progress or the general benefit derived by communication and publicity, this entry has to remain in the State List. The administrative machinery for the enforcement of the laws connected with the subject-matter of the entry is with the States. The Government therefore recommend that this entry may be transferred as Entry 25C in the State List.

Entry 40—Please see our remarks under entry 67 of List I.

Entry 42—"Acquisition and requisitioning of property."

In view of our suggestion for re-introduction of Entry 33 in List I and Entry 36 in List II and also in view of the fact that Article 31 is omitted by the Constitution (Forty-fourth Amendment) Act, 1978, the Government recommend that this entry may be omitted.

Entry 45—"Inquiries and statistics for the purposes of any of the matters specified in List II or List III."

This entry has been interpreted by the courts so as to enable Parliament to order a commission of inquiry in respect of matters exclusively falling within the State legislative field. In fact, the validity of the Commissions of Inquiry Act, 1952; (Central Act 60 of 1952) has been justified with reference to this entry. The power under the Commissions of Inquiry Act to order a Commission of Inquiry in respect of the conduct of the Ministers of a State Government even while in Office has been resorted to by the Central Government purporting to, exercise the powers under the Commissions of Inquiry Act, 1952. In a Federal set up, it is inconceivable that the Central Government should have the power to order a Commission of Inquiry in respect of the conduct of State's Ministers while in Office or in respect of the past conduct of the Ministers. It is therefore necessary that Parliament should have no power to order an inquiry in respect of the conduct of Ministers of State Government. This aspect assumes very great importance in the context of different ruling parties at the Centre and at the State level. Almost in all cases, the Central Government has resorted to order a Commission of Inquiry into the conduct of Ministers of the State Government when the State Government is headed by a Chief Minister belonging to a party different from the ruling party at the Centre. This subject 'Inquiries and statistics", should exclusively vest in the State Legislature and it is therefore necessary that this entry should be transferred to the State List. The Government primarily suggest that

Entry 45 is omitted from the Concurrent List.

However, if it is proposed to retain this entry in the Concurrent List, the Government suggest that the entry should be recast as follows :

"Inquiries and statistics for the purpose of any of the matters specified in List II or List III but not including inquiries in respect of the conduct of any Minister of a State Government while in office or after demitting office."

In other words, Parliament should have no power to order a Commission of Inquiry in respect of the conduct of the Ministers of the State Government, while in office or after demitting office. But it shall be open to the State Government to appoint a Commission of Inquiry to enquire into the conduct of the State Minister either while in office or after demitting office. To make this position clear, the Government suggest that a substantive amendment may be made in the Constitution in Chapter I of Part XI as follows :—

"246-A **Parliament to have no power to order a Commission of Inquiry into the conduct of a Minister of a State Government**—Parliament shall not have power to make law to order a Commission of Inquiry in respect of the conduct of any or all the Ministers of the State Government, while in office or after demitting office."

PART III

ROLE OF THE GOVERNOR

So far as the role of the Governor is concerned, the view of the Tamil Nadu Government is that the post of the Governor should be abolished, as the Governor appointed by the President is a legacy of the past. It is an anachronism, owing its existance to the British Colonial system. Further, the recent instances have clearly shown that the Governors do not hesitate to misuse their powers and dismiss the Council of Ministers, notwithstanding the fact that the Council of Ministers enjoy the absolute confidence of the Legislature. In order to avoid repetition of such misuse of power, the post of the Governor may be abolished. The Governors have been acting more as agents of the Centre than excercising the powers strictly in conformity with the provisions of the Constitution. This will also save the huge expenditure incurred from the State Exchequer on the office of the Governor and its attached establishments. There is no need to have an ornamental figure head in the State. In this view, the Tamil Nadu Government are of the firm view that the institution of the Governor should be abolished. For this purpose, Articles 153 to 162 may be omitted and necessary amendments to Articles 153, 164, 166, 167 and other provisions of the Constitution may be carried out.

All the powers now excercised by the Governor shall be exercised by the Chief Minister and any information which the Central Government seeks to obtain from the State shall be obtained from the Chief Minister himself and not through any other agency. However, if the post of the Governor is decided to be continued, then the following remarks are called for :

The Governor may be selected from a panel of four names submitted to the President by the Chief Minister enjoying the confidence of the Legislative Assembly in such a case, if the Legislative Assembly decides that the continuance of the Governor in any stage will not be in the interests of the State, then on a resolution passed to that effect by the Legislative Assembly, the President should remove the Governor on receipt of a copy of the said resolution by the President.

3.1(a) Under the Constitution of India the Governor of a State has to play five roles. First and foremost the Governor is the head of the State and repository of the executive power of the State. This is evident from the provisions of Article 153 and 154 of the Constitution. The extent of the State's executive power is indicated in Article 162 of the Constitution. Since the Parliamentary system of Government has been adopted by the Constitution, the Governor is obliged to excercise his functions on the aid and advice of the Council of Ministers who shall be collectively responsible to the legislative assembly of the State. In consonance with the traditional concept of maintaining the dignity of the high office of the head of the State, a number of important powers have been given to the Governor, which are expected to be exercised on the advice of the Council of Ministers. The business of Government of the State is carried on in the name of the Governor (Article 166) and in relation to Council of Ministers, he exercises his traditional rights, namely, the right to be informed, the right to warn and the right to advice (Article 167).

Secondly, he is an inalienable part of the State Legislature (Article 168) and he is empowered to exercise such important functions as :

(1) the power to summon and prorogue each House of the State Legislature and to dissolve the State Legislative Assembly (Article 174);

(2) the right to address or send messages to the House or Houses of State Legislature (Article 175);

(3) the right to address the State Legislature at the commencement of the First Session of each year (Article 176);

(4) the right to assent to or withhold assent from, the Bill passed by the State Legislative Assembly or, in case of bicameral legislature, passed by both Houses (Article 200); and

(5) the power to promulgate ordinances during recess of Legislature; etc.

Thirdly, in the chain of constitutional activities the Governor has certain reciprocal obligations to perform so as to be an effective link between the State and the Union. The Governor performs certain duties on behalf of the Union Government towards the States. This is evident from the provisions of Article 355 read with the provisions of Article 356. These provisions also give an idea that the Governor is expected to play his role so fairly as to enable the Union Government to discharge its constitutional duty towards the States.

Fourthly, the Governor is an effective link between the State and the Union in the matters relating to—

(1) reservation of State Bills for President's consideration under Articles 200 and 201;

(2) reservation of State Bills under Article 254(2) and Article 288(2);

(3) procurement of sanction of the President under Article 304(b);

(4) getting the assent of the President to the State Act as required under Article 255;

(5) State compliance with the provisions of Articles 256 and 257 and directions issued under Articles 256, 257 and 339(2).

In these matters, the Governor plays a very crucial role.

Finally, the Constitution envisages certain situations in which he has to function as an agent of the President. For instance, Article 239(2) provides that if a Governor of the State is also appointed as the administrator of the adjoining Union territory, he is expected to excercise his functions as such administrator independently of his Council of Ministers Articles 371 and 371-A, which place special responsibilities on the Governor of Maharashtra, Gujarat and Nagaland for certain specific purpose may also be reckoned under this category. Besides, after issue of Presidential proclamation and assumption of all or any of the functions of the Government of a

State by the President under Article 356, the Governor functions as an agent of the President for the period when proclamation is in operation.

(b) Differences seem to have arisen between the Governor and the Cabinet occasionally in the matter of appointment of Vice-Chancellors in Kerala, West Bengal and Andhra Pradesh. Governors in these States seem to think that as Chancellors of the University they had discretionary power to choose the Vice Chancellors. But the cabinet is opposed to the excercise of discretionary power by the Governor. Since the Governor functions here as the head of the State, he appears to have exceeded his functional limit when he appointed Vice-Chancellors against the advice tendered by the State Cabinet.

The Governor, in the excercise of his functions, either under the Constitution or under any Act, passed by the State Legislature or by the Parliament has to act on and accept the advice tendered by the Council of Ministers. In the matter of appointment of Vice Chancellors, the Governor has to act only in accordance with the advice tendered by the Council of Ministers.

Another important function of the Governor as the Head of the State relates to the appointment of Chief Ministers. Of course, when a single party gets a clear mandate from the people, difficulty does not arise. The whole problem arises when there is no single political party with clear mandate from the people to form the Government. The question is how he has to discharge his function in appointing the Chief Minister in such a situation. A number of such situations arose during the last 34 years. During such situations the Governors excercised their discretionary power to call upon persons, who in their view could command majority in the House. to form Ministry.

In the recent past, when similar circumstances arose in States like Kerala, Haryana, Karnataka, etc. the Governors adopted novel methods to satisfy themselves about the majority support to aspirants for Chief Minister's post. Those novel methods are, physical verification of all the members of the State Legislative Assembly, parading the members of the State Legislative Assembly by various leaders, signature verification, etc. These are very unhealthy practices and tell adversely on the high position of the Governor. Such a method has never been used in Britain during similar circumstances. We, therefore, state that when any political party fails to secure clear mandate from the people, to form the Government or in case when a ministry is voted out as a result of a no confidence motion and on such or similar occasions we have suggested amendment to Article 164 of the Constitution hereinafter set out. When no political party enjoys the majority support, the State head should of his own motion summon the Assembly for electing a person to be the Chief Minister and the person so elected shall be appointed by the Governor as the Chief Minister.

As part of the Legislature, the Governor has to discharge certain functions. One such function is, as stated earlier, reservation of State Bills for President's consideration and his assent under Article 254(2) and 288(2). Under these Articles, reservation of State Bills for President's consideration and getting the President's assent are essentially in relation to State's legislation to over-ride the pre-existing Central legislation made with respect to concurrent subject matter under Article 254(2) and to overcome the immunity provisions of Article 288(1). For fuller discussion our comments under Part II—Legislative Relations may be referred to.

Another important function which the Governor performs as part of the State Legislature is summoning and proroguing the House or Houses of the State Legislature and dissolving the State Legislative Assembly. The function of summoning and proroguing the House or Houses of State Legislature is done on the advice of the State Cabinet. But in the last 34 years, on a few occasions a few Governors excercised this power against the advice of the State Cabinet. This happened mainly after the fourth general election in State like West-Bengal, Uttar Pradesh, etc. These are no doubt some of the excesses committed by the Governors.

Thus, it is clear that in the last 34 years in playing the role envisaged in the Constitution, the Governor to a great extent, tried to comply with the provisions and norms of the Constitution but in a few situations, the Governors deviated from such Constitutional norms and acted beyond their functional ambit.

There cannot be any objection to appointing party-members as Governors provided they are competent and command respect and act impartially. If a politician is appointed as Governor he should by convention be above party and political affiliations as in the case of the Speaker of the Lok Sabha. The same convention which governs Speaker of the Lok Sabha ought to have been evolved in the case of politician Governor. But unfortunately no such convention developed and the politician Governor adopted partisan approach and consequently tension developed between the Centre and the States. In a quasi-federal set up like the Indian Constitutional set up, the Central Government must give up partisan approach particularly against Governments of the States who do not belong to the ruling party at the Centre. It is impossible to have smooth Centre-State relationship if the ruling party at the centre does not adopt fair approach to all the State Governments, irrespective of political affiliations. The Central Government's attitude opposition Governments in the States should not be influenced by the partisan priority of the ruling party at the Centre. No healthy convention of the Central Government adopting a uniform non-partisan approach towards the State Governments irrespective of their political affiliation since the advent of the Constitution has been evolved. The party in power at the Centre seeks to advance its party interest in the States and Governors are some times made to too the line of Centre with a view to dismissing the State Governments who do not belong to the party in power at the Centre. The dismissal of the AIADMK Government and others in the past and the dismissal of Sikkim Government are cases in point. The Governor has some times acted contrary to British Constitutional conventions and practices and has acted in a high handed manner without giving a chance to the Chief Minister in Office to convene the Assemble

for testing whether he has lost his majority or not, Sir Ivor Jennings in his 'Cabinet Government' has pointed out :

"If the King believes that the Government has lost is majority, and if it is any concern of his, his obvious step is to ascertain whether his assumption is correct and to insist upon a disolution. If Ministers refused to 'advice' the dissolution in Council they would resign, and if they did not resign, he could dismiss them.

But is it his duty to make such an assumption ? Is he sufficiently in touch with public opinion to be able to form a judgement ? It is suggested that the answer to the second question is in the negative. Though his 'splended isolation' makes him more impartial than most, it also keeps him away from the movement of opinion. He can judge only from newspapers, from by-elections, and from his own entourage. Of the first, it is enough to say that even the unanimous opposition of London newspapers would be no criterion. Of the second it can be said that by-elections (as Mr. Disreli discovered) are apt to prove deceptive, especially to one far removed from them. Of the third it must be asserted that it is always more biased and less well-informed than the King himself."

He has further pointed out :

"Democratic Government involves competing policies and thus the rivalry of parties. The policy to be forwarded is that which secures the approval of the House of Commons, subject to the power of the Government to appeal to the electors. If therefore, the Government is defeated in the House of Commons and does not appeal to the people or if, having appealed to the people, it is defeated, a new Government has to be formed. The Queen's task is only to secure a Government, not to try to form a Government which is likely to forward a policy of which she approves. To do so would be to engage in party politics. It is, moreover, essential to the belief in the monarch's impartiallity not only that she should in fact act impartially but that she should appear to act impartially. The only method by which this can be demonstrated clearly is to send at once for the leader of the Opposition."

The Governor task is only to secure a Government, not to form a Government. It is because Constitutional conventions and practices have not been followed in respect of the excercise of powers by the Governor under Article 164(1) of the Constitution, there is friction and clash between the State and the Centre. It is the duty of the Centre to appoint persons of eminence, calibre and ability as Governors. If Centre appoints persons who will be pliant and willing to do the Centre's bidding there is bound to be friction and clash and tension between the Centre and the States which will result in confrontation between the Centre and the States.

3.2 B. G. Kher, former Chief Minister of Bombay has expressed the view,

*A Governor can do a great deal of good if he is good Governor and he can do a great deal of mischief, if he is bad Governor, in spite of the very little power given to him under the Constitution we are framing." —CAD VIII P. 434.

In order to foster healthy Union-State relations the Governor should discharge his role by correctly interpreting the scope and limits of his various roles. In other words there must be a correct assessment of the scope and limits of the four types of the functions of the Governor and maintenance of clear distinction between the four functions. Apart from that, such a good relationship between the Centre and the States depends very must on the personality of the Governor.

This question has to be considered under the following heads :

(1) the personality of the Governor,

(2) the attitude of the Governor,

(3) the extraordinary circumspection required while exercising his discretionary powers as the executive head of the State as also in the exercise of his power as part of the State Legislature.

No doubt, personality of the Governor depends on the high stature of a person holding the post of Governor, which he might have acquired in one or more fields of human activity. But it also depends very much on the mode of selection or appointment of the Governor, for any selection process or appointment method, which smacks of partisan politics, has an adverse effect on the stature of the person holding the post of Governor. Lingering doubt in the minds of the people about the fairness of the Governor's acts taken under the Constitution, which often arises due to the present method of appointment of the Governors, is detrimental to the maintenance of good and harmonious relations between the Centre and States. The latest opinion expressed by a Chief Minister is "I am afraid we shall all be exposed to constant and unwarranted interference and will of the people will continue to be in danger of being stifled for political purpose". Now the President appoints the Governors after consulting the Chief Ministers. The consultation principle has no support of the Constitution. So failure or refusal to consult the Chief Ministers in the matter of appointment of Governors will not render such appointment invalid. In fact, in few appointments made recently, the Union Government did not consult the concerned Chief Ministers. Naturally, therefore, the States often view the appointment of Governors as a burden imposed on them by the Union Government. Such a view is not very conducive to good Centre-State relations. So, a new method of appointment or selection of Governors has to be devised.

In the interest of securing harmonious relationship between the head of the State and State Cabinet, it is necessary that the State Cabinet should always be consulted and concurrence of the Chief Minister obtained.

We are of the view that the proviso to Article 153 enabling the same person as Governor for two or more States should be deleted as such a concept gives the impression that the States are in effect treated as mere corporations or administrative units rather than as Constitutive entities of the federation. If the proviso to Article 153 is omitted, consequential deletion, is that clause (3-A) of Article 158 should be deleted.

3.3 (a) This question has been answered in full while dealing with Part IV—Administrative Relations.

(b) Further to our view expressed earlier, regarding the appointment of Chief Minister, we have already said hat if a political party obtains absolute majority and a clear mandate from the people in the election, the Governor has no option but to invite the leader of that party. Only in cases of fluid situations where no single party has the support of majority, the Governor has to appoint leader of any one of the political groups, who, in his opinion, is capable of forming stable ministry, as Chief Minister. In discharging his functions in such difficult situation, he is expected to do with great care and intelligence. The practice of physical verification of strength of a particular party or signature verification, etc., are unhealthy practices which will demean the office of the Governor.

(c) As far as prorogation of the House is concerned, it must necessarily be done on the advice of the Chief Minister. Problem however arises in case of dissolution of the legislative assembly. If the Chief Minister, who enjoys support of the majority in the Legislative Assembly, advises the Governor to dissolve the House, the Governor has to accept his advice for the simple reason that if he rejects such advice he cannot nominate somebody else as a Chief Minister to run the Government. But if a defeated Chief Minister advises the Governor to dissolve the Legislative Assembly, the Governor is not duty bound to accept such advice, but he is duty bound to follow the course suggested by us in the proposed clause (1A) of Article 164.

3.4 This question has been answered in Part II—Legislative Relations.

3.5 This question has been answered in Part II—Legislative Relations.

3.6 We do not accept the so called dual role of the Governor. The view that the Governor is neither an agent of the Centre nor a more ornamental head of the State but "a close link" between the Centre and the States represents the correct position. As explained earlier, he plays four important roles under the Constitution. That is the correct position as far as Indian Constitution is concerned. As set out, in playing these four roles, the Governor by and large adhere to the Constitutional provisions. But in a few occasions, the Governor deviate therefrom. It is for these reasons. we are making some recommendations.

3. 7 The Governor's office is a political office. Therefore, it should not be equated with the position of the Judges of the Supreme Court or High Court. The Governor is not expected to function under the Constitution as an arbitrator between the Centre and the States. So guaranteed tenure salary, etc. do not arise in his case as methods to ensure his independence. The present provisions of the Constitution are sufficient enough.

3.8 We do not agree with this view excepting in a situation expressly referred to by us while suggesting below an amendment to Article 164. If such a view is accepted, we will be compelling the Governor to involve himself in day-to-day politics of the State. Such a course will be derogatory to the high position of the Governor. Besides, it will result in usurping the functions of the Speaker in this particular matter.

3.9 Please refer to our recommendations below while suggesting amendment to Article 164.

In this connection we would like to state that Article 67 clause (1) of the Constitution of the Federal Republic of Germany does not in any way offer a good solution. Article 67(1) of West German Constitution states :

> "The Bundestag can express its lack of confidence in the Federal Chancellor only by electing a successor with a majority of its members and by requesting the Federal President to dismiss the Federal Chancellor. The Federal President must comply with the request and appoint a person elected."

The provisions of the said Article 67(1) are intended to ensure stability of the Ministry and to prevent frivolous no confidence motions. This is clear from the word "only" in Article 67 clause (1) of the West German Constitution. So, in no other way a no confidence motion can be brought in West Germany. In other words, the opposition party can bring a no confidence motion against a ministry in Germany only if it can elect a new leader with majority votes. The idea is in suggesting the incorporation of a similar provision in the Indian Constitution seems to be that if such similar provision is introduced into the Indian Constitution, the legislative assembly of a State can express its lack of confidence in the Chief Minister only by electing a successor and by requesting the Governor to dismiss the Chief Minister. The Governor must in such an event comply with the request and appoint person so elected as Chief Minister. If such provision is introduced in the Indian Constitution, the opposition parties of State Legislative Assembly will loss the right to bring a no confidence motion against a Chief Minister, unless they muster majority support to elect the new Chief Minister in his place. We do not think that political parties in India are prepared to accept such a restriction or their freedom to bring no confidence motion against the Ministry in order to assalt the party of the Government. Apart from that, if the provisions of Article 67(1) of the West German Constitution are going to be introduced into the Indian Constitution, to regulate the relationship between the Governor and the legislature in the State, then we must necessarily bring in also Article 68 of the West German Constitution which is a natural corollary to Article 67(1). Article 68(1) of the West German Constitution states that "if a motion of the Federal Chancellor for a vote of confidence is not assented to by the majority of the members of the Bundestag. the Federal President, may. upon the proposal of the Federal Chancellor, dissolve the Bundestag within 21 days. The right to dissolve shall lapse as soon as the Bundestag with the majority of its members elects another Federal Chancellor". Introduction of these provisions may create more problems than they seek to solve.

3.10 We do not subscribe to the view of the Administrative Reforms Commission. The very idea of issuing guidelines to the Governor, which may not

be exhaustive, as to how he should excercise his discretionary power would mean that the office of the Governor has been treated like office of the Commissioner or Secretary of a municipal body or corporation. The States clamour for autonomy and make the Governor's position independent from any Central interference. So if we accept the view of the Administrative Reforms Commission, regarding the issue of guidelines to the Governor in the name of the President, even after consultation with the Inter-State Council which under Article 263 has certain stated functions to discharge than the entire attempt to make Governor the Constitutional head of the State would be rendered meaningless. It is apposite to quote Pandit Jawaharlal Nehru. Pandit Nehru said "Governor are not political appointees and should not be changed with every new regime. It would be infinitely better if a Governor was not intimately associated with local politics and functions, but was a more detached figure acceptable to the State no doubt but not known to be a part of its party machine". The Supreme Court in Hargovind Pant vs. Raghulal Tilak and others (AIR 1979 SC p. 1109) has laid down that the Governor is not amenable to the directions of Government of India nor is he accountable for the manner in which he carries out his functions and duties. His is an independent Constitutional Office not subject to the control of Government of India. Therefore, we are constrained to say that a move to prescribe guidelines is politically improper and constitutionally untenable. It is not proper to degrade the high office of the constitutional functionary like the Governor by issuing such guidelines. We must allow conventions to develop in this field. This question has also been elaborately dealt with in Part IV—Administrative Relations.

Recommendations besides the Views Already Expressed

(1) The proviso to Article 153 states that "provided that nothing in this article shall prevent the appointment of the same person as Governor for two or more States". This proviso must be deleted. The idea of appointing one person as head of State for two or more States creates an impression that the States are, in effect, treated as mere corporation or administrative units without much standing in the Constitution as constitutive entities of the Federation. In no other Federal Constitution, such a provision is found.

Consequent to the deletion of the proviso to Article 153, clause (3-A) of Article 158 must be deleted. Clause (3-A) of Article 158 states that "Where the same person is appointed as Governor of two or more States, the emoluments and allowances payable to the Governor shall be allocated among the States in such proportion as the President may by order determine".

(2) The Governor shall be appointed by the President with the concurrence of the Chief Minister. Consequently Article 155, which relates to the appointment of Governor will have to be suitably amended for this purpose.

(3) Article 160 says that "the President may make such provision as he thinks fit for the discharge of the functions of the Governor of a State in any contingency not provided for in this Chapter". Article 160 is losely worded and gives a wide discretionary power to the President. The phrase "any contingency and not provided for in this Chapter" is wide and gives vast scope for political manoevure in view of the fact that the President has to act on the basis of the advice tendered by the Union Cabinet. It is possible to think that this provision was introduced to enable the President to make rules and lay down guidelines for the Governor for discharging his functions as agent of the President. In fact, as pointed out earlier in this report, the Governor discharges certain functions specified in the Constitution as an agent of the President. But the language of Article is such that it may be stretched to cover even other functions of the Governor. This Article requires modification.

(4) Article 163(1) of the Constitution provides that the Council of Ministers have to aid and advise the Governor in the excercise of his functions, except in so far as he by or under his Constitution required to exercise his functions or any of them in his discretion. It may be relevant to compare this Article with Article 74(1) which relates to the President. In the said Article 74(1), the "expression exc pt in so far as he is by or under this Constitution required to exercise his functions or any of them in his discretion" does not find a place. The Constitution envisages a Parliamentary system of Government both at the Union and at the State. Therefore, it is necessary to modify Article 163(1) on the lines of Article 74(1) of the Constitution. Article 163(1), may therefore be recast as follows :

> "There shall be a Council of Ministers with the Chief Minister at the head to aid and advise the Governor who shall in the exercis of his functions act in accordance with such advice :
>
> Provided that in respect of the functions expressly conferred on the Governor under Articles 239(2), 371 and 371-A the Governor shall exercise his functions in his discretion".

(5) Article 163(2) says that "if any question arises whether any matter is or is not a matter as respects which the Governor is by or under this Constitution required to act in his discretion, the decision of the Governor in his discretion shall be final, and the validity of anything done by the Governor shall not be called in question on the ground that he ought or ought not to have acted in his discretion". This provision may not be very conducive, for effective functioning of the Cabinet system of Government in the States. It must therefore be omitted.

(6) Under Article 164(1) of the Constitution the Governor has to appoint the Chief Minister and the other Ministers shall be appointed by the Governor on the advice of the Chief Minister and the Ministers. shall hold office during the pleasure of the Governor. Clause (2) provides that the Council of Ministers shall be collectively responsible to the Legislative Assembly of the State.

Consistent with the notions of Parliamentary democracy, it is desirable that a specific provision should be inserted in the Constitution as clause

(1-A) after clause (1) in Article 164 of the Constitution specifying in detail the manner in which a Ministry should be formed in a State. Clause (1-A) may be inserted on the following lines :—

'(1A)(a) The Governor should appoint as Chief Minister the leader of the party commanding an absolute majority in the Legislative Assembly.

(b) Where the Governor is not satisfied that any one party has an absolute majority in the Legislative Assembly, he should of his own motion summon the Legislative Assembly for electing a person to be the Chief Minister and the person so elected should be appointed by the Governor as the Chief Minister.

(c) The advice of the Chief Minister to the Governor to dismiss any Minister should be accepted by the Governor.

(d) Where it appears to the Governor at any time that the Chief Minister has lost the confidence of the majority of the Members of the legislative Assembly, the Governor should immediately and of his own motion summon the Legislative Assembly to enable the Chief Minister to secure a vote of confidence in the House.

(e) (i) If the Chief Minister fails to seek the vote of confidence, or having sought it, fails to secure such vote of confidence the Chief Minister shall resign forthwith. If there is any party commanding an absolute majority in the Legislative Assembly at the time of such resignation, the Governor shall, of his own motion, appoint as Chief Minister the Leader of such party.

(ii) Where the Chief Minister fails to resign under paragraph (i), or where there is no party commanding an absolute majority in the Legislative Assembly, then the Governor shall immediately of his own motion, summon the Legislative Assembly, The Legislative Assembly shall elect the person to be the new Chief Minister who should be appointed by the Governor as the Chief Minister or in the alternative, the Legislative Assembly may pass a resolution recommending the dissolution of the Legislative Assembly which shall be binding on the Governor.

(iii) If the Legislative Assembly fails to elect a new Chief Minister or pass a resolution as mentioned in paragraph (ii) within a period of one month commencing on and from the date of seeking the vote of confidence under sub-clause (d), the Legislative Assembly shall stand dissolved on the expiry of the said period on one month.

(f) When the Legislative Assembly stands dissolved under sub-clause (e) and during the period on and from the date of commencement of the Legislative Assembly and ending with the date of election of the new Chief Minister by the new Legislative Assembly, the Chief Minister and the other Ministers who are in office on the date on whioh the Legislative Assembly stands dissolved under sub-clause (e) shall continue in office only as a caretaker Minister.'

(7) The next Article that we have to think of seriously is Article 169, clause (1). This article states "Notwithstanding anything in Article 168, Parliament may by law provide for the abolition of the Legislative Council of a State having such a Council or for the creation of such a Council in a State having no such Council, if the Legislative Assembly of the State passes a resolution to that effect by a majority of the total membership of the Assembly and by a majority of not less than two-thirds of the members of the Assembly present and voting." In this Article, the word "may" after the word "Parliament" must be replaced by the word "shall". It is better to modify it in such a way as to state that "Parliament shall by law provide for the abolition of the Legislative Council of a State having such a Council or for the creation of such a Council in a State having no such Council if the Legislative Assembly of the State passes a resolution to that effect by a majority of not less than two-thirds members of the Assembly present and voting."

PART IV

ADMINISTRATIVE RELATIONS

4.1 to 4.4 These four questions are to be highlighted according to their purpose, function and use.

Articles 256, 257, 365 and 356 are the four Articles in the Constitution, which have both catalytic and fatalistic effect on the States, in view of the possible unitary exercise of executive power by the Union under those Articles. The hypothesis on which the executive power could be exercised under Articles 256 and 257, the material on which the President could be subjectively be satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution, the Report of Governor of a State which again bristles with unbridled, naked, arbitrary power to make a report under Article 356 and the residuary provision which is not controlled by any reasonable or acceptable restrictions under Articles 356 and the extreme step which could result by the adoption and implementation of executive power of the Union, whether as a preventive measure or as a curative measure have rightly created apprehensions in the minds of the States in our country, whether such exercise of executive power is at all consistent with and could stand on par with the universally accepted notions of federalism. Instances are not wanting to provoke the States to entertain such fears and apprehensions. The extraordinary use of executive power and the resultant extreme steps taken thereunder affecting the Constitutional status of the States as envisaged and enshirined in the Constitution can be traced from the year 1951.

The following are the instances :—

1. Imposition of Presidential Rule in Punjab in 1951 and Dr. G. C. Bhargara, C. M., resigned.
2. Gyan Singh Rarewala Ministry dismissed in Pepsu in 1953.

3. Dismissal of Assembly in Kerala in 1953.

4. Thiru T. Prakasam Ministry resigned and Presidential rule imposed in Andhra Pradesh in 1954.

5. In Kerala fall of Thiru P. Govinda Menon Ministry and imposition of Presidential rule in 1956.

6. Thiru E.M.S. Namboodripad Ministry dismissed and Presidential rule imposed in Kerala in 1959.

7. Fall of Thiru Mahatab Ministry in Orissa and imposition of Presidential Rule in 1961.

8. In Kerala a no confidence motion was passed against Thiru R. Sankar Ministry and consequently on 10th September 1964 the President took over the administration of the State.

9. In 1966 C. M. of Punjab Thiru Ram Kishan resigned and Presidential rule was declared suspending the power of the State Legislature.

10. The Maharashtrawadi Gommantak party Government resigned in Goa in 1966 and Presidential rule was declared suspending Goa Legislative Assembly.

11. President took over the administration of the State of Kerala in March 1965, since no political party was in a position to form the Government.

12. In Rajasthan, Presidential rule was imposed in 1967, suspending State Legislature.

13. On October 25, 1967 the President suspended the Manipur Assembly and the Council of Ministers.

14. On November 21, 1967, the President dismissed the United Front Ministry headed by Rao Birendra Singh and dissolved the Haryana Assembly.

15. Presidential Rule was imposed in Uttar Pradesh in 1968, suspending the Legislative Assembly and the Council of Ministers, headed by Thiru Charan Singh.

16. Resignation of Thiru Bhola Paswan Shastri Ministry in Bihar and declaration of Presidential Rule in 1968.

17. President dissolved Pondicherry Assembly and introduced President Rule in 1968.

18. West Bengal State Machinery dissolved and Presidential Rule imposed in 1968.

19. Resignation of Thiru Lachman Singh Gill Chief Minister of Punjab and imposition of President Rule in 1968.

20. President suspended the Bihar Assembly and imposed Presidential Rule and after the fall of Thiru Bhola Paswan Shastri Ministry in 1969.

21. In Manipur Koireng Singh submitted resignation of his Cabinet in 1969 and as a result, the Assembly was dissolved and the Presidential Rule was imposed.

22. Imposition of Presidential Rule in Uttar Pradesh in 1970 after the dismissal of Thiru Charan Singh Ministry.

23. Thiru R. N. Singh Deo, Chief Minister of Orissa resigned Assembly suspended on 11th January 1971 and Presidential Rule imposed in January 1971.

24. In Orissa, Assembly was dissolved on 23rd January 1971, Presidential Rule continued.

25. Resignation of Thiru Ajoy Mukherjee as Chief Minister of West Bengal, suspension of Legislative Assembly and imposition of Presidential rule in March 1970.

26. Dissolution of Legislative Assembly in West Bengal on July 30, 1970 and continuance of Presidential Rule.

27. In Kerala Thiru C. Achutta Menon resigned, Assembly dissolved. President's rule declared in 1970.

28. In Mysore, Thiru Virendra Patil resigned. Suspending the Legislative Assembly, the Presidential Rule was imposed in March 1971.

29. In Mysore, Assembly was dissolved in April 1971.

30. Resignation of Thiru Hitendra Desai, Chief Minister of Gujarat, dissolution of Assembly and imposition of President Rule in May 1971.

31. Dr. D. C. Pavate, Governor dissolved the Punjab Assembly and thereafter advised the President to take over the administration. President's Rule was proclaimed in June 1971.

32. In West Bengal, the Governor dissolved the Assembly on June 25. 1971 and on June 29, President took over the administration.

33. In Bihar, Thiru Bhola P. Shastri Ministry resigned and the President took over the administration of the State in January 1972.

34. A Presidential Proclamation dissolving the Assembly was issued in March 1973 when the Satpathi Ministry lost its majority.

35. In Manipur, the Alimuddin Ministry resigned President dissolved the Assembly imposing Presidential rule in March 1973.

36. In January 1974 Thiru M.D.H. Farook Maricar, Chief Minister of Pondicherry resigned, President's rule was introduced.

37. In March 1974, Thiru Ramaswamy Ministry in Pondicherry resigned and President's Rule was introduced.

38. In Tripura, in November 1971, the Sengupta Ministry resigned and President's Rule was imposed.

39. Thiru P. V. Narasimha Rao, Chief Minister, Andhra Pradesh resigned and Presidential Rule suspending the Assembly, was declared in January 1973.

40. Thiru Kamalapati Tripathi, Chief Minister, Uttar Pradesh resigned and Presidential Rule was imposed in Uttar Pradesh in June, 1973.

41. In Gujarat, Thiru Chimanbhai Patel, Chief Minister, resigned and Presidential Rule was imposed in February, 1974, suspending the Assembly.

42. The Gujarat Assembly was dissolved in March 1974, Presidential Rule continued.

43. In Uttar Pradesh in November 1976 when Thiru H. N. Bahuguna was Chief Minister, the Assembly was suspended.

44. In Orissa, Thirumathi Nandini Satpathy, Chief Minister was dismissed in December 1976.

45. Thiru Babubhai Patel, Chief Minister, Gujarat was defeated on Budgetory demand in March 1976, Assembly suspended.

46. In Nagaland, in March 1975, John Bosco Jasokie Ministry was not stabilized because of political defections, Assembly suspended.

47. In Nagaland, in May 1975, the Assembly was dissolved.

48. Dismissal of Thiru Karunanidhi's Ministry in Tamil Nadu and imposition of President's Rule in 1976.

49. Thiru C. Chunga, Chief Minister of Mizoram resigned and Assembly was dissolved in May, 1977.

50. In Tripura, in November 1977 Thiru R.R. Gupta Ministry resigned and Assembly dissolved.

51. The Government of Thiru D. Devraj Urs in Karnataka was dismissed in 1977 by the Jantha Government.

52. In Mizoram when Thiru T. Sailo was Chief Minister the Assembly was dissolved in November 1978.

53. The Government of Pondicherry by Thiru Ramaswamy was dismissed in 1978.

54. In Goa, when Tirumathi S. Kakodkar was Chief Minister in April 1979, Assembly was dissolved.

55. When Thiru Tomo Riba in Arunachal Pradesh was Chief Minister in November 1979, the Assembly was dissolved.

56. In Kerala when Thiru C. H. Mohd Koya was Chief Minister in December 1979, the Assembly was dissolved.

57. to 65. Nine State Governments namely Uttar Pradesh, Bihar, West Bengal, Orissa, Madhya Pradesh, Punjab, Rajasthan, Haryana and Himachal Pradesh were dismissed in 1977 by the Janatha Government.

66. In Manipur, in May 1977, when Thiru R. Dorendra Singh was Chief Minister, the Assembly was suspended.

67. In December 1979, when Thiru J. N. Hazarika was Chief Minister in Assam, the Assembly was suspended.

68. In November 1979 in Manipur when Thiru Y. Sahiza was Chief Minister the Assembly was dissolved.

69. In August 1979 in Sikkim when Thiru Dorji was Chief Minister the Assembly was dissolved.

70. to 78. Nine State Governments, namely, Uttar Pradesh, Bihar, Rajasthan, Madhya Pradesh, Punjab, Tamil Nadu, Orissa, Gujarat and Maharashtra were dismissed in 1980.

79. In Assam in June 1981, when Thiru Anwara Taimur was Chief Minister, the Assembly was suspended.

80. In Manipur, in February 1981, when Thiru Rishang Keishing was Chief Minister, the Assembly was suspended.

81. In Kerala, in October, 1981, when Thiru E. K. Nayanar was Chief Minister, the Assembly was dissolved.

82. In Kerala in March 1982 when Thiru Karunakaran was Chief Minister, the Assembly was dissolved.

83. In Assam, in March 1982, the Assembly was dissolved when Thiru K. C. Gogoi was Chief Minister.

84. In Pondicherry, in June 1983, when Thiru D. Ramachandran was Chief Minister, the Assembly was dissolved.

85. In Punjab, in October, 1983, the Assembly was suspended when Thiru Darbara Singh was Chief Minister.

86. Dismissal of Sikkim Ministry in 1984.

87. Dismissal of Punjab Ministry in 1984.

Introspection over the facts and circumstances governing the above cases gives the impression that extraordinary remedial or alleged curative power springing from the letter and spirit of Articles 256 257, 365 and 356 read together was invoked, that such a power was not used but improperly used, since there had not arisen a situation preventing the Government of a State from functioning in accordance with the provisions of the Constitution. Inter-alia Article 256 purports to ensure States, compliance with the laws made by Parliament and the existing laws. There is no necessity for such an article because the laws made by Parliament and the existing laws which apply to the State are bound to be followed and complied with by the State. This Article is totally unnecessary. When the Administrative Reforms Commission felt that before issuing directions to a State under Article 256 or Article 257, which ordinarily would result in an extreme step and which according to the Administrative Reforms Commission should be taken after exploring the possibilities of settling points of conflict by all other available means, the Commission itself was fully satisfied about the objectionable nature of assumption of executive power under Articles 256

and 257 read with Articles 365 and 356. These Articles, therefore, by precept and practice has the tyranical potential to cause serious inroads into the functioning of the State vested both with executive and legislative powers. In spite of the awareness of the untility of a body like Inter-State Council which the propounders of the Constitution itself comprehended, such a Council has not been established under Article 263 and no attempt has been made for the past 34 years to set up such a Council with an Expert body charged with prescribed duties. The expressions such as :

(a) as to ensure compliance with the laws made by Parliament and for the issue of directions as may be necessary for that purpose (Article 256);

(b) as not to impede or prejudice the excercise of the executive power of the Union and the consequential power to issue directions as may be necessary for that purpose (Article 257(1));

(c) failure to a comply with or to give effect to the directions given by the Union raising a presumption that a circumstance has arisen in which the State cannot be carried on in accordance with the provisions of the Constitution (Art. 365);

(d) the report of the Governor for the satisfaction otherwise by the President for his assumption of all the functions of the governance of the State (Article 356);

comprehend powers reserved by the Union under the Constitution to have an overriding influence over the States bringing down the theory of autonomy of States to a catastrophic minimum. This is so because, the use of such power during the three decades in the past have ex-necessitas demonstrably proves that there has been excessive or misuse of such powers resulting in extraordinary steps being taken and the edifice of State autonomy made to crumble. We have already expressed the view that the chain reaction between Articles 256 and 257, 365 and 356, which is in the nature of catalytic influence is bound to result in a fatalistic intrusion into the autonomy of the State. Our answers, therefore, to Questions 4.1 to 4.4 put together is that Articles 256, 257, 365 and 356 are to be deleted for the hopes of the States in having preserve them as reserve measure have become dupes and as the Administrative Reforms Commission itself said the assumption of governance by the President (under Article 356) has not become exceptional feature but a normal phenomenon and such a drastic medicine prescribed in the Constitution is being administered as daily food as a matter of course instead of being resorted to as a last resort. The Government are also of the view that Articles 357 and 360 should also be omitted.

It may be noted that so far as the Central Government is concerned, there is no provision for President's Rule at the Centre. When a President who is elected has no power to impose President's Rule at the Centre and to act without the aid of the Council of Ministers, there is no justification for imposing President's Rule in the States. In the case of a provision must be made for the Constitutional breakdown in the State, democratic process of holding elections and installing a new Government as in the case of the Centre.

4.5 The answer to this question does not arise in the light of the answers to Q. 4.1 to Q. 4.4. We have no comments to offer.

4.6 This is an area wherein the concept of decentralisation of administrative functions has been given effect to every such attempt of decentralisation must be commended. Besides, States will be in a better position than the Central Government in carrying out the works relating to such subject matters as census and elections.

4.7 First of all we have to divide all these agencies into two categories, namely, (1) agencies relating to subjects in the State List and (2) agencies relating to subjects in the Concurrent List. Central agencies relating to subjects in the State List have no constitutional authority to function and dictate policies and guidelines to the States without their consent or without transfer or entrustment of functions by the State to the Union Government in terms of Article 258A. So any functioning of the Central agency relating to the subjects in the State List would *ipso facto* amount to any inroad into the State's autonomy.

Parliament should not undertake legislation in respect of a subject in the Concurrent List except with the concurrence of the State Legislature. Where the State Legislature has not given its consent for such legislation by Parliament then the legislation made by Parliament should not apply to that State.

But Central agencies relating to subjects in the Concurrent List may function with respect to concurrent subjects, which are not completely occupied by the Union Parliament with the State's representatives in them. Such functioning may be construed as a proper role.

Central agencies relating to Concurrent subject matters which are completely occupied by the Union Parliament may function without State representatives in them because functioning of such agencies in the completely occupied fields cannot be construed as the violation of the federal principle.

In answering to this particular question and in the light of constant differences and misgivings particularly in the southern States, we are provoked to make a suggestion regarding the regulation of Inter-State rivers as envisaged in Entry 56 of list I of Schedule VII read with entry 17 of List II of Schedule VII to the Constitution. In recent times, water disputes including regulation and distribution of water of Inter-State rivers have arisen, particularly between the State of Tamil Nadu on the one hand and the State of Karnataka on the other. A lot of time is taken in exchanging correspondence between one southern State and another in the matter of securing a fair distribution of Inter-State river waters. Notwithstanding the constitution of National Water Resources Council and the National Water Development Agency in the matter of execution of any linking schemes, much depends upon the co-operation of the concerned State Governments. Several seasonal problems arise and no State is able to find an acceptable or co-ordinative solution to the satisfaction of

the problem States. In order to avoid the delay in the matter of exchange of correspondence, we suggest that all disputes relating to inter State Water Dispute should be referred to a permanent Tribunal Constituted by the Supreme Court.

4.8 It is not necessary to have All India Services including IAS and IPS. This Government feel that Officers from other States should not be inducted in this State as they cannot feel the pulse of the people. There should be two services, namely, (1) State Civil Service for the purpose of the State Government and (2) Central Service for the purpose of Federal Government. In the Central Service, regarding the personnel to be recruited by the Centre, due representation be given to the States in the offices of the Central Governments located in the States in the interest of national integration.

4.9 The Central Reserve Police Force is raised by the Government of India under the provisions of the Central Reserve Police Force Act, 1949 (Central Act 66 of 1949). Regarding the deployment of CRP the Government suggest that deployment should be done only with the consent of request of the State. The Government have already suggested that entry 2-A of List I of the Seventh Schedule to the Constitution should be suitably modified so that the federal structure should not be affected.

4.10 Broadcasting and Television should be included in the State List.

4.11 In 1956, five Zonal Councils were created. They were created as instruments of Inter-Governmental consultation and co-operation, particularly in social economic fields. Consequently., their main function is to make recommendations on matters of common interest in the field of economic and social planning. Added to that, they have a duty to discuss and make recommendations with respect to border disputes, linguistic minorities and Inter-State Transport. In other words, the functions entrusted to Zonal Councils are such that the Councils have been endowed with sufficient potentialities, as opined by Durgadas Basu to go "a great way towards eleminating friction among the units which is inherent in the federal system as such". The Government are of the view that it is in the interests of all concerned that the Zonal Councils are to be activised so as to serve the expectations under the State Re-organisation Act, 1956. Any decision of the Zonal Council should be implemented by the State concerned Government of India should be empowered to give directions.

4.12 It must be said at the outset that any Inter-State Council created under Article 263, as it stands today, will have no practical value. It must be remembered that Article 263 speaks about two things, namely, (1) enquiry into and advice upon Inter-State disputes, and (2) investigation, discussion and making recommendations upon subjects of common interest between States or Union and the States. The tenor and language of Article 263 are such that any advice tendered, recommendations made and conclusions arrived by a Council established under it are not binding on any party. At best, such advices, recommendations etc., may have persuasive value. On the other hand, if the Council is not properly constituted, not only its recommendations and advice would fail to impress the parties concerned, but it might prove to be a constant irritant in the body politic of the country as well. So, we suggest that entire Article 263 providing for the establishment of an Inter-State Council may be deleted.

Recommendations besides the Views Already Expressed

(1) In the view expressed by us earlier, Articles 256, 257, 356, 357, 360 and 365 are to be deleted.

(2) Article 263 should also be deleted.

(3) Article 339(2) must be deleted because, the welfare of the Scheduled Tribes in any State is as much the concern of the State Government as that of the Union Government. So, there need be no direction to any State as to how the welfare of the Scheduled Tribes should be p omoted.

(4) Article 344(6)must be deleted because any directions issued by the President on such sensitive issues like use of Hindi language, reduction of English languages, etc. will offend the dignity and individuality of the State.

(5) In Article 350A, the provisions relating to the President's direction to any State must be deleted, because it is the duty of the State to provide adequate facilities for instructions in the mother-tongue at primary stage of education to children belonging to linguistic minority groups and the State can be relied on to discharge this duty faithfully without any instruction or direction from the President.

PART V

FINANCIAL RELATIONS

General Remarks

When the Constitution was ushered in there was no indepth study as to the relative needs between the Centre and the States as regards their then present or future requirements or the conformity variations in financial resources. The same pattern which was conceived at the time when the Constitution was born was continued though with slight modifications which were always in favour of the Centre. By such constant adherence to the financial structure, the Centre has acquired more or less a vested interest in themselves and in course of time acquired a phenomenal grip over the States in the matter of distribution of finances. Notwithstanding Article 269, the Centre for no sustainable reason has not exploited fully the contemplated resources under the Article and the States have thereby suffered by the default of the Centre. Though Finance Commission is a statutory body gaining its strength under Article 280, the Planning Commission which has no such statutory foundation but is a creature of the executive is more or less having the last word on the distribution of finances between the Centre and the States. It is high time that the confusion and duplication in the financial field between these two Commissions are avoided. In the name of uniform distribution and in order to assist the States to plan their own investments with unaided resources, the functions of the Finance Commission and the Planning Commission should be demarcated and harmonised. The Planning Commission excepting

under emergent circumstances and in the name of national interest should accept the schemes formulated by the States for consideration by the Finance Commission. The following suggestion of Thiru K. Subba Rao, former Chief Justice of India, needs weighty consideration :

"It follows that the time has now come when a high power Finance Commission should be appointed to recast the financial relations between the Union and the State and to reallocate the financial resources between the Centre and the States having regard to the requirements of the Union and the States and that steps should be taken to amend the Constitution on the basis of its recommendation."

To quote President Nixon :—

"Let us put the money where they needs are; let us put the power to spend it where the people are; let us share out resources; let us share them to rescue the States and localities from the brink of financial crisis ......

If we put more power in more places we can make Government more creative in more places".

In the ultimate analysis , the Planning Commission also should be established under a statute and their recommendations should be made purely advisory and even so the National Development Council, and the Centre and the State should act without encroaching on each other's powers. The setting up of a High Power Financial Commission appears to be the need of the hour so that there may be a restructuring of the financial relations resulting in the devolution of funds in accordance with well thought of schemes and plans. By way of an illustration the disparity in financial relations between the Union and the State may be brought out by referring to Article 289 of the Constitution. Under Article 289(2), Parliament is empowered to impose any tax in respect of a trade or business of any kind carried on by, or on behalf of. the Government of a State, or any operations connected therewith...... Notwithstanding clause (3) of Article 289 which again gives the power to the Parliament to make law to declare any trade or business as being incidental to the ordinary functions of Government, yet this provisions by itself create discrimination. The Union undoubtedly carries on trade and business and is concerned with many business operations in relation thereto. But no tax is contemplated over the income from such occupational hazards of the Union. But the States are discriminated. The imposition of such tax made by a law made by Parliament has accepted judicial recognition in A.I.R. 1964. S.C. 1486 at 1493. The course therefore appears to be to omit Article 289(2) and (3) so that both the Union and the State can be kept at par in so fa as their occupations, particularly in the matters of trade and business are concerned.

There are three kinds of financial relation of the State. One is through allocation of taxes that they collect here. the second the grants and the third is plan allocation.

In the distribution of resources, the Centre has retained Custom duties, excise duties, other medicine, toilet and alcoholic preparation, Corporation tax, the sharing of Income-tax and also the right to impose a surcharge for its own purposes on Income-tax and thus taxes which, although allocated by the States are levied and collected by the Union.

The main sources of revenue of the States are only Land Revenue, excise on alcoholic preparations, sales tax and a share of Income-tax. The relevant articles are Articles 268, 269, 270 and 271. As regards List I entries 82 to 86. As regards List II entries 45 to 57.

The scheme of distribution is to give the Union more resources of revenue which has created a gap between the needs and resources of the States.

It is an important problem for Federal Finance to bridge this gap between the financec and resources. The Constitution has three point scheme to bridge this gap ——

(1) Firstly the States are entitled to share taxes viz., taxes on income other than corporate tax, Union excise duties on some commodities.

(2) Secondly, the States are assigned the entire proceeds of certain taxes levied by the Union, viz., Estate duty, taxes on Railway fares, additional excise duties levied in lieu of sales tax.

(3) Thirdly, the Constitution provides a system of grants in aid of revenue.

It is now for us to see how far the gap has been bridged.

The power to impose taxes on the sale or purchase of goods where such sale or purchase has taken place in the course of the inter-state trade, has been given exclusively to Parliament — Article 269(1) (g) and entry 92A of List I as inserted by the Constitution (Sixth Amendment), Act, 1956. In the exercise of this power Parliament has enacted section 3 of Central Sales Tax Act of 1956 conferring upon the Parliament the power also to lay down the principles for determing tax on the sale or purchase of goods where such sale or purchase takes place in the course of inter-State trade or Commerce so as to be liable to the Union Sales Tax imposed under Article 269(1) (g).

The experience so far in regard to the distribution of revenues. delimitation of powers and allocation of assistance for plan have been such as to cause bitterness. It has become an urgent necessity to eliminate this bitterness and evolve ways and means by promoting fruitful relation s between the Centre and States.

The main argument of the State is that the State Government should be able to command means of supplying their wants in the same way as the Central Government possesses the means in respect of wants of the Centre. A Federal Government and the State should be empowered with independent sources of income free from mutual interference and the balancing factors should come in only marginally so as to fill the gap. It is felt that the resources for raising funds available to the States are comparatively in elastic and inadequate. There are excessive dependence on the Centre. It is also felt that the constitutional division of finance is not fair to the State and in the distribution of taxes collected on behalf of the States and also in the matter of discretionary grants by the Union to the States. there is scope for discretionary

treatment. The sources of raising funds for the State are comparatively inadequate, resulting in States having to depend on the Centre for grants and overdrafts. The creation of imbalance of States and the resources calls for an amendments of the relevant article of the Constitution so as to get more adequate resources of finance to match their developmental needs and aspirations. The responsibility for development and the power of discharging it would then be matter matched and recourse to grant from the Centre would be unnecessary thus enabling the Centre to reserve their views to a more justifiable cases of contingent assistance.

Having made provisions for federal assistance to the States, both as grants-in-aid and as a share of specified taxes the Constitution visualised the necessity for a machinery independent of Union Government to determine the measure of assistance that should be afforded and also the principles on which this assistance should be made available. This machinery was created in the form of Finance Commission to be appointed by the President every five years so that such periodical adjustments can be made in the Union State Financial relationship as are needed in the light of the emerging situation. The Finance Commission is a unique experiment in the Indian Federal System. It has been envisaged by the framers of the Indian Constitution as "a quasi arbitral body whose function is to do justice between the Centre and the States". It is an authority without parallel in other federations. The only other body which bears some resemblance to it is the Commonwealth Grants Commission of Australia. However, there are significant differences between the two institutions as regards their status and the scope of their competence. The Indian Finance Commission is created by the Constitution and it is not a State-body. It sits only once in five years. On the other hand the Commonwealth Grants Commission was set up in 1933 by the Commonwealth Parliament and it is a standing body and recommends fiscal need grants to the deficit states of Western Australia and Tasmania While in Australia, members are appointed for three years, in India they are appointed for nearly a year and after the commission has completed its assigned task, it becomes functus officio. Thus, there is no continuity in the Commission's work in India. Further, the Indian Finance Commission has larger functions to discharge than its Australian counterpart in that the former has to recommend tax sharing between the Union and the States as well as fiscal need grants to States. In addition, other questions of inter governmental financial relationship are also referred to it from time to time. The provision of Finance Commission is intended to ensure the States that the scheme of distribution will be made not by the Union arbitrarily but will be based on the recommendations of an independent Commission, which will assess the changing needs of the States in making them.

Article 280 of the Constitution which provides for the constitution of the Finance Commission authorised Parliament to determine the qualifications required for appointment as members of the Commission, the manner in which they should be selected and to prescribe the powers of the Commission for the performance of their functions. Accordingly, the Finance Commission (Miscellaneous Provisions) Acts. 1951, was enacted by Parliament. Under the Acts. Commission is to consist of Chairman and four other members. As for qualifications the Chairman is required to be a person who has had experience of public affairs and its members should be persons who (a) are or have been, or are qualified to be appointed as Judges of a High Court for (b) have special knowledge of the finances and accounts of the Government or (c) have had wide experience in financial matters and in administration, or (d) have special knowledge of economics.

Article 280(3) of the Constitution lays down the functions of the Finance Commission. The Commission is required to make recommendations to the President as to (a) the distribution between the Union and the States of the net proceeds of taxes which are to be or may be divided between them and the allocation between the States of the respective shares of such proceeds (b) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India, and (c) any other matter referred to the Commission by the President in the interests of sound finance. Under the Constitution. the decisions on the Commission's recommendations with respect to income-tax is taken by the President and with respect to other taxes, grants-in-aid, etc., by Parliament.

The Commission is empowered to determine its own procedure of business, and has been given the powers of a civil court in the matter of summoning and enforcing the attendance of witnesses, requiring the production of any documents and requisitioning any public record from any court or office. The Commission is also authorised to require any person to furnish information or such points or matters as in the opinion of the Commission, may be useful for or relevant to in the matter under its consideration.

The Finance Commission can be regarded as the balance wheel of the Indian Federal financial relationship. The basis of transfer of funds from the Centre to the States has not been fixed by the Constitution. This has been left flexible to be adjusted from time to time by the Finance Commission. Since the Constitution came into force in 1950, eight such Commissions have made recommendations on these points. With each Commission, progressively the amount of central funds transferred to the States has been no doubt increasing.

A few examples may be cited here of this process. On the eve of the appointment of the first Commission, 50 per cent of the central income-tax was transferred to the States. In a bid to increase the resources of the States, the first Commission increased the State's share in Central income-tax to 55 per cent., the second Commission increased the same to 60 per cent the third Commission raised this to 66.6 per cent and the fourth Commission enhanced it to 75 per cent. The fifth Commission kept it at that figure, for, it thought that the Central Government, being responsible for the levy and collection of the income-tax should have a signficant interest in it. The eight Finance Commission has raised it to 85 per cent.

The Union excises which under the Constitution are only optionally shareable are now shared between the Centre and the States. The process was initiated on a modest scale by the first Commission, but thereafter, with each Commission the process of sharing the excise revenue between the Centre and the States has been carried further continually. The fourth Commission made the entire excise revenue of the Centre shareable with the States upto an extent of 20 per cent. The fifth Commission maintained that ratio but increased the revenue flowing to the States from the Centre by merging the special excise duties in the divisible pool. As per recommendations of eighth Commission, the State share has been increased to 45 per cent, out of which 5 per cent is earmarked for those States which had revenue deficit even after devolution. These special duties had hitherto been used exclusively for Central purposes. Sharing of central excise duties with the States has been quite helpful in augmenting their financial resources for the excise duties constitute an expanding source of revenue in an economy which is fast becoming industrialised.

It is claimed that in the area of fiscal need grants as well, the revenue flowing to the States have been increased tremendously over the years. The first Commission has recommended these grants for seven States amounting to Rs. 50·5 million a year. The second Commission recommended these grants to 11 States and increased these to Rs. 395 million a year. The fifth Commission suggested fiscal-need grants to Andhra Pradesh, Assam, Jammu and Kashmir, Kerala, Mysore, Nagaland, Orissa, Rajasthan, Tamil Nadu and West Bengal to the tune of Rs. 637·85 crores over a five year period. Eighth Finance Commission has recommended Rs. 2·200 crores as gap filling grant.

In fixing the States, share in the divisible pool of the Central funds, each Commission has sought to reduce regional disparities to some extent, so that the resources of the poor States are strengthened. For example, in fixing the States, share in the divisible pool of income-tax revenue, greater weightage is given to the population factor and much less weightage is given to the collection factor. The first Commission suggested distribution of 80 per cent on the basis of population and 20 per cent on the basis of collection. The third and fourth Commissions had also adopted the same principle but the second Commission while holding the view that the principle of collection was not on equitable basis for distribution and should be completed abandoned in favour of the principle of population, nevertheless gave to collection 10 per cent weightage as against 90 per cent to population. This formula was approved by the fifth Commission as well. The Union excise duties among the States are divided 80 per cent on the basis of population and 20 per cent on various criteria indicating social and economic backwardness. According to recommendations of eighth Finance Commission 25 per cent has to be distributed based on 1971 population, 25 per cent on inverse of per capita income and 50 per cent on distance of per capita income from the affluent States. In giving fiscal-need grants under Article 275, broad fiscal-needs of the States are taken into account, the mechanism for granting fiscal-need grants is some what inadequate and leaves much to be desired.

However in all such formulae which were computed by the eighth Finance Commission, the population as on 1971 was taken into account only in such cases where population occurs as an explicit factor. However, in other cases like the computation of per capita income where population occurs as an implicit factor in the denominator, the current population alone was taken into account. Such methodology militates against the very objective of adopting the 1971 population, *viz*, not to penalise the States which have done well in the field of family planning. It may be emphasised that by adopting the current population the States which have done well in the field of family planning which is the national objective of the highest priority have been adversely affected. The State Government has also been pleading in various forums that this trend should be reversed and the 1971 population should be taken into account even in those items where the population occurs as an implicit factor.

No doubt the recommendations of the Finance Commission are accepted only by convention. In terms of strict law, the Commission's recommendations are not binding on the President. Though Dr. Ambedkar was of the view that any action to be taken by the President he should be guided by the recommendations of the Fiscal Commission and should not act arbitrarily, in practice many of the recommendations were not accepted by the Union Government. It is, therefore, felt that the Finance Commission should be a permanent body with its own Secretariat. It should be expressly provided in the Constitution by an amendment that the recommendations of the Finance Commission should be binding on Centre as well as States. Grants by the Centre to the States for plan expenditure, non-plan expenditure should be made only on the recommendation of an independent and impartial body like the Finance Commission or a similar statutory body.

Besides the fiscal need grants, the Constitution also makes provision for 'specific purpose grants' which are given outside the recommendations of the Finance Commission, at the discretion of the Centre, for such activities as the Centre may want to promote to achieve the desired national goals. These grants have increased under the impact of Planning and have dwarfed the fiscal-need grants. Plan grants are made on the advice of the Planning Commission. A number of grants under Article 282 are given for several State activities outside the Plan programmes.

Although the Constitution devices an elaborate and flexible scheme of Centre-State financial relationship, yet the fact remains that there exist several problems in its actual working. Demands are raised from time to time for greater financial allocations by the Centre to the States.

Such a demand arises because of two main reasons. First, there is imbalance between the functions and resources at the State level. The imbalance has arisen mainly because of planning. Their tax resources are somewhat inelastic while the expenditure on the nation-building activities incurred by them is very large. Inspite of huge central aid being given every year by way of grants and loans, they do not find themselves in a position of being able to meet their commitments.

Further, there exist wide disparities in various social services in the States and adequate steps have not been taken to equate them. According to the statistical data given in the report of the fifth Commission, per capita expenditure on education varied from as low as Rs. 4·98 in Bihar to as high as Rs. 46·08 in Nagaland. The second next was Kerala with Rs. 21·11. Similarly, on public health while the per capita expenditure in Bihar was Rs. 0·23, the highest was in Nagaland at Rs. 4·41 and next in Rajasthan at Rs. 4·29. Such examples can be multiplied.

The ideas of fiscal-need grant and Finance Commission have been borrowed by India from Australia. In Australia, the task of the Commonwealth Grants Commission has been to equate the social services in the deficit States to a national average of social services. In India, the Finance Commission does not perform a similar task. It takes into consideration the present high level of expenditure in some States, on social services, but does not seek to equate with them other States with low expenditure on these social services.

This approach leads to the anomalous situation where the States which have exhibited prudent financial management have been put to disadvantage and there is a premium on extravagant expenditures. Similarly, the approach of gap fiilling adopted by the Finance Commission does not take into account the good efforts taken by some States in taping of all possible avenues of taxation and efficiently gearing up the tax collection machinery to ensure better collection. It is therefore suggested that Finance Commission should adopt a normative approach in assessing the tax receipts of all the States as well as to assess the revenue expenditure so as to ensure a minimum level of service standard for all the States and only then arrive at the deficit/surplus from the current revenue. It may also be pointed out that such a normative approach is already being adopted by the Finance Commission in respect of return from Electricity Boards and other Public Sector Undertakings. It may also be emphasised that there is a need of subjecting the expenditure and tax receipts of the Central Government to a similar scrutiny and normative approach.

The compulsions of planning have cast a shadow on the smooth operation of the Centre-State fiscal relationship as envisaged in the Constitution. There has come to be an overlap of functions between the Planning Commission and the Finance Commission. The truth is that at present larger funds pass to the States under the Planning Commission than under the Finance Commission, and the Finance Commission has thus been overshadowed to some extent, by the Planning Commission. The States are not very satisfied with the arrangement that the plan grants be recommended by the Planning Commission. Their argument is that the Planning Commission is a body established by the Central Government through an executive order, and therefore, the principles governing the allocation of plan grants should be enunciated by a different body created by law of Parliament, and the Finance Commission has been suggested in this connection. The Administrative Reforms Commission in its report on Centre-State Relationships has endorsed this suggestion, The Administrative Reforms Commission has recommended that in future the Finance Commission might be asked to make recommendations on the principles which should govern the distribution of Plan grants to the States, but the application of these principles from year to year might be left to the Planning Commission and the Central Government. In order that the Finance Commission's recommendations might be effectively co-ordinated with the Plans, the Administrative Reforms Commission has also suggested that a member of the Planning Commision may be appointed to the Finance Commission. An argument has been raised over time whether Article 282 was designed to be merely a residuary article or was it meant to be used for transfer of such larger funds as is being done at present for planning purposes. It has thus been argued that funds for planning purposes should also be given to the States under Article 275 through the Finance Commission and not through the Planning Commission. The biggest snag in this arragement is that the Finance Commission meets only once in five years and, therefore, the achievements of plan targets by the States can only be assessed by the Commission once in five years. This will leave the States free to spend the money as they like and on such schemes as they like. The whole of the planning process may thus go away.

A committee of experts may be set up to consider the entire issues relating to the indebtedness of the States. A Committee may also be set up to consider the desirability of constituting an authority of forming a Development Bank on the lines of the World Bank to deal with cases made to the Centre by the State for loan. There should be a fund for each State for relief of distress arising out of natural calamities, the fund also be utilised for marketing measures. Revision of taxes, Corporation Tax, custom including the export duties and the tax in capital value of the assets in the divisible pool should be shared by the Centre and the States.

Excise Duties—All excise duties and cesses, special, regulatory or otherwise, which are shareable at the option of the Union should all be made compulsorily divisible between the Union and the States.

Additional duties of excise should be continued only with the concurrence of the States.

Even if the additional duties of excise are abolished and they are replaced by the levy of sales tax by the States, the restrictions now imposed on the levy of sales tax by Sections 14 and 15 of the Central Sales Tax Act, 1956 (Central Act 74 of 1956) as regards the rate of levy and at the stage of levy should be totally repealed.

The power of Parliament under clause 3 of Article 286 should not be exercised except in consultation with the States.

In future, no surcharge should be levied because it takes away income which would otherwise come to the State by way of share in excess.

Grants—Grants by the Centre to the States, both for plan and non-plan expenditure should be made on the recommendation of an independent and impartial body like the Finance Commission or similar statutory body.

Finance Commission—It should be expressly provided in the Constitution that the recommendations of the Finance Commission shall be binding on all the parties—Centre as well as the States.

Loans and indebtedness of States—A Committee of experts may be set up to consider the entire issue relating to the indebtedness of States.

Relief Fund—There should be a fund for each State for the relief of distress arising out of natural calamities. The fund may also be utilised to ameliorative measures.

We however proceed to answer the questions seriatim.

5.1—It is very well known and well established fact that the scheme of sharing of Financial resources has left the Government of India in a very dominating position. This has been the result of the following factors :—

(a) The revenues assigned to the Centre are far more buoyant and elastic than revenues assigned to the States.

(b) The market borrowings have been centralised and as per the provision of the Constitution of India, the State Government cannot raise any loan without the prior permission of the Government of India to whom they are already indebted.

(c) In practice one may say that the deficit financing is the exclusive prerogative of the Centre. Such an attempt on the part of the State Government will always result in an "unauthorised overdraft" with consequent reprimands from the Centre—vide our comment on Entry 45 of List I in Legislative Relations.

It may also be seen that the scheme of transfer of resources as envisaged in the Constitution has resulted in a vertical gap inasmuch as the money raised by the Government of India is not being shared with the State Government adeputa.ly so as to enable them to discharge their constitutional obligations. The share of State Government in the market borrowings has gone down to 23 per cent (estimated) in the Sixth Five-Year Plan from 62.7 per cent in the Third Plan. Similarly the Government of India have mastered the techniques of circumventing the award of various Finance Commissions. This is quite prominent in the period of the award of seventh Finance Commission, when the terms and conditions of the award had necessitated a transfer of tax revenue to an extent of 28.77 per cent in 1980-81. However, in the subsequent years Government of India followed a conscious policy of increasing the rate of taxation in areas which were not shareable with the State Government like additional Income-Tax, additional excise duty and customs, etc., announcing on the other hand concession in respect of taxes shareable with the State Government. This resulted in a situation where the shareable taxes came down to 25.05 per cent in 1983-84—*vide* Table 1.

5.2, 5.3, 5.7, 5.8 5.24, 5.25 and 5.26—Fiscal Federalism in a country like India should ideally take into account the following factors :—

(1) Adequacy of resources for Centre and State;

(2) Reducing the regional disparities and imbalances;

(3) Guarantee the Freedom of trade as enshrined in the Constitution;

(4) Ensuring the optimum utilisation of existing resources not only of the Government but of the society as a whole; and

(5) Ensuring the efficiency in tax administration.

It is very difficult to have a structure of Fiscal Federalism which can equally satisfy all these conditions. Even though such a situation would be ideal, such an ideal is almost impossible to achieve. In any practical situation a trade off has to be made between the divergent pulls of each of these factors. The circumstances which prevail at the time of framing of Constitution might have guided the founding fathers of Constitution to arrive at the principles of sharing of resources which are now existent. But it definitely does not mean that such a system would continue to be the perfect and the ideal system for all times to come. Our experience in the past has clearly established that system has outlived its utility and desparately needs a second look. In order to bring out these points we will like to examine briefly whether the present system has so far served the possible objectives for fiscal federalism.

So far as the question of adequacy is concerned it is a well accepted fact that the State Governments are working in close contact with the people and they have been cast with the onerous responsibility of providing sensitive services like education, health, housing, maintenance of law and order, district administration, etc. It is an equally acceptable fact that the expectation of the people in these areas of administration has been rising much faster than in the areas which are the Union subjects. Without denying the importance of communication, defence, etc., it has to be reiterated that elasticity of demand for such services which are State subject is very high. In this atmosphere of rising expectation of the people, the States have become more and more acutely aware of the fact that the resources or revenue available to State Governments have very low income elasticity. Therefore examined on the touch-stone of adequacy of resources it will be easily seen that the States which have been overburdened with functions having high income elasticity have been on the whole constrained by availability of resources which have very low income elasticity. This has over the years increased the dependence of the State Government on the Centre and this unhealthy trend in the federal structure needs to be corrected.

2. Another important principle for the fiscal policy of any federation would be to ensure the reduction, of regional imbalances and promotion of sustained uniform and equitable growth of the States. With reference to our past experience it can be seen that the existing system for reasons that will be dealt with separately, has not really served this purpose too well. From table 1 it can be seen that in the period 1974-75 to 1980-81 the per capita income

of the State as percentage of per capita income of the whole country remained more or less stagnant for a State like Tamil Nadu. On the other hand, the same ratio for Punjab rose from 150 per cent to nearly 200 per cent and for Haryana from 140 per cent to nearly 165 per cent. Even for a backward State like Uttar Pradesh ratio increased from about 70 per cent to about 80 per cent. This is just to illustrate that the existing system either did not have the potential or did not recommend sufficiently strong measures to carry out the function of removing the regional disparities. The worst sufferer in these cases were the middle income States which were allowed to languish. The States like Punjab and Haryana which had already reached the take off stage further enhanced this relative affluence. Probably the system benefited some of the poorer States but this benefit can also be shown to be only marginal as can be seen in the case of Uttar Pradesh. Quite obviously the Finance Commission in the past have not taken the radical stand which could have the differential devolution progressive enough to cause an impact on the existing disparities.

3. So far as the freedom of trade as enshrined in the Constitution is concerned we only have to submit that it is quite possible to devolve the taxing powers even for all the taxes to the State Governments without affecting this freedom.

4. It is very often argued that the fiscal federalism should not lose sight of the fact that in a vast country like India inter-State trade plays an extremely important role in the building of the economy and that any fragmentary approach, which will necessarily result if the taxing powers in respect of many of the existing taxes are given to State, will essentially militate against optimum utilisation of resources. It is probably felt that in a vast country like India where the equation of supply and demand are criscrossing the whole length and breadth of the country, the optimum utilisation of resources will only be possible if the taxes which relate to any inter-regional transaction are all brought as Union subjects. We feel that this presumption has to be examined with great care and a systematic effort should be made to clearly specify the taxes which can be brought within the purview of the State Governments without effecting the optimum utilisation of resources considerably. We may also assert here that slight dislocation can even be sacrificed on the alter of more efficient administration of taxes by the State Governments in respect of certain heads which will be examined in details subsequently. But in the meanwhile we will like to draw the attention to Articles 268, 269 and 270 of the Constitution Article 268 deals with the duties levied by the Union but collected and appropriated by the States. This includes items such as stamp duties and duties of excise on medicinal and toilet preparations. It is quite obvious that these duties do not form a part of inter-State transactions to any large extent. It will not be anybody's case that variation of rates, in case of making the States competent to levy, collect and appropriate this tax in respect of these is likely to effect the optimum utilisation of resources in any way. On the other hand, it will give more and more freedom to the State Governments to raise additional resources for developmental work. We do not find any justification in including these duties under Article 268 and they can be straight away delegated to the States for levy.

5. Article 269 deals with the taxes levied and collected by the Union and assigned to the States. We feel that the duties in respect of succession to property other than agricultural land and estate duty in respect of other than agricultural land can also be delegated to the States for levy for the reasons cited in the preceding paragraph. Terminal taxes on goods or passengers carried by railway, sea or air, taxes on sales or purchase of newspapers and on advetisements published therein; taxes on sale or purchase of goods which takes place in the course of inter-State trade, etc., can all be brought under the purview of Article 268.

6. So far as the efficiency of tax administration and collection is concerned in our view the efficiency is highest when the tax is administered and collected by the same authority which has the powers to appropriate it. We also feel that efficiency goes down considerably if the tax is administered and collected by one authority but has to be appropriated by some other authority. Although it may not be easy to give an irrefutable proof for such assertion, there are number of indications which are available to point towards this. This tendency exhibited in the past by the Government of India to give various reliefs in respect of Income-Tax which is shared to an extent of 90 per cent with the State Governments and at the same time increase the rates for additional surcharge or income-tax which is entirely appropriated by Government of India is an example that immediately comes to mind. Even if one study Table 3 put up below one will arrive at a similar conclusion. It may be seen that for a period over 1973-74 to 1981-82 the growth of sales tax (administered and appropriated by the State Government) and the customs duty (administered and appropriated by Central Government) have both shown a growth of over 300 per cent as against that excise duty which is collected by Government of India but shared with the State to an extent ranging from 25 per cent to 40 per cent (depending upon the award of the particular Finance Commission) has shown a growth of 180 per cent over the same period as against above 300 per cent for custom. This is to be viewed against the background of increasing import substitution on the one hand and also the fact that the industrial development should have resulted in at least comparable rates of growth for these tow taxes. An even more obvious indication is available in respect of income-tax since income tax has to be shared at an even higher level with the States. It has shown the growth of less than 100 per cent. At the same time additional surcharge on income-tax has shown the growth of over 150 per cent. In the above comparisons to the extent possible we have tried to compare the taxes which are comparables because quite admittedly the elasticity of different taxes differs. However, taxes which relate to industrial production and trade are comparable and have therefore been compared and similarly the taxes which relate to income are comparable and have been compared with each other. From the foregoing discussion it may quite easily be seen that the efficiency of tax administration is closely related with the fact as to which authority is going to appropriate the proceeds and therefore it will be in the

interest of tax administration to progressively allow the State Governments to levy and administer the taxes which have till now been included under Article 268 and Article 269 of the Constitution.

An alternative suggestion can possibly be made in this situation. Out of the eight taxes mentioned in Article 269, only certain taxes are levied and others are not levied. As a result of this, the States could not realise the revenues from these unlevied taxes. It appears that the Finance Commission itself after making a thorough study of these taxes came to the conclusion that some of these taxes could not be levied because of administrative inconvenience, lesser yields and present economic situations. Notwithstanding the view of the Finance Commission, it must be admitted that non-levy of some of these taxes mentioned in Article 269 would deprive the States of their revenue. *So the Government suggest that the Union Government must give a substantial amount to the States in lieu of the non-levy of certain taxes mentioned in Article 269.*

We would also add that the Centre should exploit to the fullest extent those taxes which have not been touched upon for the purpose of better acquisition of finance and utilisation of such resources.

While summing up it may be reiterated that even if the 5 cardinal principles of fiscal fedrealism are kept in mind it can be seen that the existing arrangements have not served those purposes very well and that there is a need for some restructuring. It can also be asserted that the taxes included under Article 268 can be left to the State Government to levy and administer. Certain other taxes which have been included in Article 269 such as taxes on succession of non-agricultural land and the estate duty in respect of non-agricultural land may all be delegated to the State Government for levy. These are in any case being appropriated by the State Government and therefore there will be no net loss for the revenue of Government of India. All other taxes now covered under Article 269 can be brought under Article 268 with the exception of taxes on stock exchanges. This will also not affect the resources of Government of India. So far as income-tax and additional surcharge on that is concerned that can be brought within the purview of Article 269. It will also not affect the objective of correcting the regional disparities. As around 85 percent of the resources of Government of India come from Corporation taxes, customs duty and union excise duties, it is felt that the scheme of division of powers of taxation now suggested will not adversely affect the financial position of the Government of India for any corrections that it wants in the regional imbalances. At the same time it will give the State Governments some more flexibility to raise additional resources and will also bring some more sources of revenue for the State Governments. But even as an interim arrangement the powers now suggested should definitely be given to the State Governments so as to enable them to carry out their constitutional liabilities more effectively. So far as sharing of other taxes is concerned it may be mentioned that to begin with Corporation Tax was also included in Income-Tax. The Finance Act of 1959 excluded this and caused perceptible shrinkage in the divisible pool to which the States were constitutionally entitled. The Corporation Tax has now become a significant source of Revenue and the State Governments are being denied their due share in this. It should, therefor be stressed that Corporation Tax as well as the surcharge on Income-tax should be specifically made shareable with the States.

Our suggestion is that Corporation Tax as well as surcharges on Income-Tax should be divisible and earmarked for the concerned State as in the case of Income-tax.

5.4 It is an undisputable fact that reducing the regional imbalances should constitute an important objective in a diverse country like India. However, it will have to be pointed out the even the existing powers with the Centre to raise resources are enough to achieve this bojective. For the purposes of giving a Fillip to the development efforts of the backward States it is more important to use the existing resources judicially rather than that of raising fresh resources and again distributing it among various States in a manner which further aggravates the existing disparities as has already been brought out. Here it may also be pointed out that after making devolution to the State Governments as recommended by the Finance Commission and the Planning Commission if the Government of India finds itself short of funds, deficit financing is hardly and ideal solution to meet this problem. To the extent possible, the Government of India can try to meet the situation by reducing its outlay on Centrally sponsered schemes. We may also point out that if the Government of India, does insist on resorting to deficit financing, then it should also recognise that the consequent increase in Money Supply will also lead in substantial measure to inflation and should come forward to meet substantially the commitments of the State Government on increased number of instalments of Dearness Allowance and cost escalations especially for works coming under the Five-year Plan or under the upgradation grants of Finance Commission.

In the absence of such an inflation linked scales of devolution, it may be asserted that deficit financing is an indirect way of diluting the award of Finance Commission.

5.5 While reacting to the roles played by the Finance Commission and Planning Commission in bridging the gap between the rich and the poor States we would like to differentiate between the two bodies, Our stand has consistently been that more and more resources should be transferred through the Finance Commission which is a statutory body. The Commission works as a quasi judicial body and in view of its very nature it is more likely to raise above the political consideration and unhealthy regional chauvinism which are hitting at the roots of our federal democracy. In consistence with above stand, we advocate that the transfer of resources should be through the Finance Commission only.

We would like to bring out the fact that the present system of transfer of resources from Centre to States has only widened the gap in economic status of the various States. The worst affected States belong to the middle income group, who are unfortunately starved of resources under the mistaken impression that they have already reached the stage when they can take care of themselves. In fact they had reached a stage where one 'big push' would have put them in the orbit of self-sustained prosperity as has happened in the case of States like Maharashtra and Punjab. But, the system of transfer of resources has been so unfair to the middle income States that in a number of cases such States have started gradual descent down the path of deterioration in relation with other States. From the Table 'A' it may be seen that the per capita resources transfer for Tamil Nadu through Union Planning Commission has been only Rs. 161 for the period of 1980-85.

TABLE 'A'

Per Capita transfers for 1980-84

States	(1979—84) Through VII Finance Commission	(1980-85) Through Union Planning Commission	Total
(1)	(2)	(3) (Rupees)	(4)
Andhra Pradesh . .	340	208	548
Assam	355	..	355
Bihar	393	223	616
Gujarat	361	225	586
Haryana	307	234	541
Karnataka . . .	343	184	527
Kerala	361	202	563
Madhya Pradesh . .	383	243	626
Maharashtra . . .	340	174	514
Orissa	449	301	750
Punjab	310	221	531
Rajasthan . . .	350	243	593
Tamil Nadu . . .	365	161	526
Uttar Pradesh . . .	375	218	593
West Bengal . . .	360	153	513

However, the same per capita transfer for Maharashtra, Punjab and Haryana has been Rs. 174, Rs. 221 and Rs. 234 respectively. It will clearly bring out the fact that the Planning Commission has not transferred the resources among the States in a manner conducive to bridging the gap between the States. On the contrary, we find that Finance Commission has been more progressive in its approach even though that has also not been progressive enough. The net result of all these is that the States which were poor continue to be so and the richer States are prospering perhaps, even at the cost of the poor. In this regard we would like to draw the attention to the Table 'B' below. It may be seen from this table that the per capita net State Domestic product for the country as a whole rose by about 50 per cent in the period 1974-75 to 1980-81.

TABLE 'B'

Per Capita net State Domestic Product

States (1)	1974-75 (2)	1975-76 (3)	1976-77 (4)	1977-78 (5)	1978-79 (6)	1979-80 (7)	1980-81 (8)
Haryana	1,408	1,514	1,761	1,935	1,990	1,923	2,335
Maharashtra	1,435	1,455	1,535	1,677	1,797	2,021	2,277
Punjab	1,585	1,688	2,050	3,217	2,382	2,611	2,768
Tamil Nadu	964	997	1,066	1,203	1,225	1,274	1,269
All-India	1,006	1,024	1,082	1,198	1,250	1,316	1,537
Uttar Pradesh	740	727	819	896	894	962	1,272
Bihar	706	669	716	759	791	795	870
Madhya Pradesh	825	790	887	951	927	877	1,177
Orissa	780	834	797	912	1,046	931	1,147

But for a prosperious State like Punjab, it rose in the same period by over 75 per cent and for Haryana by about 65 per cent. At the same time for a middle income State like Tamil Nadu it rose by only about 30 per cent. On the other hand even for low income States like Uttar Pradesh and Orissa the rate of growth has been better and works out to about 60 per cent and 45 per cent respectively. From the foregoing, it is quite obvious that the present system of transfer of resources has not worked satisfactorily.

We are outlining below an alternative scheme regarding transfer of resources in a more just and equitable manner. Broadly speaking we would suggest that there should be three different kinds of approaches to sharing of resources. There can be one formula for devolution of all kinds of taxes and there need be no differentiation on the ground of the sources of each of these taxes. With one proviso that, in case, Central tax is introduced to replace some existing taxes, a separate formula can be evolved for the distribution of this Central tax so as to protect the revenue which the State would have derived by leving the tax directly. Similarly, to meet developmental needs of the State Governments, there should be one formula and no assitance for developmental purposes should be given outside the purview of this formula. There can be one separate formula for distribution of market borrowings amoung the States. So far as the devolution of tax is concerned it may be emphasised that ever zealous efforts to reduce disparities between various States has often resulted in a situation where incompetence and ineffective management of existing resources has been put at a premium. The devolution of taxes should effectively try to balance quite often conflicting pulls of reducing disparities and of encouraging efficient management. We suggest that together with the criterion of backwardness it will be desirable to take into account the efforts taken by the State to raise fresh resources and to meak it best use despite constraints on natural resources should also be considered. It is felt that the formula intended to serve this purpose should be simple and effective. And therefore rather than taking into account too many factors, we would like that the formula should be based on limited number of factors which can effectively reflect the two factors of poverty and States resources correctly. So far as the plan assistance is concerned an equitable formula will have to be evolved which gives 50 per cent weightage of population on basis that is adjusted with a overall growth-rate. The remaining weightage can be for tax effort in relation to backwardness and natural resources in Governments. indicators of backwardness, etc.

5.6 As expressed briefly already, the Planning Commission which is a non-statutory body has considerably encroached upon the duties of the Constitutional Commission contemplated under Article 280. The result appears to be that the Planning Commission's recommendations on non-statutory discretionary grants are, on more than one occasion, without appropriate sanction. The National Development Council which is again a non-statutory body, though created for the purposes of equitable distribution of finances, is unable to achieve its real objective. It is in this sense this Government recommended a High Power Finance Commission as envisaged in Article 280 of the Constitution with representatives from the Union and the States to provide for the distribution of finances including taxes and grants to the States. In this sense the Government are of the view that the present working of the Finance and Planning Commissions are not adequate for the purpose.

5.9 In paragraph 13 of Chapter 1 of the Memorandum to the Eighth Finance Commission (Volume I) this Government has observed "we feel that the Finance Commission need not confine itself to the non-plan revenue gap as assessed by it. It is our view that the interest of State will be served only if the Finance Commission takes an overall intergrated view of the whole problem of financial imbalances of the States in relation to the total needs. This can be done only if the Finance Commission considers the totality of the non-plan and the plan requirements." By an extension of this stand it will only be logical to say that preferably only one organisation, that is, Finance Commission, should deal with all financial transfers (plan and non-plan). The role of the planning

Commission will then be confined to establishing priorities among the various schemes so as to make best possible use of the available resources.

It has been observed that over the years Union Planning Commission's autonomous status has been eroding. It will not be long before U. P. C. will become a mere appendage to Government of India. On the other hand, Finance Commission has a constitutional origin and it can be expecetd to be more unbiased in discharge of its functions as stipulated in Constitution, rather than having any other bodies like U. P. C., Loan Council, Expenditure Commission, etc. It will be desirable to take a stand that Finance Commission can itself go into the entire gamut of distribution of resources.

5.10. The methodology adopted by the Finance Commission and the short time at its disposal makes it very difficult for the Commission to promote efficiency and economy in expenditure. Even if a standing Finance Commission is appointed it may be very difficult to have light monitoring or efficiency audit which can help the Finance Commission to meaningfully promote efficiency and economy in expenditure. Moreover, it will in future lead to great interference in the affairs of the State Governments and will probably militate against the concept of greater autonomy for the States. Even now a half-hearted efforts is made by Finance Commission to get over this problem by fixing certain normative returns for State Electricity Boards, Transport Corporations and other Public Sector undertakings and also by fixing certain norms for maintenance of existing assets. But this exercise is not taken to its logical conclusion and large chunk of both expenditure and receipts of all State Governments is not at all tested against any yard stick of desirable norms. For this part of receipt and expenditure the Finance Commission simply adopts the actuals of the past years and projects on this. This will doubtlessly promote a tendency forwards reckless financial management. It is, therefore, felt that it will be more desirable if the Finance Commission could prescribe certain norms for all important items of receipts and expenditure. Such norms can be fixed on certain relevant factors like State Domestic Product, availability and exploitation of resources, tax effort, population, literacy, etc. If that is done, it will probably be possible to provide through the Finance Commission for reasonable and uniform level of expenditure for all the States and at the same time compel them to make reasonable efforts towards raising their own resources.

5.11. It is true that the present mechanism of transfer of resources might thave created a propensity towards exaggerated revenue deficit forecast. But the Finance Commissions are also adequately equiped to suitably moderate the forecast and bring it more in line with reality.

As regards the allegation of wasteful expenditure it may be reiterated that the duly elected State Government in its sphere of action is the best judge to decide what Schemes to implement for the welfare of its people. It will not be fair for the Centre or the other State Government to criticise some of the schemes as populist measures.

At the same time we may accept the need to award good fiscal management. It may be emphasised that there should be adequate award for good tax efforts made by resource constrained States like Tamil Nadu by building sufficient weightage to this factor in resource transfer formula.

5.12 and 5.13 This question has been discussed in paragraphs 10,11, and 15 of Chapter I of the Memorandum to the eighth Finance Commission (Volume I). Broadly speaking our stand was that at least 90 per cent of the transfer should be by way of devolution and only the remaining by way of grants-in-aid. Another point to be kept in mind is that after devolution the per capita surplus of middle income State should be more or less equal to that for the affluent States as the middle income States will need it to meet special problems.

Our stand was guided by the consideration that the grants-in-aid will be primarily discretionary, in nature and will probably give too much of latitude to the Central Government to favour some States. Therefore, this aspect needs to be emphasised again and if we want to restrict the grants-in-aid to the lowest possible level we will have to say that the grants-in-aid should be given only in order to fill the fiscal gaps if any left after devolution of taxes and duties.

We suggest that the Revenue gap formula now adopted must be replaced by fiscal deficiency formula.

Even though, it will be a little different from the stand which this Government have taken before the eighth Finance Commission, there is no contradiction in terms. In the Memoranda, we had to take into account the fact of existing dichotomy between the Planning Commission and Finance Commission which precluded the Finance Commission from taking into account the plan expenditure while arriving at its formula for fiscal devolution. In the scheme of things that we are going to suggest, the Finance Commission should be in a position to take into account not only the non-plan requirements but also the overall plan requirements of the State Governments and therefore it should be well within its means to build a formula that will take care of plan, non-plan requirements and any other special burden of the State Government. This will ensure that the Central Government cannot play the game of favouritism to any large extent.

So far as the grants for upgradation of standards of administration is concerned, it will have to be done away with. Once the Commission is allowed to go into the entire gamut of plan and non-plan expenditure of the State Governments, the need for making any special provision for the upgradation will not be there.

5.14 The views of this Government have been expressed in paragraphs 26.1 and 27 of Chapter I of the Memorandum to the eighth Finance Commission (Volume I) presented by this Government. However, we may reiterate that Government of India should share the yield from special bearer bonds scheme as well as the revenue derived from raising the administered prices on items like petroleum, coal, etc. We feel that it is justified on the following grounds:—

So far as the special bearer bonds are concerned this money in any case ought to have come to the

Government of India as income-tax which is shareable with the State Governments. It is only because the Government of India have not been able to collect that revenue at the time when it should have normally been collected that a scheme like the special bearer bonds has to be devised which is nothing but regularisation of the black money on which payment of income-tax was evaded. In principle this should be viewed as arrears of income tax and it should be made shareable with the State Governments. We would like to amply assert that not only special bearer bonds but also other bonds like Rural Reconstruction Bond, etc., should be made shareable with the State Governments.

In so far as the raising of administered prices is concerned, similar logic can be applied to that also. We may emphasise that there are no justifiable factors which prevent the Government of India from raising these resources by way of increase in the excise duties. In our view the purpose sought to be served by the rise in administered prices can be served equally well by increasing the excise duties which is subsequently shareable with the State Governments. Even if the Government of India have a fundamental objection to follow such a course of action it should still be possible for them to devise a mechanism which can compensate for the additional expenditure which is incurred by the State Government, because of the increase in administered prices. The sectors which have been worst hit by such arbitrary increases are Electricity Board, Transport Corporations and Highways Department. We will like to point out that when the Finance Commission finalises its award it takes into account a certain fixed return on the investments made on Electricity Boards and Transport corporations. However, once the cost of inputs is arbitrarily increased by the Government of India all these calculations are totally upset. It is just not possible for the State Governments which have a direct contact with the people to pass on the increase of the input cost to the consumers. In fact in many cases it is not possible to do so in view of the multiplier effect which such increase will have on prices in all sections of economy. In this regard we will like to point out that the additional commitment for the past 10 years to Tamil Nadu Electricity Board on account of revision of coal prices and furnace oil and freight rates in the period of 1974-75 and 1983-84 worked out to around Rs. 350 crores and we do not have to assert that increase of this order if passed on to the customer specially the farmers would have resulted in inflationary pressure of a high magnitude. Thus in the end, the States have no option but to absorb increased burden with their own meagre resources.

Similarly, in the same period the cost of bitumen has gone up by 5 to 6 times resulting in additional commitment of the order of Rs. 60 crores to the State exchequer (*vide* Table I). The burden has to be borne entirely by the State Governments as the roads form back bone of Transport Sector which is so crucial to the industrial development. Price hike of diesel has also resulted in an additional expenditure of Rs. 215 crores —Vide table II below.

From the above it is quite obvious that, so far as the State Governments are concerned the additional burden due to increase in administered prices cannot be passed on to consumers and it ultimately erodes the meagre resourcers of the State. This, in turn, has an effect on the overall economy. The devolution of the taxes is decided by the Finance Commission taking into account both the tax and non-tax revenue. The non-tax revenue includes the contribution of the Electricity Board and Transport Corporations also. Increase in administererd prices actually reduce this revenue and to the extent widen the gap between the resources and commitment and therefore logically speaking this should be compensated by increasing the devolution in taxes.

TABLE I

(Rupees in lakhs)

Year	Length of Government Roads in K. M.	I. S. D. rates of Bitumen/M.T. Packed	Bulk	Average cost	Bitumen consumed/required (approx.)	Cost of bitumen consumed at I.S.D. rates (average) in lakhs	Cost of bitumen consumed without admitting the sudden spurt in price of bitumen after 1978-79

Market borrowings by the State Government

5.15, 5.18 and 5.20—Market borrowings have been playing an extremely important role in public finance for the past several years. However, as may be seen from Table 1, the importance of this source of finance has increased considerably in the recent years. At the same time the character of borrowings also has undergone a change and the market borrowings are now more or less borrowings from a 'captive markets'.

Strangle hold of the Centre on the market borrowings

In India where capital market is not yet fully developed and the concept of investment banking is in its nascent stage the commanding position of centre is too obvious as it controls most of the commercial banks and other financial institutions which mobilize public savings. In fact the whole operation of market borrowings is co-ordinated by Reserve Bank of India and no market borrowings is possible without the permission of Central Government if borrowing organisation be it State Government or the financial institution is indebted to the Central Government. As all these organisations are indebted to the Central Government the Reserve Bank of India floats State Government loans only under the direction of Government of India or the market borrowings have been allocated between different States by the Reserve Bank of India on the advise of the Planning Commission and the Union Ministry of Finance. After 1969, if the nationalised banks subscribe under the direction of Reserve Bank of India, the market borrowings are just an allocation of the deposits of the banks by Reserve Bank of India. It is, therefore, a matter of little surprise that over the years the Government of India has been appropriating more and more of the total available market loans.

Distribution of shares to the State Governments

So far as the relative share of market borrowings between the Centre and States is concerned, it may be seen that during the first plan the State share which was 76 per cent of the total market borrowings has plummetted down to 23.08 per cent as per the Sixth Plan estimates. There has been a corresponding increase in the Central's borrowings as the percentage of total borrowings. Not only this, it may also be seen from Table 2 that the total market borrowings have increased from Rs. 204 crores in the first plan to Rs. 19,500 crores in the Sixth Plan which is an increase of 90 times. Even if we restrict overselves to a restricted period of 70's the rate of growth works out to nearly 29 per cent per annum. As against that the Central Government has of late allowed an increase of only 10 per cent over the previous years permissible limit in the market borrowings of the State Government. Obviously, the balance rate of growth has been utilised by the Central Government for financing its plan and to some extent plan assistance to the States. The result of all this is that the market borrowings which were accounting for 9.15 per cent of the Centre's plan outlay in the First Plan, now account to 30.67 per cent of the Plan outlay. As against that in respect of the States Plan outlay, the percentage has actually come down from 10.87 per cent during the First Plan to 9.26 per cent during the Sixth Plan. A comparative statement of Plan outlay and market borrowing of the Centre and the State's may be seen at Table 3.

Under the circumstances there is a pressing need to prescribe certain well established principles based on which the market borrowings should be shared equitably between the Centre and the States and horizontally among the States.

Sharing between the Centre and the States

From the foregoing it is quite obvious that the need for sharing the market borrowings in a more equitable manner can hardly be over emphasised. The plea to increase the share of State Governments may probably be countered with the argument that if it is complied with, it will necessarily result in the reduction of Central assistance and the net effect will be negligible. However, it may be pointed out that the Central assitance as a percentage to State plan outlay has decreased from 60.38 per cent during Third Plan to 31.58 per cent during the Sixth Plan. It has also to be emphasised that in the federal structure which we have opted for an equitable distribution of market borrowings is only just, since the market borrowings have been used by both the Centre and the States for the purpose of financing plan. It will but be resonable that they are shared in proportion to the Plan outlays of the Centre and the State's put together. Such a sharing will give a similar level of support for financing the Plan to both the Centre and the States. For example, if as in the Sixth Plan, the relative share of the Centre and the States are 50 per cent each, the market borrowings may also be allocated in the same ratio.

Similarly, the distribution amongs the States must also be done on the basis of a just and equitable principle.

Distribution among the States

In the past the distribution among the States of the market borrowings has been done in very ad-hoc and arbitrary manner giving increase of 10 per cent over the last years level of borrowings. Thus the States which were unfortunately at a low level continue to be so and there was no attempt for arriving at an equitable level. In fact if the trend of per capita market borrowings is seen for the period from 1969-79 (Table 5), it may be seen that whereas for Tamil Nadu the per capita market borrowing recorded an increase of mere 90 percent from 1969-79, West Bengal in the same period recorded an increase of nearly 600 per cent. It may also be seen that there are wide variation among the States as in 1978-79, the per capita borrowings varied from Rs. 5.78 for Uttar Pradesh to Rs. 52.80 for Nagaland with highly developed States like Haryana and Gujarat standing at Rs. 15.47 and Rs. 12.10 respectively. It clearly shows that the present sharing of market borrowings among the States is just following the policy of aimless drift without any thrust on correcting the existing imbalances. The present system does not consistently favour the backward with higher market borrowings nor does it show an inclination on the part of Central Government to spare these States from the burden of high debt service charges, by reducing the allocation of market borrowings and compensating for it by way of grants. As observed earlier the state of affairs as on date is one of aimless drift. Therefore the need of the hour is to formulate a just and equitable principles of distribution of market borrowings.

The President of India should liberally invoke his power under Article 280 (3) (c) to achieve this object.

It will be worthwhile to point out that the figures for market borrowings as given by the Union Planning Commission and as given by Reserve Bank of India do not agree. The figures given by the Reserve Bank of India have been reproduced in Table 6. It shows that whereas for Tamil Nadu market borrowings showed an increase of about 32 per cent between 1973-74 to 1982-83 for the same period the increase for Uttar Pradesh was over 228 per cent and for Andhra Pradesh 276 per cent. This however, once again underlines the eminent need to formulate a just and equitable principle for distribution by the Finance Commission.

We may, therefore, emphasise that while sharing the savings of the public as a whole and by allocating the market loans, various State Governments, the Government of India should go by the award of the Finance Commission. The Finance Commission in future can be used to suggest an appropriate formula for sharing of market borrowings. The actual execution can continue to be co-ordinated by the Reserve Bank of India. There seems to be no need to set up a separate loan council for multiplicity of agencies may create a situation of their working at cross purposes.

SOURCE.—(1) Report on Currency and Finance Voll. II except for the year 1974-75.

(2) Article on Finance of State Governments, 1976-77 published in R.B.I. Bulletin December 1976 for the year 1974-75. Qns. 5.15 5.18 & 5.20.

5.16 and 5.17—It may be seen from table below that the State Government has been paying back approximately 60 per cent of the loans received from the Government of India as repayment of loans and the interest on the loans from Government of India. In fact in certain years like 1973-74 the repayment and interest itself was more than the loan received during the year. This clearly shows that over the years the States have reached such a level of indebtedness that they have to take more and more loan just to pay back the earlier ones. There are number of reasons which have contributed to high degree of indebtedness of the State Governments. They are reaccounted below :—

(1) The Government of India has always borrowed funds on more favourable terms than the terms on which they have been passed to the State Governments,

(2) Most of these loans are intended for developmental activities which are non-productive in nature and on which the State Government may not expect any return. They should have legitimately been treated as grants and treating them as loan has aggravated the indebtedness of the State Government.

We feel that in order to improve the situation in future, the loans from foreign agencies should be passed on to the State Governments on the terms and conditions on which they were obtained. Moreover the assistance given to the State Governments should be categorised into commercial and non-commercial purposes. Any assistance which is non-commercial and on which the State Governments cannot expect any reasonable return should be given as grant. In respect of productive purposes also it will be

worthwhile if a distinction could be made between the developing and backward States and if the terms of repayment and rate of interest were softer for the developing and the backward States.

Population of Tamil Nadu : 1971 Census—412 lakhs.
1981 Census—483 lakhs.

5.19 In the recent years Government of India have progressively liberalised their policy of availing foreign credit. Loans have therefore been secured from international agencies as well as other foreign Governments to finance developmental expenditure of the State Government on specific projects. The external debt outstanding in 1984-85 is about Rs. 17,000 crores excluding I. M. F. loan and about Rs. 21,000 crores including I.M.F. loan. However, the system of raising foreign credit has been so designed as to work to the detriment of the State Governments *vis-a-vis* the Government of India. Although it is understandable that the loans raised through foreign agencies are all routed through Government of India who have to co-ordinate keeping in view the balance of payment position. Still there seems to be no justification for the Government of India to obtain the loan from foreign agencies on soft terms and then pass it on to the State Governments on extremely stringent conditions of repayment and on relatively higher rates of interests.

It has been shown elsewhere that the debt burden of the State Government has already been strangling the meagre resources of the State Government and there is an imperative need to provide some relief from the excessive debt burden. It has also been shown that for Tamil Nadu the repayment of loans and interest works out to around 70 per cent of the loans received in a particular year. In a situation like this, there seems to be a genuine need for Government of India to provide even its own loans to the State Governments at much softer terms for repayment and definitely there would be no justification for the Government of India to modify the terms of the loans received from foreign agencies so as to further worsen the financial position of the State Governments already hard pressed for resources.

In this connection, we would like to draw the attention to the Table 'A' below which sets forth the position excluding the I. M. F. loan.

TABLE A

(Rupees in Crores)

Countries/Institutions	Interest on External debt	Out-standing loan	Average rate of interest
(1)	(2)	(3)	(4)
France	16.00	3.31	4.8
West Germany	25.55	15.06	1.7
Japan	45.82	11.19	4.2
Holland	11.57	5.81	1.9
Britain	3.45	5.96	0.6
America	69.82	30.72	2.2
I.D.A.	69.97	67.26	1.0
World Bank (IBRD)	1,35.38	9.64	14.0
Kuwait	5.63	.93	6.0
Saudi Arabia	14.02	.84	.8
United Arab	1.51	.17	..
Russia	10.46	3.15	3.3
I.M.F. Trust Fund	3.06	5.75	0.5
Others	5.81		
	4,08.05	1,70.00 (Approximately)	2.4

It may be seen that the rate of interest for loans taken from various external sources varies from 0.5 per cent to 14 per cent. The average rate of interest will work out to only 2.4 percent which the Government of India is paying to their external creditor. On the other hand, they have been passing on this credit to the State Governments on much more exacting terms and conditions. Most of this assistance is passed on as a part of the State Plan assistance on the same terms and conditions, for which the State Government have to pay 7 per cent as the rate of interest.

In this connection, we would like to bring out the extent to which the Government of India have modified the terms and conditions to the detriment of the State Governments with reference to a few examples. It may be seen from the table 'B' below that for Training and Visits Scheme which was assisted by the world Bank for improving the agricultural production, the Government of India had obtained loan at the rate of 3/4 per cent but the loan was subsequently passed on to the State Government at the rate of 5-1/2 per cent.

TABLE B

Project	Assistance of External Agency		Rate of Interest	Assistance to the State Schemes		Rate of Interest	Internal Burden
	Loan	Grant		Laon	Grant		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1. M.H.D.P. (I.D.A.)	100 Per cent	..	3/4 Per cent	70 per cent	30 per cent	5½ per cent	4¾ per cent
2. T.N.N.P. Ltd. (World Bank I.B.R.D.)	100 per cent	..	10.08 per cent (It varies)	100 per. cent	..	14 per cent	3.92 per cent
3. Training and visit System (World Bank)	100 per cent	..	3/4 per cent (Interest charges)	100 per cent	..	5½ per cent	4¾ per cent
Average percentage			3.86%			8.33%	3.86%

Similarly on the commercial side, for a State Public Sector Enterprises, viz., Tamil Nadu Newsprint Papers Limited, the Government of India obtained loan from World Bank at the rate of 10.08 per cent on an average, but passed it on to the State Government though at the rate of interest of 14 per cent. Not only this, the Swedish International Agency has given full grants to the Government of India for implementing Social Forestry Schemes. But the Government of India have converted this grant into 70 per cent loan and 30 per cent grant while passing it on to the State Government and they have charged rate of interest of 7 per cent of or this.

In the light of the above we would like to recommend that even though the Government of India can continue to co-ordinate the borrowings from the external agencies as it is closely linked with the foreign exchange availability and the balance of payment position, the Government of India will pass on the entire loan on the same terms and conditions on which they are obtained from the external agency to the State Governments after deducting a notional amount of 1.0 per cent as Service charges. This, in our view, will not only be just but will also go a long way towards improving the position of the heavily indebted State Governments.

5.21—It should be emphasised that availing of large overdrafts by the State Governments can be directly attributed to the weakness in the system of devolution that obtains at present. The award of Finance Commission did not take into account the additional instalments of Dearness Allowance which had to be sanctioned to the Government employees. Similarly, while working out the resources of the State Government, the additional commitment due to the enhanced subsidy to Electricity Board and Transport Corporations which becomes payable due to increase in administered prices imposed by Government of India during the award period is also not taken into account. Similarly while finalising the plan outlay and State Plan assistance, sufficient margin for cost escalation is not provided. These are the factors which are primarily responsible for the continued overdrafts of the State Governments. A remedy for this has already been suggested in the answer to the Question No. 5.14.

5.22—We may reiterate that the taxes assigned to the State Government are not as buoyand elastic as the taxes assigned to the Centre. In fact there

is only one tax(Sales tax) which gives the State Government some scope for manoeuvring additional resources. Being the only income-alastic source of taxation, it has already been exploited to the fullest possible extent. It may be relevant to point out that in the period from 1973-74 to 1981-82 the increase in sales tax (Tamil Nadu) is 311.34 per cent as against only 185.18 for excise duty. This may amply prove that a generalisation as made in Question No. 5.22 is neither fair nor appropriate (Table).

TABLE

Percentage of growth; . .		42.16	11.17	9.57	5.68	21 49	10.55	40.55	19.04

5.23—The view of the State Government on this subject is given in para 25 and 26.1 of Chapter I of Volume I in the Memorandum to the eighth Finance Commission. We agree that there is a substantial leakage of Central taxes and also that the return on the capital investment which has been made is meagre. The Central Government may probably be in the best position to decide the measures to be taken to rectify this situation.

However, it may be emphasised that the Finance Commission while working out the resources of the Centre should take into account a minimum acceptables return on capital investment and collection of arrears as is done in the resource forecast of the State Governments.

5.26—This is covered in para 1, 2.1, 2.2, 3 and 4 of Chapter V of Volume I of the Memorandum to the eighth Finance Commission. The table below shows that the Collection from Railway fares has become more than three fold in a period of eleven years. It is, therefore, only reasonable that the State Governments should be proportionately compensated by the Finance Commission by taking into account the increase in passenger fares collections.

5.27—We have no to offer remarks on this question

5.28—The views of this Government have been explained in detail in paragraphs 5, 9, 10, 11 and 13 of Chapter X of Vol. I of the Memorandum to the eight Finance Commission. These recommendations are exhaustive and may be retained as such. Only one additional point which may probably be highlighted is that normally the Government of India not only fixes on over all ceiling for expenditure on relief but even allocates it to various sectors within this total ceiling. This allocation is not only unnecessary but also harmful. In the first place the State Governments which are in close touch with the people are best judge of making these allocations depending upon the actual requirements. Secondly the visit of the Central team normally takes place months after the outbreak of the calamity and if the State Government waits for the allocation made by the Central team the very purposes of relief will often be defeated because of the delay. Therefore, we may recommend that once the Government of India has assessed the ceiling of assistance of eligible items it may leave the *inter-se* distribution of this money to various sectors with the State Governments. Of course, the Government of India can still make sure that the expenditure is incurred only on eligible items but limits of expenditure on each eligible items should be removed.

5.29—The State Government may probably take a stand that all the transfers of resources should be routed through only one body that is Finance Commission, so that the problems can be viewed in the over all perspective and an integrated approach is evolved.

5.30 We cannot agree to the suggestion made in this question. The State Government has a well defined role to play under the Constitution and has also been assigned well defined resources to carry out these responsibilities. The Centre cannot encroach on the sphere of State activity by using the argument that all funds flow from the public and have to be spent with an intention to benefit them and therefore, it is immaterial as to who does it.

5.31 The views of this Government have been explained in paragraphs 22, 23, 24 of Chapter I of Vol. I of the Memorandum to the eighth Finance Commission.

5.32 to 5.38 These buestions deal with the scope of the scrutiny that can be exercised by Comptroller and Auditor-General, the Public Accounts Committee, Estimates Committee, etc. In this regard it may be held that the existing procedure adequately empowers the Accountant-General to scrutinise the accounts of the State Governments and give a comprehensive report to be placed before the Legislature. Even points which have not been adequately covered by him are subsequently probed into much greater detail by Public Accounts Committee and Public Undertaking Committee. As such the existing procedure is enough to ensure that the public money is spent properly and according to the overall scope allowed to the executive by the representatives of the people. So far as the question of appointing an Expenditure Commission is concerned it should be generally opposed as the propriety of an expenditure is already gone into in detail by the Committees of Legislature, after taking into consideration. the recommendations of Comptroller and Auditor-General. Moreover if an Expenditure Commission is appointed for the purpose of assessing the propriety of the expenditure incurred by the Union and the States it is very likely that over the years such a Commission may become unduly influenced by the Centre as has happened in the case of Planning Commission and the practical implementation of this scheme may militate against the federal structure of our Constitution.

5.39 It is our stand that to the extent possible the Central Government should try to phase out Centrally-Sponsored Schemes and withdraw completely from the areas which had been specifically assigned to the States under the Constitution. It is an acknowledged fact that the State Governments come in much closer contact with the people and can be the best judge of their requirements. Therefore, even for the existing schemes there seems to be no justification for the Government of India, to insist upon the advance clearances of the plans of action formulated by the States, by the Administrative Ministry concerned at the Centre. Such stipulation not only causes delay but is an avoidable irritant and source of friction. The State Government who are closer to the people and answerable to them should be considered to be capable of formulating their own scheme within the broad outlines and implementing them.

PART VI

ECONOMIC AND SOCIAL PLANNING

The title "Economic and Social Planning" and the inclusion of this subject as Entry 20 in List III Concurrent List by itself affords a ready indicia that such economic and social planning is intended to highlight the necessity and the needs of both the Centre and the States. As on date, the Planning Commission as well as the National Development Council are functioning under due resolutions passed by the centre. Both the Planning Commission as well as the National Development Council are functioning as recommendatory bodies without a statutory foundation and recognition unlike the Finance Commission postulated in Article 280. Though the National Development Council by its very nomenclature is bound to be national in its character yet, it is seen that the National Development Council has become a forum for States to press their claims for special projects rather than discussion on national issues. Its status has been considerably reduced and it is acting merely as a council to viceforth its views but not to secure its objectives. Statesmen and Economists have expressed in uncanny terms that both the bodies are functioning as quasi-political bodies and Justice Subba Rao has rightly characterised them as working as a "super cabinet" integrated in all respects with the Central Cabinet. In fact the working of the Planning Commission which is at the apex has rightly been styled as a single monolithic chunk controlled by the Centre although operated in respect of concurrent and state subjects in the State. In the nature of things, therefore, the will of the Centre in the matter of the formulation and execution of Plans is demonstrably visible when the non-statutory discretionary grants under Article 282 are taken into computation. On the basis of the recommendation of the National Development Council and the Planning Commission, the States are expected to receive discretionary bounty by way of block grants and loans but they are not even measured by the depth and weight of the requirements of specific schemes postulated and formulated by the States.

If the Planning Commission is placed on an independent footing and as also the contemporaneous right to consult both the Union and the States simultaneously, for social and economic planning, then the irritant comment that the States' autonomy in the matter of securing financial resources for its advancement is being stemmed, by the Union, could be avoided. Such collective and co-operative endeavours not only in the matter of planning for State's projects but also for national projects should be thought of and the Planning Commission in conjunction with the National Development Council should centrifuge their attention in such a way as to ensure equitable distribution of the finances of the country, both for the Union and the States in accordance with the requirements and wishes of the people at large. The Centre's interferences is felt in working out major projects. In juxta-position to this, the Centre while dealing with similar recommendations of the National Development Council as regards Central schemes, the State's views and involvement in such schemes are at the lowest ebb notwithstanding the fact that the State concerned is the primary architect to implement such schemes in their respective States.

Apart from the imminent necessity to place the Planning Commission on a statutory basis, the Planning Commission should bear in mind the vast

dimensions of India with different attitudes, ideologies, intellectual physical and spiritual standards and should, reconcile its activities in such a way that it avoids unitary and centralised plans but wooes democratic plans which are at once useful to both the Centre and the States. As pointed out by Justice Subba Rao, the planning should be "democratic planning and should not cause the springs of personal initiative to dry up as a result of over centralisation and bureaucratization. Planning should not be understood as an exercise for a five year period but it requires a continual watch on current or incipient trends" and re-orientation of such plans whenever necessary even within the five year period should be undertaken and adjusted in the light of new requirements and new demands.

Again the Industries (Development and Regulation) Act 1951 read with Entry 52 of the Union List has caused visible misgivings and it is in this perspective we have suggested while dealing with Part II (Legislative Relations) certain modifications in Entry 52. In the background of the above tintroductory remarks, this Government are answering the questions under this part.

6.1—Entry 20 in the Concurrent List of the Seventh Schedule is really an eye-opener to the planners as to the modalities to be adopted chartering economic and social planning both for Union and State purposes. The entry being in the Concurrent List accentuates upon the concept that neither Parliament may sweep the State Legislative field aside in the process of making law with respect to economic and social planning nor the State Legislature may try to overtake the Union legislative field while making law with respect to economic and social planning. It is in this sense that this provision is to be accepted as the basis for co-ordinated action between the Centre and the State whether they relate to planning, pursuing and implementing economic and social programmes in their respective fields of activity. As was pointed out in our introductory remarks above, the Planning Commission is having a garb of a super Cabinet or is viewed as a single monolithic chunk controlled by the Centre. Rightly, therefore, the Administrative Reforms Commission Study Team conducted by experts have noted the three shortcomings in planning relationship which are set out in the question itself and needs no repetition. The poser however is as to what remedial measures and procedural changes are necessary to remove or at any rate to minimise the shortcomings listed by A.R.C. Study Team for the purpose of remedying the existing defects we make the following suggestions :—

(1) The Union Parliament must make law with respect to Entry 20 of the Concurrent List to create a Central Board of Planning. It must define its Constitution, Functions, and Powers clearly. It also must clearly specify that the Central Board of Planning must concern itself in assessing the availability of the Central resources listing out Central schemes relating to Union subject matters, territorial and sectoral allocation of the schemes, priorities implementing such schemes, etc.

(2) The State Legislature must pass separate Legislation for the purpose of creating a State Board of Planning. Such State legislation must lay down the constitution of the Board, its powers and functions. It also must state clearly that the State Planning Boards shall concern itself with the availability of the State resources, State schemes pertaining to the State subject matters, the territorial and sectoral allocation of such schemes, priorities to be fixed among them, etc.

(3) The plans so prepared by the Central Board of Planning and the State Boards of Planning must be submitted to the National Development Council for consideration. The National Development Council must appoint an Expert Advisory Committee, consisting of eminent Economists, Scientists, Management Experts, Sociologists and Engineers. This Committee must give its Expert advice within a stipulated period regarding the schemes of plans suggested by the Central Board of Planning and State Boards of Planning stating clearly the priorities in each group sectorwise and territorial-wise allocations, resource needs, time factor, etc. The Committee also must recommend wherever possible the dove-tailing of schemes suggested by the Central Board and State Boards of Planning. By such induction of a Standing Committee as a buffer between the National Development Council and the Planning Commission, a meaningful economic and social planning for the country both at the Central level and at the State level could be undertaken so that the approach and perspective may not only meet the national needs but would also ensure the processing of State's development programmes and priorities and in the ultimate analysis, there should be proper adequate allocations of resources between the Union and the States.

(4) The Report of the Advisory Committee must be placed before the N.D.C. for its approval. Once it is approved, the Central schemes are implemented by the Central Government either directly or through the State Governments by giving block grant or schemelinked grants. It also must specify very clearly, which of them will be centrally administered schemes and which will be block grant schemes or grant-linked schemes. The State schemes must be administered by the States. But, if there is any deficit in resources, it must be met by the Central grants prescribed by the Finance Commission.

If the above mentioned steps are taken, they may go a long way to remedy the existing malady in the planning relationship between the Centre and the States and minimise the shortcomings listed by the A.R.C. Study Team.

6.2.—In our answer to Question 6.1, we have implicitly accepted the continuance of the National Development Council but it should be governed by law made by Parliament. So, there is no difficulty on our part to accept the suggestion that a National Development Council consisting of all the Chief

Ministers of the States presided over by the Prime Minister and experts of various fields as members should be set up on a statutory basis.

As far as the second aspect of the question is concerned, the non-statutory body, namely the Planning Commission must be dispensed with as by setting up the National Development Council as recommended by us, any exercise whatever nature undertaken by the Planning Commission, which is the child of executive discretion, would not only be unnecessary but it will certainly be a futile exercise. Thus, the Planning Commission should be substituted by two concurrent bodies firmly placed on a statutory basis, namely the Central Board of Planning and the State Boards of Planning. Before the National Development Council approves all the plans either at the Central level or at the State level, it should in turn get the advice of an Expert Advisory Committee for an indepth study into the various details connected with such schemes. Such recommendations by the Expert Advisory Committee must be discussed and finally their approval should be secured as provided for in the law constituting such a Council. We are of the view that if the plans for the benefit of both Centre and States are channelised, considered and ultimately approved by the National Development Council, then such approved plans should be implemented independently by the Centre and States accordingly. Subject to the constitution of the National Development Council as proposed by us and the methodology to be adopted by them to give their seal and approval to a Central or State plan, we agree with the proposal made in the question.

6.3 Since we are of the opinion that the non-statutory Planning Commission, should be given up the question of continuing it with some changes does not arise. In its place, statutory bodies, as suggested in our answer to Question 6.1., must be created. Such a change will be a great step forward in creating a harmonious planning relationship between the Centre and the States.

6.4 The three suggestions have to be considered if we agree to the continuance of the present Planning Commission. Since we are not for the continuance of the present Planning Commission, there is hardly any necessity to express our views on these three suggestions. However, if the present Planning Commission is continued, we would say that the second suggestion regarding the composition of the Planning Commission is more reasonable. That is to say, it would be better if the Planning Commission is so constituted as to make it a high-grade advisory body of economists, technologists and management experts. Without being tied to the chariot wheel of the sponsoring Central Government the Planning Commission should make an indepth better results and better planning relationship between the Centre and the States if such an expert body functions in an independent manner without being influenced by the political upheavals.

6.5 If the Planning Commission were to continue then we would agree with the suggestion that it should be made an autonomous body under the National Development Council. In the law, which this Government envisage should govern the Constitution functioning and powers of the National Development Council, a separate chapter can be provided for the creation, functioning and powers of the Planning Commission as an autonomous body with advisory jurisdiction over the subject matters with which it is charged to consider. But it is difficult to agree with the view that the Planning Commission must be given such functions as over-seeing planning, investment and decision-making at the National level. It can at best be an advisory body and not a supervisory body. Final decision on schemes of planning must lie with the National Development Council and power to implement the plan schemes must vest with the Central and State Governments.

6.6 Subject to our earlier view on the continuance of the Planning Commission and in the alternative for a re-orientation of its status, we find it difficult to agree with the view that there is a need to consider and incorporate national priorities in the State Plans. Such measures will give greater scope for Planning Commission to interfere with the State autonomy. In fact the acceptance of this guideline might even result in the Planning Commission as it exists today, violently differing from the views of the National Development Council. This would again lead to all seeing eyes supervision of the Planning Commission over the plans envisaged and accepted by the National Development Council. It is better separate priorities are established in national and State plans. If the suggestions made by us in our answers to Q. 6.1. are taken into consideration, they will help a great deal to remove the present difficulties and stop errosions of State autonomy.

6.7 Since the Planning Commission is a non-statutory body and leans very much on the Central Government and their ideologies, the present system of channelising Central assistance by way of loans and grants through the Planning Commission to the States has not worked well. The powers, functions, tenure, etc., of the Planning Commission have not been specifically prescribed by a statute. With the Prime Minister as its Chairman and a few important Ministers of the Central Cabinet as members, the Planning Commission has virtually become a mouthpiece of the Central Government. With such status and powers it is difficult to expect from the planning Commission a fair deal to the States. The grants stipulated by Article 282 is a discretionary grant and its distribution or dispersal through the Planning Commission has not benefited the States. Loans have been given to the States for implementing various schemes in such a manner that today almost all the States have had to utilise the major part of the loans for servicing the debts owed to the Central Government. It is said, and rightly so, that in the context of inadequate State Finances and the need for large outlays of development schemes, Central aid assumes a crucial role in the implementation of the plans. It is also necessary to note that it is the States that have to execute a large number of schemes necessary for the planning development. Planning ultimately becomes transmitation of the desired targets of growth into desired outlays in various sectors, namely Central Sector, the State Sector and the Private Sector. Constitutionally the plan in the Central and State Sectors should list out schemes on the related subjects in the State List, the Concurrent List and Union List. It is also well known that the Centre's investments have been largely towards industrial development

and development of transport and communications, whereas the State outlays are directed towards irrigation, power, agriculture and various social services, The Central aids are given to two types of schemes, namely centrally assisted schemes and centrally sponsored schemes. The grant/loan element is usually much higher in the centrally sponsored schemes. The Centrally sponsored schemes and independent study and make recommendation at their own initiative. It is quite possible to expect are, for example, family planning programme, eradication and control of communicable diseases, welfare of the Backward classes, various agricultural production programmes, etc. Besides, the planning has created a huge non-development expenditure for the States because of the growth of administrative and other services necessitated by urbanisation in the agglomerated areas. Consequently, the method of granting loans and its recovery have created a tremendous hardship to the States under the present planning pattern. It is said that the impact of planning and channelisation of loans through the Planning Commission on the State finance has been unsatisfactory. It is pointed out that for the third plan, the expenditure on debt services for all the States (including appropriation for reduction or avoidance of debt) has been Rs. 934 crores which is more than Rs. 610 crores of additional taxation for the third plan. This is according to the Reserve Bank of India Bulletin of May 1966. So, it was remarked pertinently by an author that the Centre giving grant from one hand for plan purposes and taking away part of them by way of interest charges on debts, illustrates the control which the Centre has in the matter of the grants-in-aid. Therefore, it is better to channelise the Central assistance whether by way of loans or grants through the Finance Commission as approved by the National Development Council.

6.8 There is no doubt some substance in the argument that the present system of arriving at the State's plan size by adding to the assessed resources independently pre-determined quantum of Central Plan Assistance is somewhat *ad hoc*, However, the State Government feels that so far as the requirement of the economically weaker States are concerned, they are taken care of even by the Finance Commission while arriving at the devolution as well as by various grants, such as the grants for the fiscal deficit, upgradation of standard of administration, etc. Therefore while examining the adequacy or the needs for changes in the Gadgil formula, judicious balance has to be struck between the need for the poor and the economically backward States and the need to maintain a certain degree of equity among the various States in the matter of plan assistance. The State Government has been emphasising another important point at various forums, that is, even while applying the Gadgil formula in all the factors including the factors like per capita income, the 1971 population alone should be taken into account so that the States which have implemented the family planning programme in all seriousness are not penalised. It may also be emphasised that whereas the high income States can take care of all the plan needs and low income States are being adequately provided for by both Finance Commission and the Planning Commission it is the middle income States which are given a raw deal in the process. Any modifications to the Gadgil formula should rectify this imbalance so that the middle income States which are more or less in a take off stage can be given one big threat crushed for developments in a pre-determined period.

6.9 We have already set out earlier, how the present system of allocation of funds for execution of centrally sponsored schemes and centrally assisted schemes is bound to result in economic hardships to the States. One of the main irritants which is responsible for the above result is the abnormal increase in non-developmental expenditure which the States are not in a position to meet them completely. No doubt, the economic activities generated by various schemes, whether centrally sponsored or centrally assisted, have created some openings and scope for increased tax resources. But such increased tax resources have not kept pace with the enormous growth of non-developmental expenditure, which a State has to incur. As an illustration, in the case of implementation of major centrally assisted projects the execution and implementation of the same, is, always at the door-step of the States. It should not be overlooked that every centrally-sponsored scheme or centrally assisted scheme has to be geographically put through within the boundaries of a particular State. As such, when the scheme progresses in its implementation, the State has to take upon itself various duties and responsibilities including acquisition of sites, variable price structure of raw materials, measures of public health, maintenance of law and order etc. It is because of this unavoidable concept in either a centrally-sponsored scheme or a centrally assisted scheme, the co-ordination of the States is essential, not only for its successful working but also for its speedy working. Such close association is necessary even when such schemes are thought of and should not be postponed until it comes up for execution and indeed should be borne in mind till the completion of the concerned scheme. Such inter-co-ordinated activity between the Centre and the State in working out essential details connected with the projects and its completion is an important matter which has to be reckoned with in achieving the real objective, namely national progress all-wise. When such exchange of thoughts and actions precede the formulation and working of plans in general and when the related assistance is ensured, then the possibility of imbalances apprehended in the present system of allocation of Central assistance in whatever sector it may be, can be avoided.

In the State of Tamil Nadu, schemes for development of urban land were taken up under the Tamil Nadu Town Planning Act, 1920 prior to the passing of the Tamil Nadu Town and Country Planning Act, 1971 (Tamil Nadu Act 35 of 1972). Under the repealed Act, various matters such as construction of roads and communications, acquisition of land, transport facilities, water-supply, lighting, drainage, reservation of land for religious and charitable purposes, hospitals and dispensaries and other public purposes and such other matters not inconsistent with the object therein are some of the matters

that may be dealt with in a Town Planning Scheme. Section 23 of the repealed Act reads as follows :

"23. Power to levy betterment contribution—Whereby the making of any town-planning scheme the value of any property has increased or is likely to increase, the municipal council, if it makes a claim of the purpose within the time (if any) limited by the scheme not being less than three months after the date of publication of a notification of the State Government sanctioning a scheme under section 14, shall be entitled to recover from the owner of such property an annual betterment contribution for such term of years and at such uniform percentage of the increase in value not exceeding ten per centum as may be fixed in the scheme :

Provided that the aggregate amount of the contributions so recovered shall not exceed one-half of the maximum increase in value during the aforesaid term of years as ascertained under the next following section."

Thus the said Act itself provides for reimbursement of State expenditure by calling upon the beneficiary of such schemes to pay a betterment contribution to the State so that the expenditure incurred by the State for the benefit of the State and its people could, to a certain extent , be reimbursed. Some such provision can be thought of in the law which the Parliament can make when creating the National Development Council so that the benefits can be conferred without a deep inroad in the Central or State exchequer. Such a modus of reimbursement, if adopted, will root out the imbalances as also the criticism against inequitable allocation of Central plan assistance to the States.

6.10 We agree with this view. Most of the centrally sponsored schemes are non-productive schemes. Since the States do not have sufficient financial resources to take up such non-productive schemes, they are eager to accept such centrally sponsored schemes and in the process, the State Plan priorities get distorted. We therefore suggest that centrally sponsored schemes which are non-prodcuctive in nature must be fully financed by the Central Government. The State must have a supervisory role. Besides, the Centre must be compelled to make provisions for developmental expenditure due to implementation of such centrally sponsored schemes.

6.11 It is quite possible to think that the monitoring and evaluation machinery established in the Planning Commission in each State have been functioning well. But what is important from the point of Centre-State relations is creation of a machinery of similar nature which will not put irritants into such relationship. So, we suggest that the Centre and the States must be given sufficient power to constitute separate monitoring and valuation machinery to watch the implementation of the Central schemes and State schemes separately. There is no need for Central machinery to watch the investment of State funds to see whether they yield the desired results.

6.12 We fully agree with the view that the decentralised planning would help a great deal in introducing a spirit of "co-operative federalism" in our planning system. In fact, with this view in our mind, we suggeted in our answer to Q. 6.1. a wholesome decentralised planning system. Our answer to Q. 6.1., has given a full picture for a scheme of the decentralised planning. If those suggestions are accepted and given effect to, we are sure that they will help to ensure proper co-operation between the States and the Centre at the stages of plan preparation and plan implementation.

6.13 What has been said here may be true. But to give a opinion whether national plan should become progressively more indicative and less imperative as and when State Planning Boards gain experience, we must first concede the continuance of the existing system. Since we do not suggest the continuance of the existing system, we cannot subscribe to the suggestion made herein. As suggested earlier by us, the planning Boards separately functioning at two levels, one of the Central level and the other at the State level but working in unison under the aegis of National Development Council will contribute a great deal to the Economic and Social Planning in the country. Such functioning will also bring the much needed co-operation and harmonious relations between the Centre and the States.

PART VII

MISCELLANEOUS

Industries

7.1 This Government have already suggested under the heading 'Legislative Relations' that Entry 52 should be substituted by a new entry by which the entry itself will specify the industries and accordingly entry 52 may be recast as suggested under the heading 'Legislative Relations'. However, even in respect of industries, in respect of which Parliament will have power to legislate, the industrial policy is framed by the Government of India from time to time. It is the view of the Government of India that industrial development is an inter-disciplinary concept. It pertains not only to the manufacturing activity but to all related infrastructual development; licensing and corporate policies, financial fiscal, trade and pricing policies; industrial relations and management; scientific and technological development and broad socio-economic policies. As such the implementation of the industrial policy requires close and effective co-ordination and monitoring at various levels at the Centre as well as between the Centre and the States.

Hence, prior consultation with the State Governments would be desirable while framing industrial policy by the Government of India.—At present there is no such prior consultation. The States are given the major task of administering the industrial development programmes. Hence, they should be involved in major industrial policy formulation.

The entrepreneur wanting to set up an industry submits his application to the Government of India, which is referred to the State Government for their comments to be submitted within three or four weeks. There are cases here even before the comments of the State Government are made available, the Government of India take their own decision and communicate the same. Having given an opportunity to the State

Government to offer their views it is necessary for the Government of India to await the remarks of the State Government within the time limit allowed for the State Government before deciding on the application of the entrepreneur.

The other suggestion will be that the applications of the entrepreneurs are placed before the Licensing Sub-Committee. There is no representation for the State Government in the Licensing Sub-Committee. *The State Government should be represented in the licensing Sub-Committee so as to enable State Government to give their views on the application.*

Certain concessions are given in backward areas to ensure wide dispersal of industries. The backward areas have not been uniformly defined throughout the country. In some States, they refer to blocks or taluks or districts. Prior consultation of the State Government in regard to definition of backward areas will set matters right in this regard.

In 1979, the Government of India issued guidelines to the effect that if an undertaking wishes to shift the whole or part of its manufacturing activities from a forward area to a backward area or from a notified backward area to another notified backward area within the same State, there in no need to obtain prior permission of the Government of India provided the prior permission of the State Government is obtained by the industrial undertaking. This power of the State Government, has now been taken away by the Government of India and all cases of change of location will now have to be referred to the Government of India for approval. There appears to be no reason why this delegation should not be continued. The industrialists will be put to hardships, since they have to get permission from the Government of India in such cases. *The Government of India should, therefore, issue revised instructions, restoring the delegation to the State Government to give permission for the change of location within the state.*

The State Government have no representation in the Central Financial Institution like Industrial Development Bank of India (IDBI), Industrial Finance Corporation of India (IFCI), etc., through the State financial Institutions are major borrowers from these institutions. *A representation for various State Governments on rotational basis should be considered.* Regional Boards should be established and in the Regional Boards, regional representation should be given.

At present the clearance of Pollution Control Boards is stipulated as a pre-requisite only at the time of conversion of letter of intent into industrial licence and in many cases the industrial licences are also granted without reference to the Board. The Industries approach the Board for the clearance when they are almost ready for commissioning. To avoid such a contingency it is suggested that the Pollution Control Boards may be consulted even at the time of issue of letter of intent to industries.

We agree with the view that as a result of this indiscriminate extension of the First Schedule to cover a very high proportion of industries in terms of value of their output, the basic constitutional scheme has been patently subverted and "Industries" has been virtually transformed into a "Union subject". This has been dealt with in Part II also under the heading of 'Legislative Relations'. As long as the expression 'public interest' in Entry 52 has not been defined: it is necessary that Entry 52, having regard to the inclusion of several items as controlled items thus impinging on the State's autonomy, needs a radical change. This is because flood-gates are open under Entry 52 to include in the schedule any industry which in the opinion of the Central Government is in public interest or of national importance. Even the illustration given in the question such as soaps, paints, match, sticks, gum, etc. amongst others, gives a reasonable impression that industries which are not really of national importance have been included under the Industries (Development and Regulation) Act, 1951. It is, therefore, necessary that Entry 52 which is undefined and practically all pervasive should be amended specifying the industries themselves in Entry 52 as suggested under the heading 'Legislative Relations'.

7.2 In the light of the opinion expressed by this Government in answering the questions in Part II this Government feel that Entry 52 should be amended specifying the industries themselves in Entry 52 as suggested under the heading 'Legislative Relations' and Article 249 should be deleted. Therefore, no suggestions are made in this context.

Qns. 7.3, 7.4, 7.7 and 7.8 are covered by the general note.

7.5 Proper norms should be laid down for assistance by the financial institutions so as to ensure that each State should have its reasonable share as there have been criticisms about these institutions as showing partisan attitude in giving assistance to the States.

7.6 For locational decision on Central investment in Public Sector, the objective criteria to be followed shall be on the basis of availability of resources, taking into account the infr astructural facilities, etc., and also the backwardness of the region. The prior consultation of the State should also be prime criteria in this regard.

Trade and Commerce

8.1 In the light of the fundamental right of an individual citizen to carry on any occupation, trade or business, the subject of trade and commerce has to be highlighted. A distinction should always be made between inter-State trade and intra-State trade. In so far as the inter-State trade is concerned, in the light of our recommendations made while dealing with the 'Legislative Relations' (in particular transfer of Entry 33 from the Concurrent List to the State List), it is but proper to maintain Centre-State relations to amend Article 382 so as to omit any reference to Intra-State trade and commerce and confine it to inter-State trade and commerce. In order to achieve the subject for which Justice Sarkaria's Commission has been set up to recommend changes and measures as may be appropriate to review the working of the existing arrangements between the Union and the States, this Government are of the view that the Centre and the State should be kept on part so for as trade and commerce is concerned, particularly in the light of the fundamental right guaranteed under Article 19(1) (g) of the Constitution. Apart from the

recommendation earlier made in the matter of the amendment to Article 302, the word "Reasonable" may be inserted before the word "restrictions".

This Government have no comments on Article 303 and the avoidance of discrimination in taxes contemplated in article 304. *But this Government are of the view that the proviso to Article* 304 *should be omitted.* Article 304 is an enabling provision. The taxes to be imposed under the article should not be discriminatory and the restrictions which the State Legislature may imposed should be reasonable and should be in the public interest. So far, Article 304 calls for no comments by us. The proviso to the Article requires that before any Bill or amendment relating to imposition of restrictions on the freedom of trade and commerce is introduced or moved in the State Legislature, the previous sanction of the President should be obtained. It will be observed that such previous sanction is necessary in respect of restrictions to be imposed not only on inter-State trade and commerce, but it is required even for regulating or restricting commercial activities within the borders of a State. In dealing with the distribution of Legislative powers, we have suggested that all provisions in the Constitution relating to reservation of Bills passed by State Legislatures for the consideration and assent of the President (except Article 288(2)) should be omitted altogether. Whether the restrictions imposed by an Act of a State Legislature on the freedom of trade and commerce are reasonable and whether they are in the public interest for purposes of Article 304 (b) are questions to be decided ultimately by the High Court or the Supreme Court. If the Court finds that the restriction are unreasonable or opposed to the public interests previous sanction of the President or his subsequent assent cannot cure the infirmity. If the legislation is otherwise valid and the restrictions are reasonable and in the public interest, this previous sanction will be a superfluity. In any case, the requirement relating to the previous sanction of the President directly encroaches on the field assigned to State Legislatures. We, therefore, recommend that the proviso to Article 304 be omitted. We have no more suggestions regarding the other Articles such as 301 and 307.

In answering the specific question 8.1. *we are of the view that in the interest of securing better Centre-State relationship in trade and commerce it is necessary to appoint an authority to—*

(a) *Survey and bring out periodically a report on restrictions imposed on inter-state trade and commerce ;*

(b) *recommend measures to rationalise or modify the restrictions imposed with a view to facilitate trade and commerce; and*

(c) *examining the complaints from Chambers of Commerce. including the apex body like FICCI.*

Agriculture

9.1 We agree with the observation of the Administrative Reforms Commission on Centre-State Relations (1967). Agriculture including Horticulture, Animal Husbandary, Forestry and Fisheries should primarily be treated as a State subjects. It has been the experience that the Government at the Centre have been taking a large number of sectors in the Agriculture field and giving a lot of funds to individual State depending upon the pressure individual States have been able to exercise. In certain cases, despite the need and importance of assistance in certain fields of activity, the Central assistance has not been forthcoming, due to lack of appreciation and proper understanding of the local problems, on the part of the Centre. It is, therefore, felt that the flow of assistance from the Centre has not been on the merits of the individual cases but instead lopsided assistance has been going on. This situation calls for corrective steps and unless Central attachment in the activity, is restricted, the scope for partiality or undue favours would be available to a sizeable extent. Therefore, in the interest of equal treatment of the States and with a view to avoid unbridled substantive activity and sanction of various schemes involving sizeable financial commitment and assistance from the Centre there is need for restricting the scope of Entry 33 in the Concurrent List.

Though Agriculture is a State subject, Centre should also evince interest for substantive development whenever a State suffers from flood havoc or continuous drought otherwise there will be heavy burden on the State exchequer.

Thus entries 33 and 34 may be transferred to the State List as it is not likely to cause any prjudice to national or public interest. The Government also suggest that in any event when particular State suffers from flood havoc or continuous drought, the Centre should evince interest and render assistance not only such emergent situations but also to encourage various preventive measures for the same.

9.2 Agriculture should only be treated as a State subject and Central assumption of responsibility/control for substantive activity need not be permitted too much. There is huge variation between the different agroclimate zones as well as the eating habits of population of different States wherein broad generalisation is not possible in this field. Further, while fixing all-India targets for different crops, equal yardsticks are not adopted. For example, there is no parity between the price of wheat and rice as a result of which the production of rice is always pushed through to the disadvantage of the farmers, in the Southern region compared to a farmer in the Northern region.

In the case of Centrally sponsored schemes also, the same is always being launched by Government of India with considerable outlay, i.e. Agro-forestry with Rs. 188 lakhs for 1983-84. However, when this has to be continued by State, such a considerable allotment is not easily found under State funds, after meeting the existing commitments. Therefore it would be enough if the States are asked to project is long-term perspective plans and necessary financial backing alone given by the Government of India, Block grants may be sanctioned by Government of India and placed at the disposal of State Government for any of the agricultural project which it deems fit. In addition, there is an unwritten law that the Central funds are granted always towards revenue expenditure only and to for capital expenditure. This should be relaxed

to a major extent and Central funds should be allotted over a long period of time for the construction of permanent buildings purchase of equipment, etc.

The recommendation of the National Commission on Agriculture (1976) that a long term perspective be developed in which the Central and centrally-sponsored schemes being implemented through the State Agency, ultimately form part of the State Sector and that their number should be kept to a minimum is to be agreed to. This is because in the annual implementation of centrally-sponsored schemes, a number of bottlenecks occur every year, impeding the progress of the different programmes. Therefore, it will be in the fitness of things and with a view to run the Agriculture programmes on right lines, well within the seasonal limits, crop development programmes/schemes should be implemented as part of the State Sector. Further, the pattern and set up of new schemes have to be formulated only on the basis of local conditions in individual States and these cannot be generalised for a large number of States. A longer period of assistance should be planned before the State agency takes up the continuation of scheme under State Sector.

9.3 Even though State and Centre are expected to be equal partners in the formulation of centrally sponsored schemes, Centre only cannot dictate terms and conditions for the implementation of scheme (e.g.) Central funds are not made available for the Intensive Cotton Development Programme staff since they are merged with training and Visit Programme.

The working groups from both the Centre and the State should meet very often to exchange their views and the difficulties experienced by the State should be accepted by the Centre. Proper guidelines should be evolved by the working groups to appreciate the priorities of programmes to be implemented for the benefit of the people at large.

The suggestion of the National Commission on Agriculture need reiteration, so that the emphasis of mutual consultation and implementation of agreed programmes may not be lost sight of.

9.4 With regard to fixation of minimum fair prices for agricultural items especially for paddy, the State is definitely put at a disadvantageous position. Often, this does not take into account the variability in local conditions and the price fixed is sometimes totally unrelated to the actual cost of production. This is because of the conditions in different parts of the country are highly variable, even though the same crop may be grown. Therefore, in the matter of enforcing the minimum fair price for Agriculture produce, the State Government should be intimately associated with the decision making. The parity between the prices of wheat and paddy even though pressed for many a times did not come through.

This poses not only a problem for economic cultivation of this major staple food of this State but triggered political reflections also.

In irrigation, the natural resources of water that are available should be made use of to its maximum. Our suggestion made in this regard in Part IV may also be taken into consideration.

The provision of strategic inputs including credits is highly insufficient and should be increased as per the suggestions made by the State from time to time.

The State should be given the maximum power in designing the forestry policy and administration for the welfare of the States.

"Forest" was a State subject ever since the Constitution came into force. But after the commencement of the Constitution (Forty-Second Amendment) Act, 1976 with effect from 3rd January 1977, the above subject has been taken over in the Concurrent List of the Constitution, according to which both Centre and State can legislate with regard to the above subject. The Government feel that the subject "Forests" should be restored to the State List, which was the position obtaining before the commencement of the Constitution (Forty-Second Amendment) Act, referred to.

The Central Government have recently passed the Forest (Conservation) Act, 1980 (Central Act 69 of 1980) which came into effect from 25th October 1980. The Central Act has caused many difficulties to the State Government. According to the Forest (Conservation) Act referred to above, no forest lands or any portion thereof can be used for non-forestry purpose without the prior concurrence of the Government of India. Under this Act, non-forest purposes means breaking up or clearing of any forest land or portion thereof for any purpose other than re-afforestation.

The State Government also do not have the power to dereserve any forest land without the prior approval of the Government of India.

If a road has to be laid in a bit of forest land, or if a bit of forest land is to be given in connection with the Public Water Supply Scheme, the prior approval of the Government of India, under the Forest (Conservation) Act will have to be obtained.

Even if a farmer has to take a pipeline from a water course to his land passing through a spur of forest land, the matter has to be referred to the Government of India and their prior concurrence has to be obtained.

Again, if a forest land has already been given permanently long before the coming into force of the Forest (Conservation) Act and the nature and character of the land have totally and invisibly changed, but formerly if the land has to be dereserved by a notification now, proposals will have to be sent to the Government of India for their approval.

Further, if any transmission line has to be laid to give power connection to villages, particularly in tribal areas, proposals will have to go to the Government of India. Thus quick and speedy implementation of the developmental activities, pertaining to the tribals are greatly affected by this Act.

The State Government are in direct touch with the needs of the public and it is also their statutory duty to see how they can be redressed. Further, proposals are sent by this Government to the Government of India after getting appropriate approval. The Government of India in same cases have turned down the requests. When such proposals, which have been given great consideration at the highest level are turned down, this naturally causes embarrassment to the

State Government and puts them in a false position *vis-a-vis* the people whose urgent needs have to be met. The State Government are one with the Government of India in preserving the forests. But the State Government however feel that in the alternative under the Forest (Conservation) Act, a certain amount of delegation is quite necessary for the State Government at least in the following and similar cases :—

(1) When transmission lines are to be laid inside the forest, proposals need not go to the Government of India, as great care is always taken to see that there is minimum felling of trees.

(2) Roads are being laid by the Forest Department for the Welfare of the Tribals and others. When ordinary fair whether roads are laid, proposals need not go to the Government of India. When pucca motorable roads are laid by the Highways and Rural Works Department with a width of 20 ft. and above, in Reserved Forests, such proposals will be sent to the Government of India.

The Government of India have enacted the Inter-State Water Disputes Act, 1956 (Central Act 33 of 1956) which provides for adjudication of disputes relating to waters of inter-State rivers and river Valleys. The Inter-State Water Disputes Act, 1956 should continue to govern inter-State disputes regarding entitlement of water from river, and Tribunals should be set up under the provisions of this Act by the Government of India immediately when such disputes arise so that the problem could be solved without delay. Once the entitlement is settled River Basin authorities should be set up for equitable distribution of water in the existing system and for equitable allocation of waters consistent with entitlement of concerned States and the agreement between the basin States and the rights acquired through usage. The Inter-State Water Disputes Act must be suitably amended to provide for the River Basin authorities.

Another point which arises in this context is as to how the decision of the Tribunal given under the Act is to be implemented. Section 6 of the said Act states that the decision of the Tribunal is final and binding on the parties to the dispute and that it shall be given effect to by them. The question still is how is the decision to be enforced? It may be pointed out here that section 17 of the Arbitration Act 1948 (Central Act X of 1948) empowers the Court concerned to pronounce judgement according to the award of the arbitrator and upon the judgment so pronounced, a decree follows. In the absence of a similar provision in the Central Act of 1956, it is extremely doubtful whether the decision of the tribunel could be effectively implemented against a recalcitrant State.

This Government therefore suggest a modification of the Act or the introduction of a new provision therein enabling the parties to the dispute to secure through a known legal process the relief to enforce the awards given by the tribunal.

National Water Resources Council and River Basin Commissions may be appointed to discharge the functions to be specified. The modalities for the functioning must be settled through further discusion between Centre and States.

The Government of India may declare all inter-State Rivers in the country as National Rivers as most of the major rivers are inter-State in character. It is suggested that it must be compulsory for any Tribunal to set up administrative arrangements to carry out its judgement and such arrangements must be binding on all States.

However, the amendment suggested to the Inter-State Water Dispute Act, 1956 as stated above, is without prejudice to the view expressed in the answer to Question 4.7 that all disputes relating to Inter-State rivers should be referred to a permanent Tribunal constituted by the Supreme Court. If this view is accepted then the Inter-State Water Disputes Act, 1956 will require repeal or modification.

9.5 In the Indian Council for Agricultural Research there is need for more representation on the Governing Body for the Southern States like Tamil Nadu where the climatic conditions are quite distinct and needs are different from those of the North Indian States. This alone could ensure proper flow of funds for catering to the needs of the Southern States.

In the policy making body like Indian Council of Agriculture Research, the State Directors of Animal Husbandry and Agriculture should also be co-opted as members.

It is the experience of this State that with respect to the role of Research Institutions, the varieties released by Tamil Nadu Agriculture University is more beneficial to the ryots than the varieties released by Indian Council for Agricultural Research—probably ICAR is concentrating on more wheat and other varieties which are suited to the locations where these research stations are situated. This is the case of agronomical practices also. It would only be useful of more of these Indian Council on Agricultural Research stations are located in the agro-climatic zones of the State.

The Indian Council of Agricultural Research may be requested to take up post-harvest technology, packing, storage and cold storage transit containers for developing the vegetable, fruit marketing system in the country.

The preamble of Central Act 61 of 1981 (The National Bank for Agriculture and Rural Development Act, 1981 (Central Act 61 of 1981) indicates that the National Bank for Agricultural and Rural Development (NABARD) is established for providing credit for the promotion of agriculture, small-scale industries, cottage and village industries, handicrafts and other rural crafts and other allied economic activities in rural areas, with a view to promote integrated rural development and securing prosperity of rural areas and for matters connected therewith or incidental thereto. The first Board of Directors was appointed by Government of India on 19th March 1983. The Board of Directors for NABARD comprises two representatives of co-operative banks, one of commercial banks, three each of the Reserve Bank of India and Government of India, two of the State Governments and two experts in rural crafts, village and cottage industries and small scale industries. It is considered that the strength of the Board of Directors has to be enlarged to give more representation to the State Governments as the subjects dealt with by NABARD are mostly matters falling within the State List.

The NABARD and beneficiaries should come very near to each other in the matter of financing. The present methods now employed by the NABARD make the beneficiary to suffer more by paying increased differential interest as the applications are forwarded and scrutinised through other agencies, which adds interest for every stage. This increased burden of differential rate of interest can be avoided if the NABARD invites the applications directly for the financial help.

Food and Civil Supplies

10.1 The department of Food in each State is responsible for the maintenance and supply of food grains and essential commodities. This is particularly so when the interest of the under privileged and the weaker sections of the community are borne in mind. The public and the people of Tamil Nadu are not fully instructed about the dual responsibility of the Centre and the State in this regard. The present arragements for Centre-State consultation are not consistent with the actual responsibility of the State Government. As would be seen hereafter, there is ample scope for improving Centre-State liaison in the areas of procurement, pricing and distribution. The position can be classified and analysed under the following heads:

Procurement

For maintaining the Public Distribution System the State Government will have to necessarily procure the essential commodities. It would not be possible for the State to procure the entire quantity of food grains or other commodities required for being supplied through the Public Distribution System of this State due to reasons like adverse seasonal conditions, paucity of production of particular commodity, etc. As far as Tamil Nadu is concerned, it will be just self-sufficient in rice production provided the seasonal conditions are normal. Whenever the monsoons fail, the Tamil Nadu State becomes the deficit State and such situation have occurred in the last few years. Therefore, it has become necessary to look upon the allotment by the Centre from the Central pool in addition to the procurement by the State. Further, the Tamil Nadu Government will have to look upto the Centre for permission, whenever it proposes to purchase rice or wheat from other States in the open market. Even for purchases from other State Government agencies by the Tamil Nadu State, the clearance from the Government of India is necessary. Apart from this, the Reserve Bank of India is charging higher rate of interest for such outside the State purchases. While private traders are free to purchase from other State, subject to the payment of levy there, the State Governments are not so free to purchase rice or wheat from other States even if it is levy paid stock. Getting clearance from the Government of India creates embarrassing situation. In as much as the private traders freely purchase from outside, it is not clear why the State Governments alone have to get the concurrence of the Government of India. No Government will purchase more than what is necessary for the State. The excess control in matters relating to Food which is a State subject may not be desirable.

Even where the Government of India gives concurrence for the purchases from other States, the Reserve Bank of India charges higher rate of interest for cash credit assistance given by it. Thus the higher rate of interest increases the cost of the rice. Any rise in prices is adversely commented upon by the public and the State Government has to answer the public though it has no control over the cost.

As regards the allotment from the Central pool, the Central Government has its own policy for alloting the quantity and the State Government is not able to get due share. The State Government no doubt contributes to the Central pool, whenever there is surplus. At the same time, when there is no surplus in Tamil Nadu State, there is no point in contributing to the Central pool and getting it back, as this procedure serve no purpose except increasing the prices. Therefore, the insistance on contribution to the Central pool should be only when there is a really comfortable surplus. In order to remove such difficulties the following are necessary :

1. The State Government or its agencies should be permitted to purchase levy paddy and rice from the surplus States without interference by the Centre.
2. The Reserve Bank of India should charge normal rate of interest in this regard.

Prices

Now the procurement price is fixed by the Government of India on the recommendation of the Agricultural Price Commission, which is known as support prices. Such fixation is also done for wheat etc. While fixing the prices the Government of India takes into account the recommendations of the Agricultural Price Commission which in turn consults the State Government. But the difficulty is that while the cost of production is taken into account in respect of wheat, the same cannot be applied to rice.

While purchasing through levy, the prices fixed by the Government of India will have to be given and no enhanced rate can be offered. Thus, while private traders purchase at a higher price, the State Government is forced to pay only a lower price. Which farmer will sell paddy to Government if the trader offers a better price? Though section 3 (38) of the Essential Commodities Act, 1955 empowers the State Government to fix the procurement prices with the concurrence of the Central Government, subject to certain conditions, in practice the State Government is not able to exercise this power. In this view, the Government suggest that the expression "previous approval of the Central Government" in the matter of fixation of procurement price, appearing in section 3(38) of the Essential Commodities Act, 1955 be deleted and positive co-ordination will only be ensured.

Distribution of Food Grains and other essential commodities through Public Distribution System.

The Central Government have been advocating need for organising and strengthening the Public Distribution System to ensure the availability and distribution of essential commodities at fair and reasonable prices to the public, with particular reference to the weaker sections of the society. Though, the State Government has taken great care and intensive efforts in organising a well-knit distribution system through

the fair-price shops, including at the Village level, the State Governments are not able to get the adequate quantity of the essential commodities like edible oil etc. for supply through ration shops. In other words, the supply of quantity allotted by the Government of India is inadequate to meet the demand. Therefore, the prices of edible oils could not be controlled at a lower price. In the State of Tamil Nadu, several schemes in the cause of education obligeration of illiteracy, Nutritious Non-Meal Scheme (feeding about 84 lakhs of children and old aged pensioners) conceived for the first time in the country by the Hon'ble Chief Minister Dr. M.G. Ramachandran, schemes for the welfare of the aged and the under privileged have been undertaken. All such schemes need food grains and other commodities. *It is therefore suggested that in so far as the State of Tamil Nadu is concerned, a subsidised control of prices has to be introduced for the continuance of such welfare schemes.*

10.2 Production, supply and distribution of food stuffs, including edible oil seeds and oils is in the concurrent list as per Entry 33 in List III of Schedule VII to the Constitution of India.

The following are the Central enactments in relation to Food and Civil Supplies :

(i) The Essential Commodities Act, 1955 as amended by Essential Commodities (Special Provisions) Act, 1981.

(ii) The Rice Milling Industry (Regulation) Act, 1958.

(iii) The Warehousing Corporation Act, 1962.

(iv) The Industries (Development and Regulation) Act, 1951.

(v) The Prevention of Blackmarketing and Maintenance of Supplies of Essential Commodities Act, 1980.

The above Acts are intended to ensure equitable distribution and availability of essential commodities at reasonable prices and also to keep the prices under control. These Acts are also helpful to see that there is no undue profiteering and exploitation by the traders.

The Essential Commodities Act is the mainstay of the Food Department of the State. Section 3 of the said Act empowers issue of Control Orders by the States on various matters for regulating or prohibiting production, supply and distribution therefor. Any Control Order to be issued under this section requires the concurrence of the Government of India with reference to Section 5 which provides for delegation of the powers. The delegation under Section 5 is not a real delegation in as much as the prior concurrence of the Government of India has to be obtained every time when an order is issued or when an amendment is to be issued to the existing Control Order. *In order to achieve an effective control and fair distribution of essential commodities, it is necessary that such orders are issued by the State Government without reference to the Centre.*

Government of India is maintaining a central pool for food grains to help deficit States. They can also import items which are in short supply. In view of this, the role of Government of India is very important.

The State of Tamil Nadu has been handicapped in the day-to-day administration of Food and Civil Supplies Departments because the Essential Commodities Act is a Central legislation. State amendments or notifications need the concurrence of Government of India. Going to Government of India every now and then is cumbersome. Some notifications have been challenged on the ground that the concurrence of Government of India was not obtained or the communication from Government of India was not specific. In a sensitive matter like food, the immediate responsibility is that of the State. *So, more powers have to be delegated to the State Governments.* For example, the price to be paid for procurement has to be decided by the State Government with reference to local conditions.

A few other instances of delegation needed are given below :

Wheat Roller Flour Mills

Till 28th February 1969 the control functions over the Wheat Roller Flour Mills under the Wheat Roller Flour Mills (Licensing and Control) Order, 1957 were looked after by the Government of India. However, as from 1st March 1969, these functions were transferred to the State Governments. These control function included issue of new milling licences, renewal of milling licences already issued, issuing of directions to the Roller Flour Mills, imposing of penalties on Roller Flour Mills for Violation of provisions of the said Order, inspection to ensure manufacture of quality products by the Roller Flour Mills and entertaining of appeals against the orders passed by the licensing authority. The Government of India have *with effect from 6th February* 1982, resumed the powers to issue new milling licences, to impose penalties on erring mills and to entertain and decide on appeals preferred by mills aggrieved by the orders of the licensing authority. They have accordingly issued notifications amending the Wheat Roller Flour Mills (Licensing and Control) Order, 1957 suitably and appointing the Deputy Secretary (Development and Regulation) Department of Food, Government of India as the new licensing authority. The changes contemplated by the amendments now issued by the Government of India to the Wheat Roller Flour Mills (Licensing and Control) Order, 1957 are :

(i) The powers to issue milling licences vest with the Government of India with effect from 6th February 1982. The Deputy Secretary (Development and Regulation) Department of Food has been appointed as the new licensing authority. Accordingly, all orders issued by the State Government, prior to this date appointing licensing authority, would cease to be operative from that date.

(ii) The State Government are now required to issue an order appointing specified authority under clause 2(dd) of the said order for renewal, etc., of the milling licence.

(iii) While the State Government would continue to have the powers to renew licences, renewal of milling licences in respect of flour mills closed for a period exceeding 12 months or where the milling licence has not been renewed

within 30 days of the expiry of the licence, should be referred to the Government of India before renewal.

(iv) The power in respect of suspension or cancellation of the milling licence now vests with the Central Government which it will exercise on the basis of reports received from the concerned State Government.

(v) All appeals against orders issued by the licensing authority or the specified authority should be submitted to the Union Food Secretary.

(vi) The powers to issue directions to licence will be continued to be exercised by the State Government (Specified authority) subject to the condition that no direction with regard to the source from which and the manner in which wheat shall be obtained for the purpose of manufacturing wheat products will be issued by the State Government without prior approval of the Central Government as hitherto. The sub-allocation of wheat to mills and fixation of extraction percentage will be done by State Government.

The powers and duties of the "specified authority" under the said order, are :

(i) to renew or refuse to renew the milling licence.

(ii) to issue directions regarding the source from which the manner in which wheat shall be obtained for the purpose of manufacture of wheat products, the production or manufacture of different kinds of wheat products and also the size of the packing, the method of packing of like and the disposal of wheat products.

(iii) to report to the licensing authority regarding the violations and contraventions of the provision of the said order and of the conditions of the milling licence for action under clause 11 of the said order which provides for suspension or cancellation of milling licence.

When the appellate powers were vested with the Secretary to the Department of Government dealing with Food, the Joint Commissioner of Civil Supplies was appointed as the licensing authority. Now, the appellate powers as well as licensing powers have been taken over by the Government of India. The licensing authority now is the Deputy Secretary (D&R) Department of Food, Government of India and the appellate authority is the Union Food Secretary. As per the amended provision of clause 11 of the said order, taking of action by the licensing authority to suspend or cancel the milling licence is contemplated on receipt of a report from the "specified authority".

Wheat and wheat products are consumed by almost all the people of Tamil Nadu next to rice. Wheat products like maida and sooji are well known for their instant and urgent use by housewives besides they being nutritious. Effective control over their production control and distribution can be had only if the State Government have control powers over the Roller Flour Mills. Decentralisation of power and giving of more powers to State Government are desirable for efficient administration. But even the powers which the State Government have been enjoying all along have been taken away. In the interest of effective control over the Roller Flour Mills and ensuring proper production and distribution of maida and sooji to consumers, it is but necessary that the licensing powers of Roller Flour Mills are again vested with the State Governments, subject to general guidelines from Government of India.

Pulses

Tamil Nadu is deficit in pulses. The requirement of pulses of our State are met mostly from imports from abroad and from Northern States. These importers include not only traders on own account but also commission agents, who had persuaded the dealers outside this State to send goods to our State. Due to large scale import of pulses, the prices are kept stabilised.

Of late, the Government are receiving a number of representations from the dealers in pulses requesting the Government, to exempt them from the operation of ceiling of stocks of pulses as fixed in the Pulses, Edible Oil Seeds and Edible Oils (Storage Control) Order, 1977 and also to address the Government of India to enhance the ceiling on stocks of pulses. The Government of India who were requested to enhance the ceiling limits have not agreed to proposals. At present, exemptions for individual consignments of pulses imported from abroad, from the operation of clause 4 of the Pulses, Edible Oil Seeds and Edible Oils (Storage Control) Order, 1977, are given by the Government of India on specific recommendations of the State Governments. The number of applications from the wholesalers, commission agents in pulses requesting exemption from stocking limits for the consignments or pulses imported by them from abroad are too many. Considerable time lag is involved in moving the Government of India for grant to exemption and issue of notification exempting the imported stocks from stocking limits. In the meanwhile, it is open to the enforcing authorities to take action against the dealers/commission agents keeping stocks in excess of the prescribed limits, considering it a violation of the provisions of the control order. Due to this, the dealers importing pulses are experiencing a lot of hardship. While this Government support the action taken by the enforcing authorities, it is felt that there is a genuine and urgent need for finding a remedy to this situation. The Pulses, Edible Oil Seeds and Edible Oils (Storage Control) Order, 1977 is essentially a dehoarding measure and it aims at pushing into the market whatever quantity of pulses that are being imported by the private trade. Clause 7A of Pulses, Edible Oil Seeds and Edible Oils (Storage Control) Order, 1977 provides for granting exemption from stocking limits by the State Government with the previous approval of the Central Government. If the power to grant exemption from ceiling on stocks of pulses, in cases where the genuineness is satisfied, is vested with the State Government without reference to the Government of India it will do a lot of good to dealers besides making pulses available in plenty to the consumers at reasonable price.

Kerosene

At present, the wholesale dealership in Kerosene is awarded by the Government of India through its Oil Companies. Due to the reduction in the Government of India allotment of Kerosene in the year 1979

and the consequent Kerosene scarcity, kerosene is being distributed on family cards to ensure equitable distribution of the available quantity. The retail distribution of kerosene in this State has been entrusted to the State owned Tamil Nadu Civil Supplies Corporation and the Co-operatives. These institutions lift kerosene from private wholesalers for distribution to the family card holders. Kerosene is an essential commodity needed by the weaker sections of the society as fuel for cooking and lighting purposes. The State Government is looking after the retail distribution of kerosene is this State but the State Government has no powers to order the location and the establishment of wholesales depot. It is in the fitness of things that the powers of appointing new wholesale dealers should be with the State administration. The State owned Tamil Nadu Civil Supplies Corporation and Co-operatives have a net work of retail points (17,926 Fair Price Shops) all over the State distributing essential commodities to the general public. The Tamil Nadu Civil Supplies Corporation and Co-operatives are prepared to undertake wholesale dealership in kerosene whenever and wherever offered. Even, if a particular wholesales point by itself may not be economically viable, the Tami Nadu Civil Supplies Corporation is prepared to undertake such dealership also in the interest of serving the general public and to ensure uninterrupted supplies to the retail points.

In view of our suggestions, the Government of India may confine itself to major policies, inter-State transactions, imports, etc. Public Distribution System and Civil Supplies matters can be made to work better if they are entrusted to the State.

11.1 to 11.5 We would prefer to give a consolidated note on the subject of 'Education' instead of answering questions 11.1 to 11.5 chronologically. In the note which follows, we have discussed the constitutional position before and after the Forty-second amendment to the Constitution; the historical perspective concerning the subject on "Education" before and after 1950, the need for restoring Education to the State List, on the language policy adopted by the State of Tamil Nadu, the disparity in the devolution of University Grants Commission assistance to the State Universities and Colleges and the need for redefining the real objective in Articles 23 and 30 of the Constitution.

A. The Constitutional Position before and after the Constitution (42nd Amendment) Act, 1976

It will be useful, at the outset to set down the relevant items in the list of devolution of powers given in the VII Schedule to the Constitution of India, before and after the 42nd amendment.

Before 42nd Amendment	*After 42nd Amendment*
Union List (List I)	*Union List (List I)*
63. The institutions known at the commencement of this Constitution as the Benaras Hindu University, the Aligarh Muslim University and the Delhi University; the University established in pursuance of article 3715; any other institution declared by Parliament by law to be an institution of national importance.	63 to 66 : Same as before 42nd Amendment.
64. Institutions for scientific or technical education financed by the Government of India wholly or in part and declared by Parliament by law to be institutions of national importance.	
65. Union agencies and institutions for— (a) professional, vocational or technical training, including the training of police officers; or (b) the promotion of special studies or research; or (c) scientific or technical assistance in the investigation or detection of crime.	
66. Co-ordination and determination or standards in institutions for higher education or research and scientific and technical institutions.	
State List (List II)	*State List (List II)*
11. Education including Universities subject to the provisions of entries 63, 64, 65 and 66 of List I and entry 25 of List III.	Item II deleted.
Concurrent List (List III)	*Concurrent List (List III)*
25. Vocational and technical training of labour.	25. Education, including technical education, medical educations and Universities subject to the provisions of entries 63, 64, 65 and 66 of List I; vocational and technical training of labour.

B. A. Historical Perspective

(I) Till 1950

Centre-State relations in education over the last 130 years have presented an extermely variegated picture in our country. Prior to 1833, we had a period of total decentralisation when all the three Presidencies of the British Empire followed their own educational policy, subject only to the distant and sporadic supervision of the Court of Directors in *London.* The Charter Act of 1833 went to the other extreme and created a highly centralised form of administration in the country under which Education, like any other subject, became a responsibility of the Government of India. During this period, for instance, the Directors of Public Instruction in the Provinces used to complain that they could not incur an expenditure of even one rupee without sanction of the Imperial Government of Calcutta. This was thus a period of *extreme centralisation.* In 1870, a period of decentralisation of authority was initiated by Lord Mayo. This decentralisation was gradually increased till 1918, by which time the Provincial Governments came to possess large authority over education, although the Government of India did continue to exercise considerable supervisory powers in essential matters. In addition, there was

the Indian Education Service which was created in 1897 and whose officers filled the important posts in all the Provincial Education Departments. This period may, therefore, be regarded as a period of *large decentralisation combined with limited but essential, Central control.*

The Government of India Act of 1919 made a still more radical change. It introduced diarchy in the provinces under the control of Indian Ministers responsible to a legislature with a large elected majority. As a corollary to this, therefore, the Central control over education had to be reduced to the minimum, if not eliminated altogether. Consequently, there came about what the Hartog Committee calls a 'Divorce' between education and the Government of India. This situation continued right till 1950 although, some devious attempts were made, from 1935 onwards, to bring the Government of India back into the picture through such measures, as the revival of the Central Advisory Board of Education.

(II) From 1950

The adoption of the Constitution in 1950 changed the situation to some extent. The Government of India now obtained a large authority over education than under the Government of India Act of 1919 or 1935 and the co-ordination and maintenance of standards in higher education was made a Central responsibility. This trend towards centralisation was indicentally supported by three extraneous factors namely : (1) the adoption of Planning as to the technique of development with the consequential creation of a Planning Commission and the formulation of five year plans covering both Central and State developmental activities, (2) the institution of large Central grants earmarked for specific education schemes and, (3) the political accidents of the same party being in power at the Centre and in the States. Till 1967, therefore, it may be said that education, though constitutionally a 'State' subject, could in essence be administered as a concurrent subject.

Even before the 42 amendment, the Central Government had a considerable hold in Education. The Supreme Court had interpreted the power to coordinate under item 66 of Union List as "not merely power to evaluate but also to harmonies or secure relationship for concerted action". The view of the Central Government expressed in the Union Education Ministry's Administration Report for 1968-69 was as follows :—

"The Constitution makes Education essentially a State subject but also vests considerable responsibilities in the Government of India. The Union Government for instance, is directly responsible for Central Universities, for all institutions of national importance, for the enrichment, promotion and propagation of Hindi, for co-ordination and maintenance of standards in higher education, for scientific and technical education and research and for welfare of Indian Students abroad and cultural and educational agreements with other countries. Social and Economic Planning which includes educational planning is a concurrent responsibility. The Centre also has special responsibilities for the education of the scheduled castes and scheduled tribes".

C. Moves to take away education from State List (Unsuccessful till 42nd Amendment was made).

Even at the time the relevant entries in the draft Constitution were discussed in the Constituent Assembly of India on 2nd September, 1949 there were misconceived and infructuous suggestions to take away education from the State List. Their arguments were met in the following terms by Thiru T.T. Krishnamachari :—"I would like to repudiate at once so far as the Drafting Committee is concerned, that there is any idea of either overleading the Centre or erring on the side of the provinces. All that we have done, to the extent that we are able to do, is only to see that the Centre takes only such powers as are needed for the purposes of co-ordinating the activities of the provinces. My Honourable friends who have moved these amendments either to take over the entry "Education" to the concurrent list or to limit the scope of entry 18 to Education up to the Secondary standard, if they would please peruse the items relating to Education in List I, they will see that we have provided and the House has accepted those provisions which confer enough power on the Centre to co-ordinate the educational activities of the States in the field of Higher Education, in the field of technical education, in the field of vocational education and also in the field of scientific research. That is about so far as it is safe for the Central Government to go; it would not be wise for any Central Government to go beyond that limit:

I think that is about the best that we can possibly do, consistent with the idea of having States with a large measure of autonomy for themselves and the Centre taking up the question of security, defence and general well being of the country, leaving other things to the States".

Later there were from time to time ill-advised suggestions to take away Education from State List *e.g.* Recommendation of the Sapru Committee 1965 to transfer Higher Education from State List to Concurrent List; Constitution (Amendment) Bill, 1971 of S.C. Samanta to transfer Education entirely to Concurrent List. None of these attempts succeeded because both the Central Government and the State Government were against such an unwise step. But with the passing of 42nd Amendment, a patently undesirable situation has been created under which Education has been placed under the Concurrent List.

D. Need for restoring education to State List

Even in such small countries like the U.K. with a unitary Constitution informed opinion is against centralised control in fields like education. The following views of C. Northeote Parkinson ("The law of Delay"—John Murray, London 1970 See the Chapter "Principalities and Powers") will be of interest :—

"Problems of health and housing would never be discussed in Paris or Rome where there would be time, therefore to deal with matters which are genuinely national and international. Our present Policy is to kill all initiative on the periphery and leave no time for business at the Centre... — —"

"Wha t no one out of bedlam could propose is a syste m by which an Educational Policy agreed at Ed inburgh has to be debated again in London. That way lines madness, as must be obvious to anyone of even average intelligence. Out administration is cumbersome enough as it is. To add to it, costly complexity could be tantamount to suicide".

It is all the more unwise to talk of retaining Education in the Concurrent List in such a vast country like India, with a federal Constitution, when the founding fathers of the Constitution of India has orginally rightly placed Education under the State List.

A former Union Education Minister, Dr. V.K.R.V. Rao himself had referred in 1970 to complaints in past (even when Education was in the State List) of non-essential schemes being included in the centrally sponsored sector, of Central funds being utilised to ride hobby horses of doubtful significance, or over domination by Central Officials, of wasteful expenditure of needless red-tape and of insistance on conformity with standardised regulations. The above objections to be centrally sponsored sector apply equally to the retention of Education under the Concurrent List.

It will be conducive to the healthy development of Education if among other things, the Central Government curtails the size of the outlay on centrally sponsored and central sector schemes (but instead distributes the funds among the State on equitable basis), does not duplicate facilities provided by States (*e.g.* by running Central Schools, etc.); and provides for the equitable distribution among the various States and Languages groups of the funds for Higher Education is spends through the U.G.C. etc., and the funds for development of all the National languages of India, etc.

Language Question

Following the mandate of the Tamil Nadu Legislative-Assembly at its special meeting held on 23rd January, 1968, Tamil Nadu has all along been following (since January, 1968) the two language formula under which the language studied in schools in Tamil Nadu are :—

Part A—Regional language (or Mother-tongue when it is different from the regional language).

Part B.—English or any other non-Indian language.

The Part A language is taught from Standard I and the Part B language from Standard III. Examinations in the two languages are compulsory.

Resolution on the language problem passed by the Tamil Nadu Legislative Assembly on the 23rd January 1968 gives expression to the apprehension of the people of Tamil Nadu that Hindi which is one of the regional languages adopted as the official language of India will disturb the unity and integrity of India and result in the domination by a region of one language over the regions of other languages and that Tamil and other national languages should be adopted as the official language of the Union and that Constitution should be amended accordingly and that till such time as this is achieved, English alone should continue as the official language. It was also urged that ways and means should be devised to see that the people in non-Hindi region are not subjected to any disadvantage; the resolution also stated that the House refuses to accept the scheme of the Government for the imposition of Hindi. The resolution also said, among others, that the three-language formula should be scrapped and that Hindi words of command should not be used in the N.C.C. and similar Corps.

2. In the Governor's address to the Tamil Nadu Legislature on 7th July 1977 it was declared :

"It will be the firm policy of my Government to implement the two language formula which was enunciated by our late Chief Minister Anna and unanimously approved by this august Assembly. This formula fully represents and reflects the wishes of the people of Tamil Nadu".

The suggestion of this Government therefore is that English should be included in the Eighth Schedule to the Constitution and all the languages in the Eighth Schedule should be declared as the official languages of the Union. Till such a decision is made, English should continue to be used as the Official language of the Union both for the Centre and State communications as well as communications among the States *inter-se*.

3. The Union Government should accord equal financial assistance for the development of all languages specified in the Eighth Schedule to the Constitution of India.

4. Tamil is a classical language of equal or even greater antiquity than Sanskrit. Tamil is moreover spoken even now not only by 5 crores of people in India but also by some more millions of persons in diverse parts of the globe like Srilanka, Malaysia, Mauritius, Fiji Islands, etc. The place of Sanskrit *vis-a-vis* the Indo-Aryan Languages of North India is analogous to that of Tamil *vis-a-vis* the Dravidian Languages of South India. Hence the Union Government should provide assistance for the development of Tamil studies in the same manner as for Sanskrit studies.

There is inter-State disparity in the devolution of U.G.C. assistance to Universities and Colleges. The bulk of the U.G.C. grants are availed of by the Central Universities and the share of other Universities is meagre. There is no much of an all India character about the Central Universities (since generally only students of the concerned localities join these Universities). In the circumstances, a more equitable formula for the distribution of Central funds for Higher Education will have to be devised, a formula which does justice to the claims of Universities and colleges in the States.

The provisions under Article 29 and 30 of the Constitution pertaining to the rights of minorities in regard to the establishment and management of denominational educational institutions, require to be defined more rigorously, restricting them to protect the genuine interests of the minorities. The provisions as they now stand (and as they are interpreted by the Supreme Court and High Courts) are often misued.

This situation has to be remedied by redefining those provisions.

Role of Governor—Extent of and Limitation of his Powers.

The role of the Governor so far as it relates to Education, is in respect of the functions and duties he performs and the powers he exercises in his capacity as Chancellor of the Universities in the State.

2. By convention all the Universities in Tamil Nadu have the Governor as Chancellor. The appointment of the Governor under the statutes relating to the Universities is not made in his personal capacity, but *ex officio*. He functions as such only as long as he holds the office of Governor. It is, therefore, clear that only because of his position as Governor he functions as Chancellor. There were divergent opinions about functions of the Governor as Chancellor, whether it should be exercised under the discretion of the Governor or with Ministerial advice under Article 163 of the Constitution. The Governor is appointed to such statutory office as per provisions in the University Acts because he is the Head of the State Government, the intention presumbly being that as Head of the State he will reflect the views of the elected Government and as such appointment cannot possible be made in favour of the State Government straight away. If this view is correct, the Statutory functions of the Governor must be regarded as one that is included within the "business of the Government of the State under Article 163 (3) and within the meaning of functions under Article 163(1)".

3. As far as University affairs are concerned the Governor's role as Chancellor comes in while appointing the Vice-Chancellor and nominating persons to various statutory bodies.

It would be a healthy augury for democracy that the Governor acts in this regard on the advice of Council of Ministers who enjoys the confidence of public (so far as they remain Ministers) than on his own discretion. This would incidentally help the Vice-Chancellor and other members to project the views of the Government in the conduct of University affairs. The view of the Government in answer to Question 3.1 (Part IV-Role of the Governor) may also be perused for further elucidation.

Inter-Governmental Co-ordination

12.1 This Government are of the view that it would be useful to set up an institution in our country similar on to the Advisory Commission on Inter-Governmental Relations (ACIR) which should promptly deal with many of the irritants and problems which arise with regard to the Centre-State relations in India. We have earlier expressed the view that notwithstanding the express provision in the Constitution in Article 263 for the constitution of an Inter-State Council, such an inter-State Council has neither been thought of or contemplated eversince the birth of the Constitution. In such circumstances, and as there is no prospect of Inter State Council as contemplated in Article 263 being set up and even if set up, activised in accordance with the wishes of the people. This Government are of the view that the setting up of an Advisory Commission on Inter-State Governmental Relations may be one of the expeditious ways to improve the co-ordination and co-operation among the various States and also with the Centre.

Regarding its composition, this Government suggest that the Chief Ministers of all States under the Presidentship of Prime Minister may be set up.

The recommendations of such Advisory Commission shall be treated on par with the recommendations made by the Finance Commission as provided for in Article 281 of the Constitution, with the result such recommendations of the Advisory Commission together with an explanatory memorandum as to the action therein has to be laid before each House of Parliament. *In view of this, an institution similar to the one in the United States, which has obviously stood the test of times, would not only satisfy the aspirations of the people of India and in particular the States of Tamil Nadu,but also would be instrumental for a prompt and expeditious consideration and disposal of many of the irritants and problems which may arise either seasonally or otherwise between the Centre and the State.*

Summary of Recommendations

Preliminary

Dr. C. N. Annadurai, former Chief Minister of Tamil Nadu had emphasised the need for a review and reappraisal of the Constitution of India so as to remove the serious imbalance in the distribution of resources and to ensure larger powers to the States in the legislative financial and other spheres and with a view to achieve true federalism. The present Chief Minister Dr. M.G. Ramachandran has also pointed out the essential need for review of the Constitution in regard to the Centre-State relations and in particular for giving more powers to the States in the legislative, administrative and financial spheres.

The Government of Tamil Nadu are of the firm view that India should be made a true federation wherein the Central Government and the State Government will be equal and independent partners and where the residuary legislative powers including the residuary taxing power will vest in the State Government and the Central should have only limited powers. The existing Constitutional set up should be modified so as to ensure decentralisation of the powers which are now in the hands of the Centre and the State should be made more autonomous both in the legislative as well as in the financial and administrative spheres.

With the above objective in view the Government of Tamil Nadu have answered the questionnaire issued by the Sarkaria Commission. The salient features of the recommendations are set out below—

PART I

INTRODUCTORY

Though the basic structure in our Constitution is said to be federal in nature certain provisions which are not found in other Constitutions, do make our Constitution to a certain extent unitary and not federal. Provisions such as Articles 256, 257, 356, 365, 200 and 201, 31-C, 31-A(I), 254(2) and 304(b) proviso

lend support to the perpetual comment by the people and by jurists that our Constitution is not truly federal.

The autonomy of the States has been eroded by the invocation of certain unpalatable Articles in the Constitution introduced by the Founding Fathers nearly 35 years ago. The difficulties, issues tensions and problems that have arisen in Union-States relationship are due to substantial defects in the schematic plan and the fundamental fabric as envisaged at present in our Constitution. State's autonomy cannot be made to rest on the good-will of the Centre.

It would therefore be salutary to evolve healthy conventions and procedures and time has now come for removing the tensions and frictions between the Centre and the States by suitably amending the provisions of the Constitution wherever necessary and restore the amity and harmony between the Centre and the State. The object is that true federalism should come into existence. However, till that goal is achieved the amendment suggested in the following parts will go a long way in giving more powers to the States commensurate with their responsibilities and strengthen the unity of the country.

PART II

LEGISLATIVE RELATIONS

Concurrence of State Legislature before Legislation by Parliament.—No law should be enacted by Parliament in respect of a matter falling within the Concurrent List except with the concurrence of the State Legislature. If no such concurrence is obtained then the law made by Parliament in respect of a concurrent subject will not be applicable to that State.

Reservation of State Bills for the consideration of the President.—No. Bills falling within the scope of Article 31-A or Article 34-C need be reserved for the consideration of the President. Accordingly, the first proviso to Article 31-A, the proviso to Article 31-C the two provisos to Article 200 and the proviso to Article 201 should be omitted. The provision relating to the withholding of assent by the President under Article 201 also should be omitted.

Other Legislative provisions.—Article 246 should be so amended to preserve the prerogative of both the Parliament and the States in their respective legislative fields.

The proviso to Article 254(2) should be substituted to the effect that Parliament shall have no power to enact at any time any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by the Legislative of the State.

Articles 247, 249, 250, 251 and 252 should be omitted.

As regards Article 252, the alternative suggestion is that Article 252(2) should be so amended so as to make the power as between the Centre and the State mutual and not exclusive.

Residuary powers.—The residuary power of legislation and taxation should be vested in the State Legislature. Therefore Article 248 and entry 97 in the Union List have to be omitted. Consequently, a new entry as entry 67 may be included in the State List, as under :—

"67. Any other matter not enumerated in List I or List III including any tax not mentioned in either of these Lists ".

Articles 154 (2) (b) and 258(2).—The amendment to these articles may be made providing that if the Union were to exercise the power as contemplated in both the articles, the consent of the State should be obtained.

Article 304(b).—The proviso to Article 304(b) should be omitted.

Article 246-A—A new Article 246A has been suggested to the effect that Parliament should have no power to order an enquiry in respect of the conduct of Ministers of the State Government. But it shall be open to the State Government to appoint a Commission of Inquiry, to inquire into the conduct of the State Minister either while in office or after demitting office.

Legislative Entries.—The Government have suggested additions, modifications, deletions of entries under the Union List (List I) State List (List II) and Concurrent List (List III). The revised Union List, the revised State List and the revised Concurrent List, with the modification suggested by this Government will be as follows :

In the revised Union List out of 99 entries, 9 entries have been either omitted or transferred either to the revised State List or revised Concurrent List.

In the revised State List 42 entries have been added to the existing 61 entries.

In the revised Concurrent List, 33 entries have been transferred to the revised State List. Consequently, the revised Concurrent List contains only 23 entries.

List I Union List

1. Defence of India and every part thereof including preparation for defence and all such acts as may be conducive in times of war to its prosecution and after its termination to effective demobilisation.

2. Naval, military and air forces; any other armed forces of the Union.

2-A. Omitted.

3. Delimitation of cantonment areas, local self-government in such areas, the constitution and powers within such areas of cantonment authorities and the regulation of house accommodation (including the control of rents) in such areas.

4. Naval, military and air force works.

5. Arms, firearms, ammunition and explosives.

24. Shipping and navigation on inland waterways in inter-State rivers, the rule of the road on such waterways.

25. Maritime shipping and navigation, including shipping and navigation on tidal waters.

26. Lighthouses, including lightships, beacons and other provisions for the safety of shipping and air craft.

27. Ports declared by or under law made by Parliament or existing law to be major ports, including their delimitation, and the constitution and powers of port authorities therein.

28. Port quarantine, including hospitals connected therewith; seamen's and marine hospitals.

29. Airways; aircrafts and air-navigation; provision of aerodromes; regulation and organisation of air-traffic and of aerodromes; provision for aeronautical education and training and regulation of such education and training provided by States and other agencies.

30. Carriage of passengers and goods by railway, sea or air, or by inter-State river waterways in mechanically propelled vessels.

31. Posts and telegraphs; telephones, wireless and other like forms of communication.

32. Property of the Union and the revenue therefrom, but as regards property situated in a State subject to legislation by the State.

33. Acquisition and requisitioning of property for the purpose of the Union.

34. Courts of wards for the estates of Rulers of Indian States.

35. Public debt of the Union.

36. Currency, coinage and legal tender; foreign exchange.

37. Foreign loans.

38. Reserve Bank of India.

39. Post Office Savings Bank.

40. Lotteries organised by the Government of India.

41. Trade and commerce with foreign countries; import and export across customs frontiers; definition of customs frontiers.

42. Inter-State trade and commerce.

43. Incorporation, regulation and winding up of trading corporations, including banking, insurance and financial corporations but not including co-operative societies.

44. Incorporation, regulation and winding up of corporations, whether trading or not, with objects not confined to one State, but not including Universities.

45. Omitted.

46. Bills of exchange, cheques, promissory notes and other like instruments.

47. Insurance.

48. Stock exchange.

49. Patents, inventions and designs; copyright; trademarks and merchandise marks.

50. Establishment of standards of weight and measure.

51. Establishment of standards of quality for goods to be exported out of India.

52. Industries specified below :—

1. **Metallurgical Industries** :—

A. Ferrous ;

(1) Iron and Steel (Metal)

(2) Ferro-alloys

(3) Iron and steel castings and forgings.

(4) Iron and steel structurals.

(5) Iron and steel pipes.

(6) Special steels.

(7) Other products of iron and steel.

B. Non-ferrous :

(1) Precious metals, including gold and silver and their alloys.

(2) Other non-ferrous metals and theiralloys.

(3) Semi-manufactures and manufactures.

2. **Fuels** :

(1) Coal, lignite, coke and their derivative.

(2) Mineral Oil (crude oil), motor and aviation spirit, diesel oil, kerosene oil, fuel oil, diverse hydro carbon oils and their blends including synthetic fuels, lubricating oils and the like.

(3) Fuel gases—(coal gas, natural gas and the like).

3. Steam Generating Plants :

Steam generating plants.

4. Prime Movers (Other than Electrical Generators)

(1) Steam engines and turbines.

(2) Internal combustion engines.

5. **Telecommunications** :

(1) Telephones.

(2) Telegraph equipment.

(3) Wireless communication apparatus.

(4) Radio receivers, including amplifying and public address equipment.

(5) Television sets.

(6) Teleprinters.

6. **Transportation**

(1) Aircraft.

(2) Ships and other vessels drawn by power.

(3) Railway locomotives.

(4) Railway rolling stock.

7. **Fertilisers** :

(1) Inorganic fertilisers.

(2) Organic fertilisers.

(3) Mixed fertilisers.

8. **Chemicals (Other than Fertilisers) :**

(1) Coal tar distillation products like naphthalene, anthracene and the like.

(2) Explosive including gun powder and safety fuses.

9. **Paper and Pulp including Paper products :**

(1) Paper-writing, printing and wrapping.

(2) Newsprint.

(3) Pulp-wood pulp, mechanical, chemical, including dissoliving pulp.

10. **Sugar** :

Sugar.

11. **Defence Industries** :

Arms and ammunition.

53. Omitted.

54. Omitted.

55. Omitted.

56. Regulation and development of inter-State rivers and river valleys, diversion of the waters of inter-State rivers to any part of the territory of India and apportionment among the States (but not including the use within the States) of the waters of inter-State rivers, to the extent to which such regulations, development, diversion and apportionment under the control of the Union is declared by Parliament by law to be expedient in the public interest.

57. Fishing and fisheries beyond territorial waters.

58. Manufacture, supply and distribution of salt by Union agencies.

59. Cultivation, manufacture and sale for export of opium.

60. Omitted.

61. Industrial disputes concerning Union employees.

62. The institutions known at the commencement of this Constitution as the National Library, the Indian Museum, the Imperial War Museum, the Victoria Memorial and the Indian War Memorial and any other like institution financed by the Government of India wholly.

63. The institutions known at the commencement of this Constitution as the Banaras Hindu University, the Aligarh Muslim University and the Delhi University the University established in pursuance of article 371-E.

64. Institutions for scientific of technical education financed by the Government of India wholly.

65. Union agencies and institutions for—

(a) professional, vocational or technical training including the training of police officers; or

(b) the promotion of special studies or research; or

(c) scientific or technical assistance in the investigation or detection of crime.

31. Omitted.

32. Omitted.

33. Omitted.

33-A. Omitted.

34. Omitted.

35. Omitted.

36. Omitted

37. Omitted.

38. Electricity.

39. Omitted.

40. Omitted.

41. Custody, managemen and disposal of property (including agricultutal land) declared by law to be evacuee property.

42. Omitted.

43. Recovery in a State of claims in respect of taxes and other public demands, including arrears of land revenue and sums recoverable as such arrears, arising outside that State.

44. Stamp duties other than duties or fees collected by means of judicial stamps. but not including rates of stamp duty.

45. Inquiries and statistics for the purpose of any of the matters specified in List III but not including inquiries in respect of the conduct of any Minister of a State Government while in office or after demitting office.

46. Jurisdiction and power of all courts, except the Supreme Court, with respect to any of the matters in this List.

47. Fees in respect of any of the matters in this List, but not including fees taken in any court.

PART III

ROLE OF THE GOVERNOR

Our Primary view is that the post of Governor should be abolished as a Governor appointed by the President is a legacy of the past. Under the Constitution, the Governor has to act always on the advice of the Council of Ministers. As it is proposed to be made clear statutorily that there is no discretionary field at all for the Governor, the post of the Governor is redundant. In some cases, the Governors do not hesitate to misuse their powers and dismiss the Council of Ministers notwithstanding the fact the Council of Ministers enjoy the absolute confidence of the Legislature. In order to avoid repetition of such misuse of power, the Post of Governor may be abolished. As a result, the Chief Minister may be vested with all the executive powers.

If the office of the Governor is to be retained, the suggestion is that he may be selected from the panel of four names submitted to the President by the Chief Minister enjoying the confidence of the Legislative Assembly. In such a case, if Legislative Assembly decides that the continuance of the Governor in any State will not be in the interest of the State then on a resolution passed to that effect by the Legislative Assembly, the President should remove the Governor on receipt of a copy of the said resolution by the President.

If the post of Governor is decided to be continued, then the following recommendations are made.

There should be no area in respect of which the Governor should have discretion. In respect of all matters; the Governor should be bound by the advice of the Chief Minister or of the Council of Ministers.

In his role as an inalienable part of the State Legislature, the Governor's task is only to secure a Government and not to form a Ministry.

While discharging important functions for summoning or proroguing the house or houses of the State Legislature, the Governor should do so only on the advice of the State Cabinet.

So also while exercising the power of dissolution of the Legislative Assembly, the Governor should do so only on the advice of the State Cabinet.

If the suggestion to appoint a Governor from the panel of names submitted by the Chief Minister is not accepted, them in the interest of securing a harmonious relationship between the Governor and the State Cabinet, it is necessary that the State Cabinet should be always be consulted and the concurrence of the Chief Minister obtained prior to the appointment of a Governor. It is also not proper to issue guidelines as to how the Governor should function as this would be derogatory to the high office of the Governor.

The Governor is neither the Agent of the Centre nor mere ornamental head of the State but a close link between Centre and the State.

Consistent with the notions of Parliamentary Democracy, a specific provision should be inserted in the Constitution after clause (1) in Article 164 of the Constitution specifying in detail the manner in which a Chief Minister should be appointed. The new clause (IA) shall run as follows :—

"(IA) (a) The Governor should appoint as Chief Minister the leader of the party commanding an absolute majority in the Legislative Assembly.

(b) Where the Governor is not satisfied that any one party has an absolute majority in the Legislative Assembly, he should of his own motion summon the Legislative Assembly for electing a person to be the Chief Minister and the person so elected should be appointed by the Governor as the Chief Minister.

(c) The advice of the Chief Minister to the Governor to dismiss any Minister should be accepted by the Governor.

(d) Where it appears to the Governor at any time that the Chief Minister has lost the confidence of the majority of the Members of the Legislative Assembly, the Governor should immediately and of his own motion summon the Legislative Assembly to eanable the Chief Minister to secure a vote of confidence in the House.

(e) (i) If the Chief Minister fails to seek the vote of confidence, or having sought it, fails to secure such vote of confidence, the Chief Minister shall resign forthwith. If there is any party commanding an absolute majority in the Legislative Assembly at the time of such resignation, the Governor shall, of his own motion, appoint as Chief Minister the Leader of such party.

(ii) Where the Chief Minister fails to resign under paragraph (i), or where there is no party commanding an absolute majority in the Legislative Assembly, then the Governor shall immediately of his own motion, summon the Legislative Assembly. The Legislative Assembly shall elect the person to be the new Chief Minister who should be appointed by the Governor as the Chief Minister or in the alternative, the Legislative Assembly may pass a resolution recommending the dissolution of the Legislative Assembly which shall be binding on the Governor.

(iii) If the Legislative Assembly fails to elect a new Chief Minister or pass a resolution as mentioned in paragraph (ii) within a period of one month commencing on and from the date of seeking the vote of confidence under sub-clause (d), the Legislative Assembly shall stand dissolved on the expiry of the said period of one month.

(f) When the Legislative Assembly stands dissolved under sub-clause (e) and during the period on and from the date of Commencement of the Legislative Assembly and sending with the date of election of the new Chief Minister by the

new Legislative Assembly, the Chief Minister and the other Ministers who are in office on the date on which the Legislative Assembly stands dissolved under sub-clause (8) shall continue in office only as a caretaker Ministry."

No person should be a Governor for more than one State/Union Territory at a time.

The proviso to Article 153 should be omitted. Consequent on the omission of the said proviso clause (3-A) of Article 158, must be deleted.

The Governor shall be appointed by the President with the concurrence of the Chief Minister. Consequently Article 155 should be suitably modified.

The Governor discharges certain functions specified in the Constitution as an agent of the President but the language of Article 160 is such that it may be stretched to cover even other functions of the Governor. The Article requires modification.

Article 163 (1) of the constitution which provides that the Council of Ministers have to aid and advise the Governor in the exercise of his function, except in so far as he is by or under this Constitutions, required to exercise his functions or any of them in his discretion, should be modified on the line of Article 74(1) of the Constitution. Article 163(1) may be recast as follows :—

"There shall be a Council of Ministers with the Chief Minister at the head to aid and advise the Governor who shall in the exercise of his functions act in accordance with such advice:

Provided that in respect of the functions expressly conferred on the Governor under Articles 239(2), 371 and 371-A the Governor shall exercise his functions in his discretion".

Article 163(2) may not be conducive for effective functioning of the Cabinet System of Government in the State. This Article may therefore be omitted.

PART-IV

ADMINISTRATIVE RELATIONS

Issue of Directions to the States by the Union and President's rule in States.—Articles 256, 257, 365 and 356 have both catalytic and fatalistic effect on the States in view of the possible unitary exercise of executive power by the Union under these Articles. These articles may therefore be omitted, because the effect of these Articles is that powers reserved by the Union have a over-riding influence over the States bringing down the theory of autonomy of State to a catastrophic minimum. This is so because, the use of such power during the three decades in the past have *ex-necessitats* demonstrably, proves that there has been excessive or misuse of such powers resulting in extra-ordinary steps, being taken and the edifice of State autonomy made to crumble. Article 357 and 360 may also be omitted.

Central Agencies handling subjects relating to States and Concurrent List.—The Central Agencies like the Agricultural Prices Commission, Central Water Commission, Central Electrciity Authority etc., cannot be created with respect to subjects handled by State in the State list without the explicit consent of the States.

Inter-State Water Dispute.—All disputes relating to inter-State Water disputes should be referred to a permanent tribunal constituted by the Supreme Court.

All India Services.—It is not necessary to have All India Services including I.P.S. and I.P.S. There should be two services namely (i) State Civil Services for the purpose of the State Govt. and (ii) Central Service for the purpose of the Federal Govt. In the Central Service, due representations should be given to the States in the offices of the Central Govt. location in the States.

Central Reserve Police Force.—The deployment of the Central Reserve Police Force should be done only with the consent or request of the States.

Zonal Councils.—In the interest of the States concerned the Zonal Councils set up under the States Re-organisation Act, 1956 should be activised so as to serve the expectations under the said Act.

Inter-State Council.—The Inter-State Council created under Article 263 will have no practical value as the advice tendered, recommendations made and conclusion arrived at are not binding on any party. Therefore the entire Article 263 providing for the establishment of Inter-State Council may be deleted altogether.

Issue of directions under Article 339(2) Article 344 (6). and Arlticle 350-A.—The said Articles should be omitted.

PART V

FINANCIAL RELATIONS

The Finance Commission.—The Finance Commission is constituted under Article 280. It should be reconstituted giving representation to the States. The recommendations of the Finance Commission shall be binding on all parties both Centre and States. Amendments to this effect should be made in the Constitution.

The Finance Commission should not confine itself to non-plan revenue gap but should take an integrated view of the whole problem of financial imbalance. States should be categorised into the more affluent, middle income and poor States. Tamil Nadu which falls within the middle income criteria should be given additional allocation of grants.

The Finance Commission should also ensure that the per capita surpluses of middle income States are comparable and more or less equal to the more affluent States. All funds to the States should be channelled through the Finance Commission.

Excise Duties.—All excise duties and cesses, special regulatory or otherwise, which are shareable at the option of the Union should all be made compulsorily divisible between the Union and States.

Additional duties of excise should be continued only with the concurrence of the States.

Levy and collection of duties and taxes.—Article 268 can be straightaway delegated to the States for levy and collection. Duties in respect of succession to property other than agricultural land and estate duty in respect of property other than agricultural land under Article 269 could also be delegated to the States. Similarly terminal tax on goods or passengers carried by railway, sea or air tax on sale or purchase of news papers and on advertisement can be brought under the purview of Article 268.

Many of the taxes specified in Article 269 are not levied. The Union Government must therefore give a substantial amount to the States in lieu of the non-levy of certain taxes.

Corporation Taxes, as well as surcharge on Income Taxes should be divisible and ear-marked for the concerned State as in the case of Income-Tax.

Grants.—Grants by the Centre to the States, both for plan and non-plan expenditure should be made on the recommendation of an independent and impartial body like the Finance Commission or similar statutory body.

Loans and indebtedness of States.—A Committee of experts may be set up to consider the entire issue relating to the indebtedness of States.

Relief Fund.—There should be a fund for each State for the relief of distress arising out of natural calamities. The fund may also be utilised to ameliorative measures.

Market Borrowings.—At present, the distribution among the States of the market borrowings has been done in a very adhoc and arbitrary manner giving increase of 10 per cent over the last years level of borrowings. Therefore, a just and equitable principle of distribution of market borrowings should be formulated. To achieve the object in view, the President should invoke his powers under Article 280 (3) (c).

It is desirable that the Finance Commission should suggest an appropriate formula for sharing of market borrowings. The State Government and the Government of India should go by the award of the Finance Commission. The actual execution can continue to be co-ordinated by the Reserve Bank of India. There is no need to set up a separate loan council for multiplicity of agencies may create a situation of their working at cross purposes.

PART VI

ECONOMIC AND SOCIAL PLANNING

Planning Commission and National Development Council

The Planning Commission as well as the National Development Council, the two major bodies incharge of planning, are now functioning as only recommendary bodies without a statutory foundation and recognition unlike the Finance Commission postulated in Article 280. Therefore, the following changes in the Constitution of planning bodies may be made :—

(1) The Union Parliament must make law to create a Central Board of Planning. It must define its constitution, functions and powers clearly. The Central Board should assess the availability of resources relating to Central Schemes only.

(2) The State Legislature must pass separate Legislation for the purpose of creating a State Board of Planning. This Board will address itself to resources and priorities regarding States subject matters.

(3) The Plan so prepared by the Central Board and State Board must be submitted to the National Development Council for consideration.

The National Development Council must appoint an expert Advisory Committee consisting of eminent Economists, Scientists, Management Experts Sociologists and Engineers. This Committee must give its expert advice within a stipulated period of time. The Advisory Committee must also recommend wherever possible the dove-tailing of schemes suggested by the Central and State Boards. This would ensure a meaningful planning exercise without over-looking the State Government's priorities.

However, if the planning Commission were to continue, then it should be an autonomous body, under the National Development Council. The Planning Commission should not be given such functions as over-seeing planning at State Level and decision making at the National Level. It can at best be only an Advisory Body. Final decision should rest with the National Development Council and with the Central and State Governments.

PART VII

MISCELLANEOUS

Industries

Under Entry 52 of List I "Industries, the control of which by the Union is declared by parliament by Law to be expedient in the public interest" come within the exclusive legislative competence of the Parliament. In view of this entry, the State Legislature is made incompetent in respect of the Industries coming under the Act enacted by Parliament under the said entry 52. Therefore, entry 52 should be substituted by a new entry by which the industries will be specified in the entry itself. In this connection, please see entry 52 of the revised Union List. However, even in respect of industries in respect of which Parliament will have power to legislate, prior consultation with the State Government would be desirable while framing industrial policy by the Government of India.

State Government could be represented in the licensing sub-committee so as to enable the State Governments to give their views on the applications. Final decision should be taken on the basis of the recommendations of the States.

As regards the change of location of manufacturing activities within the State, the obtaining of prior permission of the Government of India should

be dispensed with and the Government of India should issue revised instructions restoring the delegation to the State Government to give permission for the same.

A representation for various State Governments in the Central Financial Institutions like I.D.B.I., I.F.C.I., etc. on rotational basis should be considered. Regional Boards should be established and in the said Boards, regional representation should be given.

Trade and Commerce

In the interest of securing better Centre-State relationship in trade and commerce, it is necessary to appoint an authority to :—

(a) survey and bring out periodically a report on the restrictions imposed on inter-State trade and commerce;

(b) recommend measures to rationalise or modify the restrictions imposed with a view to facilitate trade and commerce; and

(c) examine the complaints from Chambers of Commerce including the appex body like the F.I.C.C.I.—

The requirement relating to the previous sanction of the President under the proviso to Article 304(b) of the Constitution directly encroaches on the field assigned to the State Legislature. Hence, the proviso to Article 304(b) should be omitted.

Agriculture

Agriculture including Horticulture, Animal Husbandary, Forestry and Fisheries should primarily be treated as a State subject.

In the matter of enforcing the minimum fair price for agriculture produce, the State Government should be intimately associated with decision making.

Inter-State rivers

The Inter-State rivers should be declared as National rivers.

Food and Civil Supplies

Procurement.—(1) The State Government or its agencies should be permitted to purchase levy paddy and rice from the surplus States without interference by the Centre.

(2) The Reserve Bank of India should charge concessional rate of interest in this regard.

Prices.—In the matter of fixation of procurement price, the previous approval of Central Government is not necessary.

Distribution of food grains and other essential commodities through public distribution system.—Several schemes in the cause of education, obliteration of illiteracy, Nutritious Noon Meal Scheme (Feeding about 84 lakhs of Childeren and old aged pensioners) have been conceived for the first time in the country by the Hon'ble Chief Minister Dr. M.G. Ramachandran. A subsidised control of prices for essential commodities has therefore to be introduced for the continuance of welfare schemes like Chief Minister's Nutritious Noon Meal Schemes.

Wheat roller flour mills.—In the interest of effective control over the roller flour mills and ensuring proper production and distribution of maida and sooji to consumers, it is but necessary that the licensing powers of roller flour mills are again vested with the State Government, subject to general guidelines from the Government of India.

Pulses.—If the power to grant exemption from ceiling on stocks of pulses, in cases where the genuineness is satisfied, is vested with the State Government without reference to the Government of India, it will do a lot good to dealers besides making pulses available in plenty to the consumers at reasonable price.

Kerosene.—The powers of appointing new wholesale dealers should be with State administrations.

Education

With the passing of the Constitution (Forty Second Amendment) Act, 1976, 'Education' report has been placed under the Concurrent List. When the founding fathers of the Constitution of India have originally rightly placed 'Education' under the State List, it is necessary that 'Education' should be restored to the State List.

Language.—English should be included in the Eighth Schedule to the Constitution and all the languages in the Eighth Schedule should be declared as the official language of the Union. Till such a decision is made, English should continue to be used as the official language of the Union. English should be used both for the Centre and the State communications as well as communications among the State *inter se*.

Inter-Governmental co-ordination

An institution similar to the Advisory Commission on Inter-Governmental Relations in the United States which has obviously stood the test of time, would not only satisfy the aspirations of the people of India and in particular the State of Tamil Nadu but also would be instrumental for a prompt and expeditious consideration and disposal of many of the irritants and problems which may arise either seasonally or otherwise between the Centre and the State.

Supplementary Questionnaire No. 4

(i) to (iv)

1. The Government of Tamil Nadu are of the View that as already stated in Part III—Role of the Governor, the office of Governor itself is unnecessary and as such should be abolished, as the Governor appointed by the President is a legacy of the past. The institution of Governor has outlived its utility. Judged by the recent instances, in most of the States in India the Governor has acted more as an agent of the Central Government. However, if the office of the Governor is to be retained, the following remarks are called for in regard to the supplementary questionnairs :

In regad to Question No. 1 the Government of Tamil Nadu are of the view that there should be no area in respect of which the Governor should have discretion in the discharge of his functions and that in respect of all matters, the Governor should be bound by the advice of the Chief Minister or the Council of Ministers. This Government are also of the view that Article 163 (1) should be amended on the lines of Article 74(1) of the Constitution as recommended by this Government under the heading "Part III—Role of the Governor".

Dr. Ambedkar has expressed the view in the Constituent Assembly that the Governor is only an ornamental head. So also, the Supreme Court, in Ram Jawayas case (AIR 1955 SC 549), has held that the Govennor is a formal or constitutional head of the executive and the real executive powers are vested in the Ministers or the Cabinet. In Shamsher Singh's case, it was explained by Justice A. N. Ray who delivered the judgement on behalf of himself and Justice Palekar, Mathew, Chandrachud and Alagiriswami that Articles where the expression 'acts in this discretion' is used in relation to the powers and functions of the Governor are those which speak of special responsibilities of the Governor. These Articles are 371-A(1), (B), 371-A(1) (d), 371-A(2) (b) and 371-A(2) (F). Justice A. N. Ray has also referred to the two paragraphs in the Sixth Schedule, namely 9 (2) and 18 (3) though paragraph 18 has now been omitted. No doubt, in Shamsher Singh's case, the discretionary powers of the Governor were recognised by the majority under Article 200 and also under Article 356. But this Government are of the view that the Governor should be bound always by the advice of the Council of Ministers in the discharge of this functions in respect of all matters as already referred to and that Article 356 should be omitted.

2. As already stated since the suggestion of this Government is that the Governor should have no discretionary power at all, the question of laying down principles of regulating the discretionary power of the Governor will not arise.

3. In Shamsher Singh's case, majority has expressed the view that under Article 200, the Governor may act irrespecttive of any advice from the Council of Ministers and that in such matters where the Governor has to exercise his discretion he must discharge his duties to the best of his judgment. The Government of Tamil Nadu are of the view that in respect of Article 200, which relates to assent of Bills by the Governor the Governor should always act on the advice of the Council of Ministers and he should be bound by the advice of the Council of Ministers and he should have no discretion in any respect the real executive power vests only in the Council of Ministers and the Chief Minister and the Governor being a Constitutional figure head, this Government are not agreeable to vest in him a discretionary power under Article 200. Justice Krishna Iyer who delivered the judgement on behalf of himself and Justice P.N. Bhagwati approved de Smith's statement regarding royal assent. The following portion will be relevant :—

"We have no doubt that de Smith's statement regarding royal assent holds good for the President and Government of India.

'Refusal of the royal assent on the ground that the monarch strongly disapproved of a bill or that it was intensely controversial would nevertheless be unconstitutional. The only circumstances in which the withholding of the royal assent might be justifiable would be if the Government itself were to advise such a course—a highly improbable contingency—or possible if it was notorious that a bill has been passed in disregard to mandatory procedural requirements; but since the Government in the latter situation would be of the opinion that the deviation would not affect the validity of the measure once it had been assented to, prudence would suggest the giving of assent".

Consistent with this view, the Government suggest that the two provisos to Article 200 should be omitted. Similarly, when a Bill is reserved for the assent of the President, the Government of India should advice the President to give assent to the Bill. The President should not have any discretion to withold his assent. Accordingly, it is suggested that the proviso to Article 281 should be omitted.

As regard Article 254, this Government have suggested under the heading "Legislative Relations" that the proviso to Article 254 (2) should be substituted as follows :—

"Provided that Parliament shall have no power to enact at any time any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by Legislature of the State".

4. This Government are of the view that no Bill falling within the scope of Article 31-A or 31-C need be reserved for the consideration of the President. The Council of Ministers are responsible to the State Legislative Assembly to the State Legislative Assembly and consequently, the executive power vest in them fully and completely. It should not be open to the Governor to reserve a Bill for the consideration of the President on the ground that in the Governor's opinion, it should be reserved for the consideration of the President even though the Council of Ministers had advised that such reservation is not necessary.

Accordingly, the Government of Tamil Nadu would suggest that it is absolutely necessary to omit the first proviso to Article 31-A and the proviso to Article 31-C.

If these provisos are omitted and in the light of the views expressed under Article 200, it will not be open to the Governor to reserve any Bill for the consideration of the President except in cases falling under the Concurrent List, attracting the provisions of Article 254, wherein the Governor will be bound by the advice of the Council of Ministers. But even in such cases where the Bill is reserved for the consideration of the President, it will not be open to the President to refuse his assent under any circumstances. The Government of Tamil Nadu desires to reiterate that the Union Government cannot sit in judgmet over the decision of the State Legislature and the State Government as regards the Constitutionality of a Bill passed by the State Legilature.

As regards the proviso to Article 304(b) which requires previous sanction of the President before a Bill or amendment is introduced or moved in the

Legislature this Government are of the view that the proviso will have to be omitted for the reasons stated under the heading 'Trade and Commerce' in Part-VIII-Miscellaneous. It should not be open to the Governor to reserve any Bill in the exercise of his discretion for the consideration of the President on the ground that in his opinion it appears to infringe the policy of law laid down by Parliament.

5. It is the State executive which is to decide about the Constitutionality of the Bill or whether the Bill seeks to endanger the position of the High Court. It should not be open to the Governor or to the Union Government to sit in judgment on this question. The Governor has to be bound by the advice of the Council of Ministers.

The Union Government by themselves should not advise the President to refer any State Bill to the Supreme Court under Article 143. Reference to Supreme Court under Article 143 should be made only in cases where the concerned State Government desires it and not otherwise.

Since it is for the State Government to suggest whether the entire Bill or only a specific provision of the Bill should be referred to the Supreme Court under Article 13, it should be open to the Supreme Court to examine the entire Bill or only such of those provisions as are referred to by the President as desired by the State Government.

Supplementary Questionnaire No. 5

1. As earlier stated, in Part III—Role of the Governor, the Government are of the view that the office of Governor itself is unnecessary and as such should be abolished, as the Governor appointed by the President is a legacy of the past. The institution of Governor has outlived its utility. Judged by the recent instances in most of the States in India, the Governor has acted more as an agent of the Central Government. However, if the Office of the Governor is to be retained, the following remarks are called for in regard to the supplementary questionnaire :

> The Government of Tamil Nadu suggest that if the office of the Governor is to be continued, he may be selected from the panel of four names submitted to the President by the Chief Minister enjoyed the confidence of the Legislative Assembly.

The choice of the Governor need not be restricted either to politicians or to retired Civil/Defence personnel. The views expressed by Pandit Jawaharlal Nehru are as follows :—

> "He may be sometimes, possibly, a man from the province itself. We do not rule it out. But on the whole it probably would be desirable to have people from outside—eminent people sometimes people who have not taken too great a part in politics. Politicians would probably like a more active domain for their activities but there may be an eminent educationist or persons eminent in other walks of life, who would naturally while co-operating fully with the Government and carrying out the policy of the Government at any rate helping in every way so that policy might be carried out, he would nevertheless represent before the public someone slightly above the party and thereby in fact, help that Government more than if he was considered as part of the party machine. I do submit that is really a more democratic procedure than the other procedure in the sense that the latter would not make the democratic machine work smoothly". (C.A.D. Vol. VIII/p.455)

But the crucial test is whether a person selected is of high calibre, of absolute integrity and free from partisan politics.

2. The Government of Tamil Nadu are of the view that if the Council of Ministers decide that the continuance of any Governor in any State will not be in the interest of the State, then on a resolution passed by the Legislative Assembly to that effect, the President should remove the Governor on receipt of a copy of the said Resolution by the President.

3. There should be a fixed tenure for the Governor. But, however, the tenure may be terminated by the President if a Resolution to that effect is passed by the Legislative Assembly in the manner suggested above.

There shall not be a re-appointment of a Governor for a fresh term.

4. Pension may be liberal after the retirement of a Governor.

The Governor should be made ineligile to hold any office of profit under the Government of India or the Government of a State after his retirement. So also, he should be made inteligible to hold any elective office such as Minister at the Centre or in a State, President of India, Vice President of India or Member of Parliament or of a State Legislature, since these are all allurements which will make him subordinate to the Central Government.

5. This Government do not approve of the current practice of the Governor sending a fortnightly report to the Centre. This report can as well be sent by the Chief Minister. However, an express provision may be made that the fortnightly report may be sent to the Centre by the Chief Minister.

If the Chief Minister is to report to the Centre he will be the judge to decide as to what should be the content of the report. Since it is suggested that the Governor should not send the report, the answers to other questions do not arise.

6.1 & 6.2 As already stated, there should be no field in which the Governor can have discretionary function.

Even in respect of exercising powers of Chancellor of University, the Constitution should be specifically amended to the effect that he should exercise the power in accordance with the advice of the Council of Ministers.

6.3 & 6.4 This question has been answered under the heading "Role of the Governor" under Part III. Article 164(1-A) proposed by this Government provides an answer to this question. It should not be open to the Governor to decide whether a Chief

Minister is found indulging in or encouraging anti-national activities or engaging in corrupt practices. The Chief Minister is the real executive and he represents the people. There is no question of imposing President's Rule as this Government are of the view that Article 356 itself is to be omitted.

6.5 It is unnecessary to have a guidelines issued to the Governor by the President. Consequently, no amendment to the Constitution is necessary for this purpose. The Governor should act always on the advice of the Council of Ministers.

Law and Order

7.1 & 7.2 The deployment of the Armed Forces in a State whenever there is an internal disturbance in the State should be only at the request of the State Government concerned. This Government have suggested the omission of Entry 2-A of List I.

7.3 No doubt, it may be open to the Central Government to ask for information in regard to the situation of the public order and security within the State. But failure to submit the Report should not be construed as amounting to impeding the exercise of the executive power of the Union. This Government has already suggested that Article 257 itself should be omitted.

7.4 & 7.5 If there is internal disturbance within the State, it is open to the Centre to obtain the necessary information from the Chief Minister concerned and the Chief Minister's suggestion in this regard may be implemented by the Central Government. But under no circumstances, can the President's Rule be imposed on the ground that there is internal disturbance in the State or on the ground that there is external aggression.

This Government are of the firm view that Article 356 itself should be omitted. Dr. Ambedkar in reference to this Article in the Constituent Assembly has stated as following :—

"In regard to the general debate which has taken place in which it has been suggested that these articles are liable to be abused, I may say that I do not altogether deny that there is a possibility of these articles being abused or employed for political purposes. But that objection applies to every part of the Constitution which gives power to the Centre to override the Provinecs. In fact, I share the sentiments expressed by my honourable friend Mr. Gupte yesterday that the proper thing we ought to expect is that such articles will never be called into operation and that they would remain a dead letter. If at all they are brought into operation, I hope the President, who is endowed with these powers, will take proper precautions before actually suspending the administration of the provinces. I hope the first thing he will do would be to issue a mere warning to a province that has erred, that things were not happening in the way, in which they were intended to happen in the Constitution. If that warning fails. the second thing for him to do will be to order an election allowing the people of the province to settle matters by themselves. It is only when these two remedies fail that he would resort to this articles. It is only in those circumstances he would resort to this Article". (C.A.D. Vol. IX. pp. 176-177)

But all the instances in which President's Rule has been imposed are in direct violation of what Dr. Ambedkar has said or contemplated in his speech. This Government suggest that Article 356 should be omitted as it militates against the federal structure of the Constitution. The views of this Government are explained in detail under the heading "Administrative Relations" under Part IV.

President's Rule

8.1 & 8.2 The answer to this question does arise in view of the suggestion of this Government omit Article 356 itself.

Co-ordination between States

9.1 to 9.4 On the question of Inter-State Council please refer to this Government's views under the heading "Administrative Relations" under Part IV.

The Zonal Councils may be activised, and be made more effective.

Failure to comply with Centre's Directions

10. Article 356 has been a much misued and abused Article by the Central Government. This Government suggest that Article 356 may be omitted. Answer to this question does not arise. Article 365 itself has to be omitted.

Supplementary Questionnaire No. 6

6. As regards the question relating to Article 249 of the Constitution of India, this Government have already suggested that this Article should be totally omitted, for the reasons stated in Part II—Legislative Relations. This question therefore does not arise.

Supplementary Questionnaire No. 7

7. As regards Article 252, this Government are of the view that this Article should be omitted. Alternatively, Article 252 (2) should be so amended so as to make the power vest in the Centre and the State mutually and not exclusively. Please see remarks under the heading Part II "Legislative Relations".

Supplementary Questionnaire No. 8

1. The Supreme Court in Satpal v. State of Punjab (1982 ISCC 12) has held "Ours is a Constitution where there is a combination of federal structure with unitary features". The Government of Tamil Nadu are of the view that these unitary features found in the Constitution have been made use of by the party in power at the Centre to destabilise the State Governments in which a party different from the ruling party at the Centre is in power.

2. The Government of Tamil Nadu are of the firm view that the unity and integrity of the country should not be impaired in any manner. At the same time, the amendment suggested in the earlier part of this Report under the various headings will enable the States to get more powers so as to serve the people of the States with whom the State Government are in direct contact.

3. These Articles have been dealt with under the heading Part IV "Administrative Relations".

4. The expression "national interest or public interest" is vague and has been made use of by the Central Government and the Union Parliament to

encroach on the field-legislative and executive fields—exclusively allotted to the State Legislature and the State Governments. The criticism that the Union Parliament has drained out the content of the linked Entries in List II of the Seventh Schedule and thus improperly encroached upon the State Legislative field is well founded and the Government of Tamil Nadu agrees with this view.

The question as to how the Constitution can be amended so as to ensure greater powers to the States at the same time without affecting the strength of the Centre have been dealt with under various heads in the various parts of the Report.

5. The question relating to Inter-State Councils has been dealt with under the head-Part IV-"Administrative Relations".

6. As regards the basic features of the Constitution, the following may be recognised as the basic features :—

(1) Unity and Integrity of the Nation.

(2) Sovereign democratic republican structure.

(3) Federal structure of the Constitution with the modifications suggested in the earlier part of this note.

(4) Supremacy of the Constitution.

(5) Parliamentary system of Government.

(6) Judicial review.

7. As regards the distribution of Legislative powers under the Seventh Schedule, the subject has been already dealt with under the heading Part II—"Legislative Relations" and this Government has suggested a revised Union List, State List and Concurrent List.

8. For minimising or alleviating frictions between the Union and the States, this Government has suggested various amendments under various heads. They may be referred to.

9. As regards Article 370, the Government are of the view that it may be omitted.

10. On the question whether sales tax can be abolished and instead, additional excise duty can be levied by the Union in consultation with the States and collected by the States themselves, this Government are of the firm view that sales tax should not be abolished. The suggestion to levy additional excise duty in the place of sales-tax by the Union in consultation with the States and collected by the States themselves is not acceptable to the Government of Tamil Nadu. Sales tax should exclusively be the subject matter of legislation by the State Legislature. Sales tax should be levied by the State and collected by the State.

Tamil Nadu

REPLY TO CERTAIN POINTS RAISED BY JUSTICE SARKARIA.

Role of the Governor

The Chairman has called for replies of the State Government to the points in regard to the abolition of the institution of Governor and on the question of deletion of Articles 153, 159, etc.

The reasons for suggesting the abolition of the institution of the Governor have been mentioned at page 26 of the Report submitted by the State Government under Part III—Role of the Governor. The main reasons are that the institution of Governor is an anachronism, owing its existence to the British Colonial System. Further, some of the Governors have misused their offices against the spirit and letter of the Constitution in order to further certain party interests. The real executive will be the Chief Minister of the State who has been elected by the people of the State. Whatever powers are exercised by the Governor can be exercised by the Chief Minister.

The State Government have suggested that there should be no area in which the Governor should act in his discretion. As the real executive is the Chief Minister, the post of the Governor may become redundant. In this view, it was suggested that the institution of Governor should be abolished.

On this basis, it was suggested that Articles 153 to 162 may be omitted. Article 153 is the Article which provides that there shall be a Governor for each State and Article 159 relates to the oath of office by the Governor. These articles are all connected with the institution of Governor and therefore, if the institution of the Governor is to go, then these articles will have to be deleted.

Article 163 :

As regards Article 163, the question was raised in a Writ Petition (W.P.No. 1795/85) before the Madras High Court that the appointment of the Chief Minister and swearing in of the Chief Minister alone in one day and the appointment and swearing in of the other Ministers on subsequent days is not Constitutional. This contention was negatived by the Madras High Court in *R.R. Dalawai* v. *Government of Tamil Nadu.* The following portion will be relevant :—

"**69.** A convention seems to have grown that a Chief Minister is normally sworn in alone, and then he applies his mind to the question as to whom he will nominate as his Council of Ministers. Now it appears that in 1977, even the Prime Minister of India was alone sworn-in on 24th March 1977 and the other Ministers were sworn-in only on 26th March 1977. There is no express provision in the Constitution that the other Ministers must also be sworn-in on the same day on which the Chief Minister is sworn-in. Taking into consideration the manner in which a Parliamentary Democracy and Cabinet system of Government normally works, and the privilege which the Chief Minister enjoys as Chief Minister to decide who shall constitute his Council of Ministers, we do not see any reasons, especially having regard to the existing Rules of Business, to take the view that the Chief Minister cannot perform any executive functions of the Government until the other Ministers are sworn-in. This is, of course, on the assumption that within such time as may be considered reasonable by the Governor the Chief Minister inform the Governor the names of the other Ministers who are to be appointed by the Governor under Article 164(1) of the Constitution. We are therefore of the considered view that the second respondent did not suffer from

any constitutional disability in taking any decisions in exercise of the executive power of the Governor prior to 14th February 1985".

The suggestion to make a specific provision in this behalf has been made for the reason that the other High Courts and perhaps the Supreme Court may take a contrary view and that in order to give no room for that, the suggestion to amend Article 163 was made. However, this Government agrees that the Constitution should not be over-loaded with details.

The Chairman has also stated that the general principle adopted is that the Governor will exercise his power after consulting his Council of Ministers and that the Governor is bound to consult the Council of Ministers. In *Samsher Singh's case* (AIR 1974 SC 2192) which the Chiarman was pleased to refer, it was observed by the Supreme Court as follows :—

"**55.** In making a report under Article 356, the Governor will be justified in exercising his discretion even against the aid and advice of his Council of Ministers. The reason is that the failure of the Constitutional machinery may be because of the conduct of the Council of Ministers. This discretionary power is given to the Governor to enable him to report to the President, who, however, must act on the advice of his Council of Ministers in all matters. In this context Article 163 (2) is explicable that the decision of the Governor in his discretion shall be final and the validity shall not be called in question. The action taken by the President on such a report is a different matter. The President acts on the advice of his Council of Ministers. In all other matters where the Governor acts in his discretion he will act in harmony with his Council of Ministers. The Constitution does not aim at providing a parallel administration within the State by allowing the Governor to go against the advice of the Council of Ministers.

56. Similarly, Article 200 indicates another instance where the Governor may act irrespective of any advice from the Council of Ministers. In such matters where the Governor is to exercise his discretion he must discharge his duties to the best of his judgement. The Governor is required to pursue such courses which are not detrimental to the State.

57. For the foregoing reasons we hold that the President or the Governor acts on the aid and advice of the Council of Ministers with the Prime Minister at the head in the case of the Union and the Chief Minister at the head in the case of State in all matters which vest in the executive whether those functions are executive or legislative in character. Neither the President nor the Governor is to exercise the executive functions personally. The present appeals concern the appointment of persons other than District Judges to the Judicial Service of the State which is to be made, by the Governor as contemplated in Article 234 of the Constitution after consultation with the State Public Service Commission and the High Court. Appointment or dismissal or removal of persons belonging to the Judicial Service of the State is not a personal function but is an executive function of the Governor exercised in accordance with the rules in that behalf under the Constitution."

It will be seen from the above judgement that a majority of five Judges has held that the Governor has discretion while sending a report under Article 356. The Bench has gone further and stated that Article 200 indicates another instance where the Governor may act irrespective of any advice from the Council of Ministers. This is not a desirable position. A Bill which has been passed by both Houses of the State Legislature should automatically be assented to by the Governor. But two Judges of the Supreme Court observed as follows :—

"**153.** We declare the law of this branch of our Constitution to be that the President and Governnor, custodians of all executive and other powers under various Articles shall, by virtue of these provisions, exercise their formal constitutional powers only upon and in accordance with the advice of their Ministers save in a few well-known exceptional situations. Without being dogmatic or exhaustive, these situations relate to (a) the choice of Prime Minister (Chief Minister), restricted though this choice is by the paramount consideration that he should command a majority in the House; (b) the dismissal of a Government which has lost its majority in the House but refuses to quit office; (c) the dissolution of the House were an appeal to the country is necessitous, although in this area the Head of State should avoid getting involved in politics and must be advised by his Prime Minister (Chief Minister) who will eventually take the responsibility for the step. We do not examine in detail the Constitutional proprieties in these predicaments except to utter the caution that even here the action must be compelled by the peril to democracy and the appeal to the House or to the country must become blatantly obligatory. We have no doubt that de Smith's statement regarding royal assent holds good for the President and Governor in India."

'Refusal of the royal assent on the ground that the monarch strongly disapproved of a bill or that it was intensely controversial would nevertheless be unconstitutional. The only circumstances in which the withholding of the royal assent might be justifiable would be if the Government itself were to advise such a course—a highly improbable contingency—or possibly if it was notorious that a Bill had been passed in disregard to mandatory procedural requirements: but since the Government in the latter situation would be of the opinion that the deviation would not affect the validity of the measure once it had been assented to, prudence would suggest the giving of assent'.

Thus, the majority view is that while exercising the power of assent to a Bill passed by the State Legislature, the Governor can act irrespective of the advice of the Council of Ministers. This position ought to be avoided and it should be made clear that in according assent to a Bill the Governor is bound to act always on the advice of the Council of Ministers and should have no discretionary power in this regard.

Article 356 :

The State Government has already suggested that Article 356 should be omitted in view of the fact that the ruling party at the centre, whatever be the party's

composition, has exercised the power against the State Governments ruled by a different party. The State Government reiterates the suggestion that Article 163(1) should be amended as follows :—

> "There shall be a Council of Ministers with the Chief Minister at the head to aid and advice the Governor who shall in the exercise of his functions act in accordance with such advice :
>
> Provided that in respect of the functions expressly conferred on the Governor under Articles 239(2), 371 and 371-A, the Governor shall exercise his functions in his discretion."

The position that the Governor should act always according to the advice of the Council of Ministers is the same as set out in Article 74(1) as amended by the Constitution (Forty-second Amendment) Act. What the President is to the Centre, the Governor is to the State Government. This principle has been accepted by the Supreme Court in a number of cases such a *Ram Jawava kapur* v *State of Punjab* (AIR 1955 SC 549 at p. 556) *Sanjeevi Naidu* v *State of Madras* (AIR 1970 SC 1102 at p. 1106) *U. N. R. Rao* v *Indira Gandhi* (AIR 1971 SC 1002 at p. 1005) and *Shamsher Singh's* case (AIR 1984 SC p. 2192).

Proposed Article 164 (1-A) :

As regards the suggestion made by the State Government for insertion of Article 164 (1-A) as a guiding principle for the appointment of the Chief Minister, the Chairman has stated that there may be difficulties in regard to the implementation of Article 164(1-A). But the point the State Government would like to press is that the Governor should appoint the person who commands absolute majority in the Legislative Assembly and in case there is no absolute majority, the Governor should appoint a person who enjoys the confidence of the Legislature. It should not be left to the Governor to have his own discretion in the matter of appointment of Chief Minister. No doubt, there are conventions. But this Commission is well aware of how this convention has been violated in several instances and the Governor has sought to appoint a person as Chief Minister notwithstanding the fact that he does not enjoy the confidence of the Legislature. It is this situation which has led this Government to make the suggestion as proposed in Article 164 (1-A), the basic principle being that the Chief Minister should always be a person who enjoys the confidence of the Legislative Assembly and if that is not possible, election should follow as a democratic method.

The Chairman has pointed out that what will happen if there is a problem of law and order. It is submitted that this problem will not be peculiar to the State. There may be cases also arising at the Centre. What is the position? The State Government's submission is that whatever position is obtaining in the Centre may obtain in the States also. The provision relating to the appointment of the Prime Minister of India should also be made applicable to the appointment of Chief Ministers in the States.

The Chairman has made a suggestion to keep the Assembly in suspended animation. This will not be happy situation for them, it will lead to horse trading and there will be Ayarams and Gayarams crossing from one party to the other. This will be notwithstanding the Anti-Defection Law embodied in the Constitution by the Constitution (Fifty-Second) Amendment Act.

Article 356 :

As regards Article 356, this Government is of the firm opinion that it should be omitted in its entirety. The eighty-seven instances which have been mentioned at pp.34-35 of the Report submitted by the State Government will go to show that this Article has been misused and it will be a hope in vain to expect that this Article will be used only sparingly in future. In fact, Dr. Ambedkar in his Constituent Assembly speech has said that this Article will be a dead letter; but unfortunately it is not so. It has become a very live Article for the Centre to interfere in the affairs of the State Government. Article 356 is against the basic principle of federalism and therefore it has to be deleted.

The safeguards that have been suggested by the Chairman, namely, the incorporation of clauses similar to Article 352(7) and 352(8) will be no safeguards at all for the reason that it is very unlikely that Parliament will disapprove the imposition of President's rule since the ruling party at the Centre will always command a majority in the Parliament.

Article 263 :

The suggestion of the State Government is to omit Article 263 which provides for the constitution of Inter-State Councils. As already submitted at P. 40 of the State Government's Report, any inter-State Council under Article 263 will have no practical value. The tenor and the language of Article 263 are such that any advice tendered, recommendations made and conclusions arrived by a Council established under it are not binding on any party and that such advices, recommendations, etc., may have persuasive value only. Further, under Article 263, an Inter-State Council has so far not been established after the lapse of 35 years since the commencement of the Constitution. It is for this reason that the Government suggested that the Inter-State Council may be abolished.

Inter-State Water Disputes

As regards the Inter-State Water Disputes Act, 1956, the Act as it now stands is not of practical importance. Under Section 4(1) of the Act, when any request is made by the State Government in respect of any water dispute and the Central Government is of opinion that the water dispute cannot be settled by negotiations, the Central Government shall, by notification in the Official Gazette, constitute a Water Disputes Tribunal for the adjudication of water dispute. Section 6 of the Act states that the Central Government shall publish the decisions of the Tribunal in the Official Gazette and the decision shall be final and binding on the parties to the dispute and shall be given effect to by them. This Section 6 has not been amended subsequently. The question here is as to how to enforce the award of the Tribunal if any State Government does not give effect to the award. The 1968 Amendment to the Act does not deal with the enforceability of the award. It is for this reason this

Government have suggested at p.89 of the Report the modification of the Act for introduction of a new provision therein enabling the parties to the dispute to secure through a known legal process the relief to enforce the awards given by the Tribunal. It has also been suggested at p. 89 of the Report that the Government of India may declare all Inter-State rivers in the country as national rivers as most of the major rivers are Inter-State in character. In the same page, it has been suggested that all disputes relating to Inter-State rivers should be referred to a permanent Tribunal constituted by the Supreme Court and that if this view is accepted, then the Inter-State Water Disputes Act, 1956 would require repeal or modification. The State Government is in agreement with the view suggested by the Chairman that Article 262(2) may be deleted and jurisdiction may be given to the Supreme Court to decide Inter-State Water Disputes and that automatically any decision or decree of the Supreme Court will be binding. The suggestion made by the Chairman that the matter should come to the Inter-State Council first and that the differences could be sorted out and settled and that if it could not be settled, it is mandatory on the part of the Central Government to set up a Tribunal will, it is submitted, be a time consuming process and that the defects now found in the Inter-State River Water Disputes Act, 1956 will again be repeated. For the Inter-State Council to meet it will take time; for the Inter-State Council to arrive at a decision it will take time; and if the Central Government is to appoint a Tribunal after being informed that the dispute could not be settled by the Inter-State Council, further time will be taken.

Article 254 :

As regards the suggestion made by the Chairman for facts and figures in relation to the reservation of Bills under Article 254, the following are submitted.

The basic point sought to be made by the State Government is that when a Bill is sent to the Central Government for obtaining the assent of the President on the ground of repugnancy to an existing law or to an earlier law made by Parliament with reference to Article 254(2), virtually the Central Government sits in appeal over the Bill. There are cases where a Bill has been passed unanimously by both Houses of the Legislature and when the Governor reserves the Bill for the consideration of the President on the advice of the Chief Minister, the Bill is referred to 4 or 5 Ministries by the Home Ministry, which is the Co-ordinatory Ministry. Each Ministry takes its own time to offer its remarks and the Bill is subjected to scrutiny from a policy and Constitutional angle. So far as policy is concerned, the State Government will be the best Judge as to what is the best policy so far as the State is concerned and it is not for the Central Government to sit in judgment over a policy decision of the State Government and adopted by the State Legislature in the form of a Bill. If this trend continues, then virtually the State Legislature will be subordinate to the Central Government which the Constitution does not envisage, at all. It is therefore submitted that the Central Government should never look into the policy angle embodied in the Bill unless it be that the Bill is dangerous to the sovereignity, integrity and unity of India.

Again, it is submitted that the Central Government sits in judgment over the Constitutionality of the issue. The question whether a particular enactment is Constitutional or not can never be answered conclusively except by the Supreme Court. Even the High Court judgement is not final and the Supreme Court may reserve or affirm the decision of the High Court and Article 141 of the Constitution States that the law declared by the Supreme Court shall be binding on all courts. If the State Government consider that the Bill is Constitutional, it should not be open to the Central Government to sit in judgment over that decision for the decision of the Central Government cannot itself be said to be final and the Constitution also does not say so. It is therefore submitted that when a Bill is reserved for the assent of the President by the Governor on the advice of the Chief Minister, the President should automatically assent to the Bill.

Instances

I. **Delay in giving assent to Bills :**

1. The Industrial Disputes (Tamil Nadu Amendment) Bill, 1981 (Legislative Assembly Bill No. 43 of 1981). This Bill was passed by both Houses of the State Legislature and the same was reserved for the consideration of the President in Letter No. 16853/81-1, dated 10th June, 1981.

Under the Industrial Disputes Act, 1947 (Central Act XIV of 1947), a reference by the Government is necessary if a dispute is to be adjudicated by a Labour Court. It is decided that when one settlement is arrived at in the course of any conciliation proceeding taken under section 2-A of the said Act, the aggrieved individual workmen shall be allowed to take the industrial dispute arising under Section 2-A of the said Act in the prescribed manner to the Labour Court direct without any reference by the Government for adjudication by such Labour Court and the Labour Court shall proceed to adjudicate such dispute as if such dispute has been referred to it for adjudication and all the provisions of the Act relating to adjudication of industrial disputes by Labour Court shall apply to such adjudication. Sub-section(4) of section 11 of the said Act as it stands now does not empower the conciliation officer to summon and examine any person for the purposes referred to therein. It is considered necessary that apart from calling for any records the conciliation officer should also be vested with the power to enforce attendance of persons and examine them on oath or to issue commissions for examination in addition to their power to compel the production of documents. The Bill sought to achieve the above objects.

The Bill was reserved on the ground that it was repugnant to the provisions of the Industrial Disputes Act, 1947 which was an existing law on a concurrent subject.

On 21st July 1981, a letter was received from the Ministry of Home Affairs stating that the Ministry of Labour who were consulted in the matter had advised that the Central Government were already considering amendments to the Industrial Disputes Act, 1947 on the same lines as proposed in the Bill by the State Government and that the State Government may consider deferring the proposal pending decision of the Central Government in the matter.

On 7th September 1981, the State Government again expressed its anxiety that the Bill should be placed on the Statute Book and the benefits accruing therefrom made available to the working class as early as possible and that it may take some more time for the Government of India to bring the legislation contemplated by them.

On 1st February 1983, the Government of India informed the State Government that the Secretaries' Committee before which this Bill was placed felt that the right sought to be conferred on workman should not have general applicability and certain categories of industries and services should be insulated from the operation of the provisions, *viz.*, the essential services and vital sectors. The State Government was advised to consider modifying the proposal in this regard.

On 4th October 1983, the Government of India were informed that having regard to the provisions of section 2-A of the Industrial Disputes Act, which confined itself to individual disputes relating to the discharge, dismissal, retrenchment or termination of the services of an individual workmen, the Bill did not cover cases of strikes and lock-outs, etc., which have wider impact upon industrial sectors. The Government of India were informed that as the Government of India had already given their concurrence to the above Bill and as the Bill had been passed by both Houses of the Legislature, the assent of the President may be expedited.

On 6th March 1984, the then Labour Minister Thiru Veerendra Patil informed the then State Labour Minister that the Sanat Mehta Committee constituted by the National Labour Conference has also made recommendation, more or less on similar lines and that they have not so far taken a decision in this regard and that till such time a decision was taken, it was not possible for them to communicate the Government of India's acceptance to the proposed amendment.

In view of the stand taken by the Government of India, this Government informed the Government of India that this Government have decided to wait till such time a decision is taken by the Government of India on the report of the Sanat Mehta Committee. Thus the Bill has been subjected to protracted correspondence. The Bill is still pending with the Government of India.

2. **The Tamil Nadu Hindu Religious and Charitable Endowments (Amendment) Bill, 1981 (L.A. Bill No. 64 of 1981).**—On 23rd September 1981, this Bill was sent to the Government of India for obtaining the assent of the President in Lr. No. 28802/81-2. The Government of India were reminded several times, *viz.*, on 24th October 1981, 3rd December 1981, 11th January 1982, 10th February 1982 and 18th March 1982. On 17th March 1982, the Government of India forwarded the representations of Sri-la-Sri Ambalavana Pandara Sannathi Avl. raising certain objections to the provisions of the Bill and asking for the comments of the State Government. On 7th September 1982, the comments of the State Government were sent. The legal contentions raised by the Adinathar were also sent. It was also pointed out that the decision of the Madras High Court in the writ appeal had no application to the Bill in question and that an appeal has been preferred to the Supreme Court.

Again, on 17th June 1982, the Government of India have sent further representation from Sri-La-Sri Ambalavana Pandara Sannathi and asked for the comments of the State Government.

Again on 4th January 1983, the Government of India asked for the comments of the State Government and suggested that it is perhaps advisable either to await the judgement of the Supreme Court or to take such other steps to have the Madras High Court judgment reviewed.

On 2nd April 1983, this Government replied to the points raised by the Government of India and stated that the Bill was Constitutional and that the assent may be expedited. Further reminders were sent.

Again on 8th June 1983, the Government of India asked for the comments of this Government with reference to Article 26 of the Constitution. On 1st December, 1983, this Government replied that the Bill does not infringe Article 26 and asked for the expedition of President's assent. The Government of India were again further reminded.

On 7th January 1984, the Government of India referred to some judgements of the Gujarat High Court and asked for comments. On 5th June 1984, it was pointed out that the Gujarat judgement had no application and asked for the expedition of President's assent. On 9th July 1984, the Government of India remarked that the Bill in so far as it relates to removal of the trustee for appointing a successor who has not the capacity to discharge his functions will infringe Article 26 of the Constitution. This Government again replied by a D.O. Letter from the Law Minister to the then Union Law Minister stating that the Bill is Constitutional and requesting for President's assent, enclosing a note on the subject.

The Government of India were again reminded on 4th July 1985. On 19th August 1985, the Law Secretary of the State Government discussed the matter with the Union Law Secretary, Legal Affairs and explained the Constitutional position, pointing out that according to the judgement of the Supreme Court in *Mahalinga Thambiran's case* (AIR 1984 SC 199) relied on by the Madras High Court, custom could be modified by a Statute and accordingly the Bill passed by the State Legislature is constitutionally valid. The then Union Law Secretary wanted the Advocate General's opinion obtained. On 2nd September, 1985, the Advocate-General has been asked to give his opinion on this subject and his reply is awaited.

The Government of India's point of view is that the Bill, in so far as it relates to the removal of the trustee, for nominating a successor not having the capacity to perform the duties and functions under the Act, is not Constitutional. The Bill contains enough safeguards before removing a trustee. A suit lies to a civil court with an appeal to the High Court. This is a case where assent is being delayed as, in the Government of India's view, the Bill is not constitutional. It is submitted that this is for the Supreme Court to decide whether the Bill passed by the State Legislature is constitutional or not and the Government of India cannot assume the functions of the Supreme Court in deciding the Constitutionality of the Bill.

3. The Tamil Nadu Recognition of State Register of Practioners of Indian Medicine Bill, 1983 (L.A. Bill No. 14 of 1983).—The Bill was sent to the Government of India for obtaining President's assent on 14th February 1983.

The Registrar of Indian Medicine as maintained by the Tamil Nadu Board of Indian Medicine has no statutory basis and is based on only executive order issued by the State Government from time to time. The election of members representing the Ayurveda, Sidda and Unani systems of Indian Medicine to the Central Council constituted under the Indian Medicine Central Council Act, 1970 (Central Act 48 of 1970) is made with reference to the "State Register of Indian Medicine" as defined in section 2(1)(j) of the said Central Act. It has been represented to the Government that unless the State Register of Indian Medicine is given statutory basis, the Medical Practioners who are Registered as on the 1st February 1983 in the said State Register will be ineligible to stand for, or vote at, the aforesaid election. It was therefore proposed to provide necessary statutory basis to the said Register of Indian Medicine by undertaking necessary legislation. The Bill sought to achieve the above object.

On 27th June 1984, the Government of India requested the State Government to give an assurance that they could make the Necessary amendment in the Bill after the assent of the President is accorded to the Bill.

4. The Tamil Nadu Building and Construction Workers (Conditions of Employment and Miscellaneous Provisions) Bill, 1984 (L.A. Bill No. 44 of 1983).— On 8th November 1984, the Bill was sent to the Government of India for obtaining President's assent.

At present there is no separate legislation to safeguard the interests of the workers engaged in building and construction works in regard to their wages, health and safety and other working conditions. The need to enact a separate legislation in this regard has been keenly felt. The Government have, therefore, decided to enact a separate legislation to regulate the working canditions of the workmen engaged in building and construction work in this State. The Bill sought to achieve the above objects.

On 23rd March, 1985, the Government of India have asked for some clarifications.

5. The Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Amemdment Bill 1985 (L.A. Bill No. 44 of 1985).—On 3rd July 1985, the Bill was sent to the Government of India for obtaining the President's assent.

In terms of the existing provisions of the Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Act, 1961 (T.N. Act 58/61), no public trust and educational institution can acquired any land.

Representations have been received by the Government that the above prohibition to acquire land imposed under the said Act has hampered the growth of educational institutions and hospitals. The public trusts, educational institutions and hospitals have not been able to acquire land even for bonafide purposes, that is, for the establishment or for the expansion of educational institutions and hospitals. It has, therefore been considered necessary to amend the said Act suitably taking power for the Government to grant permission in favour of public trusts, educational institutions and hospitals to hold or acquire land for such educational and hospital purposes subject to the conditions that may be imposed by the Government in the order granting such permission. To give effect to the above proposal, it has been decided to amend the said Act suitably. The Bill sought to give effect to the above proposal. The provisions of the Bill as introduced in the Legislative Assembly and as passed by both Houses of the Legislature were the same.

On 26th November 1985, an interim reply was received from the Government of India. The Government of India were reminded on 16th December 1985.

6. The Tamil Nadu Urban Land (Ceiling and Regulation) Amendment Bill, 1985 (L.A. Bill No. 45 of 1985).—On 31st July 1985, the Bill was sent to the Government of India for obtaining the President's assent.

In terms of the existing provisions of the Tamil Nadu Urban Land (Ceiling and Regulation) Act, 1978 (Tamil Nadu Act 24 of 1978), public charitable or religious trusts, educational institutions, hospitals and industrial undertakings cannot sell any vacant land even for the purpose of promoting the objectives of the trust or for the purpose of expanding the educational activities of such educational institutions or preserving or maintaining the industrial growth of such industrial undertaking. Representations have been received that the prohibition to sell the whole or a portion of a vacant land held by such public charitable or religious trusts, educational institutions, hospitals and industrial undertakings, hampers the growth of the said public trusts, educational institutions, hospitals and industrial undertakings. It has, therefore, been considered necessary that in the case of public charitable or religious trust which is desirous of starting an educational institution or a hospital or to carry out the objectives of the trust, when they do not have adequate financial resources, such trust may be permitted to transfer by way of sale, mortgage, lease or otherwise the whole or a portion of a vacant land by it to carry out the abovesaid objectives. Such permission is to be granted by Government on application made to the Government. The permission will be subject to such conditions. as the Government may impose in the order granting the permission, Similarly, in the case of educational institutions, hospitals and industrial undertakings, it has been considered necessary that they may be permitted by Government to transfer by way of sale, mortgage, lease or otherwise the whole or a portion of the vacant land held by them so that the proceeds of such transfer may be utilised for the purpose of expanding the activities of educational institutions or hospitals or preserving and maintaining the industrial undertakings or promoting the activities of the industrial undertakings subject to the conditions imposed by Government in the order granting the permission in favour of such institutions, industrial undertakings and trusts. It has, accordingly, been decided to amend the Act

suitably for the above purpose. The Bill sought to achieve the above object. The provisions of the Bill as introduced in the Legislative Assembly and as passed by both Houses of the Legislature were the same.

On 26th August 1985, the Government of India offered some remarks. The Bill is pending with the Government of India.

II. Withholding of assent :

The Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Second Amendment Bill, 1980 (L.A. Bill No. 26 of 1980).—On 30th August 1980, this Bill sent to the Government of India for President's assent.

Clause 5 of the Bill seeks to insert a new chapter as Chapter III-A in the principal Act. The said new Chapter III-A contains new section 23-A to 23-G. Sub-section (1) of the new sec. 23-A invalidates all transfers effected on or after 1st January 1959 and before 6th April 1960 by any person including a trust who held land in excess of the ceiling area on 6th April 1960 or any person including a trust who would have held land in excess of the ceiling area on that date but for the transfers referred to above. Sub-sect. (2) of the said sec. 23-A seeks to exempt any transfers made to any person (other than a trust) not exceeding one unit of land which is defined as five ordinary acres of dry land or two and a half ordinary acres of wet land, subject to the conditions provided therein. Sub-section (4) of the said section 23-A provides for the publication of a notification by land Commissioner to the effect that the surplus land is required for a public purpose and on the publication of such notification, the land specified therein shall be deemed to have been acquired for a public purpose and vested in the Government free from all encumbrances. The new sec. 23-C *inter-alia* provides for the application of the provisions contained in the principal Act including the provisions relating to the amount payable in respect of lands acquired under that Act. The new section 23-E provides for the constitution of a Committee consisting of the persons referred to therein, for the purpose of gathering information and particulars relating to transfers referred to in sec. 23-A (1), etc.

On 13th March 1981, the Government of India sent a letter containing the representation from the Thanjavur District Agriculturists Association and also stated as follows :—

"The examination of the Bill in various Departments of the Union Government has brought out the following points :—

(i) The Tamil Nadu Bill seeks to invalidate certain transfers made on or after 1st January 1958 and before 6th April 1960 when the the Tamil Nadu Land Reforms (Fixation of Ceiling on Land) Act, 1961, came into force. The proposed invalidation will be both inexpedient as a public policy and highly discriminatory in its operation. Unless there are exceptional reasons, settled rights in land should not be disturbed and it is as much an obligation of the State to prevent uncertainty in the property rights of citizens as to ensure that these rights do not operate in a manner detrimental to public good. These rights, it is obvious, should be subject to modification if such modification serves an important public purpose. In the present case, there is no information as to the public good that will be served with the proposed invalidation of the transfer under reference. The State Government have no doubt said that some big land holders are delieved to have transferred parts of their holdings soon after the then Revenue Minister of the State referred to the prospect of a ceiling legislation in the Legislative Assembly some time in March 1958 but there is no information as to the scale of such transfers. The principal Act was published in the Fort St. George Gazette, on 2nd May 1962 but was given effect to from 6th April 1960, when the Bill was published in the Gazette. Transfers made after the latter date with a view to defeating the provisions of the Act were invalidated. It would thus appear that, when the principal Act was enacted, the State Government had thought that the larger number of malafide transfers can be invalidated if the Act was given retrospective effect from a date about 2 years earlier. During all these years, the State Government have not had any occasion to review this policy. To re-open, at this stage, transfers made nearly two decades ago would appear to be warranted by the amount public good likely to be served by such an extraordinary step. It is not unlikely that such a measure would only promote unsettled conditions in land rights without resulting in any tangible or substantial benefit.

(ii) As regards the discriminatory character of the Bill, a reference may be made to the explanation to sub-clause (1) of the proposed clause 23-A according to which "transfer" does not include partition. If the then Revenue Minister's announcement in March 1958 is presumed to have occasioned large scale malafide transfers, it would be reasonable to presume that a large number of such transfers would have been through partition. If partition is not disregarded, transfers which are no more than a legal fiction (since the land is retained with the family) are validated while transfers which may really convey the interest to another person would become void. It is natural that the larger number of malafide transfers should have taken place through the device of partition and, by its refusal to interfere with partition the Bill will in effect discriminate against bonafide transfers while protecting malafide and collusive transfers.

(iii) As regards the legal position, the proposed amendment would fall foul of the second proviso to Article 31-A of the Constitution. As per the said proviso. it has been laid down that where any law makes any provision for the acquisition by the State of any estate and where any land comprised therein is held by a person under his personal cultivation, it shall not be lawful for the State to acquire any portion of such land as is within the ceiling limit applicable to him under any law for the

time being in force or any building or structure standing thereon or appurtenant thereto, unless the law relating to the acquisition of such land, building or structure provides for payment of compensation at a rate which shall not be less than the market value thereof.

(iv) The proposed legislation in so far as it omits to make provision for payment of compensation at the market value of any estate referred to in the said proviso. In view thereof, the Bill to the aforesaid extent would be unconstitutional. The mere fact of inclusion of the parent Act in the Ninth Schedule (item 46) would not save amendment proposed to be made.

In view of the consideration referred to above it may not possible to recommend to the President to grant his assent for the Tamil Nadu Bill referred to above.

On 4th May 1981, a reply was sent to the Government of India pointing out that the Bill seeks to plug out the loopholes in the Land Ceiling legislation and to achieve real purpose of ceiling law and also pointing out that the Government of Tamil Nadu have already stated that the Bill would have to be included in the Ninth Schedule to the Constitution so that the law cannot be challenged as violative of the second proviso to clause (1) of Article 31-A of the Constitution. On 4th May 1981, the Chief Minister sent a letter to the Prime Minister. On 12th October 1981, the Deputy Secretary to the Government of India in Lr. No. 17/68/80-Judl. addressed to the Secretary to the Government of Tamil Nadu, Law Department, has stated that the President's assent was withheld. It was stated in that letter as follows :—

"With reference to your letter No. 21045/80-1, dated 30th August 1980 on the subject noted above, I am directed to return herewith two authentic copies of the Bill withholding President's assent from the Bill under Article 201 of the Constitution of India. Their receipt may kindly be acknowledged". The Government of India in the letter, dated 22nd January 1982 stated the reason as follows:—

"I am directed to refer to your letter No. 21045/80-9, dated 5th January 1982, on the subject cited above and to say that the matter was considered at length and the Government of India was of the view that the transactions sought to be set aside by the Bill were made nearly two decades ago. During the intervening period the land involved may have changed hands several times and the present owner in all likelyhood, would not have been a party to the malafide transaction. If small landholders and genuine cultivators are exempted, and if transactions made through partitions were exempted the residual cases will be few and will not justify the extraordinary measure the Bill contemplates. The State Government had pointed out that the scheme of partition exists in the principal Act which was enacted with the assent of the President. While this is not denied, the Government of India have, from time to time, urged the State Government to reconsider these provisions which have resulted in quite some land remaining outside the ceiling law and note should be taken of these suggestions. In brief, the exemption of transactions made through partitions was discriminatory and repugnant to the avowed purpose of the Bill. Further, more, the Government of India was not in favour of disturbing settled and long standing rights in land unless there were compelling reasons and the reasons do not seem to exist in this case.

The legislation in so far as it omits to make provision for payment of compensation at the market value of any estate referred to in the second provision to Article 31-A of the Constitution infracts the the guarantee afforded by the said proviso. In view thereof, the Bill to the aforesaid extent would be unconstitutional and that the mere fact of inclusion of the parent Act in the Ninth Schedule (Item 46) would not save the amendment proposed to be made."

Thus, it will be seen that the Government of India was not in favour of disturbing settled and long standing rights. It may be pointed out that this is a Bill which was passed unanimously by both Houses of the State Legislature.

Articles 256, 257 and 258 :

As stated in page 34 of the report submitted by the State Government under the heading "Administrative Relations". Articles 256, 257, 365 and 356 are the four Articles in the Constitution which have both catalytic and fatalistic effect on the States, in view of the possible unitary exercise of executive power by the Union under those Articles. As stated at page 37 of the Report, the expressions such as (a) as to ensure compliance with laws made by Parliament and for the issue of directions as may be necessary for that purpose (Article 256).

(b) as not to impede or prejudice the exercise of the executive power of the Union and the consequential power to issue directions as may be necessary for that purpose (Article 257(1)).

(c) failure to comply with or to give effect to the directions given by the Union raising a presumption that a circumstance has arisen in which the State cannot be carried on in accordance with the provisions of the Constitution (Article 365).

(d) the report of the Governor or the satisfaction otherwise by the President for his assumption of all the functions of the governance of the State (Article 356) comprehend powers reserved by the Union under the Constitution to have an over-riding influence, over the States bringing down the theory of autonomy of States to a catastrophic minimum. This is so because the use of such power during the three decades in the past have ex-necessities demonstrably proves that there has been excessive or misuse of such powers resulting in extra-ordinary steps being taken and the edifice of State autonomy made to crumble. We have already expressed the view that the chain reaction between Articles 256 and 257, 365 and 356, which is in the nature of catalytic influence is bound to result in a fatalistic instrusion into the autonomy of the State. Articles 256, 257, 365 and 356 are therefore to be deleted; For the hopes of the States in having preserve them as reserve measure have become dupes and as the Administrative Reforms Commission itself said the assumption of governance

by the President (under Article 356) has not become exceptional feature but a normal phenomenon and such a drastic medicine prescribed in the Constitution is being administered a daily food as a matter of course instead of being resorted to as a last resort. The Government are also of the view that Articles 357 and 360 should also be omitted.

Planning :

As regards the suggestion made by the Chairman the local bodies can be entrusted with planning and some functions can be processed by the State Government, it is submitted that the various laws governing local bodies provide for this and in particular, the Tamil Nadu Town and Country Planning Act, 1971 (Tamil Nadu Act 35 of 1972) contains provisions regarding the regulation of planning, including planning for the Metropolitan City of Madras.

Entry 52 of the Union List :

As stated at pages 17-18 of the Report submitted by the State Government, the Industries (Development and Regulation) Act, 1951, has been passed with reference to this entry and Parliament has brought many items within the scope of this Act with the result that the Legislative power under entry 24 of List II, viz., "Industries subject to the provisions of entries 7 and 52 of List I" becomes actually ineffective because, to the extent Parliament has included any industry within the scope of the Industries (Development and Regulation) Act, 1951 or any other Act under entry 52 as a controlled industry, the legislative competence of the State Legislature is deprived of. This certainly affects the federal structure of the Constitution in the sense that the State Legislative is made incompetent in respect of the controlled industries coming under the Acts enacted by Parliament under entry 52 of List I.

Further, the expression "in public interest" is so wide that any and every industry can be brought within the scope of entry 52. It was for this reason that the Government of Tamil Nadu suggested that the core industry of crucial importance for national development should be specified in the entry itself and this Government has recast entry 52 as at page 18 of the Report submitted by the State Government. The request of the State Government is that the Commission should make an exercise on this subject and suggest specifically as to what entry should be specified in entry 52 itself. The Chairman's suggestion that if the Commission goes into details, it will be risky, requires reconsideration and the Commission may accept the suggestion of this Government that the entry 52 itself should specify the industries without giving any room for the Parliament or the Central Government to encroach on the Legislative powers given to the State Legislature under entry 24 of List II and on the co-extensive executive power of the State Government.

GOVERNMENT OF TRIPURA

Memorandum

MEMORANDUM

Commission has sent questionnaire containing several parts. We do not feel it necessary to give answer to each question separately. We propose to give a compact statement as follows before the Commission.

We do not agree with the view that our Constitution is basically sound and flexible enough to meet the challenge of the changing times. We have already amended our Constitution of 45th times during the period of 34 years. People of India will remain grateful if the Commission can find out any other Constitution of any worthy democratic country which has undergone so many changes within a span of 34 years.

The difficulties, issues, tensions and problems which have arisen in Union-State relationships are mainly due to substantial defects in the scheme and fundamental fabric of our Constitution. It is also true that over the years these relationships have not been worked out in conformity with the minimum guarantee laid down in the Constitution to protect the interest of the States.

These difficulties, problems and issues cannot be resolved without major constitutional amendments. The particulars of the distortions have not been mentioned in the questionnaire and, therefore, no definite answer can be given. Change of executive procedure, practice are absolutely necessary. These are creating hindrances in respect of Union-State relationships. But only change of executive procedures and practices will not solve the problem unless the Constitution itself is suitably amended. Advisory body, according to experience gained by us during these years, have no value and it is the common feeling that the positive recommendations of the Advisory bodies are not acted upon if it adversely affects the vested interest.

Yes, we do agree that the protection of the independence and insurance of the unity and integrity of the country is of paramount importance. But we are sorry to say that there is no effective provision in the Constitution in this regard. Rather our experience is that for temporary political gain and in the interest of capitalist and imperialist countries divisive forces have been given opportunities to be active in our country.

Constitutional provisions regarding the obligations of the Centre and the State in respect of the country as a whole and to one another are not reasonable. The provision require further considerations so that fullest autonomy are given to State in respect of the matters with which only States are concerned.

According to the provisions our Constitution, India i.e. Bharat is a Union of States. Under Article 3 of the Constitution power has been given to the parliament to (a) form a new State, (b) alter areas, boundaries and name of the existing States, after observing certain procedures. Whatever might be the power given to the parliament, concept of 'State' as contemplated in our Constitution cannot witheraway not to speak of its complete abolition. From the scheme of our Constitution it is apparent that our Constitution is neo-federal in character. Distribution of different powers—executive, legislative and judiciary between the Centre and the States amply suggest that India is a federal country, though the peculiar orthodox characteristics like agreement between the States, separate Constitution of the States etc. are not present.

We think that Parliament shall have the right to convert union Territories into State, but must not have other powers any right as given to it under Article 3 of the Constitution. If such powers are given to the Parliament divisive forces shall always try to put pressure upon the Central Government to pass necessary enactment in exercise of its power under Article 3 of the Constitution and in fact this power of the Parliament has created so many problems in our country.

We must not overlook that by much controversial 42nd amendment in the preamble we have included the word 'Socialist' and it is expected that such insertion was not without any meaning. In the present political system we can find two types of federalism : (1) Socialist Federalism and (2) Capitalist Federalism. If we look at the Constitution of USSR we shall see a model of socialist federalism. Of course, Soviet Constitution, 1977 has been possible only after a long period of socialist rule in that country. But even for socialist rule in the country, Constitution must have some provisions through which socialist economy can be established in the country and thereby socialist federalism can be achieved.

It is too late in the day to argue that only by inserting the term 'Socialist' in the preamble of the Constitution, a country can be changed into a socialist country.

To make federalism and democracy as contemplated in our Constitution meaningful we have to amend our Constitution. The Constitution as it stand today, in many fields has spent its force, and in other fields it has been used to throttle democracy and it is being used to oppress weaker section of the people. Sonorous words used in the preamble of the Constitution displaying left ideals do not melt ice any more. In reality social justice and dignity of human beings have ruthlessly been ravished during this entire post constitutional period. Poor citizens have been exploited ruthlessly and capital has been accumulated in few hands. All these were/are possible because provisions of our Constitution do permit such

situation to exist and continue. Basic fabric of our Constitution encourages growth of capitalism and exploitation of majority of people. Keeping this basic fabric intact, introduction of the word 'Socialist' in the preamble of the Constitution does not make our country a Socialist country. Socialism, by this time, has been well established in many countries and it has an internationally accepted meaning and system of administration. Inclusion of the word 'Socialist' in our Constitution does justify that the provisions of the Constitution should be so amended so that socialist economy can be established to make way for socialist federalism. Our Constitution must have provisions through which socialist economy and socialist rule can be established to make the introduction of the word 'Socialist' in the preamble of the Constitution meaningful. Our entire Constitution should be amended so that the socialist federalism, socialist economy, socialist society can be achieved and established and justice in socialist way can be administered, because under the present capitalist system no body can expect those in our country.

While the basic nature of the Constitution framed in 1960 was declared to be federal in principle, its content was excessive centralisation. Furthermore, in its actual working it became still more centralised. The fact that the same political party was in the saddle at the Centre and in all the States for nearly three decades facilitated this process.

The States were made to surren der 'Voluntarily the rights that they had in the original provisions of the Constitution. Many of the amendments made to the Constitution during the last 37 years deprived the States of whatever element of autonomy they originally had.

That is why, the moment other parties started heading the administration at the State level, the question of Centre-State relations became the subject of hot debate. Once the non-Congress State Governments started agitating for greater powers and resources, the Congress-led State too started joining the demand. The memorandum submitted by the State Governments to the successive Finance Commissions will show that there is hardly any difference between some of the Congress-led and other State Governments in protesting against the inroads made into the State resources—a process that has been uninterruptedly going on during this entire period.

The entire question of the relations between the Union and the States, therefore, requires thorough re-examination. In the very framing of the Constitution the federal principles and State autonomy were to a large extent violated. We do not agree with the propositions that there is nothing wrong with the Constitution as it was framed and that what is wrong is only its working. At the same time, we hold that in its actual working the Constitution came to be distorted, ever the limited extent of autonomy that found a place in the Constitution has been eroded. We, therefore, suggest a thorough re-examination of the basic provisions of the Constitution. Before proceeding to spell out how this should be done, let us explain our general position with regard to Centre-State relations.

We stand for the unity of the country and fight all forces of disintegration, we definitely stand for an effective and efficient Centre capable of defending the country, organising and consolidating its economic life and adequately armed with powers to discharge its other jobs like foreign policy, communications, foreign trade etc.

Unfortunately, this urge for unity among the people, their desire that India should be protected against external aggression has been exploited by the ruling party to appropriate dictatorial powers to the Centre, abrogeting and eroding the powers of the constituent States. The ruling party's idea of a strong centre is a dictatorial Centre carrying out its behests. The fact that the notorious 42nd amendment of the Emergency days reduced the States to the position of a subordinate dependent of the Government of India, showed that an attack on their powers was the inevitable requirement of authoritarian rule. The question of Centre-State relations therefore, not only relates, to the question of defending Indian Unity, it has become an issue in the struggle between the forces of dictatorship and democracy.

This is not accidental. The Constitution that was framed after independence reflected the needs of the capitalist path of development which required India as unified, single, homogenous market. It reflected the needs of the big capitalists allied with landlords, she considered the demand of democracy, state autonomy or equality of languages, as obstacles to their economic domination and political power.

We state that it is but natural that in such a situation the contradiction between the Central Government and the States should have grown. Underlying these contradictions often lies the deeper contradiction between the big bourgeisie of this or that State on the other. This deeper contradiction gets constantly aggrevated due to the accentuation of the unevenness of development under capitalism.

The pre-vested interest policies of the Centre, its compromise with feudal forces and imperialist agencies, the economic crisis, the improverishment of the masses resulted in attacks on democratic rights and the rights of the States.

This process was accompanied by abject economic dependence of the States on the Centre. The Centre decides the amounts of public borrowing to be done by the States, it monopolises credit made available by the banking sector and makes the States dependent on adhoc grants sanctioned by it. All these together with the method of determining the size of the State plan reduced planning in the States to a mockery and makes it an adjunct of the Central plan, to be curtailed or expanded according to the convenience and needs of big business which dominates the thinking is Central plans. Backwardness and perpetuation of unevenness result from this. Planning in States is not geared to the needs of the people of the States or to the genuine need of all India development.

Over the years this concentration of the political and economic power at the Centre has been making inroads into whatever federal elements there were in the Constitution. The Emergency with its Constitutional Amendment Acts, enabled the sending of the

Central Reserve Police to the States without the prior consent of the State Governments, with the further provisions that these forces when deployed in the States would take their orders only from the Central Government. The unilateral powers of the Centre to declare some areas of the entire State as 'Disturbed Area' to send Army, is one more instance of its autocracy. These optimised the process of extremes centralisation.

The Centre was armed by the Constitution with sufficient powers to intervene and deal with any problems arising in any part of the country. Added to this are the powers which the Centre assumed for itself during the thirty-year-long central rule of one party, with most of the State being ruled by the same party. These enormous powers were often used against opposition parties duly electcd in State elections. By misusing the Governor's power, minority ministries of the ruling party were installed and the verdict of the electorate was nullified.

Similarly by withholding presidential assent to bills passed by the State legislatures, the Centre has succeeded in sabotaging progressive legislation passed in the interests of the people. The process of agrarian and educational reform started by the 1957-59 Government of Kerala were blocked by the Centre. Recently the agrarian legislation passed by the left Front Government of West Bengal was sent but has not received President's assent, though months have passed since the Legislature voted it. The measure to grant recognition to trade Union on the basic of secret ballot passed by an earlier Left Front Ministry was killed using the same device of withholding assent. The Andhra Bill to abolish the Upper chamber in the State has also been now blocked.

The defence of the unity of India, the preservation of democracy, the coordination of planned economic development and other basic tasks require full and real coordination of the activities of the Central and State Government. That is why we propose autonomy for the States. Without this, India unity will not be durable, the feeling of being one people and one country will be weakened. Against the attack of divisive forces what is required is a strong sense and urge for unity, State autonomy will go a long way in fulfilling this need. The State Legislatures and Governments must have sufficient freedom and powers to fulfil the desires and mandates of the people electing them. Denial of this freedom to the elected legislatures and Government of States, as if the mandate received by the ruling party at the Centre is all that matters, reduces the constituent federal units to the status of dependencies, and lops off one arm of Indian democracy.

We do not believe that a correct solution of the question will *ipso-facto* solve the problems of the Indian people. Their solution relates to changing the basic structure of society. But arming the States with autonomous powers, relating the dectatorial grip of the Centre and the ruling party will help people to fight the grip of the vested interests on the States and the Central Government.

Article 263 of the Constitution of India should be amended and reformulated to ensure that the provisions relating to inter-State Council are made mandatory so as to make it incumbent under the provisions of the Constitution to form an inter-State Council. The Council should be constituted as follows :—

(i) The Prime Minister should be its Chairman.

(ii) The Council should also have a Vice Chairman and this post of Vice Chairman should be filled up by annual rotation by the State Chief Ministers.

(iii) Only the Prime Minister and all the Chief Ministers of different States should be the member of the Council. The Council should meet at least four times during the year and the agenda of the meeting should be decided upon by the Prime Minister in consultation with the Vice Chairman. There should be provisions for emergency meetings to discuss particular situations when the invocation of Article 356 or Article 365 are under contemplation. The Council should have a permanent secretariat to be financed jointly by the Union and States.

The aforesaid Inter-State Council should have among others, the following functions:—

(a) to give its view on any proposals for interreference with the boundaries of a State, or other matters covered by Article 3 of the Constitution;

(b) to offer its view in case a bill passed by a State Legislature has been referred to the President for his consideration;

(c) to consider proposals for removing a serving Governor;

(d) to decide whether directives are to be issued under Articles 256 and 257 and to reach decisions under Article 365 where such situations are expected to arise;

(e) to decide whether President's rule should be imposed in a State under Article 356;

(f) to formulate guidelines to be followed by the Governor of a State; and

(g) to lay down the functions and responsibilities of the permanent agency to supervise and monitor the distribution of resources between the Union and the States.

(h) The National Development Council be supplemented by a properly constituted Inter-State Council in terms of Article 263 as suggested hereinabove with weightage given to the representation of the State Governments. The Planning Commission should be converted into a Secretariat of the inter-State Council and its proposals must be decided upon by the Council, again with appropriate weightage given to the points of view of the State Governments. The Union Ministries must not be allowed to impose their ideas on the Planning Commission and the role of centrally sponsored schemes must be drastically reduced. National Development Council as stated hereinabove should be substituted by the inter-State Council to be set up in terms of duly amended Article 263 as suggested hereinabove.

Article 247 to 254 of the Constitution should be so amended so that the Parliament's powers to legislate on items belonging to the State List do not exceed beyond the period of six months and each of such proposed legislation must first be approved by the inter-State Council, and any proposal to renew any such proposal must have the prior approval of the inter-State Council. Constitution should be amended so that Concurrent List is totally abolished and the items mentioned in the Concurrent List are 'enblock' included in the State List *i.e.* List-II. The residuary powers mentioned in List I should, instead of keeping them in the hands of Central Government, be given within the jurisdiction of the State Government.

All India Services may be retained. But provisions must be there so that the officers belonging to All India Services while serving in a particular State should be, for all purpose, within the disciplinary jurisdiction of that State Government and not under the Central Government.

Unity in diversity is the philosophy which we pursue. Each State has its own peculiarities, tradition, culture, language etc. Therefore, only State can, by way of proper scheme of education, maintain and flourish those traditions, cultures, peculiarities etc. Advancement and also preservation of those cultures, traditions, languages etc. are eminently necessary for the meaningful integration and unity of our nation.

Education should be given exclusively within the domain of State so that each State can make best endeavour, without intervention from the Centre, to flourish and advance the cultures, traditions, languages, etc. of the State.

While enlarging the scope of the State sphere, we must also try to preserve and strengthen the Union authority in subjects that could be carried out only by the Central authority and not by any single State, such as Defence, Foreign Affairs including Foreign Trade, Currency and Communication and Economic Coordination.

Heavy industries, electric power, oil and coal or irrigation schemes which concern more than one States have to be kept in the Union List, so that there can be a common policy. In matters concerning industrial licensing, etc. major modifications in regard to allocation of powers between the Centre and the States are called for. The list in the Seventh Schedule should be reformulated so that the States may be given exclusive powers in respect of most of the industries.

The right of Central Reserve Police or other Police forces the Union Government may raise to operate in the States, should be withdrawn. The subject of law and order and the Police should be fully in the States sphere and the Centre should not interfere with its own specially created forces.

Role of the Governor

This is another provision taken over from the provisions British made Constitution and written into the 1950 Constitution. The Governor under the Constitution was the appointee of the British Government and was responsible to it through the Governor General. The only change made in the new Constitution of free India is that the Governor is an appointee of the Central Government which means the agent of the ruling party at the Centre. The Office has in fact been used by the ruling party at the Centre to deny the people of States to have Governments of their choice and impose on them unwanted Government, etc. The office has also been used to provide for the leader of some faction in the ruling party who has become inconvenient to its 'high Command'. It is, therefore, ridiculous for any body to attribute the quality of 'impartiality' to the Governor.

The post should be abolished and, if this is not possible for any reason, the post should be filled by a somebody who enjoys the confidence of the State Legislature, no Governor to continue when there is a change in the elected legislature. The present provision leads to conflict between the elected executive, namely, the Council of Ministers and the formal head of State who is responsible not to the elected legislature but to the executive at the Centre.

The Office of the Governor is an 'opicentrum' of our Constitution. This office was created by the British imperialist to protect their interest and now it has been followed by the ruling class to protect their vested interest. In a democratic society the office of a Governor who is an appointee of the Central Government to keep a watch over the peoples' representative runs counter to the concept of democracy. Therefore, the post should be abolished and, if this is not possible for any reason, then it must be filled up by a person as stated hereinabove and the function of this post should be subject to the provisions of Article 263 as proposed.

Administrative relations

Apart from the office of the Governor, there are several other provisions which enable the Centre indirectly or directly to interfere in the administration of States. The most important of them are the powers vested in the Central Government to dismiss the State Governments, dissolve State legislature etc. These have been used in a notoriously partisan way.

All India Services have a special feature in our Constitution and thereby it can be said that the administration in our country is a peculiar fusion of Cabinet from the Government and bureaucratic Government. We cannot simply deny the dominant role of bureaucracy in the administration in the set up of our present Constitution. This position must be changed.

All India Services like the IAS, the IPS etc., whose Officers are posted to the States, but remain under the supervision and disciplinary control of the Central Government this system must be abolished. There should be only Union Services and State Services and recruitment to them should be made respectively by the Union Government and the State Government concerned. Personnel of the Union Services should be under the disciplinary control of the Union Government and those of the State Services under the disciplinary control of the respective State Government. The Central Government should have no jurisdiction over the personnel of the State Services. Appropriate

provisions must be made so that persons belonging to All India Services while serving under a State Government should remain under the disciplinary control of that State and not under the Central Government.

Financial relations

No other part of the Constitution has been subjected to such universal criticism from State Governments including those headed by the party ruling the Centre as its financial provisions. The Memorandum submitted by the State Governments to successive Finance Commission would show how wide is the gulf between the Centre and the States on the question of financial powers and resources. A complete overhauling of the entire field of financial relations is thus in order. While almost every department of administration involving heavy expenses (except defence and foreign affairs) falls within the purview of the State Government, almost all the revenue earning items are with the Centre.

The Articles regarding the Finance Commission and distribution of revenues should be amended to provide for 75 % of the total revenues raised by the Central from all sources for allocation to different States by the Finance Commission. This is necessary to end the mendicant status of the States. In what proportion and on what principle this 75% of the total realisation should be divided between the States should be decided by the Finance Commission to decide on the proportion of revenues to be distributed between the Centre and the States. Its task should be only to keep the proportion that each State should get from the total financial realisation by the Centre 75% of which is to be allotted to the States.

Article 280, Clause 3, Sub-Clause (a) which provides for "the distribution between the Union and the States of the net proceeds of the taxes which are to be or may be divided between the Union and the States" should be omitted and the entire clause be redrafted so as to make it clear that it is the duty of the Commission to make recommendations to the President as to the allocation between the State of their respective shares of the proceeds. The State must also be accorded more powers for imposing taxes on their own, and to determine the limit of public borrowing in their respective cases. To achieve these objectives the Seventh Schedule Union, States and Concurrent List should be suitably amended. However, the subject covered under this head shall be subject to the provisions of Article 263 as proposed hereinabove.

Economic and Social Planning

We have explained above that the planning and co-ordination of economic development should be the responsibility of the Centre which however should be carried out in a democratic way through Inter-State Committee in which the States should have equal representation along with the Centre and whose executive organ NDC and Planning Commission should be. The process of planning however is unfortunately being used by the Central Government and the party that controls it as it likes. Added to this are such policies of planning pursued by the ruling party as have proved their bankruptcy, national economy is as a consequence in shambles.

The real solution for the crisis emerging out of this is a total reversal of planning policies. This does not perhaps fall into the purview of the legal-constitutional changes which are under consideration by this Commission. We, however, would urge that this Commission should not accept either the drive towards centralisation of the work of all economic activity in the States in the name of Central Planning (which is demanded by the ruling party) or the abandonment of the centralised planning as is suggested by some other parties. The solution is centralised planning with the active involvement of the States in the formulation and the implementation of policies, or State autonomy under centralised but democratic guidance and high decentralisation at lower level. However, the subject covered under this head shall be subject to the provisions of Article 263 as proposed hereinabove.

Miscellaneous

We would in the end touch upon four aspects of Union-States relations which are relevant in this context. They are the language of administration, the electoral system, the special status of Kashmir within the Indian Union and special features of North Eastern Region.

Our view is that in the course of the growing economic, social and intellectual intercourse the people of different States of India will develop in practice the language of inter-communication most suitable to their needs. This natural process requires that no single language is sought to be imposed on the other linguistic groups. While we are all for encouragement to the learning of Hindi by non-Hindi speaking peoples, we are of the view that the equality of all Indian language should be recognised. All Acts, Government orders and resolutions of the Centre should be made available in all Indian languages. The use of English in the field of Administration, Legislation, Judiciary and as the medium of instruction in education should be discarded, replacing it with the people's language of the State concerned. Right of the people to receive instruction in their mother tongue in educational institutions as well as its use as the medium of education in the State upto the highest standard should be recognised. The Urdue language and its script should be protected. The Eighth Schedule should be amended to include language like Nepali.

The present electoral system enables a party with minority of votes to secure a majority of seats in Parliament or Legislatures. The disastrous consequences of this were seen during the Emergency when the Congress Government elected on a minority of votes introduced measures which made inreads into the civil liberties and democratic rights of the people, reduced the Parliament and State legislature to rubber stamps of a single party—all in the name of asserting the "Supremacy of Parliament". Whatever remained of State autonomy also came under the axe.

It is, therefore, necessary to introduce the system of proportional representation and provide for right to recall. The present special status of Kashmir within the Indian Union should be retained.

The entire North Eastern Region has been neglected for long years. Some special provisions should be made in the Constitution for the entire region including the State of Tripura for its socio-economic development so that they can be at part with other State "Regional Autonomy in Tribal Compact Areas should be introduced after amending the Constitution for the proper protection of the interests of Scheduled Tribes.

There must be a separate High Court for each of the State including the State of Tripura, otherwise it is not possible for the poor persons of the State to seek redress of their grievances from the highest Court of the State. More than 80% (Eighty percent) of the total population live below the proverty line. In the State of Tripura we do not have Bench of High Court on all the working days of High Court. At present, State of Tripura is under the jurisdiction of Gauhati High Court having its principle seat at Gauhati. The geographical position of the State is such that it is not only expensive but also takes a long time to reach Gauhati on road. Only moneyed people can go to Gauhati by air and move the principal seat. Under these circumstances the poor people of the State cannot have the benefit of administration of Justice by the highest Court of the State on all working days of the Court. To the poor people of the State, Article 226, Article 227 Sections relating to bail to be granted by High Court, urgent inter-locutery orders both Civil and Criminal which can only be issued by High Court have become illusory. Under these circumstances there is a need for a separate High Court for the State of Tripura. Administration of justice and independence of judiciary both are basic features of our Constitution. Therefore it is necessary that each State should have a High Court having its principal seat at that State so that poor people of the State can move the highest Court of the State without incurring unnecessary heavy expenditure. A common High Court for five States in North Eastern Region is in effect is denial of administration of justice to the people living in the region. Article 231 should be wiped out from the Constitution. Each State in North Eastern Region should have a separate High Court.

GOVERNMENT OF UTTAR PRADESH

(a) Replies to the Questionnaire

(b) Memorandum

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 A Federal Constitution establishes a dual polity comprising of two levels of Government one at Centre having jurisdiction over the entire country and the other at Regional level each exercising jurisdiction in its own sphere. The citizens of federal country become subject to the jurisdiction of the laws of the two Government, Central as well as Regional. The two levels of Governments divide and share the governmental functions between themselves, each having to function within the field assigned to it by the Constitution. Both these basic requirements of a federal structure are satisfied in regard to our country.

2. There are no doubt several unique features of our Constitution which distinguish it from the Constitution of other federal countries. These features are :—

(a) The Indian Constitution provides for a good deal of centralisation. The Centre has wide powers and plays a more dominant role as compared to the States.

(b) The emergency provisions provide a simple way of transforming the system into an almost unitary system so as to meet the national emergencies effectively.

(c) In certain circumstances Parliament become competent to legislate even in the exclusive State field.

(d) The process of amendment of the Constitution is not very rigid.

(e) India is a dual polity but has a single citizenship.

3. Despite these features, essential elements of federalism are present in the Indian Constitution. The Centre is, no doubt, strong yet the States are not agents of the Centre. They exist under the Constitution and not at the sufference of the Centre. Their powers are derived from the Constitution and not from Central laws. Federal provisions of the Constitution can be amended not unilaterally by the Centre but only with the Co-operation of the Centre and the States. Thus, the essential elements of federalism are clearly present in the Indian Constitution.

1.2 The Constitution has made a well-balanced distribution of powers between the Centre and the States. In a country like ours with vast area, large population, various diversities and multidimentional problems, it appears not only desirable but necessary to give the Union the supervisory role over the States. The objective of the unity and integrity of the Nation must over-ride every other consideration.

1.3 The division of power is quite apt and elaborate for normal times and is also adequate to meet the situations arising in time of emergency. There appears no need for further decentralization of powers and functions in favour of the States.

1.4 Perhaps, there does not exist a federation of the traditional type as envisaged in its abstract theory anywhere in the world. In any case, the Federal form of Government in its rigid abstract form cannot suit a country like ours.

1.5 Our Constitution is basically sound and flexible enough to meet the demands of the changing times. Whatever else may be the reasons underlying the difficulties which have arisen in the Union-State relationship the same are not due to any defect in the fabric of Constitution and such difficulties may be overcome within the framework of the Constitution without calling for any substantial amendments in the Constitution.

1.6 & 1.7 This State Government fully shares the view that the protection of the independence and insurance of the unity and integrity of the country is of paramount importance. The Constitution of India envisages a strong Centre and contains various provisions to achieve this objective. The apportionment of the legislative function and powers has been done in such a way that the matters of national importance needing uniform laws for the entire country are placed in the Union List. The Concurrent List contains such matters on which the Parliament may not feel it necessary or expedient to initiate legislation in the first instance but if at some stage a matter assumes national importance and requires to be dealt with on a uniform all India basis then the Centre can step in to enact necessary legislation. The residuary power has been left with the Centre as per Entry No. 97 of List No. I of the Constitution of India. Article 249 reserves the power with the Parliament to legislate with respect to a matter in the State List in the national interest. There are then the emergent provisions of the Constitution. During the period in which a proclamation of Emergency issued under Article 352 is in operation, Parliament shall have the power to make laws for the whole or any part of the country with respect to any matter contained in the State List. The provisions of Articles 354 to 357 also help to safeguard the unity and integrity of the Nation. During the period in which the Proclamation of Emergency is in operation, the Presidential Order can be issued under Article 354 to suitably modify the distribution of revenue

between the Union and the States as per the provisions of Articles 268 to 279. A duty has been enjoined on the Union under Article 355 to protect every State against external aggression and internal disturbances and to ensure that the Government of every State is carried on in accordance with the provision of the Constitutoin on the report of the Governor of the State, all on any of the functions and powers of the State and its authorities can be assumed by the President in situation where the President is satisfied that the Government of the State cannot be carried on in accordance with the provision of the Constitution. The Union has also the power to issue directions to a State Government with a view to ensuring that the executive power of every State is so exercised as not to impede or prejudice the exercise of the executive power of the Union. The Union shall also have the power to issue directions to any State to ensure compliance with the Central Laws (Articles 256 and 257). Failure to comply with such directions makes it lawful for the President to hold that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. These powers are meant to be exercised in extraordinary situations in order to preserve the unity and integrity of the country and are, thus, reasonable and justified.

1.8 The Parliament has no doubt been empowered to form a new State by separation of territory from any State or parts of such States as also to alter the area or name of any State but no such enactment can be made unless the views of the State or States concerned have been obtained. It would appear that no question of alterations of the area or the name of any State would arise unless necessitated by some extraordinary circumstances. In our opinion, therefore, no modification of this provision is required.

PART II

LEGISLATIVE RELATIONS

2.1 Article 249 provides for enactment of law by the Parliament on a State subject if it is necessary to do so in the national interest. There is built-in double safeguard in the article itself against the possibility of its abuse. The condition precedent for exercise of such power by the Parliament is a resolution to that effect by the Rajya Sabha. Except for a few nominated members, the Rajya Sabha is constituted of the members elected from the State legislatures who are not expected to override the rights of State unless the proposed enactment is considered really necessary in the national interest. Secondly, the resolution cannot be taken as passed unless it is supported by two-thirds majority. Thus, the chances of abuse of this provision or encroachment by the Centre on the State's legislative field are negligible. So far as the State of Uttar Pradesh is concerned there has been no instance of encroachment by the Union or State legislative field under the cover of national or public interest.

2.2 There is an elaborate distribution of legislative power between the Centre and the State. A Unique feature of the division of power is the existence of a long concurrent list of subjects for the Centre and the State and it provides sufficient leverage to meet the needs of both Central and State legislation in regard to any of the subject-matter contained therein. Keeping in view the local situations a State may legislate with respect to any matter in the Concurrent List. However, if any matter assumes national importance and requires to be dealt with on uniform all-India basis, the Centre can step in to enact necessary legislation. There might have been some aberration here and there but the elaborate distribution of legislative power has stood the test of time for over 35 years. As such there is no need for any change in the distribution of the legislative powers.

2.3 It would definitely be desirable for the Government of India to consult the State Government before undertaking a legislation on a matter included in the Concurrent List. However, no statutory provision appears necessary for this purpose and it should only be by way of convention. It may also be provided as a working arrangement that in case a State Government fails to give its views within a specified time, it would be presumed that it has no objection to the proposed legislation.

2.4 The resolution under Article 249 remains in force for a particular period. This is in consonance with the purpose of the article. It may be a matter of national interest to enact a law by the Parliament on a State subject for a short period. The situation giving rise to such resolution may come to an end after some time. The law so made should, therefore, cease to operate accordingly and the right of the State Legislature restored. If it is ever considered necessary that Parliament should make permanent law in relation to a State subject, that matter may be transferred from the State List to the Union List but the exceptional power in Article 249 should only be for a particular duration and not on permanent basis.

2.5 The present distribution of legislative powers between Centre and States is quite reasonable and does not call for a change.

PART III

ROLE OF THE GOVERNOR

3.1 The framers of our Constitution had visualised the need for a strong Centre. That is why the States in India were not given the same status as the federal units of U.S.A. Although States have been vested with a share of Governmental power yet the States are to operate under the overall control and direction of the Centre. The Centre discharges its supervisory functions through the Office of the Governor, who is appointed by the President. The Constitution thus envisages dual responsibilities for the Governor, named the responsibility towards the Centre as also towards the State executive of which he is the head.

By and large, the Governors have been discharging their responsibilities as visualised by the Constitution as also up to the expectations of the people. There was no difficulty so long as the

party in power in the States and at the Centre was the same. Some difficulties did arise when this position changed. However, no such difficulty has been experienced in this State so far.

3.2 The Governor can act in the best interest of healthy State-Centre relationship only if he discharges his constitutional duties fairly and impartially as also keeping in view the public interest.

3.3 The Governor is not a mere ornamental head of the State. He has important constitutional duties to perform. It is he who appoints the Chief Minister, dissolves the house or invokes the provisions of Article 356 if constitutional machinery fails in the State. He is not a party man. He is under an oath of allegiance to the Constitution. He has, therefore, to perform his functions fairly, impartially and with the best interest of the people of the State in mind in accordance with the Constitutional provisions.

(a) In making report to the President for action under Article 356 he should not act to serve the interest of any political party. He should explore all possibilities of an alternative stable Government. Only if he has arrived at the conclusion after an objective assessment that there is no such possibility, recourse may be taken to make a report under Article 356(1).

(b) In the appointment of the Chief Minister he ought to act impartially and objectively. There is no difficulty where a political party is in absolute majority and is able to elect its leader. Difficulty arises only when no party achieves absolute majority. In such cases the Governor has to make his assessment as to the party which may be able to form a stable Government in the State. The party having the largest number of seats should be given a chance to form the Government.

(c) Prorogation of the house has to be done on the advice of the Council of Ministers. The business before the house may have exhausted for the time being or an important Ordinance may have to be repromulgated in the interest of continuity and there may be no chance of replacing Bill being passed within time. In such circumstances it is for the Government to advise for prorogation and for the Governor to act accordingly.

However, in case of dissolution of the House, occasions may arise calling for his independent action. Where the term of the house is coming to a new house has to be elected, the Governor may accept the advice of the Cabinet for dissolution of the house a little earlier than expiry of its full-term. But where a Government has lost majority in the house, the recommendation of the defeated Cabinet for dissolution of the house should not carry much weight. Dissolution is a serious matter calling for an expensive exercise of mid-term poll and it should not be resorted to without adequate grounds.

3.4 The Governor is an integral part of the State legislature. His association with a bill at some stage is, therefore, inevitable. It is possible that a Bill may be passed with such alterations as was not originally envisaged by the Government. Even after a bill has been passed, Government may decide to reconsider the matter because of strong public reaction. The requirement of assent provides a final opportunity to the Government to have a second look on the various aspects as well as effect of the proposed law, the Government having the right to send back the Bill for reconsideration by the legislature.

Reservation of the Bill for consideration of the President is chiefly required in matters on concurrent list where the State law cannot override the central law unless assented to by the President. Even otherwise, situations may be conceived where the Governor may think it prudent to bring the matter to the notice of the Central Government in view of its national importance. In Uttar Pradesh, there has not arisen any occasion when the Governor reserved any Bill for Presidential consideration or refused assent, against the advice of the Council of Ministers or against the intent, spirit or purpose of the provisions of the Constitution.

3.5 It is not correct to say that the process of Presidential assent has acted as a substantial threat to the autonomy of the State. During the period of last 35 years, there has been only one case in the year 1973 when the Presidential assent was withheld in regard to a Bill passed by the State Legislature whereby certain amendments were proposed to be made in the Code of Criminal Procedure. The reason given for withholding assent was that the new Cr. P.C. had been recently enacted by the Parliament. The Government of India was of the view that the proposals contained in the State legislation would be duly considered by them and the necessary amendment would be incorporated through a Central legislation. Subsequently, the matter was re-considered by the State Government and only a few important provisions were enacted in respect of which assent was duly given. This instance cannot be construed as a threat to the State autonomy. It has been the experience of this State Government and whenever a doubt arose in Government of India with respect to a particular provision of a new act, an informal discussion was held between the officers of the Central Government and the State and the issue was clarified and the enactment was cleared by the Centre. As such, there has been no complaint in regard to the process of Presidential assent to the Bills passed by the State legislature.

3.6 The Governor is certainly not a mere ornamental head of the State. He has useful purpose to serve and has to act in his discretion in certain eventualities. On the other hand, considering that he is the head of the State he cannot be called an agent of the Centre either, although as a part of his duty he has to maintain close link with the Centre. In our view, the Governors have generally acted fairly in accordance with the Constitution and healthy conventions and in the best interest of the people.

3.7 It will not be appropriate to provide for the procedure of removal of a Governor on the lines of provisions for removal of a Judge of the supreme Court/High Court. There should be no question of impeachment of Governor as he holds office during the pleasure of the President as is provided in Article 156 of the Constitution. As against this, the Judges of the Supreme Court/High Court are appointed to hold office upto a certain age prescribed under the Constitution and not during the pleasure of the President. There is a vital functional difference in the office of the Governor and that of a Judge. This State Government does not share the suggestion that appointment of a Governor should be guaranteed for a full-five years term. The existing provision about the appointment of the Governor during the pleasure of the President seems to be appropriate in view of the duties and functions of the office. A Governor is to act on the aid and advice of the Council of Ministers and a difference of temperament or some other exigencies of situation may warrant shifting of a Governor to another State.

3.8 and 3.9 There have been complaints (not in this State) on some occasions in the past that the Governor has not acted fairly in making his choice of the Chief Minister in unstable party position after a Ministry in the State has resigned or after polls were held in the States. The complaints so raised have, by an large, been unfounded.

3.10 The State Government is not in favour of instructions or guidelines being issued to the Governor. There would be no sanction behind such instructions and no institution to oversee its implementation. It would not be advisable to make it justiciable nor would it be appropriate to ask the Centre to oversee it since it would mean intervention in the affairs of the State.

PART IV

ADMINISTRATIVE RELATIONS

4.1 to 4.3 The Indian Federal system stands on the pillars of a strong Centre and flexible and co-operative federalism. The strength of the Centre lies in its wide legislative and financial powers and in its emergency powers. The flexibility of the Indian federalism lies in the flexible provisions of the Constitution relating to the allocation of administrative responsibility between the Centre and the State. The scheme is so designed as to permit different kinds of administrative arrangements between the two levels of Government. The executive power of the Centre extends to the whole of India in respect of matters in List I. The Centre is, however, not obliged to administer by itself all matters in its exclusive domain. If it so desires it can entrust administrative responsibility in any matter to the States. The State's executive power extends to its territory in respect of matters in List II. In matters of Lists II and III the executive power ordinarily vests with the State except where either the Constitution or a law of Parliament expressly confers it on the Centre.

If Union Laws are to be enforced in each State the proper working of the federal Government requires that the executive powers of the State Government must be so exercised as to ensure compliance with the Central laws which apply in that State. Logically these executive powers of the Union would extend to giving such directions to a State as may appear to the Government of India to be necessary for that purpose. This has been provided in Article 256. Article 257 provides for the Control of the Union over the States in certain matters. Just as in the case of conflict between valid States law and a valid Union law the Union law would prevail, so also when a question arises as to the conflict between the exercise of executive power by the Union and the States, Article 257 provides, and logically so, that the executive power of every State shall be so exercised as not to impede or prejudice the exercise of the executive power of the Union article 257 provides that the power of the Union shall extend to giving of such directions to a State as may appear to the Govt. of India to be necessary for the purpose.

The provisions of Article 256 and 257 are essential in the interest of harmonious exercise of executive power by the Union and the State and also to effectuate provisions of our Constitution that the executive power of the Union is coextensive with its legislative power. As is provided in Articles 257(2) and (3), it is essential for securing means of communication between the States and for protecting railways which run through the States that the Union Government should have the power to require the State Government to maintain and protect such communication and such railways. It is difficult to share the view that Article 365 should be deleted. As is obvious, there must be some sanction at the back of the power of the Union to give direction to States without which the power to issue directions would be futile. As such this is purely a consequential enabling clause.

The exercise of power under Article 365 is no doubt an extreme step and should be taken only in cases of absolute necessity. In fact this power has been hardly over exercised by the Government of India during the period of past 35 years. There has been no case of exercise of this power in regard to this State. It is essential for the working of the federal Constitution that Government of India should have this power. The apprehension that the Government of India would abuse this provision does not appear justified as in actual practice the Centre would always explore the possibility of settling points of conflict by all other available means before issuing formal directions under Article 256.

4.4 The intent and purpose of Article 356 is to empower the Union Government to ensure that the State Governments function in accordance with the provisions of the Constitution. During the debate on this subject in the Constituent Assembly in answer to a question from Pt. Hridaya Nath Kunjuru, Dr. Ambedkar and categorically stated that the Centre was not being given the authority in Article 356 to intervene in provincial affairs for the sake of good Government. This power was being given to be exercised only when the

provincial Government was not carried on in consonance with the provisions laid down for the constitutional Government of the province. He further clarified that whether there was good Government or not in a province was not for the Centre to determine. The justification and need for this provision is obvious. The constitutional machinery does not ordinarily fail by individual violations of the provisions of the Constitution in the course of States' multifarious activities.

India is a vast country facing multidimensional dangers and having problems peculiar to it because of the composition of its population, the diversity of problems of border States, and other caste and class conflicts. It is in fact difficult to anticipate and lay down in advance the situations, which would pre-eminently justify the exercise of power under this provision.

4.5 This State Government shares the views that the time limit specified in clauses (4) and (5) of Article 356 though intended to be a safeguard may turn into a handicap to the efficacious use of this power by the Union. Experience has shown the existence of situations, continuous disturbed conditions and breakdown or failure of constitutional machinery for a period beyond one year. It is suggested that sub-clauses (a) and (b) of clause (5) of this article may be independent of each other thereby making it possible to continue the Presidential Rule for a period upto three years as may be necessitated by a particular situation in either of the cases covered by clause (5). The result would be that even when a proclamation of Emergency is not in operation the Presidential Rule may continue in case the Election Commission certifies that there are difficulties in holding General Election to the Legislative Assembly of the State concerned.

4.6 The present arrangement in respect of function of Union Government like census and election etc. being implemented by State Government has been working satisfactorily and needs no change.

4.7 The Central agencies mentioned in this question have to keep an overall picture of all the States in view and have also to consider the conflicting interest of the various States. As such, they have sometimes to take decisions or make recommendations which may not be welcome by some States. However, there is no justification in saying that through these agencies the Union has made inroads into the States' autonomy.

4.8 The All-India Services have not only justified their existence as instrument of administration but have also proved to be an important factor in the promotion and maintenance of national integration. The present powers enjoyed by the State Government in respect of officers of All India Service, which includes power to place under suspension and inflict minor punishment is adequate.

4.9 Article 355 is part of 'Emergency Provisions' of the Constitution and its scope is also limited. In fact, this Article broadly enjoins the duty on the Union to protect every State against external aggression and internal disturbance and to ensure that the Government of every State is carried on in accordance with the provisions of the Constitution.

4.10 This State Government is not in favour of the decentralisation of the broadcasting or telecasting media. Like any other media, if not centrally controlled, they may cause serious damage in sensitive areas like foreign relations, security of the nation and public morality. The media of newspapers and books can be censored and prescribed before they can cause any substantial mischief, but that would not be possible in the case of radio or television where the mischief caused is instantaneous and wide-spread.

4.11 The Zonal Council as suggested under the State's Reorganisation Act, 1956 have definitely played a positive role in fostering co-ordination and co-operation between member States on subjects of mutual interest. The State Government has not found any difficulty even when parties in power have been different at the Centre and in the States.

4.12 The setting up of an inter-State Council as envisaged under Article 263 of the Constitution will serve useful purpose to sort out inter-State and Union-State differences and issues. The functions of such a Council could include issues relating to distribution of water, energy, settlement of territorial claims etc. There appears no need for setting up inter-State Council on permanent basis. It may be constituted as and when necessary to sort out any particular differences/issues.

PART V

FINANCIAL RELATIONS

5.1 While allocating the taxating powers and Governmental functions to the Union and the States, the Constitution-makers had foreseen that the States would be confronted with the problem of non-correspondence between their resources and expenditure needs for carrying out their functions. Accordingly, they provided for devolution of some Centre taxes and duties and of grants-in-aid to States in need of assistance, on the recommendations of a statutory body, *viz.* the Finance Commission. The provision for constituting a Finance Commission at intervals of not more than five years is desirable as alterations in the scheme of transfer are called for in the light of changing finances of States, their fiscal needs and circumtances. The arrangements for statutory transfers can be said to be 'as automatic and free from interference as possible' although the terms of reference given to a Finance Commission do some what restrict the scope of its work. The scheme of devolution envisaged by the Constitution makers, however, has suffered a change as Central transfers for Plans where not visualised by them, the country having embarked upon the Development Plans later. Plan transfers have been sizable in the past, being almost at par with the Finance Commission transfers. Annexure I shows that during the years 1961-62 to 1980-81, the tax revenues raised by States ranged from 29 per cent to 33 per cent of the aggregate tax revenues of Centre and the States, while the revenue expenditure of the States ranged from 51 per cent to 57 per cent of the total revenue expenditure.

After tax devolution, States share ranged from 39 per cent to 52 per cent during the period. The revenue gap between the resources and the fiscal needs of the States has thus been partly taken care of by tax devolution and grants-in-aid under the recommendations of the Finance Commissions. The Scheme of devolution, however, cannot be said to have worked well, as the transfers have fallen short of the comprehensive fiscal needs of the States, particularly the backward States. There are large regional gaps within the national economy and the Finance Commission transfers as well as the Plans transfers have been unable to bring about a reduction in inter-State disparities. Further the award period of a Finance Commission should be coterminous with five year plans.

5.2 Annexure I shows that States own resources over the years have not been enough even to meet all non-Plans expenditure and the States have depended on federal transfers. But the constitutional provisions themselves induce such vertical fiscal imbalance and lay down the mechanism for federal transfers to States. The overall position stated by the A.R.C. Study Team on Centre-State relations thus still holds good. Among the alternatives that have been suggested in the question, alternatives (a) to (c) will require basic changes in the provisions of the Constitution, which is not considered desirable. Besides, the division of fiscal powers between the Union and the States under the Constitution is based on the principal that a tax should be imposed and collected by that layer of Government which can best collect and administer the tax. No change is suggested in the tax power of the Union and the States, and it is felt that alternatives (d) of bringing more Central taxes into the shareable pool should be adopted to enable the States to better match their resources with their growing fiscal needs. This State Government is of the view that :

(i) The surcharge on income tax should be made shareable with the States. It is being levied by the Centre on a continuous basis. The underlying assumption that surcharge on a tax would be levied only as a temporary expedient to meet any special burden has not been followed in this case. As has been suggested by the Eighth Finance Commission, the surcharge on income tax should be abolished and its incidence merged with the basic tax. In the alternative, the Constitution should be amended so as to specifically provide for the sharing of the surcharge with the States.

(ii) Corporation tax proceeds should also be made shareable with the States. Under the Finance Act, 1959, the income tax paid by the companies was classified as Corporation tax, resulting in considerable depletion of the divisible pool of income tax. Aggrieved by the said amendment, State Governments have repeatedly contended before the Finance Commissions that part proceeds from corporation tax also should devolve to them. States provide infrastructural facilities to the companies paying the corporation tax. The Eighth Finance Commission has also observed that it would only seem fair that the States have an access to corporation tax revenue.

(iii) The sharing of revenue from Union excise should be made obligatory under the Constitution. Although the sharing is permissive at present, the Finance Commissions have invariably recommended devolution of part of the proceeds of Union excise duties to the States. Even after the devolution of Central taxes and duties, it becomes necessary for the Finance Commission to recommend gap-filling grants in aid to some of the States. State's share in income tax is already 85 per cent. Accordingly, devolution of part proceeds of Union excise duties to the States is imperative.

5.3 State Governments on their own do take steps to meet the needs of specific areas for reducing the inter-regional disparities. Uttar Pradesh Government has undertaken decentralised planning in the State and nearly one-third of the annual plan outlay is being allocated for local level planning. 50 per cent of the outlay of the districts is determined on the basis of population and the remaining on the basis of selected socio-economic indicators which reflect the level of backwardness. But the capacity of Backward States in bringing about any significant reduction in the regional inequalities within the State is very limited due to resource constraints. Then there are inter-State disparities which can be reduced only by a strong Centre having elastic sources of revenue. The State Government thus agrees with the view expressed in the question, at the same time, the Centre need not enjoy more discretionary powers to use the funds available with it for the development of poorer States. In the past, transfers outside the recommendations of the Finance Commission and the Planning Commission, the so called discretionary transfers, have not subserved the equity criterion. It is thus felt that for achieving the objective, the institutional arrangements for federal transfers need be so improved that the per capita transfers to poorer States are larger to enable them to accelerate their pace of development.

5.4 The deficit in Central revenue account, noticed in the last few years, cannot be attributed to Central transfers to States on the recommendations of the Finance Commission and the Planning Commission. Annexure 5 shows that the resources transferred to States from all sources, as a percentage of Centre's aggregate receipts, have not been higher in recent years. In 1979-80, these were 50.8 per cent as compared to 53.9 per cent in 1972-73. In the context of overall scarcity of resources, it would appear necessary that the Centre as well as the States optimise their tax revenues and exercise better control over expenditure. The Centre having more elastic sources of revenue with a wide base is in a better position to raise additional resources through taxation. Deficit Financing would appear unavoidable in a developing economy, and may also be resorted to by the Centre. But the high rate of inflation that has plagued the economy during the last decade would imply a more restrictive use of deficit financing.

5.5 The devolutions made through the channel of the Finance Commission and the Planning Commission have not been able to bridge the gap in resources between the poorer and richer States. The inter-State disparities have in fact widened instead of narrowing down. A study of the ranking of the States in respect of per capita N.D.P. in selected years from 1950-51 to 1977-78 reveals that five of the six relatively backward States continued to have the lowest ranks except that Uttar Pradesh had a slightly higher ranks in 1950-51, and Andhra Pradesh and Rajasthan in some of the years (Annexure 2). The position of Uttar Pradesh declined in rank from 8 to 13. In regard to Finance Commission transfers, it may be pointed out that the backward State of Uttar Pradesh received lower than average per capita transfers under the awards of all the Finance Commissions (Annexure 3). Its share has also been less than its population ratio. Under the recommendations of Seventh and Eighth Finance Commissions, Uttar Pradesh's share in total devolution comes to 15.90 and 15.43 respectively. as compared to its population ratio of 16.32 (1971 Census). The situation does not improve if Plan transfers are also taken into account. The Statewise indices for these transfers (Annexure 4) reveals that the Uttar Pradesh secured lower than average transfers throughout and Bihar and Madhya Pradesh upto Fifth Plan. Larger per capita transfers to relatively backward States are thus called for to enable them to accelerate their pace of development and also to improve the functioning of their administrative and social services. In this context, the State Government would like to suggest the following criteria for determining the share of taxes, plan assistance and non-plan assistance to States.

(a) **Share of taxes :**

In the determination of States share in income-tax proceeds First to Seventh Finance Commission adopted only two criterial *viz.* population and contribution. The relative weightage accorded to contribution ranged from 10 to 20 per cent. The Eighth Finance Commission did recommend distribution of 90 percent proceeds on indicators of backwardness but maintained the 10 per cent weightage to contribution. A weightage to contribution yields a greater share to the more advanced States due to higher yield of income-tax in those States. As federal transfers should be conducive to reduction of inter-State disparities, the criterion of contribution is not justified in a federation like ours where the constituent units never possessed the right to levy income tax. The State Government is of the view that uniform criteria should be adopted for the distribution of the entire divisible pool of both the major taxes viz. income tax and Union excise duties.

In the distribution of Union excise duties. the Third Finance Commission onwards have given weightage to economic and social backwardness also. The Third and Fourth Finance Commissions had used partial indicators of backwardness and their distribution of Union excise was not progressive. It is from the Fifth Finance Commission onwards that the distribution of Union excise has been progressive and higher per capita shares accrued to the relatively backward States. The criteriaused, and the weightage assigned to them were, however not such as to make the total transfers progressive.

In regard to the index of backwardness, it is our considered view that the composite index of per capita income should be used in preference to any partial indicators. The Eighth Finance Commission has already used per capita income as the only criterion for adjudging the relative backwardness of States. Further, part proceeds should be earmarked for distribution exclusively among the backward States, as was recommended by the Fifth Finance Commission. On these considerations, the State Government is of the view that 50 per cent of the net proceeds should be distributed on the basis of population, 25 per cent in the inverse ratio of per capita incomes of States multiplied by population and 25 per cent to those States exclusively whose per capita income is below all States average, and the share given to them on the principle of income equilization, that is in proportion to the shortfall of the States per capita income from all State average, multiplied by the population of the State. In the alternative, if the distribution of part proceeds amongst the backward States only is not favoured, 25 per cent should be distributed on the basis of population and the remaining 75 per cent on the indicators of backwardness, as recommended by the Seventh and Eighth Finance Commissions. These principles are suggested for the distribution of income tax as well as Union excise duties.

For the distribution of additional excise duties levied in lieu of sales tax on sugar, textiles and tobacco, its distribution should be on such principles as will secure for each State a share more or less equivalent to what it would have obtained if it had continued to levy and collect sales tax on these commodities. Statewise consumption of the concerned commodities should thus be the basis of distr bution. Where reliable data of Statewise consumption of the commodities is not available, the distribution should be in proportion to the guaranteed amount of the State to the total guaranteed amount of all States, the guaranteed amount representing the income of the States from sales tax on these commodities in 1956-57, the year immediately preceding the year of replacement of sales tax by additional excise duty.

In regard to assigned taxes such as estate duty in respect of property other than agricultural land or for the distribution of the grant in lieu of tax on railway passenger fares, the existing principles for distribution appear to be fair and equitable.

Tax on the sale or purchase of goods other than newspapers, where such sale or purchase takes place in the course of inter-State trade or commerce, is also levied under Article 269 of the Constitution. At present the proceeds of Central sales tax accrue to the State from which the movement of the goods commences. This is inequitous for the relatively backward States, who have to depend on import of goods in a larger measure. While the residents of backward States have to bear the burden of the Central sales tax, it is the comparatively well-off States which reep the benefits. Sales tax being a tax on consumption, this State Government is of the

view that the receipts of Central sales tax should accrue to the State of destination and not the State of origin. At best, a small proportion of the tax would devolve on the producer States. Accordingly, it is suggested that the receipts from Central Sales Tax should be distributed in a manner that 75 per cent of the proceeds accrue to the State of Destination and 25 per cent to the State of origin of goods. In the alternative, there should be a provision for distribution of the proceeds on the basis of equitable criteria, such as population and relative economic backwardness. The tax on consignment transfers should also be levied and distributed in the same manner as it would be collected from these inter-State consignments which do not attract Central Sales Tax.

Apart from adopting such principles for tax devolution as may be conducive to reduction of inter-State disparities, an increase in the quantum of the divisible pool of Union taxes and duties is necessary for enabling the States to discharge their growing responsibilities. The statutory devolutions to States do not show a consistently rising proportion to the growing Central revenues. Despite the doubling of State's share in Union excise duties on the recommendation of the Seventh Finance Commission, the recommended transfers for the award period constituted 26 per cent of the gross collections of Central taxes. The corresponding percentage in the case of Sixth Commission was 25.4 and of the Eighth Commission is 24. If the resources transferred to States from all sources are considered as percentage of Centre's aggregate receipts, the transfers during the award period of the Seventh Commission were even lower than the transfers during the period of the Fifth Commission (Annexure 45). To enable the States to meet their Comprehensive fiscal needs, therefore, the State's share in Union excise duty should be further enlarged and fixed at 60 per cent. The sharing of corporation tax and surcharge on income-tax with the States has already been suggested.

To sum up, the State Government would suggest an increase in the divisible pool of Union excise duties to 60 per cent of the net proceeds inclusion of surcharge on income tax in the divisible pool of income tax, and sharing of part proceeds of proportion tax also with the States. In regard to distribution of the proceeds among the States, the following criteria are suggested :

(i) there should be uniform principles for distribution of the proceeds of income tax and Union excise duties,

(ii) the divisible pool of income tax and Union excise duties should be distributed 50 per cent on the basis of population, 25 per cent in the inverse ratio of per capita incomes of States exclusively whose per capita income is below all States average and the share given to them on the principle of income equalisation,

(iii) additional excise duties in lieu of sales tax on sugar, textiles and tobacco, should be distributed in proportion to the guaranteed amount of the State to the total guaranteed amount of all States, the guaranteed amount representing the income of the States from sales tax on these commodities in 1956-57, the year immediately preceding the year of replacement of sales tax by additional excise duty,

(iv) the receipts from Central sales tax should also be pooled and distributed 75 per cent of the State of destination where consumption takas place and 25 per cent to the State from where the movement of goods commences. The tax on consignment transfers should also be levied and distributed in the same manner.

(b) **Plan assistance :**

Before the fourth five year plan, Central assistance to States was not based on any specified criteria. From the fouith plan, after setting apart a lump sum amount for meeting the requirements of special category States, the balance of Central assistance was distributed under the Gadgil formula.

The formula was modified for the sixth plan and the weightage given to continuing major irrigation and power projects was done away with. This 10 per cent was added to the weightage given to per capita income, with the welcome change that 20 per cent is now distributed in proportion to the shortfall in per capita income of States whose per capita income is below the national average. Under the revised Gadgil Formula, as operative at present, Central assistance is allocated to States 60 per cent on the basis of population, 20 per cent to backward States in terms of shortfall in their per capita income from the average per capita income of all States, 10 per cent on the basis of tax effort and 10 per cent on consideration of special problems of States.

It is observed that even under the Gadgil Formula, the distribution of Central assistance has not been equitable for some of the backward States. If the total per capita Central assistance from first plan to sixth plan (Annexure 6) is considered, the two most backward States of Bihar and Uttar Pradesh receive lower than all States average transfers. For the Fifth Plan, Uttar Pradesh had a little higher allocation than the average for non-special category States, but in the sixth plan, both Uttar Pradesh and Bihar received lower than all States average.

The Criteria adopted for the allocation of Central assistance need thus be more progressive if the desired objective of accelerating the pace of development in backward States and of reducing inter-State disparities is to be achieved. A high weightage of 60 per cent is given to population which is a general measure of need and has no equilising impact. While it is accepted that population should continue as an important factor in federal transfers, it is only a significant increase in the weightage given to indicators of backwardness that can bring about the desired progressivity in these transfers. The State Government is of the view that the weightage given to shortfall in per capita income should be increased to 30 per cent and the 10 per cent distributed on the basis of tax effort should be done away with.

Tax effort of States need not be taken into account for a number of reasons. Firstly, the States have not lagged behind the Centre in raising tax revenues. Interest, tax effort measured in terms of tax ratio puts the poorer States at a disadvantage. Annexure 7 shows the per capita tax burden of the major States as percentage of their per capita income. Except for Andhra Pradesh, the tax ratio in backward States ranges from 4.88 in Orissa to 7.87 in Madhya Pradesh. For the advanced States, it varies from 7.39 in West Bengal to 10.86 in Tamil Nadu. The advanced States having a greater degree of industrialization and urbanization have a wider tax base resulting in higher yield from State taxes. It is not the additional tax effort in relation to tax potential, or achievement against the target given for additional resource mobilization, which are adopted as the basis of allocation of 10 per cent Central assistance. Instead, the per capita total yield as a percentage of per capita State domestic product, is used for determining the share of States. As a result of this, the progressive collection of tax revenue gets a premimium and this favours the richer States. Besides, the additional resource mobilization by States increases their plan outlay to that extent and basing the allocation of part Central assistance also on tax effort is not justified.

(c) **Non-Plan assistance :**

Article 275 of the Constitution gives ample scope to the Finance Commission to take into account the differential needs of the States and to provide for the relatively large needs of backward States. But the Finance Commissions so far have made a very limited use of non-plan grants-in-aid. The quantum of grants-in-aid was 12.15 per cent of the total statutory transfers under the award of the First Finance Commission. It gradually increased to 26.12 per cent under the recommendations of the Sixth Commission but has since declined to 8.15 per cent under the recommendations of the Eighth Commission. (Annexure 8).

In regard to upgradation grants, the Seventh Commission confined these to non-developmental sectors and services. The Eighth Commission has recommended upgradation grants for health and education also, but the quantum of grants is low for some of the backward States, particularly Uttar Pradesh. The State Government is of the view that instead of assigning a residuary role to grants in aid, the Finance Commission should take into account the level of per capita non-plan expenditure of States and the comprehensive needs of the relatively backward States for upgrading the levels of administrative and social services including health and Education Services provided by them to a desirable level.

5.6 A special federal fund for ensuring "faster development in economically under-developed areas relative to other developed areas of the country" does not appear necessary for India. The present arrangement of tax devolution and grants-in-aid on the recommendations of the Finance Commission and of distribution of Central assistance for the plan on the recommendations of the Planning Commission appears to be adequate for the purpose. What is necessary is that the Finance Commission takes into account the larger needs of relatively backward States and formulates such principles for federal transfers as would secure larger per capita transfers to backward States. Plan transfers should also be on such criterion as would enable the backward States to accelerate their rate of economic growth for mitigating their backwardness.

5.7 The three principles which should serve as imperatives in the allocation of taxation functions of the Union and the States, as stated in the question, would appear to be unexceptionable. The power to levy income-tax should remain with the Centre in the interest of uniform rates thereof in the country. If the States were to exercise the power, it would lead to taxing the individual according to residence. In the case of levy of corporation tax by the States, the anomalies would be more pronounced. In the interest of the growth of common market in the federation, it is necessary that custom duties and Union excise should continue to be levied by the Centre, Union excise duties are levied on production and being origin based, differential rates would not be desirable. This State Government thus feels that none of the individual taxes in the Union List can be reasonably transferred to the States. At the same time, however, it is necessary that more Central taxes should be made shareable with the States, as it has been suggested in reply to question 5.2.

5.8 This State Government agrees that for taxes which impinge upon a common base, such as Union excise duty and sales tax, there should be an integrated approach to taxation instead of a fragmentary approach. But it is not necessary that all taxes are levied by the Centre. The cascading effect of different taxes can be avoided and a reasonable total incidence ensured by frequent exchange of information and periodical discussions on matters of taxation in a forum comprising representatives of the Central and the State Governments and some experts in public finance.

A Central levy of sales tax as suggested in the question is neither feasible nor desirable. Sales tax is basically a tax on consumption and it should be left to the judgement of a State to decide the incidence thereof on its consumers. It is an instrument of economic policy. Its structure and rates need be such as attract investment and promote industrialisation. Besides, sales tax has developed as the largest single item of States tax revenues and an effective source of additional resource mobilization. The levy of Union excise duties in lieu of sales-tax is also not a feasible proposition. The experiment has been tried in respect of sugar, textiles and tobacco and States have demonstrated in various forums that their revenue interest has suffered on account of such replacement. Accordingly, this State Government is of the view that the levy of sales tax or other taxes in the State list should not be centralised, and the power to levy them should continue with the States.

5.9 The revenue surplus which emerges on the recommendations of the Finance Commission is available to the concerned State as resource for the Plan. Finance Commission's transfers are thus

relevant for the Plan also. It may be pointed out that Central assistance in relation to States plan expenditure was 64.4 per cent during the third Plan whereafter it declined to 33.8 per cent in 1981-82. Increased tax devolution thus brought in its wake a reduction in the quantum of Central assistance as a percentage of States Plan outlay.

The categorisation of expenditure between Plan and non-Plan depends more on the period during which the expenditure is incurred rather than on the nature of expenditure. At the end of the Plan, the maintenance expenditure relating to the schemes completed during the preceding Plan period is shifted to the non-Plan account. Therefore, the comprehensive fiscal needs of a State (Plan and non-Plan) should be taken into account and the federal transfers should take care of both the needs to the extent possible.

This calls for effective co-ordination between the Finance Commission and the Planning Commission. A single organisation for dealing with both categories of transfers does not, however, appear to be practicable or desirable. A permanent Finance Commission is also not considered necessary, although its Secretariat should have continuity. Taking into account the projections made by the Finance Commission, which are based on existing level of taxation, the Planning Commission should continue to determine the Plan outlays of States in the light of additional resource mobilization proposed by them, the quantum of external aid, market borrowings and other relevant factors.

5.10 The federal transfers, particularly Finance Commission transfers can be said to have promoted efficiency and economy in expenditure. The normative approach adopted by the Finance Commission regard to appropriate returns on State Governments investments in irrigation, electricity, transport and other sectors or regarding the provisions for expenditure on emoluments of Government employees and the services makes the States more conscious of the need for securing those returns and for restricting non-Plan expenditure. On their own also, State Government's strive to restrict non-Plan expenditure in the interest of having a larger plan outlay.

The federal transfers have, however, not succeeded in narrowing down the disparities in non-Plan expenditure of States. A comparison of the per capita total non-plan revenue expenditure of individual States in 1974-75 and 1980-81 (Annexure 8) reveals that the backward States of Bihar, Uttar Pradesh and Madhya Pradesh continue to occupy the lowest ranks. Among the non-special category States, the per capita expenditure in 1974.75 ranged from Rs. 54.63 in Bihar to Rs. 149.91 in Haryana. In 1980-81, the expenditure ranged from Rs. 107.28 in Bihar to Rs. 330.95 in Maharashtra. The disparity in non-plan expenditure thus continues unabated.

5.11 This State Government does not subscribe to the view that the present mechanism of transfer of resources has inbuilt propensities towards financial indiscipline and improvidence. The forecasts presented by States are, by and large, based on the growth rates observed in the past. Any way, while reassessing the forecast, the Finance Commission adopts a fairly conservative rate of growth in expenditure and it is seldom that the actuals of receipts and expenditure leave a State with a smaller revenue gap than what was stipulated in the reassessed forecasts.

5.12 & 5.13 NOTE : Answers for 5.12 and 5.13 are given with Ans. 5.5.

5.14 States would have received a share of the proceeds if the concealed income invested in the bearer bonds had been subjected to income tax. It would thus be equitable for the Centre to share with the States the monetary benefits derived from the scheme. In regard to upward revision of the administered prices of items like petroleum, coal etc. this erodes the resource base of State Governments and their capital and operating costs. States would gain if excise duties are raised instead. The Eighth Finance Commission has also observed that if obtaining revenue is the sole criterion for increasing administered prices, the appropriate course is to increase excise duty. The State Government would suggest that there should be a statutory organisation for revising prices of petroleum, coal, iron and steel, cement etc.

5.15 The saving available to the public sector mostly comprise small saving and market borrowings. At present two-third share of the net Collections under small savings scheme is passed on to the State as interest bearing loan. The States make concerted efforts and spend considerable amounts in mobilizing small savings. There is thus no justification of allocating only two-thirds of the net collection and a higher share should be given to the States.

The Centre's repayment liability to the general public on account of small savings, is in each year, fully met from the fresh collections during that year and it is only from the balance amount that a State's share is paid by way of loan. The small savings loan is, the only loan given by the Centre to the States which indicates its origin and it is already netted for repayment. Other Central loans do not have this distinguishing feature. It is, therefore, unjustified to expect the State Governments to repay these loans which should be treated as loan in perpetuity. For market borrowings, the total kitty and the share of Centre and the States is determined by the Centre. Over the years, the shares of States in the total market borrowings has gone down. Keeping in view the plan needs of the States, this trend needs to be reversed. The Eighth Finance Commission has also observed that the "pattern of distribution of total market borrowings requires correction and the share of States ought to be raised, (Report page 8)." Besides, no formula has been laid down for the inter-State distribution of market borrowings. Till the end of the Fifth Five Year Plan, market borrowings to States were distributed on historical basis with a uniform annual step-up which perpetuated inequity in the distribution of market borrowings amongst States. During the Sixth-Five Year Plan the backward States again pressed for a higher level of market borrowings. The Planning Commission recognising the past inequity made a special allocation of market

borrowings only for backward States. However, this did not provide substantial additional resources to the backward States. For reaching the level of development of advanced States the resources of the backward States need to be suitably augmented through a higher level of market borrowings amongst States should be made in accordance wi h the revised Gadgil formula applicable for distribution of Central Assistance. Alternatively, in addition to normal limits of market borrowings given in various States, additional market borrowing limits should be provided to the States which have an adverse credit deposit ratio. This additional market borrowing should be proportionate to the extent of gap in the credit and deposits.

5.16 Article 246 of the Constitution demarcates the sphere of responsibilities of the Centre and the States in terms of their legislative powers as laid down in the Seventh Schedule. While the Centre has been entrusted with a few major responsibilities like defence, external affairs, etc. t e State have to shoulder major responsibilities for most of the development and welfare functions like irrigation, power, agriculture, education, health, social welfare, etc.

Since the Second Plan, there has been growing centralisation of revenues. On the other hand, compared with the revenues at its command, the centre assumed relatively less responsibility in the total public expenditure of the country. This resulted in increasing federal fiscal imbalance during the past few years. Thus the States, own revenues (both capital and revenue) could now finance less than 60 per cent of their total expenditure. There has been a continuous decline in the State's own revenue to finance State's total expenditure upto the end of the Fourth Plan. There has, however, been some improvement in the situation during the Fifth Plan period. This, in the context of the increasing additional resources mobilisation by the States in recent years, implies that while t eir capacity to raise their own revenues has reached the end of ladder, their expenditure needs are increasing faster owing to the increasing demand for development and welfare expenditures from the people.

Fiscal transfers from the Centres made on the recommendations of the Finance Commission in the form of share in Central taxes and grants-in-aid are non-returnable. Such transfers constitute only one-third of the total federal fiscal transfers. Transfers on the recommendations of the Planning Commission are on the other hand discretionary and usually have a mix of 30 : 70 between grants and loan. It imposes a heavy debt burden on the States. It is therefore suggested that the grant and loan components of plan transfers should be 50 : 50.

5.17 States are committed to improve the living standards of the people and undertake the Plans to accelerate the rate of growth of economy. For financing the plans, the States also resort to market borrowing and loans from financial Institutions in addition to loans from the Centre under small savings and Central assistance of which 70 per cent is in the shape of loan. The quantum of these loans is increasing progressively resulting in the increase of States debt burden. This rising indebtedness of the States can be remedied to some extent by writing off part of the Central loans. The real solution would appear to cover their growing fiscal needs and loans are secured in respect of such investments only which are likely to yield returns.

5.18 States can borrow only to the extent of yearly allocation made by the Centre. States borrowings are being subscribed primarily through nationalised banks and institutions and no difficulty is experiencec in achieving the stipulated borrowings. As already explained under question 5.15 there is need for higher allocation of market borrowings to the States.

5.19 It is true that the Centre charges from the States a higher rate of interest than what it pays to the foreign lender. In the meetings of the National Development Council, it has been repeatedly urged by the State that this should be required to pay the same rate of interest on which the Centre gets the loan from the foreign lender. Further, on an average only 50 per cent of the amount received from the foreign lender is passed on to the States for financing such States projects. For obtaining foreign credit for their projects, the States have often to agree to such conditions or incur expenditure which the States would not have otherwise incurred or sanctioned. There is thus no reason why the entire amount of foreign credit is not passed on the States and only small service charge is realised in addition to interest rates on which this is received from the foreign lender.

5.20 The Reserve Bank of India should continue to play the role of co-ordinating the market borrowing as it is in a position to channelise the reserves of the nationalised banks and other institutions into market borrowings. The borrowing limits of the States and the Centre are, however, not fixed by Reserve Bank of India, and instead are fixed by the Union Finance Ministry and the Central Planning Commission. This State Government agrees with the suggestion for setting up a Loans Council which could fix the borrowing limits of different States and the Centre on the basis of principles to be approved by the National Development Council.

5.21 Overdrafts by the States is an indication of a deeper malaise in the finances of the State Governments. Doubling of the Ways and Means Advance was a short-term measure, which was only a palliative and not a remedy. We cannot, however, blame any single Govt. for this malaise. It cannot be said that there is no laxity in fiscal administration in the States. Some Public Utilities are neither run competently nor their services pric d at a cost-plus basis, resulting in heavy losses requiring budgetary support. Secondly, there is ever capitalisation. States are under various pressures to take up too many projects, needing heavy investment, which results in wastage of resources and consequently, high capital output ratio and very low rate of returns. These collectively lead to a weak resource base for the States and their Ways and Means problems. This is further compounded by the relatively in elastic sources of revenue with the States. The deficiencies in fiscal management by the States are largely found in the Centre's fiscal management also. Though the State's problem of

Ways and Means is not a simple one, only an overall National Financial Strategy, which strives for efficiency, bereft of other considerations alone can solve this deep-rooted malaise.

5.22 Article 246 of the Constitution demarcates the sphere of responsibilities of the Centre and the States in terms of their legislative jurisdiction as laid down in the Seventh Schedule. As far as the division of sources of revenue is concerned, the Central Government enjoys a comfortable position with many elastic sources of revenue like Union Excise Duties, Custom Duties, Corporation Tax etc. which have a national tax base. In contrast, the States are given inadequate and less elastic sources of revenue. A possible exception is sales Tax. But its scope has been gradually reduced by the Central Government, by making many inroads into the coverage, like centralisation of Sales Tax on inter-State trade, taking over the power of fixing the rates of Sales Tax on declared goods and services and gradual extension of Additional Union Excise Duties in lieu of Sales Tax to more commodities. Further, some of the sources of revenue like land taxation and State Excise Duties are entangled in various types of constrains, making it difficult for the State Governments to raise more revenue from these sources. Inspite of these constraints, a backward State like Uttar Pradesh, has been able to sustain a compound growth rate of more than 16 per cent per annum in receipts of all States taxes and duties during the past 12 years (from 1970-71 to 1982-83). Indiviudal taxes, like General Sales Tax, Taxes on Vehicles, Entertainment Tax, Tax on Goods, Stamp Duty and State Excise Duties registered a compound growth rate ranging from 14.2 per cent to 19.6 per cent per annum during the same period. The per capita revenue from State Taxes and Duties rose from Rs. 15.83 in 1968-69 to Rs. 80.81 in 1981-82 and the tax ratio from 3.5 in 1968-69 to 5.6 in 1982-83. Non-tax revenue also registered commensurate buoyancy during the period. Other States have also registered similar trends. Thus, in so far as revenue from State sources and Additional Resource Mobilisation measures are concerned, the State Governments have done and are doing, whatever is possible within the given framework of the Constitution and the prevailing economic situation.

5.23 As a result of leakage of Central taxation and its avoidance there is considerable unaccounted money in circul tion. This is revealed by the response to one time measures such as special Bearer Bonds Scheme. In regard to returns on Capital investment in C ntral Public Sector undertakings, the Seventh Finance Commission had considered the return of 4.4 per cent in 1976-77 to be inadequate and while reassessing the resource forecasts of the Central Government, the Commission has assumed that the return will increase to 7.5 per cent by 1983-84. For curbing tax evasion or avoidance, the tax administration machinery need be strengthened and made more effective. Concerted efforts should be made to improve the financial working of the enterprises which are running at a loss or are not yielding proper returns. The same, however, applies to State Governments also.

5.24 The proceeds of taxes and dutiese numerated in Articles 268 and 269 of the Constitution accru to the States. In the interest of healthy Centre-State financial relations, therefore, if the rates of any of these taxes are proposed to be revised or any significant changes or concessions are contemplated it would be desirable for the Centre to elicit the views of State Governments and to consider them before proceeding in the matter.

5.25 This State Government is also of the view that the taxes and duties mentioned under Article 269 of the Constitution, which are collected by the Centre but assigned to the States, should be better exploited. Of the seven taxes and duties mentioned in the Article, only two *viz.* estate duty on property other than agricultural lands and inter-State Sales Tax are levied at present. The Fifth and Eighth Finance Commissions have examined in Article 269 and have made specific recommendations. These should be considered expeditiously by the Government of India..

5.26 The tax on railway passenger fares is one of the taxes mentioned in Article 269 of the Constitution. The tax was imposed by the Centre in 1957 but was given up in 1961, and an ad hoc grant is being given to the States in lieu thereof. Initially the grant was fixed at Rs. 12·50 crore in 1961-62. It was raised to Rs. 16·25 crore from 1966-67 and to Rs. 23·12 crore from 1981-82. The grant was due to be revised every five years. The delay in its revision and also the f ct that the quantum of the grant has been kept much lower than what would have accrued to the States, if the tax had continued, has caused considerable loss of the revenue to the States. The Eighth Finance Commission has specifically recommended that the annual grant should be increased to Rs. 95 crore. This, when implemented, would meet the major grievance of the States. The matter is, however, to be considered by the Railway Convention Committee. This State Government would suggest that as long as the tax on railway passenger fares is not re-imposed, the determination of the quantum of the grant in lieu of the tax should be specifically referred to the Finance Commissions.

5.27 No comments.

5.28 The present arrangement in regard to provision of Central assistance to States for dealing with natural calamities *inter alia* envisages that a part of the expenditure should be shared by the States. In times of natural calamities the paying capacity of the people is considerably reduced. In consequence, the resource raising capacity of the States is also adversely effected. The State would accordingly suggest the following:—

(1) The Central assistance made available to the States in the event of drought should not be in the form of advance Plan assistance and should be provided on the same terms as in the case of other natural calamities;

(2) the Central assistance should fully cover the expenditure in excess of the margin money, it should be in the nature of a grant, and only the amount granted as loan by the State Government should be given as loan;

(3) the norms adopted in fixing the ceiling of expenditure for items like repair and reconstruction of damaged houses should be suitably revised; and

(4) the procedure should be streamlined to enable the flow of Central assistance to the State Government as soon as it becomes clear that the relief expenditure would exceed the margin money.

The Eighth Finance Commission has recommended grants-in-aid to States to the extent of 50 per cent of the margin money as redetermined for each State, provided that the State spends its share of the margin money. This will be helpful to States afflicted by natural calamities.

5.29 A National Loan Corporation does not appear necessary as the nationalised banks are competent to raise loans in the national or international markets for viable projects. The idea of setting-up a National Credit Council is, however, welcome. All State Governments should have equal representation on the National Credit Council which should be entrusted with the task of assessing the available credit resources within the country, possibilities of its growth and the extent to which it can be harnessed for purposes of meeting developmental expenditure. This council should have the freedom to determine the share of the States as well as the Centre and also the distribution of the share of the States *inter se* amongst them. The idea of setting up a National Economic Council is also welcome. Here again all the States should be given equal representation in the council. The council could constitute Expert Bodies for examining different economic problems of national and local importance within the country. The annual reports of the two bodies should be placed before the Parliament for discussion and suggestions as well as before the State Legislature for their information.

5.30 It is no doubt important that public funds are spent prudently and the benefits go back largely to the people. Sinc there is non-correspondence between State resources and expenditure needs for discharging their growing responsibilities, it is necessary to ensure adequate transfer of resources from the Centre to the States. It is the State Governments which are closer to the people and have to render services which touch intimately the lives of the people.

5.31 (a) The expenditure of the State is scrutinised in considerable detail by the Finance Commission and the re-assessed estimates become a base for determining the level of transfer of resources from the Centre to the States. Although since the Sixth Commission, expenditure of the Union is also subjected to examination but in actual practice a detailed scrutiny as is done of States, expenditure is not carried out. It is, therefore, necessary that Centre's expenditure is examined in as much detail as is done for States.

(b) The conditions vary from State to State and a scheme which may be of benefit to the people of one State may not be equally beneficial t the people of another State. If, however, a particular item of expenditure on the non-plan side s not justified in view of resource constraints, it can be suitably dealt with by the Finance Commission while reassessing the forecast.

(c) The Constitution already provides for a fiscal readjustment mechanism is the shape of an independent statutory body *viz.* Finance Commission, which goes into the details of expenditure as well as details of revenue receipts. What is needed is that expenditure of the Centre is scrutinised in detail in the same manner as is scrutinised by the Finance Commission for States.

5.32 We have not encountered any operational problem in keeping the accounts as having a bearing on Centre-State Relations.

5.33 Evaluation audit is desirable but if it cannot be done promptly, its very purpose is defeated. At present evaluation starts when a scheme has been completed. If evaluation work could be taken up concurrently with the execution of the scheme, it should be possible to complete evaluation audit much earlier. It would then prove more useful.

5.34 The powers and duties conferred on the Comptroller and Auditor General of India appear to be adequate.

5.35 & 5.36 The success of Parliamentary control rests on two important factors—publicity of the account rendered to the Legislature through the instrumentality of an audit office and the responsibility of executive to the Legislature. The present arrangement appears to be adequate.

5.37 The role of the estimates committee is purely advisory, whereas public accounts committee has a statutory role. The presentation of the estimates to the Legislature provides the basis for the grants. Economy can be secured if the estimates of expenditure are carefully prepared and kept as low as possible, consistent with efficiency. The extent to which they are intelligible and can be controlled by the body to which they are intelligible and can be controlled by the body to which they are submitted, depends on their arrangement and detail. This is already being done by the Finance Department the Finance Ministry and in this way there is adequate control of Legislature over the public expenditure.

5.38 Control over expenditure is necessary initially as the stage of preparation of the estimates and thereafter during the course of expenditure. Audit examines whether the expenditure has been incurred in accordance with the objects for which it has been voted by the Legislature. An expenditure commission will perform more or less the same functions. Thus there appears to be no need for constituting an expenditure Commission.

5.39 It is felt that once the scheme has been approved in principle, details thereof should be left to the State Governments and in the interest of speedy and effective implementation of the

scheme, the States should have the freedom to make variations in details. The Centre should only be concerned that the money earmarked for the scheme was utilised on that very scheme and not diverted elsewhere. This can be ensured on the basis of accounts of utilisation. After all, the States are the beneficiary of the grants and there seems no reason for not trusting the States in such matters.

ANNEXURE I

Taxes levied by Centre and States, tax devolution and States share in total Revenue Expenditure

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The existing procedures for the formulation of State Plans and their finalization allow adequate inter-action between the Planning Commission and the States. The overall policy framework for National Plans is provided by the National Development Council and within these broad guiding principles for development perspectives, national priorities and targets for key areas are determined by the Planning Commission. Thereafter in keeping with the accepted concept of decentralised planning the States must have a free hand in the allocation of available resources to different sectors of development and to propose programmes and projects for the satisfaction of regional and local needs, for the optimum utilization of natural and human resources, for providing essential social services and taking up programmes for the benefit of disadvantaged sections. The formulation and implementation of centrally sponsored schemes needs to be reviewed specially in accordance with the suggestions given in reply to Q. 6.10 below :

The examination of major programmes and projects of the State by the concerned Central Ministries and by the Planning Commission is helpful to the State. The experience of the Central Ministries in dealing with similar programmes with other States also becomes available through such examination and helps in improving the quality and content of the programmes. It is, however, felt that once the Central Ministries and the Planning Commission have made their advice known to the State Government it should then be left to State Government to modify their plan programmes suitably with references to characteristic local conditions and there should be no compulsion implied or otherwise for the acceptance of uniform guidelines for all the States. It is also suggested that before the Planning Commission puts up an important policy document for the approval of National Development Council, the States should be asked to furnish their reactions and these should also be placed before the National Development Council.

6.2 The National Development Council as constituted at present remains the best forum for the determination of perspective of development and plan strategies and priorities. The National Development Council derives its strength from the fact that it is presided over by the Prime Minister, who is also the Chairman of the Planning Commission.

We agree with the view that once the development plans are approved by the Council, the States should be free to implement them and adequate financial resources should be provided to the States for implementation of the approved plans.

6.3 The present composition and procedures of the Planning Commission have stood the test of time and provide adequately for consultation and understanding with the State Governments and the Ministries of the Central Government. The following suggestions are made with the objectives of making the Planning Commission more responsive to the needs of the States and the difficulties they face in the implementation of their plans and programmes :

(i) During any year, Chief Ministers of at least two major states should be included as Members of the Planning Commission by rotation, the period of rotation being one year.

(ii) The Planning Commission should meet at least once every year with the Chief Ministers of all the States for review of the progress of the Plans and for obtaining their suggestion for the next year's plans.

6.4 The Planning Commission should retain its character as high grade Advisory Body of economists, technologists and management experts. Representation of the Central Ministries and the States is available in the National Development Council and it does not need to be duplicated in the Planning Commission. The view-points of the State Governments can be provided by the two Chief Ministers who take up membership of the Commission on rotation as mentioned in reply to Q. 6.3 above.

6.5 The Planning Commission should continue to be a Department of the Government of India as at present. This arrangements lends to the Planning Commission necessary authority and prestige of Government of India and is helpful in its dealings with the Central Ministries and the State Government as also in resolving difference of view-points between them. The Planning Commission has the responsibility of getting the decision of the National Development Council implemented. The Planning Commission should, however, not hesitate in pointing out the short-comings in policies approved by the National Development Council in case, such deficiencies come to light during the course of implementation of plans and programmes.

6.6 We agree that it is essential to consider and incorporate national priorities in the State Plans. There is no objection to the examination of States finances and plans by the Planning Commission but it must be realised that such detailed examination is not very helpful to the States in as much as the Planning Commission is not in a position to provide for the genuine and recognised needs of the State beyond the set pattern of allocation of central assistance as indicated by the Ministry of Finance. The Planning Commission should be enabled to discharge its responsibility towards the economically backward States by exclusive allocation of adequate resources to it for the implementation of essential programmes of the economically backward States.

6.7 This question has been dealt with in detail in reply to Part V of the question pertaining to financial relations.

6.8 We agree that the present system of determining the plan size operates harshly against the economically weaker States. The following suggestions are made in this regard :—

The revised Gadgil formula which forms the basis for allocation of Central assistance to the States needs to be modified further so that the

allocable central assistance is distributed amongst the various States on the following basis :—

(A) Weightage for population . . .	60%
(B) Weightage for backwardness in accordance with IATP (Income Adjusted Total Population Formula).	30%
(C) Special Problems	10%
TOTAL .	100%

(ii) The Planning Commission should, in addition, have access to adequate additional resources which could be utilised for meeting special needs of the economically backward States as assessed by the Planning Commission from time to time.

(iii) Uttar Pradesh has not been receiving adequate share in externally aided projects which provide additionality to State Plan resources. The past neglect should now be made up by linking some major power and irrigation projects with external assistance. The entire amount of external assistance should be passed on to the States as additionality to the plans except for service charges which may be retained by the Government of India.

(iv) Uttar Pradesh has three recognised backward regions namely Eastern region, Bundelkhand and the Hill region. It is necessary that special central assistance should be provided for the accelerated development of Eastern U.P. and Bundelkhand regions on the same basis as is being provided for the Hill region. Such assistance should be provided to the State on the basis of 90 % grant and 10% loan.

6.9 As stated in reply to Q. 6.8 above, the present criteria for allocation of Central Plan assistance to States are not fair to the economically weaker States. These States are obviously not in a position to generate adequate resources of their own for plan financing and must be helped by adequate flows of central assistance to enable achievement of the objective of balanced regional development and removal of poverty.

The special central assistance provided by the Planning Commission for the hill region of U.P. is generally for the same order as provided to Himachal Pradesh. The Hill region of Uttar Pradesh has serious problems of communications, lack of cultivable land, lack of irrigation sources, soil erosion, environmental degradation and absence of large industries. The special central assistance provided by the Planning Commission is not adequate to take care of these aspects and needs to be raised substantially. Uttar Pradesh has large tribal pockets in the hills, Bundelkhand and Tarai regions. Several of these tribes have not been declared as scheduled tribes upto this time and have thus been deprived of due assistance. Secondly, on account of wider dispersal of tribal population in Uttar Pradesh, it is not possible to formulate integrated tribal development plans for scattered tribal population according to prescribed guidelines. The following suggestions need consideration in the interest of accelerated development of the tribal population of the State :—

(a) Early decision should be taken regarding notification of additional tribes in Uttar Pradesh as scheduled tribes as proposed by the State Government.

(b) Special central assistance should be provided by the Government of India on the basis of entire tribal population of the State.

The present mechanism of earmarking of State Plan outlays for projects and programmes is not satisfactory. The Planning Commission generally adopts far too rigid an approach in this matter which does not take into consideration the problems of implementation of particular projects and programmes as also other problems which come up during the course of implementation during the year. The practice of earmarking of outlays should be restricted only to a few programmes of national importance and therein too the Commission should be fully responsive to State Government suggestions for modifications.

6.10 We agree with the general concept of implementation of centrally sponsored schemes in areas related to specified national objectives. The formulation and implementation of these schemes, however, needs improvement. The following suggestions are made in this regard :

(1) The process of consultation with the State Government before a new centrally sponsored scheme is taken up is inadequate. Such new Schemes should be framed in consultation with the concerned departments of the State Government. In addition draft of the scheme as finalised by the Central Ministry should also be sent to the Planning Departments of State Governments (in addition to the concerned departments) and their views should be obtained in writing before a final shape is given to the proposed centrally sponsored scheme.

(2) The new centrally sponsored schemes should be introduced at the beginning of the Five Year Plan or at the beginning of the Annual Plans. They should not be introduced during the course of the year and specially during the latter half of the year as such introduction results in serious dislocation of the States, plans priorities and sectoral allocations.

(3) The Central Ministries should adopt a more flexible policy in modifying the guidelines for different States in accordance with the characteristics of their economy and their needs. The present system of inflexible adherence to uniform guidelines sometimes goes against the objectives of deriving maximum benefits out of the investments made in the schemes.

(4) It has been the experience that the richer States have derived far greater benefits from centrally sponsored schemes as compared to the economically backward States. This aspect needs careful attention as sizable assistance is flowing to the States through such schemes.

(5) The centrally sponsored Schemes should mainly to be on the basis of 100 per cent funding by the Central Government. It is however,

recognised that the Government of India might ask for financial participation of the States in a few centrally sponsored schemes in order to relieve their burden on the respective Central Ministries. In such cases for economically backward States like Uttar Pradesh, the sharing of outlays for such schemes should be 75 percent by the Government of India and 25 percent by the State Government.

6.11 We feel that the monitoring and evaluation of programmes is inadequate both at the level of the Planning Commission as well as by the State Government. For major projects monitoring of progress has been rendered ineffective largely because of the fact that enough resources for timely completion of such projects are not being made available. This problem is of greater relevance to the economically backward resource of poor States. The Central Ministries and the Planning Commission as also the State Governments should not hesitate in dropping a scheme which has not achieved its purpose within a specified period. High power bodies should be available both at the level of the State Government as also at the Planning Commission, to assess such schemes objectively and in depth and stop their implementation as necessary.

6.12 Uttar Pradesh has been a pioneer in decentralised planning and 30 percent of the State Plan outlay have been allocated to the districts for preparation of district plans in accordance which locally felt needs and resources. The State Government accepts these plans as approved by the District Committees as such and does not make any substantial modification therein except when such modification is necessary to adhere to some a nationally accepted guidelines providing matching scheme for centrally sponsored schemes etc. Similar of flexibility regarding State Plans has to be available in the States dealings with the Planning Commission. *Ad hoc* fixation of targets of certain programmes by the Planning Commission without adequate appreciation of States conditions is not realistic.

6.13 Uttar Pradesh has a State Planning Board by the name of Rajya Yojana Ayog (State Planning Commission). Its role in practice is limited to reviewing the proposals for Five Year and Annual Plans before submission to Government of India and also reviewing the progress of the implementation of plan schemes in various sectors. The National Plan has to be more specific in sectors in which the responsibility of implementation devolves mainly on the Central Ministries and provide more flexibility in sectors for which responsibility for implementation lies with the State Governments.

PART VII

MISCELLANEOUS

Industries

7.1& 7.2 It is true that the first schedule to the IDR Act has been amended from time to time and a number of industries have been brought under its purview. This however, has been a natural result of the growing industrialisation in the country and the manufacture of new items, over a period of time. However, the mere fact of an industry being brought under the first schedule does not *ipso facto* act against the interest of any particular State. On the contrary one of the principal objectives of the IDR Act is balanced regional development and proper industrial dispersal.

To attain this objective, it is essential that the Central Government apply more thoroughly the principle of adequate regional dispersal and representation of industry, to different groups of Industry. Such industries as have been exempted from the purview of licensing are substantial both in numbers and give adequate opportunity to the small and medium industries where the investment is not very heavy, for location in terms of the economic pulls of any particular region. However, for the larger industries or industries which have a substantial impact in terms of other downstream industries, the national public interest requires that the Central Government continues to apply the IDR Act to fulfil the objectives of balanced regional development as laid down in its industrial policy and in its amendments of that policy in 1980 and subsequently. Fiscal incentives alone may not fulfil, the objective of uniform development, because the more effluent state will always out match the less effluent States.

It is noteworthy that in recent months several industries have been taken out of the purview of licensing. Within the framework of the preceding paragraphs, these changes are welcomed.

7.3 In the present procedure for industrial licensing, State Governments are not given a full and adequate opportunity to represent their case; even in the full Licensing Committee it is felt that greater weightage may be attached to the State Government view point before a final decision is taken on a licence application. In keeping with the present liberal and pragmatic policy for import of Capital Goods, it is also necessary to streamline the procedure so that decision making is actually decentralised and becomes much quicker, while at the same time it is in keeping with the central norms. For this purposes, the regional offices of the DGTD should be given adequate powers. Similar powers should be delegated to JICCI & E in the case of import of scarce raw materials and spares, so that every small matter need not be routed through CCI &E at the Centre.

7.4 Arrangements are in place for supply of raw materials and finances to small sector and to give them marketing support by way of price preference etc. However, the supply of raw materials is largely dependent on the allotment made by the Central Government to the State Government. The allotment has generally been far short of actual requirements, firstly because of chronic shortages and secondly because of inequitable distribution among the small, medium and large sectors. This inequity has to be corrected at the national level in order to enable State Governments to ensure better supply of raw materials to the small scale sector. The State organisations in charge of supply of raw materials frequently suffer from want of funds. Injection of adequate funds will enable these organisations to perform their tasks better. The major problem face

by the small sector is the inadequate availability of working capital. Effective steps need to be taken by the banks to ensure prompt sanction of adequate working capital. Suitable mechanism should be devised for this purpose, so that working capital is available at appropriate time.

Action for bridging the gap of technology would need to be taken up primarily at the national level. Apex organisations and research institutions are already involved in technological research. However no mechanism is available at present for technology transfer and establishment of necessary nexus for commercial utilization of research findings. It would be necessary to create a national level agency for working as a data-bank of such findings, with necessary linkages with the State level organisations. If necessary, new State level agencies may also be created for this purpose. The Central Government would have to play a major role in creation and financing of all these agencies.

Where requisite technology is not available within the country, it is being imported by different agencies/units on individual basis. It is necessary to route the flow of foreign technology, through a single window or institution. This could either be created as an entirely independent agency, or as a wing of the technology bank suggested in the previous paragraph. This will also obviate reckless import of technology.

7.5 It is a fact that investment of Centrally controlled national industrial financial institutions is congregating primarily in developed States, like Maharashtra and Gujarat. An analysis of their total financing, in the various States, clearly brings out the fact that backward States like Uttar Pradesh have received much less than their proportionate share, though logically speaking backward states should receive higher per capita financing vis-a-vis the developed ones. It is, therefore suggested that the national level financing institutions should go in for regional allocation of total resources, with a view to particularly help the backward States. They should be also made responsible for financing programmes of infrastructural development and rehabilitation of sick industries in these States.

7.6 & 7.7 A large, populous and backward State like Uttar Pradesh has received only about 5 per cent of Central Investment in public sector projects so far. The Central Investment decisions should be taken after giving due weightage to the level of investment so far, present state of industrialisation of a particular State and the extent of its backwardness, besides technoeconomic considerations.

7.8 The present methodology adopted for identifications of industrially backward districts/areas is satisfactory, and no need for a change is felt.

The Government of India has vide its G.O. dated 1-4-83 stated that such blocks of industrially backward districts as have investment in excess of Rs. 30.00 crores in the fixed assets of industries located in that block would cease to receive concessions. Thus, the Government of India has rightly recognised the fact of industrial backwardness being defined in terms of direct investment in the fixed assets of industries located in a particular block. The impact of these concessions has been encouraging. However the assistance granted by Government of India for development of infrastructure in zero industry districts is not adequate.

The subsidy of Rs. 2.00 crores in a project of Rs. 6.00 crores needs to be raised to reduce the ultimate cost of developed land to the prospective entrepreneurs. This will attract entrepreneure to the Zero industries districts and ensure better dispersal of investment.

Most of such projects cost well over Rs. 6 crore while the subsidy remains fixed at Rs. 2 crore resulting in high cost of developed land. Hence the same proportion needs to be maintained.

The various central incentives for promotion of industries in backward areas have been useful. However, most of them are one-time measures e.g., central capital subsidy, reduced requirement of promoters contribution etc. It is felt that introduction of some recurring concessions, like rebate on excise etc; to off-set recurring disadvantage of location in backward areas, may be thought of.

It bears mention, however, that previous experience has shown that fiscal incentives alone are not adequate for industrialization of backward areas, It is imperative to continue with an effective policy of licensing to ensure regional dispersal of investment.

Trade and Commerce

8.1 Although in theory free flow of trade and commerce cannot be questioned in the interests of national integrity but imposition of certain restrictions on trade and commerce have a direct bearing on the economy of this State and they are mostly imposed to raise revenue. Most of these imposts are State's subjects; advice of such an authority on relaxation/reduction on the restrictions can not be made mandatory and as such the usefulness of such an authority is reduced to a very large extent.

However there should be specific committees at the Central Government level. It is felt that the same objective can be better attained by setting up specific committees under union ministries concerned with the subject, where states are represented.

Supplementary Questionnaire No. 2
(On Industry)

1. As in Answer to Q. no. 7.1 and 7.2.

2. The policy of protection to 551 by reserving items for production in 551 will not work if the powers are given to the State Government as the States may have different set of policies and pull in different directions. Therefore, reservation, to be real and effective, will have to be decided at the national level.

3 & 4 The State Government are basically responsible for promoting the growth of small industries in that the State Directorate of Industries are responsible for their registration. The creation of infra-structure facilities, arrangements of raw material, power and finance through State Finance Corporation are also

acuvities fairly under the control of State Government. However, most of the critical raw material are not within the control of State Government as they are allocated to the State Government/State Institutions by various Central Departments/ Institutions. In regard to medium enterprises, the registration is the responsibility of DGTD. They also sponsor these enterprises directly for various raw materials. It is only in respect of infrastructure availability of power etc. that the State Government comes into picture. The expanded role may constitute transfer of registration of all medium enterprises to the State Government; as also their sponsoring for raw-materials. There is, however, a difference here because the registration by DGTD has a legal sanction under the IDR Act. This sanction also enables DGRD to have a better control over the monitoring of DGTD units. It would be necessary to make amendments in IDR Act for enabling the State Directorate of Industries to do so. There is a thinking in currency these days that there should be closer linkage between the small and medium enterprises, and incentives should be so structured that small enterprises are motivated to move to medium scale. There is a lot of merit in this thinking. This change over would also enable the State Government to effectively monitor both small and medium enterprises, as also ensure equitable distribution of raw material amongst them. In this connection, it would be also necessary to delegate sufficient financial powers to State Financial Institutions to enable them to undertake financing of all medium enterprises.

5. Already answered in para 7.1 and 7.2.

6 & 7 National Industrial policy has to be in keeping with the national objectives, and we are again agreement with the industrial policy resolutions. It would, however, be useful to develop a forum for regular inter-action between the Centre and the States. Such a national level forum may be introduced by Government of India, in which the Industries Ministers and officials of the Central and State Governments, as well as representatives of various Chambers of Commerce and Industry inter act freely and regularly.

8. The Government of India has reduced certain restrictions on MRTP Houses with objective of development of zero industry and backward districts. But it has been the experience that non-clearance by Department of company important projects. For the development of backward region particularly zero industry districts it is essential that MRTP clearance should be given at the time the SIA clears the projects for such areas.

Agriculture

9.1 The agro-climatic conditions and diversities of crop husbandry, no doubt, make agriculture a State subject but to meet the food requirements of teaming millions, Central assistance to boost the meagre State resources, for agriculture development, is a must. Hundred per cent assistance is necessary for the programmes which are of National importance such as oilseed and pulses production, augmentation of irrigation potential, seed multiplication, etc.

Although the implementation of all the Centrally sponsored schemes would fall under the purview of State administration yet reorientation of infrastructure in the shape of expertise would also be desirable, through central assistance.

9.2 The general concept of implementation of Central and Centrally Sponsored schemes in areas related to specified national objectives is laudable. The important point however , is the manner in which the schemes are formulated and implemented. The process of consultation should be clearly laid down and prior views of the State Governments should be obtained formally before a final shape is given to such schemes. The schemes ultimately are passed on to the State and entire burden is to be borne by the State Governments after some time. It is felt that wherever the National interests diotate implementation of a particular scheme, the Government of India should continue to bear the entire expenditure of the scheme as long as the runing of the scheme is felt necessary in the national interest.

9.3 The report between the Centre and State in respect of planning is quite congenial, but as far as priorities and programmes are concerned the ideas of the former always prevail in centrally sponsored schemes. At present the programmes are tailored to suit the outlay indicated by the Centre, whereas the outlay should be in accordance with the programmes proposed by the state. It is suggested that agricultural experts of the State should also be included in the Central working group of agricultural planning to plead the cause of the State in the right perspective.

9.4 (a&c) The support price of agricultural commodities are fixed uniformly and they do not take into account the local conditions like productivity, market price etc., which would differ from State to State. This factor needs to be taken into account. The support price on the whole has been useful in prevention of exploitation but they should be so designed as to give a remunerative return to the producer. Similarly the programmes in regard to irrigation particularly in case of major projects such as Command areas and the distribution of water particularly during lean period should be according to the agreed plan. In respect of tube well programmes the required supply of power should also be ensured from Central Grid. In the case of inputs particularly seeds, fertilizers and pesticides, the initiative of the Central Government is of utmost importance for popularising new varieties, application of fertilizers in balanced does and taking plant protection measures at the proper time, as monetary help in the shape of subsidy is very much needed for all these and this will be possible only with Central assistance. Similarly assured supply of diesel, particularly at the time of preparation of fields for sowing and irrigation, can be maintained only with Central assistance. In the case of credit however the guidelines provided by the centre to the nationalized banks for providing crop loans etc., need to be pursued more vigorously so that the banks scrupulously comply with them.

Central Assistance

9.4(b) Harnessing and development of Water Resources of the State for irrigation, generation of hydroelectric power and flood protection is the

State's subject. Due to resource constraint. Uttar Pradesh has not been able to utilise substantial part of its surface and underground water potential. The Government of India through its Central Water Commission, Central Electricity Authority, Department of Environment and Planning Commission exercise technical and financial control over the implementation of Major, Medium and Minor irrigation and multipurpose projects. Technical control is exercised by subjecting the projects to technical scrutiny and financial control by allocation of funds. The allocation for various projects are decided by the State Government, but they remain dependent on the availability of financial resources within the State substantially supplemented by Central assistance. For expenditure and timely implementation of various irrigation and multi-purpose projects it is imperative that financial resources of the State should be augmented by substantial and perceptible increase in central assistance. Having regard to the relative backwardness of the State and keeping in view the fact that bulk of its vast water and energy resources remain unutilised it is necessary that quantum of central assistance should be need based and the sectors of irrigation and energy be given more priority and funds.

External Aid

The State Government sponsors Major, Medium and Multipurpose projects and State Minor irrigation schemes for external aid through bilateral agencies and World Bank. For clearance of schemes for external aid decision of the Government of India is all important. The Government of India's discretion needs to be biased in favour of lesser developed States so that they may have the benefit of external aid liberally. In addition to and together with this the percentage cut enforced at the level of the Government of India in passing on the aid to the State may be reduced to the barest minimum.

Nodal Agency at the Centre for Clearance of Projects

When a proposal is formulated by the State Government its clearance by a number of central agencies namely, Central Water Commission, Central Electricity Authority, Planning Commission, Department of Environment and if it attracts provisions of Forests Conservation Act, 1980 approval of the Department of Forest, is a mandatory requirement. The State Government has to approach these organisations individually. A lot of time is consumed in containing their concurrence approval. There should be a "Single Window Delivery System" at the Centre which should receive proposals of the State Government and obtain approval of the various agencies/departments at the Centre. They will dispense with the need of the State Government spending years in approaching various agencies at the Centre. Further, such proposals should be processed simultaneously by the different concerned departments in Government of India and be cleared at one meeting instead of consecutive examination which is time consuming. The time thus saved would ultimately result in financial savings and restrict the quantum of cost escalation which presently accrues because of a large time gap between project formulation and its implementation.

Inter-State River Projects

Government of India has an important role to play in the implementation of Inter-State river projects on which the concerning State are unable to reach bilateral agreements. The Government of India does have authority to set up Central Boards for implementation of Inter-State River Projects under its control and with the consent of various beneficiary States. The States project their points of view to elicit maximum benefit for themselves out of the project. At times their point of view lacks total objectivity. In Inter-State water disputes Central Governments role should be more effective and decisive. The Government of India should adopt a pragmatic approach keeping in view the overall interest of the region. This would help in settling disputes quickly and in turn in quicker utilisation of the perennial natural resources in public interest.

Notwithstanding the above mentioned suggestions, Irrigation and Power provide the necessary infrastructure for the development of the State. Therefore, harnessing of resources of inter-State rivers should not be taken out of the State List.

9.4(d) Owing to evergrowing population of our country of both human being and cattle, rapid industrialisation and developmental activities of post independent years have put our forests and its dumb denizens under an unprecedented strain. The State Government under the political consideration and in the name of rapid industrialisation, roads, canals and other developmental activities, have been under great pressure to deforest forest areas and this process was going unabated. Thus the Union Government realized the need for central interference in the year 1977 and with this background Forestry was brought in the concurrent list.

Although only a brief period of about 9 years has elapsed since the Forestry has come on the concurrent list, the Union Government has taken many effective steps for the protection of Forests and Wild Life. The Government of India enacted the Forest Conservation Act, 1980 in which the concurrence of the Union Government is required for every transfer of forest land to a non-forestry use. This Act has no doubt reduced the rate of such transfer of forest land was compared to the period prior to the commencement of this Act. Similarly much of the wild life today owes its existence to the keen interest the Union Government have shown in the formulation and implementation of the Wild Life Act, 1972. In this way the Union Government's initiative in forestry policy and administration has given a fillip to the cause of forest and wild life conservation which otherwise would have been difficult for any State Government, which has also to care for the local pressures exerted on it. Thus there does not arise any problem in Centre-State relations due to Union Government's initiative in forestry policy and administration.

It may also be mentioned that the Union Government are also helping the State by providing financial resources to carry out ambitious, plans of raising plantations and doing soil conservation works in the various river valley projects which will go a long way in enriching the State's forests and water wealthe

9.5 While there is no problem in the Centre-State relations with respect to the role of agricultural research, it is however felt that the National Agricultural Research Institutes should try to supplement the efforts of the State Research Organizations in tackling the problems of local importance in addition to their role in tackling National International research problems.

At present the research work is being done directly by the Agricultural Universities of the States and the Central Organizations like I.C.A.R. are supplementing their efforts. Still the same sort of assistance by the Central Organisations to the Regional Agricultural Research Stations of the State which are conducting adoption research work, should also be made available.

Similarly in the flow of credit NABARD is playing a pivotal role, but it is felt that it would be more useful if while formulating credit schemes the stage of socio-economic development of a particular State is kept in view because all States are not equally developed and the schemes should be in consonance with their specific requirements.

Food and Civil Supplies

Procurement under Price Support Scheme

10.1 The policy regarding procurement of Rabi and Kharif foodgrains is formulated by the State Government within the framework of the guidelines received from the Government of India. Different aspects of procurement are, however, conditioned by variations in geographical, agricultural, climatic and other socio-economic conditions prevailing in different States. It is suggested that the Government of India, before finalising procurement scheme, should give proper weightage to these variations and the suggestions of the State Government resulting from their experiences in the implementation of procurement scheme. Following points may be taken into account by the Government of India while formulating these guidelines :—

(1) The support price of foodgrains is generally much below the expectations of producers and as such the cost factor prevalent in different region should be given adequate weightage in fixation of price. By and large there is no co-relation between price fixed and price suggested by the State Government.

(2) The support price of different categories of foodgrains should be announced well in advance and preferably before the start of the agricultural season.

(3) At present the Food Corporation of India does not possess adequate storage capacity with the result that foodgrains purchased under the central the pool remain undelivered causing unnecessary financial and administrative strains to the State Government. The procured foodgrains also get damaged as they remain in the open space for pretty long time. The Food Corporation of India should prepare a comprehensive plan for building adequate storage capacity and this may be reflected in coming five year plans.

(4) At present there is no long term prospective plan for the procurement of different foodgrains. It would be advisable if a long term plan for procurement is prepared by the Government of India taking into account trends in agricultural production.

(5) Incidental rates accruing to the State Government under price support scheme should be sanctioned by the Government of India well in advance.

Licensing Authority of the Roller Flour Mills

At present the Central Government is the licensing authority of the Roller Flour Mills under the Wheat Roller Flour Mills (Licensing and Control) order, 1957. It would be advisable if the powers of licensing authority under the said Order, 1957 are transferred to State Government.

Public Distribution System

Food-grains and other essential goods, distributed through Fair Price Shops, are made available to State Government by the Government of India. Due to limited availability of foodgrains and other essential commodities sometimes allotments to the State Government are not made in accordance with demands made by them. The Government of India should give due weightage to the requirements of the State Government so that those commodities may be made available to consumers for proper functioning of the Public Distribution System. In the State of Uttar Pradesh Co-operatives have been closely associated in the Public Distribution programme. Availability of finances on soft loaning pattern has been a major constraint in their proper functioning. For successful implementation of this programme it is necessary that these co-operatives or in alternative other Government agencies engaged in this programme should have an independent line of credit and finance should be made available to them on concessional rates.

Storage

The Government of India have been allotting foodgrains under public distribution system and the State Government are required to store them in their godowns before actual distribution takes place. In this respect the State of Uttar Pradesh, on account of its vastness has its peculiar positions and there are certain pockets in this State like hill districts and the Bundelkhand areas which either remain inaccessible during rains or are widely spread where food-grains and other commodities have to be stored for two or three months at a time. Due to financial constraints State Government have not been able to build up adequate storage capacity which is adversely affecting distribution programme specially in rural areas and in far flung places. The construction of godowns under public distribution system needs to be given adequate attention and it should be made a part of the Development Plan. The State Government to start with, have taken a decision to construct godowns of a capacity of 5,000 Mts. in each revenue district during Seventh Five Year Plan, with a total cost of Rs. 16.35 crores. Adequate allotment of funds should be released by

the Government of India under this programme so that required storage capacity may be built up for successful implementation of programme relating to the Public Distribution System. To ensure better distribution Tehsil and block level godowns should also be constructed in a phased manner.

Pricing

The Public Distribution System has been implemented as an anti-poverty programme and anti-inflationary measure. Foodgrains and other commodities, distributed through Fair Price Shops, are primarily meant for weaker sections of the society and specially those who live below the poverty line. The pricing struc ure for goods sold through Public Distribution System should be designed in such a manner so that prices are comparatively low and its real benefits accrue to economically weaker sections of the society. This will obviously require adequate amount of subsidy which cannot be met from the meagre financial resources of the State Government. The Government of India should help the State Government liberally in providing this subsidy. On pricing structure it is also suggested that the Government of India may think in terms of formulating a long range pricing policy in which variation in prices of foodgrains and manufactured goods should be co-related *i.e.* prices of these two sets of commodities should not be allowed to go beyond a fixed variation.

10.2 It is in the interest of both the Central and the State Governments that the arrangements for administering the Essential Commodities Act and other Central Acts/Orders affecting State's areas of responsibility is reviewed periodically. One of the arrangements may be to discuss the administering of the Esssential Commodities Act and other such regulatory Central Acts/Orders by convening a quarterly meeting of the officers concerned. However, modality of such arrangements could be worked out.

The arrangements may be reviewed under two broad heads *e.g.* (1) Administ ring of Essential Commodities Act and (2) administ ring of other Central regulatory Acts/Orders. This is necessary because the E.C. Acts also envisages penal action under section 7.

It is felt that some Central regulatory Acts/Orders do not fully meet the requirements of the State concerned. For instance The Petroleum Products (Supply and Distribution) Order, 1972, which is a Central legislation, does not give adequate powers to the State Government to deal with the situation arising out of mal-practices indulged by dealers of petroleum products. In fact, this order applies mainly to the main installations and depots. Therefore some kind of amendment is called for so that State Government are empowered to deal with the situation. Similarly bricks have also not been categorised as an essential item with the result that the State Government have not control on brick-kilns. Thus articles of common use and mass consumption should be declared as essential commodities and adequate powers in respect of these commodities should be given to State Government.

Education

11.1 We do not subscribe to the view that there is unnecessary centralisation or Central interference in the field of education. In fact, the State is free to devise its plans and stategies. The State Government thus have full authority and initiative in the matter. The Government of India merely lays down broad policies and indicate National framework with a view to ensuring minimum uniform standard of education throughout the country. There is, therefore no justification in the criticism that there is too much of Central interference in the field of education. In fact, there is urgent need for more central initiative so that vital programmes like Universalisation of elementary education, introduction of 10+2 system and providing basic minimum physical facilities in the educational institutions could get suitable priority and the requisite financial assistance. If the Central Government does not take initiative in implementing these important programmes, such backward States like U.P. may not be able to mobilise necessary resources for implementing such vital programmes with the required urgency and speed.

11.2 The University Grants Commission has done very good work during last few years to improve standard and quality of education and bring about co-ordinated action in the field of education. The U.G.C. should continue to give financial assistance to the universities. Centres of Advance Learning and Special Studies on long term basis. It should also continue to review the prescribed norms after regular intervals. U.G.C. assistance should be available for libraries, laboratories/buildings and hostel amenities on liberal basis.

While recommending pay-scales for teachers, their qualifications, method of recruitment and workload etc. must be categorically stated with a view to ensuring academic excellence and specialisation in different fields. Before making such recommendations, the U.G.C. should also keep in mind financial position of the States. It should also lay down guidelines for opening new colleges, new universities and new faculties. However, the universities should be left free to determine the courses, syllabi for various degrees. Educationally backward States like U.P. cannot afford adequate resources toward their matching share for the U.G.C. grants to the universities and colleges of the States. There is, therefore urgent need for evolving a system of weightages for educationally backward States like ours so as to ensure that educationally backward States get adequate assistance from the U.G.C. should also devise its programmes and policies in such a way as to ensure that there is no regional imbalance in the field of higher education, and opportunities of higher education are available to different States uniformly.

11.3 The process of discussion, consultation and persuasion is already being followed in evolving consensus on matters of importance to the Centre and the States. The Central Ministry of Education has evolved a system of frequent meetings of Education Ministers, Education Secretaries, Directors of Education and other concerned officers. There is also a Central Advisory Board of Education in which all important issues and programmes are discussed threadbare and consensus is evolved on them. It is

suggested that more regular and periodical meetings should be held. Similarly, there should be more frequent dialogues between Central Bodies like N.C.E. R.T. and U.G.C. and the States.

Education is in the concurrent subject but in practice the Centre has not started operating on this provision so far as effectively as it should. It is still considered to be basically a State subject. It is suggested that there should be more central initiative in the field of education.

11.4 Legal and practical difficulties have been experienced in the operation of Article 30 giving rise to litigation in the courts. This is evident from the fact that the matters have gone upto the Supreme Court in a good number of cases.

Definition of minority

It is not clear in the Article as to whether minority is to be construed in relation to the total population of the country or a particular State or a smaller local area.

2. Forum to decide the question of minority has not been specified with the result that whenever the occasion arises before any court or authority, such court or authority has to take evidence and decide the issue. It may be desirable to specify some forum where the question as to whether an institution is a minority institution or not, may be determined.

3. Who can establish a minority institution is also not clear. Whether one member of the community is sufficient to do so or there must be some specified minimum number of persons to represent the community. It is also not clear whether, the minority character of the institution is lost by inclusion of some members of the other communities.

4. The scope and extent of administration guaranteed in the article is not specific. The courts have held that the right to administer does not include the right to mal-administer. It is yet the subject matter of controversy as to upto what extent the State may have control over the administration and in what branches of administration like standard of education, syllabi, recruitment and service conditions of teachers and other employees, admission of students, choice of administrative body.

5. The term educational institution is very wide and from that viewpoint it may include institution upto the status of Universities and institution imparting education not only in minority languages, culture, religion but secular institution also. Question arises whether it covers technical, industrial institutions like Engineering, Medical Colleges. The position of these institutions may be different because uniformity in standards of education has to be achieved.

6. Thus the scope of the Article as worded, is very wide, In Uttar Pradesh all religion, other than Hinduism and all languages other than Hindi may be minority resulting in numerous minority groups, moreover the right of minority under the Article does not exhaust by the establishment of one institution by one minority. Different or some members of the some minority may establish several institutions of their choice. This means that in every district, tahsil or even smaller local areas there may be several minority communities. They may even exceed the number of non-minority institutions. Existence of Hindu, Muslim, Christian educational institutions at every place is bound to result in compartmentalisation. This is fraught with the danger of giving rise to segregation and communalism. As was observed in St. Xavier's case (1974 S.C. 1389) by the Supreme Court—Education should be agreat cohesive force in developing integrity—of the nation. Abuse or the provision of Article 30, lately sought to be made is not conducive to national integrity.

7. Earlier the State confined its educational laws to affiliation/recognition of institutions for the purposes of examinations and awarding diplomas. It did not interfere with the management. When, however, it was found that teachers/students were exploited and mismanagement was rampant then only the State had to make a regulatory measure to protect the interest of the students, teachers and other employees. Obviously it is in public interest. It is not clear whether the so-called minority institutions which may even exceed the number of majority institutions shall be allowed to be free from the right of the State to intervene howsoever the public policy may require. If not, then what is the exact import of the right to administer guaranteed in Article 30.

8. In Chakhala Sammuel's case (A.R. 1982 pp. 64) it was held that an institution imparting secular education must have some nexus with the minority community to which it belongs. That is, it should serve and promote the interest of minority community in some manner even otherwise than promoting the religious tenets culture or language. This allows commercialisation of educational institutions by the minorities for applying the profits to purposes other than promotion of religion, culture and language.

9. In the field of technical education like medicine and engineering common competitive test. If the minority institutions are to be conceded the common competitive test of the minority institutions are to be conceded the right to choose their own students and to abide by the common selection, there is the danger of sub-standard production of professionals. In St. Xaviers case the Supreme Court observed—To day education, specially Science and Technology is a pre-emptive social interest for our developing nation. Obvisously secular general education, more specially Science and Technology should play decisive role in the development and prosperity of our nation. Accordingly our State should as much interested as, may more than the religious or linguistic minorities, in the right and socially needful education of students of minorities. The students do not belong only to the minorities, they belong also to the nation. The over accentuated argument of imparting secular general education in a religious atmosphere seems to overlook this in protant national aspect.

10. In fact it is high time to reconsider the need and purpose of this separate article. Just as a member of the majority community has fundamental right to establish an educational institution for preservation of his religion, language or culture, the minority community also have the same even without the help of Article 30 as there is no discrimination between

citizens on the ground of religion, culture or language in this background a separate provision in article 30, gives room for argument that the right to establish and administer guaranteed in Article 30 is something supreme which does not admit any interference whatsoever by the State. Probably the idea behind was only to safeguard that no hindrance shall be put in the way of minorities to preserve their religion, language or culture and that they were not prevented from establishing their educational institutions if need be. It does not appear that the intention was to provide special immunity to them or to give rights more than those given to majority community. To quote from the judgement of Supreme Court in St. Xavier's case—"The idea of giving some special rights to the minorities is not to have a kind of a privileged or pampered section of the population but to give to the minorities a sense of security and a feeling the population but give to the minorities a sense of security and a feeling of inequality....this article cannot be converted by them into a weapon to exact unjustifiable preferential or discriminatory treatment for minority institution so as to obtain the benefits but to reject the obligations of Statutory rights". It was further observed—How could they (Constitution-makers) then intend to confer an absolute or near absolute right on a religious or linguistic minority to establish and administer an educational institution for imparting secular general education.

It therefore appears necessary to consider these aspects and suitably clarify the same.

11.5 No instance of conflict between the Centre and the State in regard to programmes of educational development has come to light so far.

Inter-Government Co-ordination :

12.1 This state has not experienced any serious irritant in its relation with the centre. Hence there is no need for establishing any advisory body such as that exists in the USA.

Uttar Pradesh

MEMORANDUM

Presented by the Chief Minister

I have great pleasure in extending a very warm welcome to the distinguished Chairman and members of this august Commission on their visit to our State, on behalf of myself and the Government of Uttar Pradesh. I also extend a welcome to the accompanying officers of the Commission.

2. I would like to express the gratitude of the State Government to the Commission for giving us an opportunity to exchange views on the subject of 'Centre-State' relations, a subject which the Commission has been entrusted by the Government of India to study and report. We are conscious that the task before the Commission is not an easy one. We have been able to establish during the last 35 years of governing ourselves under the Constitution which we gave to ourselves, that the Constitutional framework has the necessary strength, resilience and stability to safeguard and protect the essential features of a democratic society which the founding fathers of our Constitution envisaged. There have been many internal and external challenges. Notwithstanding these, the vision and hope of the great sons of India in the future of this country and their faith in the democratic processes in the march of the country towards the fulfilment of its aspiration have been largely vindicated.

3. There is no doubt that doubts have been raised, questions have been asked about the texture of the Centre-State relations as incorporated in the Constitution and our ability or otherwise in practice to actualise the intentions or vision of the framers of the Constitution. The subject of Centre-State relations has been a subject of continuous study, analysis and comment by a number of experts and committees at different points of time. The present Commission has a unique role in the study of this subject because it is the first major comprehensive study of this subject assigned by the Government of India. The task before the Commission becomes extremely complex in the context of the fact that insights into the processes of political, social, economic and cultural developments of the country since independence, and perceptions of the country's sound health and well-being in future as one Nation have to inform the critique of the working of our Constitution and more particularly the Centre-State relations. It is not merely a question of structures or mechanical relationships. It is a more complex question of inter-active forces in a governing structure which is influenced by very many other social factors. The work of the Commission is of great contemporary relevance and, in a sense of historical importance. A dispassionate and perspective statement on the subject coming from an august and wise group as yours after four decades of independence should help to set at rest doubts and strengthen our faith in the basic validity and strengths of the federal feature and unitary linkages of our Constitution while suggesting such changes as would be considered necessary based on experience and appropriate in the present socio-political milieu to the fulfilment of our future vision of a prosperous and united country. We have every hope that the report of the august Commission will be an important landmark in the evolution of the country's polity.

4. The State Government has responded in detail to the questionnaire circulated by the Commission and I would refer the Commission to the very detailed replies that we have given to the questions. In this presentation, I would confine myself to some of the essential and salient viewpoints which I, on behalf of my State Government, have the privilege to put forward. We are quite clear in our view that howsoever we may discuss the structure of the Constitution and the Centre-State relationship, we have to give the most dominant place to the concept of inviolable integrity of the country as a whole and the concept that India is one nation. Our Constitution has a federal structure with an unmistakable unitary streak. The advocates of federalism do not often realise that no true federalism exists or can exist any where. Political, social, economic and cultural realities of existence dictate the degree to which centralism moderates federalism in different situations. Even in the United States of America, quoted often as an example of liberal federalism, there have been shifts in some areas to centralism. A nascent democracy like ours, subject to external threats on the one hand and internal problems on the other, the latter arising out of the complex problems of poverty, illiteracy, etc. of an

under-developed society and the features of a multi-cultural, multi-lingual, multi-racial society postulates stronger centralism within a federal framework. This is precisely what our founding fathers had envisioned. We cannot afford to be carried away by the euphoria of the argument for liberal federalism which would compromise in reality and in practice the needed strengths for building up the country as one nation.

Legislative Relations:

We feel that the present distribution of legislative powers between the Centre and the States does not need any change. It has stood the test of time.

Provision of Article 249 regarding enactment of law by Parliament on State subjects is necessary in the national interest. There are enough safeguards provided in the Article to prevent its abuse. The provision has never been abused.

There is an elaborate distribution of legislative powers between the Centre and State. A unique feature of this distribution is the existence of a long Concurrent List of subjects. It provides sufficient leverage to meet the needs of both Centre and the State in regard to any of the subject matter contained therein. This distribution does not need any change. It will of course be desirable for the Central Government to consult the State Government before undertaking a legislation on a matter included in the Concurrent List. However, this may be done by convention and not by statutory provision.

Role of Governor:

The Constitution envisages a duel responsibility for the Governor. Firstly, the Centre discharges its supervisory functions through the office of 'Governor' and also the Governor is responsible towards State executive of which he is the head. By and large, Governors have been discharging their responsibility as visualised by the Constitution.

The Governor has the power to make report to the President suggesting action under clause (i) of Article 356. We feel, if he has arrived at a conclusion after an objective assessment that there is no possibility of formation of an alternative stable Government, he should make report under clause (i) of Article 356. Duties of the Governor also include prorogation of the houses of Legislature and dissolution of the Legislative Assembly. In case of dissolution of Assembly, occasions may arise calling for his independent action. Where the term of the Assembly is coming to an end and a new House is to be elected the Governor may accept the advice of the Cabinet for dissolution of the House a little earlier than expiry of its full term. However, when the Government has lost majority in the House, the recommendation of the defeated Cabinet for dissolution should not carry much weight.

Articles 200 and 201 provide for reservation of Bills by the Governor for the consideration of the President and the assent of the President thereto. We feel that these provisions are both useful and essential. The requirement of assent by the Governor to a Bill is also necessary. His association with the Bill at some stage is inevitable as he is an integral part of the Legislature. Moreover, it provides a final opportunity to the Government to have a second look on the various aspects of the proposed legislation. The experience of last 35 years indicates that provision of Articles 200 and 201 have not been abused and have not posed any threat to the autonomy of the States.

This State feels that there is no necessity to make a provision for impeachment of the Governor like that in case of a Judge of the Supreme Court or High Court. We also feel that there is no need of a guarantee of full term. The present arrangement in which the Governor functions during the pleasure of the President seems to be appropriate in view of the duties and functions of the office. The Governor has to act on the aid and advice of Council of Ministers and a difference of temperament or some other exigencies of situation may require shifting of a Governor to another State.

Administrative Relations

Articles 256 and 257 require the executive powers of the State to be so exercised as to ensure compliance with Central laws and for that purpose Centre may issue instructions. These provisions are essential for harmonious exercise of executive power by the Union and the State. Article 365 provides the sanction behind the power of the Union to give instructions to States without which such power would be futile. This power has hardly been exercised by the Centre in the last thirty-five years.

This State Government feels that the time limit specified in clauses (4) & (5) of Article 356, though intended to be a safeguard, may turn into a handicap to the efficacious use of this power by the Union. Experience has shown the existence of situations, continuously disturbed conditions and break-downs or failure of Constitutional machinery for a period beyond one year. It is suggested that sub-clauses (a) and (b) of cluase (5) of this Article may be independent of each other, thereby making it possible to continue the Presdidential rule for a period of three years as may be necessitated by a particular situation in either of the cases covered by clause (5). The result would be that even when a proclamation of Emergency is not in operation, the Presidential rule may continue in case the Election Commission certifies that there are difficulties in holding general elections to the legislative assemblies of the State concerned.

Article 355 enjoins upon the Union to protect States against external aggression and internal disturbances. In normal times, however, deployment of Central Reserve Police Force and other armed forces in any State may desirably be made with the concurrence of the State.

Setting up of an Inter-State Council, as envisaged under Article 263 will serve a useful purpose in sorting out Inter-State differences and issues. There is, however, no need to set up such Councils on a permanent basis. It may be constituted as and when necessary to sort out any particular issue.

Financial Relations:

The Constitution has assigned to the Centre the power to levy and administer taxes which are high yielding and reapidly growing sources of revenue. The taxes in the State list have a local base and are less elastic. At the same time, State Governments have to fulfil

their responsibilities in the fields of agriculture, education, medical and public health and law and order without adequate resources of their own. The problem of non-correspondence of States' resources with their functions needs to be effectively tackled by adequate transfer of resources from the Centre. In the past, however, the Finance Commission transfers as well as the plan transfers have falled short of the comprehensive needs of the States, particularly the backward States. As a result thereof, the inter-State disparities have not reduced.

While the State Government feels that the taxation powers of the Union and the States need no change, it would be desirable to bring more Central taxes in the shareable pool to enable the States to better match their resources with their expanding needs. It is accordingly suggested that corporation tax proceeds should also be made shareable with the States, as they provide infrastructural facilities to the companies paying the corporation tax. The Eighth Finance Commission also observed that it would only seem fair that the States have an access to corporation tax revenue. The share of States in the proceeds of Union excise duty also needs to be raised to ensure greater statutory devolution to the States.

The federal transfers should be so designed that the per capita transfers to economically backward States are larger to enable them to accelerate their pace of development. It may be pointed out that despite the weightage given to backwardness in devolution of proceeds of some of the taxes, the transfers in the past have lagged the desired progressivity. Under the recommendations of Seventh and Eighth Finance Commissions, Uttar Pradesh's share in total devolution was 15.90 and 15.43 only, as compared to its population ratio of 16.32 (1971 Census). The share was lower under the awards of earlier Finance Commissions. The situation does not improve if Plan transfers are also taken into account. To lend desired progressivity in federal transfers, the State Government would like to suggest the following criteria for determining the share of taxes, Plan assistance and non-Plan assistance to the States :

(A) **Shares of Taxes:**

(1) Uniform criteria should be adopted for the distribution of the entire divisible pool of both the major taxes *viz.*, income tax and Union excise duties.

(2) 50 per cent of the net proceeds should be distributed on the basis of population, 25 per cent in the inverse ratio of per capita incomes of States multiplied by population and 25 per cent to those States exclusively whose per capita income is below all States' average and the share given to them on the principle of income equalisation.

(3) Additional excise duties on sugar, textiles and tobacco should be distributed in proportion to the guaranteed amount of the State to the total guaranteed amount of all States.

(4) The receipts from Central sales tax should also be pooled and distributed—75 per cent to the State of destination, where consumption takes place, and 25 per cent to the States from where the movement of goods commences.

(B) **Plan Assistance :**

(5) Tax effort of the States need not be taken into account in the allocation of Central assistance.

(6) The weightage, given to shortfall in per capita income should be increased from 20 per cent to 30 per cent.

(7) The grant and loan component of Plan transfers should be 50:50.

(C) **Non-Plan Assistance :**

(8) In determining the quantum of grants-in-aid, the level of per capita non-Plan expenditure of States should be taken into account and the larger needs of the relatively backward States for upgrading the levels of administrative and social services including health and education should be provided for.

The allocation of market borrowings should be more equitable for the relatively backward States. The share of backward States in market borrowings need be suitable augmented by adopting the revised Gadgil Formula. Alternatively, in addition to normal limits of market borrowings, additional market borrowing limit should be provided to the States which have an adverse credit-deposit ratio.

State's share in the net collections under small savings schemes should also be increased from the present two-third in recognition of the concerted efforts made by them in mobilising small savings. Further, small savings loan should be treated as loans in perpetuity.

The Central assistance made available to the States in the event of drought should not be in the form of advance Plan assistance and should be provided on the same terms as in the case of other natural calamities. Further, the Central assistance should fully cover the expenditure in excess of the margin money and should be in the nature of grant. Only the amount granted as loan by the State Government should be given as loan. It is also necessary that the norms adopted in fixing the ceiling of expenditure for items like repair and reconstruction of damaged houses should be suitably revised.

Economic and Social Planning

The existing procedure for the formulation of State plans and their finalisation allow adequate interaction between Planning Commission and the States. After the national priorities and targets for key areas are fixed, the States should have a free hand in allocation of available resources to different sectors of development and to propose programmes and projects for the satisfaction of regional and local needs.

It is felt that once the Central Ministries and the Planning Commission have made their advice known to the State Government it should then be left to the State Government to modify their plan programme suitably with reference to characteristic local conditions and there should be no compulsion implied or otherwise for the acceptance of uniform guidelines for all the States.

The present composition of the Planning Commission appears satisfactory. To make it more responsive to the needs of the States it is suggested that every year Chief Ministers of atleast two major States should be included as members of the Planning Commission by rotation, the period of rotation being one year, we also feel that the Planning Commission should meet atleast once every year with the Chief

Ministers of all the States to review the progress of the plans and for obtaining their suggestions for the next year's plan. This Commission should continue to have its character of high level advisory body of economists, technologists and management experts.

This State feels that our share in externally aided projects has not been in tune with our size and requirement. The past neglect should now be made up. Similarly, additional assistance should be provided for development of backward hill areas and the Bundelkhand region of this State.

We feel that in case of centrally sponsored schemes the process of consultation with the States before the scheme is taken up is not adequate. A centrally sponsored scheme should be introduced at the beginning of a Five Year Plan and the Central Ministries should adopt a more flexible policy in modifying the guidelines for different States in accordance with the characteristics of their economy and their needs.

Industry, Trade and Commerce

One of the principal objectives of Central Government with regard to industrial development has been balanced regional development and proper industrial dispersal. With this in view, we feel, it was necessary to amend the first schedule to I.D.R. Act from time to time. Even with the licensing policy there are substantial number of industries which are exempted from the purview of licensing and they provide enough opportunity for location in terms of economic pulls of any particular region. However, for larger industries or industries which have substantial impact in terms of downstream industries the national interest requires that the Central Government continue to apply the IDR Act to fulfil the objective of balanced regional development. However, we feel that the procedure for industrial licensing should provide greater opportunity for the consideration of the State Go ernment point of view.

There is a need to improve the supply of raw material and finances to the small sector. Most of the critical raw material are allotted to the States by the Central Government. The allotment has generally been far short of requirement, firstly, because of chronic shortage and secondly, because of inequitable distribution among the small, medium and large sectors.

For bridging the gap of technology, it is suggested that a national level agency needs to be set up which should act as a Data Bank of research findings with necessary linkages with the State level organisations. Further, flow of foreign technology should also be routed through a single window or institution. In fact the agency suggested above could also be made responsible for this. It will obviate reckless import of foreign technology.

Agriculture, Irrigation and Food & Civil Supplies

The present arrangement in respect of these sectors appears to be quite satisfactory. However, in respect of centrally sponsored schemes we feel that there is need for greater consultation with the States. It is also felt that wherever the national interest dictated implementation of a particular scheme, the Government of India should continue to bear the entire expenditure of the scheme as long as the running of the scheme is felt necessary in the national interest.

Due to resource constraint, Uttar Pradesh has not been able to utilise substantial part of its surface and ground water potential for irrigation and power projects. Having regard to the relative backwardness of the State and keeping in view the fact that bulk of its vast water and energy resources remain unutilised, it is necessary that the quantum of central assistance should be need-based and the sectors of irrigation and energy be given more priority and funds. It is felt that clearance of projects by the Central Government takes a lot of time because a number of central agencies are involved. There should be a "single window delivery system" at the Centre which should receive proposals of the State Government and obtain approval of the various agencies/departments at the Centre.

At present the support price of agricultural commodities are fixed uniformally and they do not take into account the loacal conditions like productivity, market price, etc., which would differ from State to State. This factor needs to be taken into account. The support price of different categories of foodgrains should be announced well in advance and preferably before the start of the agricultural season. There is also necessity for augmenting the storage capacity of the Food Corporation of India because of certain pockets like the hill districts and the Bundelkhand areas which either remain inaccessible during rains or are widely spread where foodgrains and other commodities have to be stored for two to three months at a time. Increasing the "storage capacity" of the State Government is also necessary to make the Public Distribution System more effective.

Education

The present arrangement wherein the Government of India lays down broad policies and indicates a national framework with a view to ensuring minimum uniform standard of education and its details are left to the State Governments seems to be quite satisfactory. It is not correct to say that there is unnecessary centralisation. In fact, there is need for more central initiative.

Educationally backward States like Uttar Pradesh cannot afford adequate resources towards their matching share for the U. G. C. grants to the universities and colleges of the State. There is, therefore, urgent need for evolving a system of weightages for educationally backward States to get adequate assistance from the U. G. C.

Conclusion

I am conscious that no presentation on this subject can either be comprehensive or complete. But I do hope it has been possible to convey the basic sense of the State Government perceptions in the matter. As I have said before, structural forms and mechanistic relationships may at best conduce to or facilitate the process of building up a healthy and prosperous nation but these forms assume substance and meaning only by the manner in which we operate the system or articulate within it showing good sense, good faith and genuine concern for the future of the country and the well being of our posterity. I thank the Commission once again for giving us this opportunity.

GOVERNMENT OF WEST BENGAL

(a) Replies to the Questionnaire

(b) Statement by the Chief Minister

West Bengal

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 to 1.6 The Government of West Bengal's views concerning issues covered by this series of questions are set forth in a detailed manner in our response to the rest of the questionnaire. There can be no question that given the area, size of population, cultural and linguistic diversities, and disparities in the levels of social and economic development characterising our country, a constitutional arrangement, which provides for a very large measure of devolution of resources and responsibilities to the constituent States, is a paramount necessity. Many of the tensions that have afflicted the nation in the more recent years are symptomatic of the discontent caused by the absence of such an arrangement. A nation featured by such immense and intricate diversities can subsist and prosper only on the basis of a relationship of mutual trust among its peoples. This trust cannot be fostered if some parts of the country, and some sections of the people, obtain a greater advantage, or suffer from a greater disadvantage, because of the overwhelming concentration of powers and resources in the hands of the Union Government and of the manner in which these powers and resources are deployed. There are several federal nations around the world, including the United States of America, the Soviet Union, China, Canada and Australia, where the existence of national and regional governments with "coordinate and absolutely independent" jurisdictions has not caused any functional disorder. It need not be any different in our case. The integrity and unity of the country is of overriding importance, but this objective can be ensured and furthered only if the States are allowed a greater devolution of resources and responsibilities rather than if the attempt is the other way round.

1.7 The constitutional provisions in regard to the respective obligations of the Union and the States need basic restructuring. Our detailed views are set forth in the subsequent sections.

1.8 Article 3 should be amended to ensure the decisions with respect to the formation, or alteration of the area, boundary or name of a State should be taken only in consultation with the Inter-State Council set up under Article 263.

PART II

LEGISLATIVE RELATIONS

2.1 The scheme of distribution of legislative powers in the Constitution is heavily biased in favour of the Union. This is the outcome of the fact that this distribution of powers has largely followed the pattern of the Government of India Act, 1935. Nothing short of a total re-structuring of legislative powers can meet the demands of a true federal entity.

To begin with, the Concurrent List should be abolished. Article 254 implies that the Concurrent List is in effect a second Union List, since in case of a conflict between a Central piece of legislation and a State law, the Central law will prevail; items covered by the Concurrent List are thus subject to the ultimate jurisdiction of the Union Government. It is our point of view that this List must be eliminated in entirety, and all items covered by it transferred to the State List.

Besides, taking advantage of the blanket provisions of Articles 248 and 249 and of entries 7, 23, 40, 48, 52, 53, 54, 56, 61 and 97 of the Union List, the Union Government has made steady encroachments into areas reserved for the States. The most glaring example is the Industries (Development and Regulation) Act and the indiscriminate expansion of the Union's hegemony by declaring its control over certain industries as being 'expedient in the public interest' in terms of Entry 52 of the Union List. Even items such as razor blades, match sticks, sewing and knitting machines, canned fruits and fruit products have been brought under the Centre's control.[1]

Again, Entry 24 of the State List provides for industries but subject to the provisions of Entries 7 and 52 of the Union List. Entry 7 of the Union List provides for industries declared by Parliament by law to be necessary for the purpose of defence or for the prosecution of war, and Entry 52 provides for industries the control of which by the Union is declared by Parliament by law to be expedient in the public interest.' Furthermore, Entry 17 of the State List provides for water, that is, water supplies, irrigation and canals, drainage and embankments, water storage and water power, subject to the provisions of Entry 56 of the Union List. Entry 56 of the Union List provides for regulation and development of inter-State river and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest. Therefore,

[1] Certain subjects of legislation, which belong exclusively to the States, can become subjects of exclusive Central legislation, if a declaration is made by Parliament as to the expediency of control of such subjects by the Union 'in the public interest'. Thus Entry 23 in the State List provides for the regulation of mines and mineral development subject to the provisions of the Union List with respect to regulation and development under the control of the Union. Entry 54 of the Uvion List provides for the regulation of mines and mineral development to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest".

to the extent to which a declaration is made by law by Parliament, the power of the State legislatures to legislate in respect of matters in Entries 17, 23 and 24 of the State List is excluded. Herein lies the potential mischief, in as much as these Entries are so enmeshed with Entries 7, 52, 54 and 56 of the Union List that the Union Legislature can, ostensibly in the name of 'Public interest', unilaterally transfer to itself legislative jurisdiction over matters reserved to the States. And the potential mischief has in several instances been rendered into actual mischief.

Parliament passed the Industries (Development and Regulation) Act, 1951 (Act LXV of 1951) in 1951, which came into force with effect from May 8, 1952. This Act specified in its First Schedule those industries which in the public interest would have to be controlled by the Centre. In course of time, a considerable number of industries, even minor ones, were added to the industries listed in the First Schedule to the Act till the basic constitutional scheme was completely upset. Without any amendment to the Constitution, 'Industries' has, for all practical purposes, been transferred into a Union subject and has ceased to be a State subject. Even items like razor blades, paper, matchsticks, household electrical appliances, cosmetics, soaps and other toilet preparations, fabrics and footwear, pressure cookers, hurricane lanterns, bicycles, dry cells, T. V. sets, agricultural implements, sewing and knitting machines, canned fruits and fruit products—have all been brought under the Centre's control.

In this connection, the role played by Governors in the interpretation of Articles 200 and 201 must also be mentioned. Since a Governor is an appointee of the Union Council of Ministers, if a piece of legislation enacted by the State Government is not to the liking of the Union Government, the Governor can be, and has been persuaded to withhold assent to the bill and reserve it for the consideration of the President[1], who, again, given Article 74 in its present form, has to abide by the decisions of the Union Council of Ministers. There is also the curious instance of Article 31A, which takes away the right of the States legislatures to enact any meaningful legislation concerning land reforms.

2.2 & 2.3 We suggest (a) the deletion of the Concurrent List and the transfer of each of the items covered by it to the State List; (b) deletion of Article 248 and introduction of an explicit provision so that the residuary powers of legislation vest with the States and not with the Union; (c) abolition of, or amendments to, Articles 249, 252 and 254, so that no State could be deprived of any legislative powers which belong to its without its prior concurrence; (d) deletion of Articles 200 and 201 in their present form, and making it obligatory on the part of the Governor to give assent to all bills passed by the State legislature on items belong to the State List.

2.4 Articles 247 to 254 should be so amended that the Union Government's powers to legislate on items belonging to the State List do not exceed beyond a period of six months; each proposed legislation must first be approved by the Inter-State Council, and any proposal to renew any such legislation must have the prior approval of the Council.

2.5 Were a reference to be made under Article 143 to the President in case of any dispute between the Union and a State on any matter of fact or law, a constitutional amendment should ensure that a decision in the matter be taken not on the advice of the Union Council of Ministers but of that of the Inter-State Council.

PART III

ROLE OF THE GOVERNOR

3.1 It is most unfortunate that the Constitution made provision for a State Governor. This arrangement was a legacy of the imperial administration. During the British days, the Governor was the head of administration of the individual provinces and reported to the Governor-General, and, through him, to the British Crown. He was thus the eyes and ears of the Governor-General and the foreign rulers. In the changed context of an independent India, with democratically elected administration in all States, the position of the Governor is altogether anamolous. Most Governors have tended to function according to the pre-independence colonial tradition, as agents of the Centre and faithfully carrying out the latter's bidding. This has been demonstrated in the choice and dismissal of the Council of ministers, in the exercise of prerogatives under Articles 200 and 356, and generally in all activities where the Governor's discretion is called for.

There are several federal constitutions, including those of the USA, Canada and Australia, where the need for an intermediary between the federal union and the federating entities has not been felt necessary. It need not be otherwise in India. The post of Governor should therefore be abolished and alternative institutional arrangements made for maintaining channels of communication between the Union and the States.

If the abolition of the post is not considered feasible, the Governor must then cease to be a nominee of the Union Council of Ministers. He must be appointed by the President, on the advice of the Inter-State Council, from a panel of three names suggested by the State legislature.

3.2 In case the post is retained, the Governor should be assigned only some symbolic functions to perform; he must also act according to the advice of the State Council of Ministers only.

3.3 With respect to (a), (b) and (c), the record indicates that, in a large number of cases, the Governor has acted not independently and on objectives considerations but in terms of the predilections of the Union Council of Ministers.[2] We are, therefore, in favour of drastic reformulation of Article 356, so that any action taken under this Article is subject

[1] The most recent and glaring example is the withholding of assent by the Governor of West Bengal to the Calcutta University (Amendment) Bill, 1984 despite its not being repugnant to the provisions of Article 254.

[2] The latest example is the dismissal of the Ministry headed by Dr. Farooq Abdullah in Jammu and Kashmir.

to prior approval of the inter-State Council or a standing committee thereof. Article 164 should be amended so that the State Assembly is convened for choosing a Chief Minister within a fortnight of the declaration of the results of the elections, or if a Chief Minister appears to have lost his majority. If Article 174 is retained, it must be so amended that the Governor is bound by the advice of the State Council of Ministers.

3.4 and 3.5 As stated elsewhere, several State Governors have used Articles 200 and 201 to serve the partisan interests of the Union Council of Ministers. The most recent example in West Bengal, already cited, is the decision of the Governor to reserve the Calcutta University (Amendment) Bill, 1984 for the consideration of the President*. These two Articles must therefore be deleted. If for some reason such deletion is not possible, a Constitutional amendment should clarify that the Governor will not act in his discretion, but only on the advice of the State Council of Ministers. There should also be a time limit laid down of one month for the Governor to make up his mind under Article 200 and six months for the President to make up his mind under Article 201, with the further provision that if a bill is passed again on its return from the President under Article 201, it shall automatically become law.

3.6 In a very large number of instances, Governors, through their functioning, have effectively thwarted the will and intention of the democratically elected State legislatures and State Governments. There is no question that in these instances they did not act impartially and fairly.

3.7 The issue of tenure is not relevant. What is important is that in case it is decided to retain the post of the Governor, he must be appointed by the President, as suggested earlier, on the advice of the Inter-State Council from a penal of names decided by the State legislature. The procedure for his removal can be the same as prescribed in the case of a judge of the Supreme Court. No person who has served as a Governor of a State shall be eligible for further appointment in any capacity under the Union Government or under a State Government, nor shall he be allowed to take up any private appointment. There should be a provision for payment of pension to a person who serves as a Governor of a State for a full tenture.

3.8 The suggested prerogative cannot be delegated to the Governor.[1]

3.9 We do not think that the procedure adopted in the German Federal Republic is suitable for our purpose. Such a procedure will also not be necessary in case the appointment of Governor and the selection of Chief Minister are made in the manner suggested above.

3.10 In case the post of Governor is retained, the guidelines to be followed by him should be laid down by the Inter-State Council and then issued in the name of the President. The question of their acceptance by the Union Government should not arise; they may, however be placed before Parliament.

PART IV

ADMINISTRATIVE RELATIONS

4.1, 4.2 and 4.3 Articles 256, 257 and 365 are repugnant to the spirit of a federal entity. Their intent is to reduce the States into administrative agents of the Union Government. This position is altogether unacceptable to us. Directives were in fact issued under Article 257 to the State Governments in 1968 to suppress the strike declared by Union Government employees. There have also been other instances where the Union Government, impliedly under Article 256, has applied pressure on State Governments to enforce Central legislation ratifying detention without trial. These three Articles are to be drastically amended. If any directive is to be issued to the States under Article 256 or Article 257, it should be issued only after adequate consultations with, and concurrence of, the Inter-State Council; action under Article 365 in any situation too must be undertaken only in case the Inter-State Council has given its seal of approval.

4.4 and 4.5 Article 356 has been blatantly misused by the Union Government to serve its partisan purposes. Both Articles 356 and 357 must be so amended as to preclude future possibilities of such misuse. The amending provision should indicate

*During 1950-83, the following Bills passed by the West Bengal Legislature have been withheld by the President:

1. The Trade Unions (West Bengal Amendment) Bill, 1969.
2. The Sri Ramkrishna Sarada Vidya Mahapitha (Amendment) Bill, 1981.
3. The Netaji Nagar College (Taking over of Management) (Amendment) Bill, 1981.
4. The Bangabasi Group of Colleges (Taking over of Management) (Amendment) Bill, 1981.
5. The Birla College of Science and Education (Taking over of Management) (Amendment) Bill, 1981.
6. The Indian College of Arts and Draftsmanship (Taking over of Management) (Amendment) Bill, 1981.
7. The Sri Ramkrishna Sarada Vidya Mahapitha Acquisition Bill, 1981.
8. The Bangabasi Group of Colleges Acquisition Bill, 1981.
9. The Netaji Nagar College Acquisition Bill, 1981.
10. The Birla College of Science and Education Acquisition Bill, 1981.
11. The Indian College of Arts and Draftsmanship Acquisition Bill, 1981.

The following Bills passed during the period between 1981 and 1983 have not yet been assented to by the President:

1. The West Bengal Majdoor, Tindal, Loader, Godownman and other Workers (Regulation of Employment and Welfare) Bill, 1981.
2. The Industrial Disputes (West Bengal Amendment) Bill, 1981.
3. The Land Acquisition (West Bengal Amendment) Bill, 1981.
4. The West Bengal Land Reforms (Amendment) Bill, 1981.
5. The West Bengal Motor Vehicles Tax (Amendment) Bill, 1983.
6. The West Bengal Primary Education (Amendment) Bill, 1983.
7. The Trade Union (West Bengal Amendment) Bill, 1983.

[1] In 1967, the first United Front Government was arbitrarily dismissed in West Bengal on the specious plea that the Chief Minister had refused to summon the Assembly on a date suggested by the Governor; the prerogative of summoning the Assembly must remain with the Chief Minister.

that the decision whether a constitutional breakdown has taken place in a State must be taken only in consultation with the Inter-State Council; fresh elections must however be held, and a new government installed, within six months. In case elections cannot be held within this period due to disruption of normal life, the President should once again consult the Inter-State Council and place it opinion before Parliament.

4.6 The present arrangements may continue.

4.7 The Inter-State Council should review the working of all these bodies and decide on the advisability of their continuance. In case a decision is reached to continue with any or all of them, not less than one-half of their membership should be nominated by the State Governments.

4.8 The experience with the All-India Services is of a mixed nature. There are certain advantages in having in the States serving officers who have a broad national outlook. At the same time, the fact thar officers belonging to the All-India Services generally tend to think of themselves as being under the discipline of the Union Government had led to complications. We would suggest that the Constitution be so amended that in case a State does not wish to make use of the All-India Services, it must be allowed the prerogative to opt out. Moreover, it must be made clear that the personnal belonging to the All-India Services, when they serve in the States, would be under the supervision and disciplinary control of the State Governments. If any appeal is to be lodged against any disciplinary action taken by a State Government against an officer, it should be dealt with by the administrative tribunals set up for the purpose. The tribunals must be independent of both the State and the Union Governments.

4.9 The provisions of Article 355 cannot be made use of to locate Central police and armed forces in a State without the prior concurrence of the State Government. Law and order is a State subject and the prerogative of the States in this matter must be fully respected. There can of course be occasions when induction of Central Police Forces might be considered necessary. In all such cases, however, the Union Government cannot take *suo moto* decision, but must act according to the wishes of the State Government concerned. Similarly, lagislations such as the Disturbed Areas Act must not be extended to any State without the prior approval of the State Government.

4.10 We are for the abolition of the Concurren List. As such, the jurisdiction over newspapers, books and printing presses should be transferred to the States. Radio and Television are being increasingly misused by the Centre. Such a situation cannot be allowed to continue. In a country with India's size, diversity and complexity of problems, it is important that the State Governments are allowed parallel jurisdiction over radio and television; the Constitution may be amended accordingly.

4.11 Till now, the institution of Zonal Councils has been only infrequently made use of. To serve the purpose they are intended to serve, the Councils must meet at regular intervals and be serviced by a permanent secretariat jointly set up by the State Governments.

4.12 Article 263 must be re-formulated to ensure that the inter-State Council is made mandatory. The Council should be constituted with the Prime Minister and Chief Ministers of the States, as its members and should become the pivotal element in the structure of Centre-State relations. The Prime Minister should be its Chairman, but the Council should also have a Vice-Chairman; this latter position should rotate annually among the State Chief Ministers. The Council should meet at least four times during the year and the agenda should be decided upon by the Prime Minister in consultation with the Vice-Chairman; there should be provision for emergency meetings to discuss particular situations where the invocation of Article-356 or Article 365 is being contemplated. A standing committee of the Council may be contemplated in case such emergency meetings are not considered feasible. The Council should have a permanent secretariat to be financed jointly by the Union and States.

The Inter-State Council should have, among others, the following functions : (a) to give its views on any proposals for interference with the boundaries of a State; (b) to offer its views on bills passed by State legislatures and referred to the President for consideration, in case Articles 200 and 201 are retained in their present form; (c) to consider proposals for removing a serving Governor; (d) to decide whether directives are to be issued under Articles 256 and 257 and to reach decisions under Article 365 were such situations to arise; (e) to decide whether President's rule should be imposed in a State under Article 356; (f) to formulate guidelines to be followed by the Governor of a State; (g) to lay down the functions and responsibilities of the permanent agency to supervise and monitor the distribution of resources between the Union and the States as indicated later: and (h) to advise the President with regard to questions and disputes under Act, 143.

Apart from our specific views on administrative relations between the Union and the States set forth in response to the questionnaire, we have one major change to suggest. This is with respect to the composition of the Council of States. The Council of States was intended to reflect, at the level of the Union, the views and interests of the constituent States. Its present composition has put paid to those hopes and intentions. While the functions and responsibilities of the Council of States for the present need not be disturbed, its composition may be so changed as to ensure equal representation from all States, whether big or small. This principle is enshrined in the constitutions of both the Soviet Union and the United States of America, and has contributed immensely to national cohesion and integrity. Article 80 of our Constitution may be so amended that we too can reap the benefits which stem from the acceptance of the principle of equal representation of the States in at least one chamber of the national parliament.

It is also important that in view of the prevailing circumstances, the special status which Article 370 of the Constitution accords to the State of Jammu and Kashmir is not interfered with.

PART V

FINANCIAL RELATIONS

5.1 The statutory devolutions, that is, devolutions to the States made in pursuance of the awards of the Financs Commissions, have comprised only a part of the total transfers from the Union to the States. Over the period since 1951, nearly 60 per cent of this total has consisted of Plan and discretionary transfers (Table 1). Plan transfers too are in effect discretionary transfers, since the Planning Commission, to all purposes, now acts accordance with the guidelines laid down by the Union Government. It is thus obvious that the hope cherished in regard to an 'automatic' and free-from-interference' arrangement has not borne fruit. Grants-in-aid of the revenue of State Governments are of course generally preferred in terms of the recommendations of successive Finance Commissions. In so far as the Finance Commission itself is however appointed by the President on the advice of the Union Government, it should be permissib:e to raise the basic question whether even the statutory transfers could be considered to be objectively determined in all circumstances. It is, besides, unrealistic to consider the transfers of the Union Government's tax receipts only. While discussing the aspect of distribution of resources between the Union and the States, the totality of resources available in the public domain ought to be taken into account.

There is a second, equally important, consideration. The interest of the States would be adequately safeguarded only if, along with improved arrangements for objectively determined resource transfers, equal attention is also paid to enlarging the area of their fiscal operations. This would imply re-alignment of the distribution of fiscal powers as delineated in the Constitution in favour of the States.

Another basic question which also relates to the sanctity of the recommendations of the Finance Commission is whether it is given to the Union Government to deny the States their dues, as recommended by the Commission, for any particular financial year.

TABLE 1

Gross Central Transfers to States, 1951-84

(Rs: crores)

Period	Statutory Transfers	Plan Transfers	Discretionary Transfers	Total
1	2	3	4	5
1951-56	447(31.2)	350(24.5)	634(44.3)	1,431
1956-61	918(32.0)	1,058(36.9)	892(31.2)	2,868
1961-66	1,590(28.4)	2,515(44.9)	1,495(26.7)	5,600
1966-69	1,782(33.3)	1,767(33.1)	1,798(33.6)	5,347
1969-74	5,421(35.9)	3,535(23.4)	6,145(40.8)	15,101
1974-79	10,873(43.0)	7,722(30.5)	6,683(26.0)	25,278
1979-84	22,757(43.1)	15,808(30.0)	14,203(26.9)	52,768
1951-84	43,788(40.4)	32,755(30.2)	31,850(29.4)	108,393

5.2 The observations of the study team of the Administrative Reforms Committee remain relevant till this day. As can be seen from Table 2, the dependence of the State on the Union has in fact increased over the years, and, if things remain as they are, this dependence might in fact increase further in future. It is inherent in the existing arrangements that the Union's fiscal and other resources, raising powers would yield resources to it which are far in excess of its genuine requirements. The Union Government, in addition, has made several encroachments on the tax-raising and tax sharing prerogatives granted to the States by the Constitution. For instance, the device of imposing a surcharge on income tax and the redefinition of Corporation tax have deprived the States of their legitimate share of these two most important sources of revenue. The solution must therefore be two-fold. First, the States' fiscal powers should be enlarged, and whatever encroachments on these powers have taken place since the Constitution came into force should be made void. Second, the totality of resources at the disposal of the Centre, including resources raised through increases in administered prices, must be considered as a common pool and the States entitled to a share of this pool. This pool should also include the proceeds of the various borrowing programmes launched by the Union Government. At the same time, there should be a separate arrangement whereby the States are enabled to be actively associated with the formulation of the nation's monetary policy.

5.3. To argue that providing additional fiscal powers to the States would increase inter-State disparities is not an easily defensible proposition. Even under the existing dispensation, inter-State disparities cannot be claimed to have narrowed compared to the situation obtaining thirty-odd years ago; the pattern of resource transfers from the Union to the States has not always conformed to the objective of advancing the cause of social and economic justice. If we leave out the so-called Special Category States, aggregate transfers from the Centre in the quarter of a Century since 1956 have generally favoured their relatively better-off States rather than the low income States (Table 3). So it is not that the

protecting hand of the Union Government ensures the fiscal interests of those States which are economically weak. Once it is accepted that devolution must encompass the total resources in the public domain, a set of criteria can be adopted for ensuring that *inter se* distribution between the States places appropriate weightage to the problems encountered by the weaker States.

TABLE 3

Gross Budgetary Transfers from the Centre, 1956-81

States	Rupees per capita				Index numbers

5.4 The options suggested by the question are neither exhaustive, nor should they be exclusive of one another. It is also not factually correct that large deficits in the Union Government's accounts in recent years are mostly because of devolutions made to the States. These devolutions have constituted a minor fraction of the total quantum of deficit financing each year. (Table 4.) The need to control expenditure and ensure its effective and efficient use will always be a major consideration whatever the level of resources available. Resort to deficit financing should be made only on the basis of overall national considerations and not because either the Union or the States are in difficult financial straits. If the total situation does not permit such deficit financing, the Union Government must desist from the measure and raise additional resources through other means.

The objective criteria for determining *inter se* distribution among the States should place the most stress on protecting the interests of the relatively poor and economically vulnerable States. Apart from the aspect of relative levels of per capita income, the incidence of poverty, illiteracy, industrial backwardness, the State of employment, etc. should be taken into account.

5.5. As already stated, the pattern of devolution of financial resources from the Union to the States has been far from equitable. No amount of exhortation upon the Union Government will improve matters unless clear-cut directives are written into the Constitution. These directives should be an integral part of the scheme of devolution of, total resources available with the Centre and should be administered by a body appointed by the Inter-State Council.

The task of monitoring resource-raising efforts as well as of economic management by the State Governments should, be left to the State legislatures and other agencies in the respective States. Once devolution has been de-linked from the so-called revenue and capital gaps and is governed by a set of objective criteria, and is accompanied by a substantial enlargement of the States' taxing and borrowing powers, the States will be on their own and will be compelled to adjust their expenditure to the resources placed at their disposal. This itself would be the biggest stimulus for cultivation of fiscal responsibility.

5.6. If the equity principles are formally embedded in the criteria for resource-sharing, no special fund is called for. The crucial issue is to ensure adequate resources for the States. In the past, the Union Government has shown a tendency to encroach into the resource-raising areas belonging to the State Governments. All such encroachments should be made void through constitutional amendments.

5.7. There is strong ground for suggesting that the jurisdiction of several fiscal items covered by Articles 268 and 269 should be transferred to the State Governments. None of the principles referred to will be affected thereby, and, given the demonstrated reluctance of the Union Government to deploy effectively the prerogatives currently enjoyed by it under these Articles, such a transfer will augment the aggregate flow of resources in the public domain.

5.8. The argument put forth can be easily overstated so as to justify the total centralisation of virtually all taxing powers, denying the States any tax-raising prerogatives whatsoever. To take the specific instance of sales taxation, which is in the State List but which the Union Government is desperately striving to transfer to the Union List through the device of additional duties of excise. No convincing case has been established through an objective analysis of the Indian tax structure that sales taxation by the States has adversely affected the national economy even in a marginal manner. In a country of India's dimension, it would not be irrational to plead for a considerable decentralisation of taxing powers so that, in both the imposition of taxes as well as their administration, due regard is paid to local conditions. In the United States, even the taxation of income is a prerogative of the federal government shares with the States. The distribution of fiscal powers in our Constitution was heavily influenced by the arrangements in the Government of India Act, 1935; it is altogether out of tune with the present circumstances. This arrangement paid but little attention to the aspects of efficiency of tax collection and of regional variations.

5.9. There is much merit in the suggestion that fiscal transfers should steer away from making any distinction between Plan and Non-Plan transfers. As practised, this distinction is mostly arbitrary. Transfers to the States should be decided upon on an assessment of overall resource available and the allocation between the States should be made with appropriate regard to the criteria laid down for ensuring inter-State equity. It is therefore only appropriate that financial transfers of all categories be decided upon and reviewed periodically by one and the same body. Were the Planning Commission so constituted as to inspire the confidence of the States, this responsibility could have been assigned to it. If the Commission however continues to be appointed in the present manner, the task of deciding the fiscal transfers should rather be assigned to an independent body to be set up under the auspices of the Inter-State Council.

5.10. This question has already been answered. Finance Commissions have attached a disproportionately large weightage to the gap-filling approach. As a result, some States have tended to overstate their gaps and some other States have had no incentives to reduce such gaps. As stated above, the existing arrangements have not led to any narrowing of inter-State disparities either.

5.11. The view expressed is by and large valid. It is important that the existing approach. which places a large premium on the aspect of filling gaps in the capital and revenue accounts, is abandoned and a set of independent and objective criteria—as already stated—are laid down for determining the allocation between the Centre and the States and the *inter se* allocation among the States.

5.12. The suggestion of the Seventh Finance Commission is well taken in so far as the choice between tax-sharing and grants in-aid is concerned. This is of course on the assumption that a solid foundation has been laid for the equitable sharing of fiscal resources between the Centre and the States and as between the States.

5.13. The objective should be to move away from the principle of grants-in-aid altogether. Once the criteria of resource-sharing take into fullest account the different aspects of economic and social disparities, there should be no occasion for considering separately the issue of grants for narrowing down disparities in the level of administrative and social services. In any event, the mechanism of grants must not be deployed to discriminate further in favour of the relatively better off States, as would appear to have been the case in the past. There may be some provision for offering grants-in-aid to cover situations of emergency, but the allocations must be made exclusively

by the body set up by the inter-State Council suggested above and not at the discretion of the Union Government.

5.14. As explained earlier, the sharable divisible pool should include the totality of resources raised by the Centre on both revenue and capital accounts and therefore, should include all conceivable sources of revenue-gathering. The case for including receipts obtained through periodic increases in administrative prices in the divisible pool derives from the consideration that such increases in the recent period has been intended largely to circumvent the constitutional requirement to share the proceeds of excise duties with the States. An allowance may however be made for that part of the increase in administrative prices which genuinely reflects an increase in costs. As regards capital receipts, such as those from special bearer bonds, the case for their inclusion in the divisible pool rests on the ground that contributions to these bonds directly affect receipts under income tax. Since the States are, under the existing dispensation, entitled to 85 per cent of the proceeds from income tax, it is only proper that contributions to the bonds too should be included in the pool. Similarly, proceeds from all schemes for revenue-raising, which are contingent upon major concessions being accorded under the income tax, such as in the case of the recently announced National Deposit Scheme, should be sharable with the States; it is not necessary to specify individual items, since it is our contention that all revenues raised by the Centre should be shared with the States.

5.15. The purport of this question is not immediately obvious. It is a matter of political judgement what proportion of the nation's total savings, including private savings, should be drafted for the public domain. What is important to point out is that while in the Union Government's total budgetary receipts, the share of tax and non-tax revenues has improved in relation to that of capital receipts since the period of the second plan (Table 5), the share of the States in the Centre's aggregate budgetary receipts has not increased over the years (Table 6). This trend is clearly relatable to the drastic decline in the amount of loans received by the States from the Union Government as a proportion of the latter's aggregate capital receipts.

5.16. The contention is not correct. The budgetary deficits of the States have not grown at a rate faster than those of the Union. As can be seen from Table 7, the overall deficits of the State Governments as a proportion of their total disbursements have remained far below the corresponding proportion of the Centre's deficits. The fiscal difficulties the States have been facing of late is attributable to the shrinking share of the States in both the Centre's capital receipts and direct market borrowings.

TABLE 5

Structure of the Union Governments Resources

(as percentage of total)

	Plan Period						
	First	Second	Third	Annual Plans	Fourth	Fifth	Sixth
1	2	3	4	5	6	7	8

5.17. For some States, such as West Bengal, the burden of repayment is close to 40 per cent of total capital disbursements, and has been so over a consistently long period (Table 8). A periodical review of this burden is an imperative necessity. The body proposed by us to be set up under the auspices of the Inter-State Council to decide upon Centre-State fiscal transfers should have the prerogative to recommend write-off of outstanding debts of State Governments from time to time. The rationale for such write-off is strengthened by the fact that a considerable proportion of loans to the States by the Centre has been financed through recourse of the printing press; the Centre therefore has no moral right to insist on the repayment of such loans. The viability of the State Governments, and their capacity to initiate developmental expenditure of any meaningful dimensions, will be seriously impaired if these debts persist.

5.18. There can be no question that the right of the States to borrow has been unduly restricted by the Constitution. As long as a State Government has a line of credit with the Union Government, it has at present no right to borrow from any other source without the explicit permission of the Centre. In any event, the States have no prerogative to contract public loans on their own and have to depend upon whatever borrowings are permitted by the Centres. Unlike in the 1958 when two-third of the total public borrowings were assigned to the States, the proportion has now dwindled down to around 10 per cent. (Table 9.) This is an absurd situation, and needs to be reversed. Once the right to borrow on their own is accorded to the States, it would of course be necessary to ensure that they do not transgress the limits of sound finance; the independent body to be constituted by the Inter-State Council to determine the distribution of resources between the Centre and the States could be the regulating agency for this purpose.

*Data on allocation to the States not available.

SOURCE : Reserve Bank of India.

5.19 We have serious reservations about the rate of interest charged and the period of repayment enforced for Union Government transfers to the States against loans or credit received from external financial institutions. The States are deprived on a number of counts. The full quantum of the loan or credit is not passed on to them; the rate of interest charged is also much higher than what the foreign agency charges. In several instances, the stipulated period of repayment too is shorter than what the foreign institution has agreed to for the Union Government. Finally, many of the conditions that are imposed are often more onerous for the State Governments than they are for the Centre. The entire arrangement should be reviewed.

5.20. The suggestion to have a National Loans or Credit Council is well taken. Such a Council, in which the Union Government, the State Governments and independent experts may be represented, should be the final authority for setting borrowing limits for the different States and for the Centre. The Reserve Bank of India, as at present constituted, cannot

fulfil this function, since it has been made into a subordinate office of the Union Government. Alternatively, the Reserve Bank of India Act should be so amended as to make the Bank an entity fully independent of the Union Government, and one in which the State Governments will have adequate representation along with outside experts.

5.21. The doubling of the limits for ways and means advances to the States in 1982 was done arbitrarily and without consultation with the States. An analysis of the data for the past few years indicates that while the Union Government has been indulging in deficit financing to the extent of close to 15 per cent of its total disbursements, the corresponding average for the States taken together is less than 3 per cent. This is an anomalous situation. The total volume of deficit financing in a year should be determined by either the National Credit Council, or, alternatively, by the Reserve Bank of India in case it can be restructured as an independent entity. The quantum of such created money should be evenly distributed between the Centre and the States; the *inter se* distribution between the States should once again be determined either by the National Credit Council or a re-structured Reserve Bank of India. The States should not obviously be permitted to have overdrafts beyond limits, just as the Union Government too must not be allowed to indulge in unbridled money creation. But the limits to created money should not be mechanically determined, and special circumstances which the States or the Centre are facing should be taken into account.

5.22. True, some of the State Governnments have been sluggish in exercising their prerogative to impose, for example, agricultural income tax and other taxes on land. It would be justifiable if individual States are set targets by the Inter-State Council in this regard. If the target is not complied with and the States are unable to offer any satisfactory explanation for their failure to attain the target set, the Council should issue a directive to the body which would determine the allocations from the divisible pool to apply a penalty clause for the defaulting States. If the States happen to be sluggish, they will have access to less resources. Once the system puts the onus on the States, the responsibility for optimising resources too can be placed squarely on them.

5.23. The Centre too has been neglecting many important areas of taxation. It has been soft in the spheres of both corporate and income taxation and has steered away from exploiting the resource-raising possibilities which Article 268 and 267 provide. The remedy lies, first, in transferring some of the relevant items to the State List, and, second, in consulting the States on the structure of rates for taxables items which belong to the Union List but the yield from which are crucially important to the States. Here too, the Inter-State Council should have the prerogative to assign targets and devise a mechanism of punishment if its directives are ignored.

5.24. The suggestion is worth consideration.

5.25. Since Article 269 has not been at all made use of by the Centre for raising additional resources the fiscal items covered by it should be transferred to the State List.

5.26. The Union Government has deprived the States of substantial revenue by the manner in which it has dealt with the tax on railway passenger fares. The compensation offered for the loss suffered by the States is of a derisory nature. The *status quo anta* should be restored.

5.27. Union Territories constitute a special category and the allocation for them should be decided on overall national considerations; the receipts from individual taxes from within their borders should not be relevant.

5.28. This is one area where the States have been experiencing considerable difficulty. Funds to fight natural calamities have to be provided for adequately and the provision of some annual amount by way of so-called margin money does not enable the States to meet the contingencies when they actually arise. Regardless of where they occure providing for natural calamities should be regarded as a national obligation. The formula suggested by the Seventh Finance Commission has not proved satisfactory. The opinion of an expert team jointly nominated by the Union Government and the State Government concerned on the requirement of funds should be considered final in the matter and the funds needed both to provide immediate relief and to repair the damage should be a charge on the Union budget; the State Government should be promptly remitted the amount thus determined.

5.29. We suggest that the State Governments be provided with adequate representation, in case necessary, by rotation, on the boards of the Reserve Bank of India and the nationalised Banks. The general guidelines of credit policy should be laid down either by the National Credit Council or the Reserve Bank of India thus reconstituted, which the financial institutions must strictly adhere to.

5.30. Under all circumstances, funds must be spent prudently. But in a huge country such as India, there are some crucial administrativ aspects involved in the collection of resources which can hardly be ignored and which suggest that some of the major taxes must be left to the care of the States.

5.31. There is wasteful expenditure on the part of both the Union and the States. Surveillance in this matter is however best left to the respective legislatures and the Comptroller and Auditor General. The major safeguard against wasteful expenditure by the Union Government is to take away some of its prerogatives for excessive resource raising, as we have suggested. Similarly, the best insurance against irresponsible fiscal behaviour on the part of the States is to inform them that once the system of financial devolutions has been restructured in the manner set forth above, they will be on their own and could not expect to the bailed out by the Union Government in the case of improvident expenditure.

5.32. The problem does not lie in the procedure suggested in Articles 150 and 151, or in the role of the Comptroller and Auditor General either. It is in the modality of appointment of the CAG, which is currently done by the President on the advice of the Union Council of Ministers in accordance with

Article 74 of the Constitution. This procedure needs to be changed. A Constitutional amendment should ensure that in the matter of the appointment of the CAG, the President is guided by the Inter-State Council and not by the Union Cabinet. Similarly, it is important that the CAG, be precluded by a constitutional amendment from accepting any employment in the private sector too following his retirement: in case necessary, his emoluments and retirement benefits might be suitably adjusted upwards.

5.33. It is important that 'performance' auditing or 'evaluation auditing' is expanded all along the line.

5.34. The Comptroller and Auditor General's powers should be extended so that certain areas of auditing, where the CAG at the moment has only a perfunctory jurisdiction, are enlarged. This applies particularly to defence expenditure and the Government's outlay on foreign trade.

5.35 and 5.36. We are generally in favour of providing greater scope to the Comptroller and Auditor-General so that, in important spheres, audit and analysis could be undertaken in depth. Wherever necessary, the CAG may be armed with additional prerogatives to enable him to inform the public on particular developments in the pattern of, and trends in, public expenditure.

5.37. The present arrangements with respect to the Estimates Committee may continue.

5.38. We do not believe that an Expenditure Commission will be of much avail. The propriety of expenditure is a matter of political judgement and is best left to the State legislatures. They should however have the benefit of detailed analysis undertaken by the CAG's office.

5.39. There are several spheres where the Union Government, in contravention of the spirit of the Constitution, tries to influence the pattern of expenditure on particular projects, on the ground that the projects are Centrally assisted or belong to a Concurrent area of jurisdiction. Such intereferences must stop. The surveillance by the CAG should be considered adequate enough to ensure that the funds are properly spent by the States.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The deficiencies in the present planning process as listed in the question are generally valid. The National Development Council does not find a place in the Constitution; it is convened by the Union Government at its discretion, and its functions have been reduced to empty rituals. The Planning Commission, which again has neither constitutional nor legal sanctity has also been converted into an appendage of the Union Government; it is the voice of the Centre which is predominant in its deliberations and decisions. It is therefore important that the National Development Council be supplanted by a properly constituted Inter-State Council in terms of Article 263, as amended, with due weightage given to representation of the State Governments. The Planning Commission should be converted into a secretariat of the Inter-State Council and its personnel must be decided upon by the Council, again with appropriate weightage given to the points of view of the State Governments. The Union ministries must not be allowed to impose their ideas on the Planning Commission and the role of Centrally sponsored schemes should be drastically reduced.

6.2 The National Development Council, as stated above, should be susbstituted by the Inter-State Council to be set up in terms of a properly amended Article 263. It must meet more frequently than the NDC does now a days, if that is not feasible, a standing committee of the Inter-State Council should be convened at regular intervals. The Planning Commission should abide by the directives of the Council and must not be allowed to assume the role of final deciding authority.

6.3 The Planning Commission, as currently constituted, not only acts in close understanding and consultation with the Union Ministries, but is in effect subservient to them; in contrast; it treats the State Governments as one would treat underlings in a feudal milieu. Its composition and functions have to be drastically changed, as suggested above.

6.4 Our proposals with respect to the reconstitution of the Planning Commission have already been set forth. It should act as a secretariat of the Inter-State Council, and its composition must give due weightage to the views of the States *vis-a-vis* those of the Union.

6.5 The Planning Commission, as reconstituted in terms of the suggestions given above, should confine itself to offer advice on the overall aspects of planning and investment.

6.6 While the fixation of particular macrolevel priorities and targets may be left to the Commission, which would make its recommendations to the Inter-State Council, detailed planning with respect to subjects which fall within the States' sphere should be left to the States. The present practice of subjecting State plans and proposals to minute scrutiny by the Commission is unwarranted and should be discarded.

6.7 Unless the Planning Commission is restructured, it would be dangerous to leave the prerogative of resource transfers to it. It would in any event be more appropriate to keep the activities of the Commission confined to the task of Plan formulation, although it must feel free to offer advice on aspects of resource raising. But the issues of resource transfers should be the prerogative of the independent agency, already suggested above, to be appointed by the Inter-State Council.

6.8 and 6.9 Once the Inter-State distribution of total resources transferred to the States has been determined on the basis of an objective, equitable formula by the body set up for the purpose by the Inter-State Council, the question of their Plan size may be left to the individual States. If, through additional mobilisation, they can increase the size of their Plan, it should not be within the ambit of the Commission to demur. The Gadgil formula, along

with its subsequent revisions, can at best be described as striving towards reaching the goal of Inter-State equity, but there are components in it, such as the weightage given to continuing irrigation and power schemes, which have operated against the interests of the poorer States. Besides, the formula has so far covered only a fraction of the total Plan assistance to the States. There is no reason why external assistance, for instance, such resources as are received via World Bank loans and IDA credits, should also not be covered by whatever formula is adopted for resource transfers to the States. This task should not be left to the Planning Commission, but delegated to the agency proposed by us to be set up under the auspices of the Inter-State Council.

6.10 The point of view is valid and the Union Government should be asked to reduce drastically the amount set aside for centrally sponsored schemes.

6.11 Monitoring and evaluation need to be strengthened at both the Union and the States levels. For such monitoring to be meaningful, uniform criteria must be adopted and an understanding reached with the Comptroller and Auditor-General on areas of respective jurisdiction.

6.12 In a country of India's size and diversities, Planning has to be decentralised right up to the village level. Such decentralisation should begin with the devolution of more responsibilities and resources to the State Governments, who in turn should agree to devolve funds and functions to district and village bodies. The districts should be the primary unit for Plan formulation, then the State, then the nation as a whole.

6.13 Unfortunately, given the predominant role till now of the Union ministries and the Planning Commission in the Planning process, the State Planning Boards have not been very effective. Unless the format of national planning is changed, the State Planning Boards are unlikely to come to their own.

PART VII

MISCELLANEOUS

Industries

7.1 The objectives as adumbrated in the Industries (Development and Regulation) Act 1951 should be re-defined. Except for a number of industries crucial for defence, or where massive investments are called for beyond the capability of a State Government, the responsibility for overall planning and licensing of industries should be transferred to the States; this, after all, was the original intention of the Constitution. Things have now come to such a pass that, over large areas, the State Governments cannot even set up a Committee to enquire into the affairs of a particularly industry without the concurrence of the Centre.

7.2 The compulsions of national public interest need not extend beyond defence industries and one or two major industries where investments are beyond the capability of a State Government. It would be unreasonable to assume that the State Governments are *per se* unmindful of the 'national' or 'public' interest ; they two are capable of defending and furthering the interests of the nation. Keeping this contest in view, a considerable number of industries can be shifted to the jurisdiction of the States.

To illustrate, the following items can be deleted from the list in the First Schedule of the IDR Act;

1. **Metallurgical Industries**
   Other products of iron and steel
   Iron and Steel castings and forgings
   Iron and steel structures
   Iron and steel pipes
2. **Electrical Equipment**
   Equipment for generation, transmission, and distribution of electricity including transformers
   Electrical motors
   Electrical fans
   Electrical lamps
   Electrical furnaces
   Electrical cables and wires
   Household appliances such as electric iron, heaters, etc.
3. **Telecommunications**
   Telephones
   Telegraph equipment
   Wireless communication apparatus
   Radio receivers, including amplifying and public address equipment
   Television sets
   Teleprinters.
4. **Transportation**
   Automobiles (motor cars, buses, trucks, motor-cycles, scooters, etc.)
   Bicycles
   Others, such as fork lifts, trucks, etc.
5. **Industrial Machinery**
6. **Machine tools**
7. **Agricultural Machinery**
8. **Earth moving Machinery**
   Bulldozers, dumpers, scrapers, loaders, shovels, drag lines, bucket wheel excavators, road rollers, etc.
9. **Miscellaneous Mechanical and Engineering Industries**
   Plastic moulded goods
   Hand tools, small tools, etc.
   Razor blades
   Pressure cookers
   Cutlery
   Steel furniture
10. **Commercial, Office and household Equipments**
   Typewriters
   Calculating machines
   Air conditioners and refrigerators
   Vacuum cleaners
   Sewing and knitting machines
   Hurricane lanterns

11. **Medical and Surgical Appliances**

Surgical instruments-sterilizers, incubators, etc. and the like.

12. **Industrial Instruments**

Water meters, steam meters, electricity meters, etc. Indicating, recording and regulating devices for pressure, temperature, rate of flow, weights, levels etc.

Weighing machines.

13. **Scientific Instruments**

14. **Mathematical, Surveying and Drawing Instruments.**

15. **Textiles (including those dyed, printed or otherwise processed).**

made wholly or in part of cotton, including cotton yarn hosiery and rope

made wholly or in part of jute, including jute, twine and rope.

made wholly or in part of wool, including wool tops, woollen yarn, hosiery, carpets and druggets

made wholly or in part of silk, including silk yarn and hosiery.

made wholly or in part of synthetic, artificial (man-made) fibres, including yarn and hosiery of such fibres.

16. **Sugar**

17. **Fermentation Industries**

18. **Food Processing Industries**

Canned fruits and fruit products

Milk foods

Malted foods

Flour

Other processed foods

19. **Rubber goods**

Tyres and tubes

Surgical and medical products, including prophylactics.

Footwear

Other rubber goods

20. **Leather, Leather Goods and Pickets**

21. **Glue and gelatin**

22. **Glass**

Hollow ware

Sheets and plate glass

Optical glass

Glass wool

Laboratory ware

Miscellaneous ware

23. **Ceramics**

Fire bricks

Refractories

Furnace lining bricks/acidic, basic and neutral China ware and pottery.

Sanitary ware

Insulators

Tiles

Graphite ceramics

24. **Cement and Gypsum Products**

Portland cement

Asbestos cement

Insulating boards

Gypsum boards, wall boards, etc.

25. **Timber Products**

Plywood

Hardboard, including fibre-board, chip-board and the like

Matches

Miscellaneous (furniture components, bobbins, shuttles, etc.).

26. **Miscellaneous Industries**

Cigarettes

Linoleum, whether felt based or jute based

Zip fasteners

Oil stoves

Printing, including litho printing.

7.3 Apart from in the case of the strategic industries, industrial licensing and capacity control should be decentralised and handed over to the States.

For the import of capital goods, there should be regional boards to process the requests from the States. A similar arrangement could be made for foreign collaboration agreements. Of course such regional boards would have to operate within the board guidelines set by the Inter-State Council and a national body for overseeing capital imports and foreign collaboration arrangements. As at present, there should also be national boards for allocating scarce raw materials, with strengthened representation of the State Governments.

7.4 While it is true that State Governments will have to make relatively more rapid progress to reach the goal of industrial dispersion, the task will be rendered considerably easier once a decentralised structure of administration and planning becomes a reality.

7.5 To the extent that the size of State Plans depends on the loans the States are able to raise either from the market or directly from the financial institutions, the quantum as well as the inter-State distribution of such borrowings are of significance. These borrowings add up to only 10 per cent of the current capital receipts of the States. As far as market borrowings are concerned, as already stated, the States at present receive only 10 per cent of the total capital raised in this manner from the market. It is equally remarkable that the share of State Governments' securities held by the Life Insurance Corporation of India, as a proportion of its total holdings, has been declining over the years : between 1969 and 1982, it fell from 35.7 per cent to 18.5 per cent. As regards their distribution between the States, the poorer States are relatively the worse off; three out of the four low-income States received resources significantly below the all-States average. The story is repeated in the case of practically all the public financial institutions; the inter-State discrepancies in the per capita flow of institutional funds is particularly glaring (Table 10).

7.6 It would be seen from Table 10 that the inter-State distribution of investments and assistance from the financial institutions is titled against the poorer States. This is a matter calling for urgent corrective action. All the financial institutions are under the direct surveillance of the Union Ministry of Finance. This is equally true of the commercial banks. In both kinds of institutions, the States must be allowed a more effective voice, whatever the instrumentality that may be devised for the purpose. It is equally desirable that whenever the State Governments consider it necessary, they should be allowed to set up their own financial institutions, including commercial banks. The latter may be subjected to certain guidelines nationally arrived at, but in no instance should the Union Government have the prerogative to decide which institutions to allow and which ones not to. The constitutional provisions may have to be suitably amended to bring about these changes.

TABLE 10

Per capita Centre-State Financial Flows 1973-83-Budgetary and Institutional

Rs. Per Capita

SOURCE : K.K. George, 'Centre-State Financial Flows, and inter-State Disparities in India' University of Cochin (Mimco), 1982.

7.7 and 7.8 In the initial years of Planning, steel plants, fertilizer factories, petro-chemical units, etc. came to be established in the public sector by and large on objective considerations, such as the availability of raw material, etc. But, over a period of time, the Union Government has utilized the mechanism of investment in public sector undertakings for the purpose of rewarding or punishing some States or regions purely on political considerations. Illuminating examples are provided by the fluctuating fortunes of proposed steel plants at Visakhapatnam in Andhra Pradesh, Salem in Tamil Nadu and Mangalore in Karnataka, and the proposed petro-chemical complex at Haldia. It is also possible to refer to the refusal of the Union Government to agree to the proposal for a ship-building yard at Haldia and an electronic complex at Salt Lake City in Calcutta

PART VIII

TRADE AND COMMERCE

8.1 A case does indeed exist for a continuous appraisal of the various fiscal, legislative as well as executive decisions and measures which the Centre and the States take from time to time and which impinge on the unfettered movement of trade and commerce within the country. Reports of such appraisals should be promptly made public and discussed widely. For instance, there is an urgent need for a study of the impact of not permitting commodities declared as 'goods of national importance' to be subject to sales tax at more than 4 per cent. or of the impact of not allowing sales tax to be levied on an exportable commodity, in so far as the consequences of such decisions affect the different States to a varying extent. Effective consultation between the Central and the States should take place, perhaps within the Inter-State Council, before action is initiated on such studies. At the same time, the Centre should not be allowed to stall indiscriminately and on its own State legislative proposals on the ground that freedom of trade and commerce is likely to be affected. As in similar other cases, the President, before deciding whether a particular piece of legislation attracts the provisions of Articles 303 to 304, should hold consultation not with the Union Council of Ministers, but with the Inter-State Council. Alternatively, the Council may lay down certain guidelines in such matters for the convenience of the President.

PART IX

AGRICULTURE

9.1 Agriculture, including animal husbandry, forestry and fisheries, should be exclusively a States subject, and therefore the present entries in the Union and Concurrent Lists, constricting this jurisdiction, should be dropped. The recent trend, with the Centre progressively encroaching in the sphere of agriculture, must be reversed.

9.2 As already stated, Central and Centrally sponsored schemes in the sphere of agriculture are repugnant to the spirit of the Constitution and should be phased out.

9.3 The Planning Commission may be set up joint working groups along with the States. Such groups should however have only recommendatory responsibilities and nothing beyond.

9.4 In a country of India's geographical expanse and agronomical diversities, it is irrational to have a uniform structure of support or procurement prices: the States should therefore be allowed greater latitude in fixing farm prices within their respective territories. Similarly, in the sphere of irrigation, only projects, which have inter-State or international implications, should be jointly sponsored by the Centre; the rest of the area should be left to the States. In the general matter of agricultural policy, the Inter-State Council, as advised by the Planning Commission, may lay down overall guidelines, but it should be for the States to evolve detailed and specific programmes. As far as provision of strategic inputs, including credit, is concerned, it is to be expected that the national institutions will co-operate with the agencies belonging to the State Governments.

9.5 The pattern of inter-State distribution of credit extended by the ARDC, which was the predecessor institution of the National Bank for Agricultural and Rural Development, has been most uneven. The role of the Indian Council for Agriculture Research has also been paternal and feudal. Such bodies, to be made effective, must be instructed to co-operate with the State Government agencies.

PART X

FOOD AND CIVIL SUPPLIES

10.1 Certainly much greater scope exists for improving Centre-State co-operation and coordination in the areas of procurement, pricing, storage, movement and distribution of foodgrains and other essential commodities. But such cooperation cannot flourish if the Union Government assumes that it is in a position to issue directives to the States on all such matters. Here again, it is for the Inter-State Council to prescribe the general guidelines for coordinated activities, while the details of operational measures should be worked out by the Centre in consultation with the States.

10.2 The States must the allowed to have their own systems of price administration, but it is important for the Inter-State Council to lay down a framework for price regulation which the States may conform to.

PART XI

EDUCATION

11.1 It is dangerous for a nation with our kind of ethnic, linguistic, social and cultural diversities and disparities in economic structure to try to enforce a rigid centralisation in the sphere of educational philosophy and policies. The transfer of education to the Concurrent List has been a grievous mistake and should be rectified: with the proposed abolition of this List, education should revert to the State List.

11.2 The University Grants Commission being a Central institution is heavily influenced by the attitudes and political biases of the Union Government. There is a need for special grants for universities which the States cannot meet, and therefore the need for a body such as the UGC, but its constitution should be such as to evoke the confidence of the State Governments.

11.3 A consensus among the States and between the States and Union Governments in this sphere is not essential. The constituent units of a nation of India's diversity and complexity must be allowed a certain measure of elbow room to pursue educational and cultural programmes of their own within a broad frame work of national objectives.

11.4 The constitutional provisions should be so modulated that, in the name of protecting minority institutions, protection is not offered to entrenched interests; genuine minority rights must not however be interfered with.

11.5. Since under the present arrangements the Governor is a representative of the Union Government, the State Governments have encountered difficulty in instances where, while processing legislations concerning educational matters, the Governors have been guided by the predilections of the Union Government and not by the wishes of the State's electorate, legislators and Government. Other instances can also be quoted where State Legislation has been held up by the Union Government, or influence has been sought to be exerted through the deployment or withholding of Central funds.

PART XII

INTER-GOVERNMENTAL CO-ORDINATION

12.1. The Inter-State Council, if it functions in the manner suggested by us, may prove to be an effective enough machinery for dealing promptly with many of the irritations and problems that might arise in Centre-State relations. Multiplicity of institutions with cognate jurisdictions might not achieve the desired ends. However, there may not be any harm in an autonomous research institute, with equal representation from the Union and the States on its governing body, which devotes itself entirely to issues and problems concerning Centre-State relations. Such an institute should be located away from New Delhi and the funding of its expenditure should be charged to the Union and the State Governments' budgets in equal proportions.

Replies to Supplementary Questionnaire on Industry

1. In this connection State Government's reply to the main questionnaire at question 7·2 may kindly be referred to. It has been stated very clearly that it would be unreasonable to assume that State Governments are *'per se'* unmindful of the national or public interests. The State Governments are capable of defending and furthering the interests of the nation. In this background it is reiterated that the regulation of industries in its different aspects should be done under the auspices of the Inter-State Council to be set up as per the suggestion of the State Government in its replies already furnished to the main questionnaire. Specially, any proposal to bring new industries under the control of the Union Government in accordance with the provisions of Schedule-I of the IDR Act should be placed before the Inter-State Council first.

2. Reservation for selected industries/items for exclusive development in small scale sector is one of the more important measures adopted for accelerating growth of SSI Sector by providing an area where SSI entrepreneurs will not face adverse competition from their larger counterparts. Accordingly, reservation of a number of industries has been done by the Government of India in the small scale sector under Notification issued by the Department of Industrial Development, Ministry of Industry, in exercise of the power conferred by Sub-Section (1) of Section 29B of the Industries (Development & Regulation) Act 1951, as mentioned in Schedule (1) of the said Notification. It is better for operation of the reservation plan that such reservation may continue to be done by centralised legislation instead of each State Govt. separately legislating on the subject. As movement of manufactured items is unrestricted throughout the country, it will lead to obvious difficulties like protected items in the SSI list of a particular State getting adversely hit by entry of such items manufactured by large and medium sectors in another State.

3. Small scale Industries being a State subject, the State Govt. is concerned directly with promotion of growth of small scale industries. This is ensured by making available essential inputs like finance, infrastructure, raw materials and marketing facilities. At present, scarce raw materials like iron and steel, paraffin wax, essential oil for soap manufacture are canalised by the Govt. of India. If allocation of such raw materials is made on the basis of installed capacity of units, existing aberrations in allocation can be avoided. Similarly, the Govt. has no control over financing institutions like banks. and industries suffer from lack of adequate and timely financial help in spite of pursuasive efforts of the State Government. Banks which have major activities in the State can have Regional Boards for over-seeing lending activities and such Boards may include nominees of the State Governments. It is felt that these steps will ensure expanded role of States in promotion of small scale industries.

Again development of small scale industries being a State subject, the objective to extend legislative protection to this sector can be better realised by separate legislation by each of the States, setting apart matters of mutual interest or issues demanding co-ordination at the national level for Parliament to codify. This task may be accomplished by circulating a model bill for the States to adopt, as was done in respect of Khadi & Village Industries Development Programme, instead of the Parliament enacting a legislation for all States for adoption.

4. Reservation of listed items in Schedule-I for Small Scale Sector is in conformity with the State Government's policies to promote growth of small scale sector. The reservation items may, however, be reviewed from time to time in consultation with the State Governments for deciding about inclusion or deletion of items.

5. In line with the replies already furnished by the State Government to the main questionnaire, it is stated that in respect of all industries falling under entry 52 of List-I of the Constitution, the Central Government should enact any legislation pertaining to these industries only after consultation with the State Governments. This consultation should be done under the auspices of the Inter-State Council or any Authority specifically set up by this Council for dealing with the subject of industries. This process of consultation will give adequate opportunity to the States to get convinced as to whether a particular piece of legislation to be enacted by the Central Government in respect of any industry under the

State purview is at all required to be brought under the control of the Central Government in public interest.

6. The Industrial policy resolutions adopted by Govt. of India from time to time have by and large reflected the spirit and determination of the Union Government towards industralisation of the country covering various sectors of the industry, including the primacy of the Public Sector, and the role and importance of small scale industry in the economy of our country. As far as the private sector is concerned, there are wide ranging opportunities for them to grow and expand in their area of operations. Of late with the more liberal import policy adopted by the Government indigenous technology is getting exposed to foreign knowhow and even in core sectors like communication private sector is getting opportunity to make investment.

If the suggestion of the State Government for the constitution of a national forum like the Inter-State Council is accepted adequate opportunity would be available for all the State Governments to voice their views about the revisions needed in the industrial policy from time to time.

7. Industrial policy resolutions as have been adopted by Government of India from time to time were conceived, drafted, formulated and approved by the Central Government. To the best of our knowledge, these drafts were not circulated among the States for comments nor were the States consulted in a formal or informal manner.

It is, therefore, suggested that in line with the suggestion already made by the State Government the Inter-State Council should have the opportunity to discuss and analyse the implications of the industrial policy framed by the Central Government in all its aspects.

It is stated in this context that the Inter-State Council should also have the opportunity to look into all the Central Industrial Investment Programmes in different regions of the country in order to ensure that such decisions are arrived at in a collective forum in the spirit of national integration and equitable opportunity for economic growth for all regions. In other words, the Union Government should not unilaterally decide upon Central Industrial Investments which, experience shows, very often give cause for complaint to the State Government.

8. M.R.T.P. Act has been framed with a view to ensuring productive and distributive justice in the sphere of economic activities by private sector. The social and economic objectives behind the provisions of the Act are unexceptionable.

In terms of this Act, a category of Companies in the private sector has been classified as M.R.T.P. Companies taking into account their large assets and turn-over. These companies are not permitted expansion of their capacity in their existing places of in view areas. There is no gainsaying the fact that because of historical factors, industrial growth had taken place in West Bengal region, more particularly in and around Calcutta, due to the efforts and investments of the Companies which have been subsequently classified as M.R.T.P. houses. But as a consequence of the existing licensing policy and procedures in respect of M.R.T.P. Units the scope for investment or expansion by them in Calcutta or other backward areas of the State are extremely limited, notwithstanding the fact that it is they who have the necessary investible resources and expertise to develop the backward areas. Hence it is observed that the policy of curbing monopoly houses has, in fact, impeded growth of industries in West Bengal. As there has been a near stagnation in the traditional industries in this region, it is imperative that the existing regulatory measures are liberalised in order to make the State economy move faster. It is accordingly suggested that in the functioning of the M.R.T.P. Commission special dispensation clauses should be provided giving weightage to the views of the State Government. This aspect needs to be examined more closely by the Sarkaria Commission.

However, we would like to emphasise in this context that those provisions in the MRTP Act relating to restrictive trade practices should be enforced in letter and spirit in the interest of fulfilling better socio-economic objectives lying behind these provisions.

Statement by the Chief Minister, West Bengal, before the Commission

The Commission on Centre-State Relations is visiting West Bengal in the wake of a great national tragedy. However, the tragedy makes it all the more important that the Commission completes its task, and sets forth its recommendations, as expeditiously as possible. Much of the tension and divisiveness currently afflicting the nation stem from factors which originate in imbalances in the existing relationship between the Centre and the federating States. Without a comprehensive restructuring of Centre-State relations, there is every fear that social and economic tension will multiply. We owe it to ourselves to ensure to that the objective conditions preclude the rise of any irrational passion in the policy.

2. The Government of West Bengal, in its reply to the questionnaire forwarded by the Commission, has endeavoured to cover the gamut of problems crucial to the re-ordering of Centre-State relations in our country. I would nonetheless like to take the opportunity of the visit of the Commission to invite attention to a number of issues which have increasingly come to the force in the more recent months.

3. We have, in our reply to the Commission's questionnaire, given our views on the role of the Governor in some detail. These views have been further strengthened by the demeanour of the Governors of Jammu & Kashmir and Andhra Pradesh respectively, in the months of July and August this year, for engineering changes in the complexion of the State Governments. In both States, the Governor, without ascertaining the views of the State legislature, used his prerogative to dismiss the democratically elected Chief Minister and install as substitute an individual of his choice. It is a depressing commentary on the state of social and political awareness in our country that members of legislatures can be induced to cross floors and disown the mandate

on the basis of which they are elected. Such floor-crossing is however being systematically further encouraged by the acts and activities of Governors, who, either on their own volition or because of directives issued by the Union Government, have proceeded to dismiss and appoint Chief Ministers in an altogether arbitrary manner. In Jammu and Kashmir, the outrage that was perpetrated has not yet been reversed, since the legislators, who were induced to change their loyalty, have not chosen to return to their original fold; but this does not condone the role played by the Governor. In Andhra Pradesh the situation was different : perhaps at no time the individual picked by the Governor to supplant the incumbent Chief Minister enjoyed the support of a majority of the members of the State Assembly. It is outrageous that the Governor refused to abide by the request of the incumbent Chief Minister to convene the State Assembly, where the latter wanted to demonstrate his majority support within forty-eight hours, but was prepared to allow the individual whom he chose to appoint arbitrarily as Chief Minister as much as thirty days to convene the Assembly and prove his majority support which in any case he failed to do.

4. There is another aspect of the matter to which I would like to draw the Commission's attention. Dr. Farooq Abdullah continued to be the Chief Minister as well as the Home Minister of Jammu & Kashmir till the late afternoon of July 1st, 1984; yet, para-military forces were being flown into the State since the early hours of that day without his knowledge and concurrence. Such induction of armed personnel from outside took place under the direct orders of the Governor. This was a gross breach of constitutional procedures and must not be allowed to happen again.

5. Taking into account these developments, we have not the least hesitation in reiterating the view that the post of Governor deserves to be abolished. I would invite the Commission to look into the provisions of the Government of India Act, 1935 concerning the role and functions of the provincial Governor. These provisions have been almost totally reproduced in our Constitution, thus burdening a supposedly federal—democratic structure with an imperial legacy. There are a fairly large number of federal nations around the world where the federal centre and the federating units are able to sustain the on-going constitutional arrangements without the presence of an intermediary such as the Governor in our Constitution. I have every hope the Commission would closely examine this issue.

6. The other most disquieting event since the State Government forwarded its reply to the Commission's questionnaire is the Union Government's decision on the recommendations of the Eighth Finance Commission. The substantive outcome of this decision is to deny the States devolution of resources to the extent of around Rs. 1,500 crores during the current fiscal year, of which an amount exceeding Rs. 300 crores would have devolved to West Bengal alone. The legality and constitutionality of the Union Government's decision can be questioned, and is going to be questioned by the State Government before the Supreme Court. Nonetheless, I strongly feel that the constitutional provisions themselves should be suitably amended so as to remove all ambiguities in such matters so that henceforth the Union Government is deprived of any alibi for no complying with the recommendations of the Finance Commission. The crux of Centre-State financial relations, which are of basic relevance for sustaining the federal polity, lies in the arrangement revolving around the periodic appointment of a Finance Commission and the implementation of its recommendations. If this arrangement is sought to be whimsically put into disarry by the Union Government, I am afraid there is bound to be widespread social and economic discontent over large parts of the country. Such a denouncement must be avoided at all costs, and whatever constitutional changes are called for must be set in motion.

7. I would also like to draw the attention of the Commission to the fact that the Finance Commission's recommendations could be put aside by the Union Government because of the provisions of Article 74 of the Constitution; as this Article now reads, the President has to abide by the advice of the Central Council of Ministers in the exercise of all his functions. I would reiterate the State Government's view that where Centre-State relations are involved, the President must be guided, not by the advice of the Central Council of Ministers, but by that of the Inter-State Council provided for in Article 263 and constituted in the manner described in our reply.

8. The Commission must have noticed the wide spectrum over which we would like the Inter-State Council to exercise its jurisdiction. This is not intended to constrict the role of Parliament, which—with a certain restructuring of the composition of the Rajya Sabha—must remain the dominant authority in our democratic system. But where vital issues affecting Union-State relations are concerned, the advice and counsel of a body like the Inter-State Council, in the composition of which the points of view of the federating States would receive due weightage, could be of immense help towards understanding issues and modulating decisions.

9. Let me now refer to a number of specific problems. Taking advantage of Article 200 of the Constitution, past Governors of the State had referred a number of important Bills passed by our Assembly to the Union Government; these Bills have not yet been assented to. I have particularly in mind the West Bengal Land Reforms (Amendment) Bill, 1981 and the Calcutta University Act (Amendment) Bill, 1984. In the case of the latter, although the subject matter of the Bill belongs to the Concurrent List, its provisions are not repugnant to any Central Act; yet the Bill has been withheld. In the case of the Land Reforms (Amendment) Bill, the Union Government has, apart from invoking the provisions of Article 31(a), also elliptically expressed its apprehension that the implementation of this amendment might adversely affect the country's export promotion efforts. The Directive Principles of State Policy in our Constitution do not mention export promotion; there is however a clear directive, in terms of Articles 38 and 39, to effect more equitable distribution of land. It is therefore imperative that the Union Government's power to intervene in legislative and administrative matters in areas where the States have

clear-cut prerogatives should be excised from the Constitution; the Commission will, I hope, recommend the necessary amendments for the purpose.

10. Our reply to the Commission's questionnaire contains a strong plea for restructuring the Council of States, the Rajya Sabha, in such a manner that all States will have equal representation on it. This principle is incorporated in the Constitutions of both the Soviet Union and the United States of America, and have gone a long way in assuaging the sense of neglect and alienation on the part of relatively small, weak, or outlying States. Given the extent of linguistic, ethnic and cultural diversities amongst the peoples of India and the wide disparities in their social and economic levels, it is impo tant that population groups inhabiting the different States do have a forum where they can articulate their points of view on an equal footing. A restructured Council of States, where all States will have the same number of representatives, could be the answer to the problem.

11. Where such a forum available, such an issue as the recognition of Nepali as an national language and its incorporation in the Eighth Schedule would perhaps have received much greater attention than has been the case. Such recognition would have been an appropriate response to the felt urge of a large number of citizens resident in West Bengal and Sikkim. I hope the Commission would make a recommendation in this matter.

12. In our reply to the Commission's questionnaire, we have dwelled at some length on the problems related to the sharing of financial and monetary resources between the Union and the States; we have also discussed the role of industrial licensing and the immense harm rendered to the cause of balanced economic growth of the country by the provisions of the Industries (Development and Regulation) Act. We have also referred to the State of economic planning in the country and the plight to which the Planning Commission has been reduced. It is my fervent hope that the Commission would carefully analyse our suggestions and proposals concerning these issues while reaching its decisions.

13. I would appeal to the Commission to look into the range of issues affecting Centre-State relations in the light of the totality of problems the nation is currently facing. The historical factors must also be taken into account here. Before the advent of the British, there was no unified administrative set-up in the country; even during the British days, there was a duality of arrangement between the princely States and the rest of the provinces directly ruled by the imperial masters. The leadership of the Indian National Congress in the pre-independence days was fully aware of this histrorical reality and was most anxious that, in post-independent India, the federal ideology should prevail and receive formal imprimature, and the different cultural, linguistic, ethnic and religious groups, who constitute the great Indian nation, be allowed a large elbow room to enable them to exploit to the full their developmental potential; it was equally important that, in the quest for over-all socio-economic advance, the interests of no particular groups were hampered in order to foster the interests of any other group or groups. Keeping in mind these postulates, the Indian National Congress, even in its August 1942 Resolution had suggested that, once the nation had on its freedom, the residuary powers in the reconstituted polity must vest in the federating State and not in the federal Centre. When the Constitution was enacted, this proposition was however reversed. I would suggest that the Constitution be so amended that the pledge of the freedom movement is redeemed.

14. I would, in this connection, reuest the Commission to examine the provisions of the constitutions of such federal countries as the United States of America, the Soviet Union, Canada and Australia. The problems India is facing are not *sui generis*. There are parallels which can be observed in similarly placed countries; appropriate lessions can be drawn from these parallels. The Commission may, for example, find the following statement by Comrade Stalin before the Central Committee of the Communist Party of the USSR of some interest. The Statement was made in the course of a discussion that took place in 1923 in the Central Committee on the Draft Constitution of the Soviet Union :

> If within the Central Executive Committee of the Union we could create two chambers having equal powers, one of which would be elected at the Union Congress of Soviets, irrespective of nationality, and the other by the republics and the national regions (the repbulics being equally represented, and the national regions also being equally represented) and endorsed by the same Congress of Soviets of the Union of Republics, I think that then our supreme institutions would express not only the class interests of all the working people without exception, but also purely national needs. We would have an organ which would express the special interests of the nationalities, peoples and races inhabiting the Union of Republics. Under the conditions prevailing in our Union, which as a whole unites not less than 140,000,000 people, of whom about 65,000,000 are non-Russians, in such a country it is impossible to govern unless we have with us, here in Moscow, in the supreme organ, emissaries of these nationalities, to express not only the interests common to the proletariat as a whole, but also special, specific, national interests. Without this it will be impossible to govern, comrades. Unless we have this barameter and people capable of formulating these special needs of the individual nationalities, it will be impossible to govern. (J. V. Stalin, Works, Volume 5, pp. 263-4, Moscow, 1953).

15. A Constitution survives, and gathers strength, if its provisions embody an arrangement whereby the governing agencies and the people they govern are kept in continuous communion with each other. We seek a re-appraisal and a re-ordering of Union-State relations in our Constitution for this purpose. I am sure that too is the goal the Commission has set for itself.

REPLIES TO QUESTIONNAIRE, MEMORANDA ETC. FROM POLITICAL PARTIES

1. NATIONAL PARTIES

BHARATIYA JANATA PARTY

MEMORANDUM

Introductory

The Indian Constitution has been described by many Constitutional experts as quasi-federal. It is not federal in the sense the American or Australian Constitution is. It has a pronounced unitary bias. However, a vast country like India can be administered only through regional governments. The existence of states as political units is, therefore, inevitable. It is desirable as well. There are peculiar problems pertaining to different parts of the country and their solutions are bound to vary from place to place. Thus, decentralisation of political power is imperative both to strengthen democracy, and to ensure efficient governance of the country.

Our Constitution has made certain arrangements for the distribution of power and functions between central and state governments. However, the implementation of these provisions has resulted in strains and tensions in Centre-State relations. We feel that in the interests of the country's unity and integrity, effective steps must be taken to remove these strains. While the Centre has to be prevented from becoming authoritarian, the States cannot become centres of parallel or conflicting loyalty. A review of Centre-State relations has become necessary in order to strike a proper balance. This note incorporates briefly the position of the BJP on problems pertaining to Centre-State relations.

We are of the opinion that nothing should be done that may weaken the unity of the country. Continuing conflict or friction between the Centre and the States must be eliminated. The provisions of the Constitution should be implemented both in law and in spirit. Unfortunately, this has not been done. The Constitution contemplates substantial decentralisation, territorial as well as functional, of powers and functions. This has not been allowed to take place. The Centre continues to grab more and more powers, and the States in their turn have not devolved powers on the Local Bodies. These imbalances have to be rectified.

The Indian Constitution is sufficiently flexible to meet the challenges of the times. Various tensions, problems and issues which have arisen in Union-State relationships exist because over the years these relationships have not been worked in conformity with the true spirit and intent of the Constitution. However, we do not think that the distortions can be rectified merely by evolving conventions and procedures. Some changes in the Constitution are also necessary.

The Rajamannar Committee, appointed by the Tamil Nadu Government way back in 1971, expressed its commitment to federalism, in its pristine form. It, therefore, recommended deletion of, or drastic revision of, a number of provisions in the Indian Constitution dealing with Centre-State relations, such as Articles 251, 256, 257, 348, 349, 355, 356, 357, 365 etc.

As already mentioned at the outset, India's Constitution makers did not conceive of India as a classical federation, and made the Constitution federal in form, but essentially unitary in content. We think this approach is sound, and do not favour changes that undermine this arrangement.

Specifically speaking, we do not favour any change in Article 251 (Inconsistency between laws made by Parliament and Laws made by Legislatures), Article 256 (Obligation of States and the Union), Article 257 (Control of the Union over States in certain cases), Article 348 (Language to be used in Supreme Court, High Courts etc.) and Article 355 (Duty of Union to protect States).

Article 3 of the Constitution which deals with alteration of State boundaries should be modified so that all changes contemplated by that Article should be given effect to only by amending the Constitution.

Article 252, 360 and 365 should be reviewed so as to avoid their misuse.

The formation of an Inter-State Council under Article 263 should be made mandatory. The Council should include the Prime Minister and all Chief Ministers.

Article 370 being a transitory Article should be deleted in the interest of national integration.

Legislative Relations

By and large we accept the distribution of legislative powers made in Lists 1, 2 & 3 of the Constitution.

There are numerous instances where Article 200 has been misused. Bills have been reserved for the consideration of the President in order to create difficulties for the State Government. Article 200 must, therefore, be amended as follows :

When any Bill relating to a subject on the State list is passed by the State Legislature, the Governor of the State should have only two options; viz.

(i) To give his assent to the Bill; or

(ii) To return the Bill expeditiously with his recommendations for any changes in the Bill; if the legislature passes that Bill either in the original form or in the amended form, the Governor shall give his assent to the Bill.

Governor shall give his assent to the Bill. He should not have any powers to reserve these Bills for the assent of the President.

When a Bill relating to some matter in the Concurrent List is passed by a State legislature, the Governor, may reserve the Bill for the assent of the President who either declares assent or refusal within three months of the receipt of the Bill. If no decision has been given by that time, it will be presumed that it has been assented to. We agree with the idea that before the Centre passes any legislation on a concurrent subject, the concerned State Governments should be consulted.

The Union Territory of Delhi, with a population of seven million, is today deprived of the opportunity of framing its own laws and running its own administration. Laws for Delhi have to be framed by Parliament, and even though there is a Metropolitan Council and an Executive Council, real executive power vests in the Central Government. The BJP thinks this situation must change and Delhi must be given a Legislative Assembly and a Council of Ministers responsible to the Assembly.

Role of The Governor

The Constitution visualized that by and large the Governor will be the constitutional head of the State. The office of the Governor is meant to be the State's link with the Centre. The position of the Governor is somewhat difficult and paradoxical. He is the constitutional head of the State Government which in turn is responsible only to the State legislature. On the other hand, he is appointed by the President which in fact means the Central Government. It is no doubt true that the Governor is appointed by the President but that does not make him an employee or servant of the Government. We recommend that this constitutional position needs to be strengthened by making certain changes in the manner of appointment of the Governor and his powers.

The Governor should be appointed for a term of five years by the President from a panel prepared by the Inter-State Council. He should be appointed in consultation with the concerned State. The Governor should be removed only by impeachment in Parliament by a procedure analogous to that provided in the case of a judge of the Supreme Court and High Court. He is not to be transferred from one State to another and he should not hold any office of profit under the State or the Central Government after the expiry of his term.

All questions about confidence in the Chief Minister by the majority of the members of the Assembly should be decided on the floor of the House. The Governor shall exercise his constitutional powers only upon and in accordance with the advice of his ministers. The Inter-State Council should prepare guidelines for the Governor to help him in the discharge of his constitutional functions.

Financial Relations

The Constitution provides for setting up of a Finance Commission and for the distribution of revenue between the Union and the States (Articles 268, 269, 270, 271, 272, 275).

We feel that the present scheme of distribution of economic resources has proved a major irritant in Centre-State relations. There is a general consensus amongst economic experts that the resentment of States on this score is justified.

We feel that :

(i) the resources for raising funds available to the States are comparatively inelastic;

(ii) the functions allocated to the States are such as lead compulsively to expanding responsibilities, particularly in the context of ambitious development plans; and

(iii) important sources for national plan financing as foreign aid, external borrowing, deficit financing, all tend to strengthen central rather than State resources.

It follows that if this grievance is to be justly met, steps must be taken to see that :

(i) the arrangements for devolution should be such as will allow the States' resources to correspond more nearly to their obligations; State's share in the divisive pool should be enlarged;

(ii) the devolutions should be made in a manner that enables an integrated view to be taken of the plan as well as non-plan needs of both the Centre and the States;

(iii) the loans and advances by the Centre should be related to the developmental needs of the States.

The State list in the Seventh Schedule to the Constitution of India incorporates subjects like public order and police; public health and sanitation; hospitals and dispensaries; relief of the disabled and unemployment; communications, that is to say, roads, bridges, ferries and other means of communication; agriculture, including agricultural education & resources, water including water supplies, irrigation and canals; production, supply and distribution of goods.

Any State Government or political party desirous of implementation its programme for which people's mandate has been obtained would need financial resources of colossal magnitude. The taxing power of the States is woefully inadequate to finance any ambitious schemes of development

If the Central Government, or rather the political party to which it belongs, decides upon a course of hostility to any State Government, it can, by misuse of those constitutional provisions, destroy the latter's economic viability and gradually make it so unpopular as to compel it to get out of office. Thus, a sore point with States is that the Centre's authority to issue industrial licences is often used in a manner so as to obstruct industrial growth. This situation should be remedied.

Under Article 268, stamp duties and duties of excise on medicinal and toilet preparations are leviable by the Government of India. They are, however, required to be collected by the States and finally assigned to them. The Union Government can render this source totally non-existent by just refusing to levy such duties.

Article 269 refers to seven kinds of taxes and duties which are both levied and collected by the Central Government but only such shares would go to the States as are prescribed by Central Law. That provision can be worked very unfairly. There is no obligation on the Central Government to levy such taxes or duties. In any event the volume of the taxation is entirely a matter for the Centre to decide and so also, the State's share therein.

Article 270 creates a pool divisible between the Central Government and the State Governments. The percentage to be assigned to the States has to be fixed by the Centre. The percentage assigned to the States may be meagre or unfair. States can be deprived of their legitimate share by the further device of calling the duty or tax a surcharge for the purposes of the Union . Under Article 271, no portion of surcharge can be claimed by the States.

Article 272 does not impose any obligation but only confers a discretion on the Central Government to share the excise duties. This dependence can be used to humiliate, starve and strangle state Governments. It is not possible to resist the claim of the States that some of the sources of revenue at present allotted to the Centre must be transferred to them, that the scope of the divisible pool must be enlarged and so too the State's share therein. Equally irresistible is their claim that additional powers to levy taxes and collect duties must be conferred on them. In our opinion the States seem to have a very sound case in respect of the following :

1. It should be made compulsory constitutional amendment for the Central legislature to impose duties and taxes of the seven kinds mentioned in Article 269. So far, out of these seven, two have been levied, namely, estate duty in respect of property other than agricultural land and tax on railway fares and freights. The Central Government has removed the latter, though a fixed subsidy has been made available to the States by way of compensation. This subsidy was fixed in 1961 and has not been increased. The Centre continues to enjoy and appropriate all the increases in rail fares and freights that have been galloping during the last few years. If the Centre does not wish to levy these duties and taxes, power must be transferred to the States.

2. Corporation tax which has so far been separated and excluded from income-tax should be included therein and shared by the Centre with the States. There is really no reason why a part of the corporation tax should not go to the States, basically, the character of both is the same. It is the States which facilitate the functioning of companies and provide the requisite infrastructure in most cases, such as electricity, water, roads and sometimes even monetary incentives. The Surcharge on the Income Tax must also be included in the divisible pool.

3. States should receive royalties on an *ad valorem* basis on all major mineral resources, the royalty must bear a reasonable relationship with the price fixed.

4. States should be permitted to tax generation of electricity within their areas as distinguished from mere sale of electricity. Generation of electric power necessarily involves the exploitation of the States' resources like rivers, lakes and rainfall.

5. The character of the Finance Commission should be suitably changed. It should not remain as it is now, a Centre-dominated institution. Article 280 should be amended so that the composition of the Commission reflects the quasi-federal character of the Indian polity. The Finance Commission should be charged with the responsibility of earmarking funds for the local self bodies out of the devolutions to the States. The composition of the Planning Commission also should reflect the quasi-federal character of the Indian polity.

BHARATIYA JANATA PARTY

State Unit—West Bengal

MEMORANDUM

My party is of the opinion that there is no need for any basic change in the Constitutional provisions or in regard to the distribution of Legislative powers between the Centre and the State. It is not the Constitutional provisions but the way they have been used that has created the present impasse.

My party is of the opinion that nothing should be done to impair the unity of the country, on the other hand we should try to strengthen to Unity of the country.

Larger powers should be given to the State in the matter of economic development of the country and the balance contemplated by the Constitution makers regarding Centre and State

relationships be restored by taking steps to suitably make provisions for preventing the mis-use of the Constitutional Powers as has been done in the past.

My party is also of the opinion that Local Self Government units should be enlarged and constitutionally protected and certain taxes and duties levied and collected by the States must be assigned to them such as Stamp Duty, Entertainment Tax, Property Tax etc.

My party is also of the opinion that Articles 292 and 293 be amended for permitting the States to borrow monies from domestic market within the limits laid down by the States Legislations. External borrowings made by the Centre, however, shall not be subject to a share by the States nor the States have any share in the Customs Duty. The royalty on the minerals resources of a State should be on the *ad valorem* basis and more resources be provided to the State in order to reduce its dependance on the Centre.

The power vasted in the Governor has been vastly mis-used and the Governor has often acted in the interest of the Ruling Party rather than a Constitutional head as provided by the Constitutional provisions.

My party is of the opinion that the test of majority in the Legislative Assembly should be determined on the floor of the House and within shortest possible time and the Governor should have no discretion in the matter. If necessary relevant provisions in the Constitution be amended to prevent abuse of power by the Governor.

Detailed reply to the Questionnaire will be forwarded to you in due course.

(Sd/-)

President

COMMUNIST PARTY OF INDIA

Central Office

MEMORANDUM

GENERAL SECRETARY : C. Rajeswara Rao

April 23, 1984

Shri R. S. Sarkaria
Chairman
Commission on
Centre-States Relations,
New Delhi

Sir,

Thanks for the Questionnaire sent to us. I am sorry that our reply to the same has been delayed.

We welcome the appointment of this Commission on this burning and important subject which has been dogging our political life for long and which has today become all the pressing because of the coming to power of governments of various parties in different States.

We are confining ourselves to the broad aspects of the problem without going into the details at this stage. Once the broad approach is settled the details can be worked out.

1. Though our constitution is broadly a federal one, what predominates it are its unitary features. The distribution of powers between the Central and the States follows the pattern which was outlined in the Government of India Act, 1935 and this fact stands out glaringly in several Articles of the Constitution and in the VIIth Schedule which enumerates the exclusive legislative powers of the Union, (List I), the States (List II) and the concurrent legislative powers of both (List III). The exclusive powers exercisable by the Union and the States are based on their respective legislative jurisdiction, that is, on the jurisdiction given them under these three Lists. All residuary matters including taxation are left within the jurisdiction of the Union. This means that the residuary powers are with the Centre.

2. As the VIIth Schedule and other provisions of the Constitution would show that the autonomy and powers of the States in the legislative, economic and financial, as well as in the administrative sphere are already much circumscribed. What has happened during nearly three decades of the Constitution is that even the restricted autonomy and powers of the States have been steadily eroded and undermined, while there has been a growing concentration of power and authority with the Centre. Not only certain provisions of the Constitution but a whole number of other factors, political as well as economic, have contributed to this unhealthy and harmful development. What stands out today is a striking imbalance in Centre-State relations, the States having lost much of the substance of their autonomy.

3. The capitalist path of development and the monopoly bourgeois power plus the single-party rule at the Centre, as well as in most of the States over the past years, have of course been the main contributory factor in undermining the federal features of the Constitution on the one hand and in the concentration of excessive powers and authority with the Centre on the other.

4. Responsibility to implement most of the welfare activities lies with the States whereas the sources of revenue are limited and meagre. As a result, not only the dependence of the States on the Centre has gone on increasing, but developmental and other social welfare activities of the States have been hamstrung and even, in some critical areas, crippled. The democratic features and norms of Centre-State relations have been a casualty not only to the detriment of the States and their people, but even to that of national unity and national integration. This has encouraged fissiparous and divisive tendencies and forces.

5. In any federal structure worth the name, the federal centre derives its strength and authority in very large measure from the willing co-operation

of the constituent States which, to, must be invested with their necessary powers and authority. In order that they may be based on a strong democratic foundation, Centre-State relations must necessarily ensure that both have their legitimate due in the field of powers, authority, resources and opportunity to discharge their respective responsibilities to the people and the country. The problems we face is, however, a concentration of power and resources with the Centre, while the States badly lack them, while their development responsibilities continue expanding which is what it ought to be.

6. In no other sphere is the frustrating and restrictive impact of Centre-State relations so pervasively and acutely felt as in that of finance, economy and economy development. In this connection it is necessary to reiterate that the problem of resources for the national development arises basically from the present socio-economic order, from the capitalist path of development and from the grip of monopoly capital and other vested interests over our economy. This factor, compounded by the economic policies pursued by the bourgeois governments both at the Centre and in the States has resulted in massive denial of resources to the States and indeed in an aggravation of the resources problem.

The problem is indeed a built-in feature of the present system and it obviously cannot be solved without ending the present socio-economic order—the rule of capital—and without radical structural changes in our economy and socio-economic transformations. However, as the provision for greater resources for the States could be made in order to enable them to bring relief to the masses, raise their living standards and vigorously pursue the developmental and other social welfare and cultural activities.

7. The financial resources of the States are today too inadequate for their developmental and other welfare activities and the sources from which they can raise their revenues are also equally inelastic. As a result, the gap between their legitimate needs and their resources has gone on widening, despite all their borrowing, "overdrafts" and the so-called ways and means advances from the Centre.

8. Not only are the major sources of revenue under the exclusive jurisdiction of the Centre but banking, insurance and public financial institutions are also under its control. So are the country's economic and fiscal policies in the formulation of which the States have no say. These factors, together with the manner in which the central funds are disbursed to the States, have made the latter increasingly dependent on the Centre with an escalating negative impact on the whole spectrum of Centre-State relations.

9. The situation is further worsened by the fact that the States are denied any share whatsoever in the revenue receipts of the Centre from such major sources as customs and export duties and corporation tax. The so-called "Central assistance" under different heads such as "grants-in-aid" "discretionary grants", the state's share in the income tax receipts of the Centre, etc. are inadequate. It is the "discretionary grants", not assured assistance under the Constitution, which has begun to predominate and constitutes the major share of the total aid, giving the Central Government a powerful leverage for unjustly pressurising and influencing the policies of the States in many fields of the latter's activity. Occasionally this is used as an instrument even of political pressure on the States. This has caused much resentment in the States, although under the monopoly of one-party power, such resentment has been silenced at the official level.

10. The role of the Finance Commission, which is appointed by the Central Government and whose composition, powers and functions are open to question has made no material difference to the Centre-State relations over the question of resources.

11. The administration of the five-year plans which has given rise to demarcation between planned and non-planned sectors has been taken advantage of by the Centre, especially to establish its control over a number of subjects in the Concurrent and State Lists which come within the scope of planning. Even the conservative Administrative Reforms Committee expressed its concern at this development, which, according to it, has "tended to unite the horizontal pieces (of the so-called plan sectors in the States) into a single monolithic chunk" controlled by the Centre, although operated in the concurrent and State lists. The National planning certainly requires a well directed central authority. At the same time the initiative of the States in the matter of developmental activities should not be crippled by undue interference by the Centre. Certain guidelines or areas of operation in the matter of setting up industries and other projects based on the magnitude and strategic importance should be formmulated. Bureaucratic bungling should not be allowed to come in the way of initiative of the States.

12. It is, however, not in the financial and economic fields alone that the States are handicapped or the inroads into their powers and autonomy have taken place. The exclusive legislative jurisdiction of the States and their executive powers have taken place. The exclusive legislative jurisone pretext or another. Some provisions of the Constitution, including several entries in the Union List and concurrent list, have facilitated this. Though 'industry' is, for example, under the exclusive jurisdiction of the States, the Centre has acquired a very wide, almost unlimited range of control over many industries in the States. The trend is one of extending such sweeping jurisdiction of the Centre over matters which are supposed to be the State subjects.

13. The arbitrary resort to President's Rule in the States under Article 356, sometime even for sorting out the internal problems of the party in power, the provision for President's assent to certain categories of Bills passed by the State legislatures, the powers of the Centre to issue directions to the States, Centre's control over the All-India

services even when their cadres are under the employment of the States and the sweeping emergency provisions in Part XVIII of the Constitutional this has enormously contributed to the undermining of the federal principles and of the powers and autonomy of the States.

14. The changed political conditions, the coming to power of several non-congress governments and the growth of new consciousness about their rights and needs for rapid development in various nationalities and the tribal people and the fact that the existing imbalance in Centre. State relations is sought to be exploited by certain sections for furthering the interests of separatist and even secessionist forces lend an urgency to the democratic demand to restructure Centre-State relations.

15. The Communist Party of India is firmly of the opinion that the necessary restructuring of Centre-State relations should be given wider legislative and financial resources to the States to meet the growing needs of development, consistent with the unity and integrity of the country and its planned, integrated and all-sided economic development. Such widening of the powers of the States shall not only enable the fruition of the aspirations of the people of the States, but will also strengthen the democratic content of the relations between the Centre and the States and thereby strengthen the unity of the counry and national integrity.

16. At the same time, the Communist Party of India is of the view that it would be wrong to restrict the powers of the Centre merely to four subjects like Defence, Foreign Affairs, Communications and Currency as is being suggested by some. The Centre should have the power to work for the integrated economic development and strengthening the common economy and development with due regard to the needs and legitimate aspirations of the under developed States and regions.

17. The crux of the immediate problem is clearly one of giving wider powers to the States, raising their resources and broadening the opportunities for their democratic initiatives so that they can effectively discharge their responsibilities for promoting the well-being of the people and the progress of the States.

18. In tune with the aforesaid, the meeting of opposition parties held at Srinagar from 5th to 7th October, 1983 worked out proposals for reshaping Centre-State relations. A statement giving the full text of the same is enclosed herewith for your earnest consideration.

COMMUNIST PARTY OF INDIA

State Unit—Karnataka

MEMORANDUM

1. At the outset, we have to state that the overall relations between the Union and the States have got to be on an equitable basis. The relationship is not one of the domination but is one of partnership for achieving the best national interest. The responsibility of the Union in maintaining such a harmonious relationship is obvious and is far greater than that of the States. This is not to minimise the role of the state in maintaining amicable relationship. However, over the years, it cannot be gain-some said, that those in charge of the affairs of the Union or a party in power at the centre, have not taken a responsible and impartial view. They have failed to evolve proper standards of democratic behaviour vis-a-vis the states. As a result of such a behaviour, the centre-state relations or Union-State relations have deteriorated leading to fissiporous tendencies in the body politic. Unfortunately, such attitudes have not been of casual occurrence only but seems to be almost a policy for those at the centre or those holding political power at the Union level not to tolerate the persons in power at the State belonging to different parties. Noticeable thing is that this has been so from the beginning. Just to quote one or two instances. In the 1952 general elections in the then State of Madras, the Congress Party which was ruling at the centre was reduced to a minority in the State Legislature. The United Democratic Front headed by Shri Prakasam had total majority, but the Governor under instructions from the then Prime Minister and the Home Minister declined to call Sri Prakasam to form the ministry but called C. Rajagopalachari who was just then nominated to the Legislative Council to form the Ministry on behalf of the Congress Party. Thus a minority ministry was foisted on the Madras Legislature, without giving due respect to the wishes of the electorate solely because the then leadership of the Congress at the Centre thought it could not suffer a non-Congress Ministry in Madras. The same attitude found expression in the latest undemocratic act of dismissing the Ministry headed by N. T. Ramarao and foisting a Ministry led a faction in the Telugu Desam Party. Same fate be fell Dr. Farooq Abdullah in Jammu and Kashmir. In the same way and style, power under Article 356 has been exercised to displace non-Congress Ministries. Durgah Dar Basu has said that during 30 years on more than 60 occasions this extraordinary power has been abused. Without multiplying the instances it can be safely asserted that the party in power at the Centre have tried to frustrate the functioning of the Party in power at the State level when they do not belong to the same party. We would request the Commission to examine all the instances and point out how far there has been an abuse of power vested in the Centre either under Article 356 or under other articles or through the discretionary powers of the Governor. This examination is necessary in the interest of establishing healthy conventions so as to secure understanding and amity between the Centre and the States. Such conventions are necessary in the interest of the smooth functioning of the framework of the constitution; we are of the view that mere changes in the legal provisions governing the relationship between the Centre and State alone are not sufficient. The most important is to work it in a democratic manner.

2. In what follows we propose to answer some of the questionnaire.

PART I

INTRODUCTORY

1.1 This question appears to be somewhat academic. Legal Pundits or Political Philosophers are not agreed on the various features that go into making a federal structure. One writer examining the various definitions has said as follows :—

"From the several definitions one can bring out three important and essential features of federalism. They are :

(1) Definition of powers between centre and States which are expected to exercise their powers independently as far as possible and in concert with each other or co-operatively if necessary.

(2) Supremacy of the constitution is an explicit idea that neither the Centre nor the States can change the provisions relating to federal aspect unilateraly and,

(3) an independent judiciary to function as an arbitrator in all disputes between the Centre and the States and also between the States." To this, he has also added a concept of a strong Centre. Thus it can be found that the constitutional set up in India has certain federal features. However the unitary aspect of the concept of strong Centre is very important in the set up. Hence it is sometimes characterised as quasi federal with strong unitary tendencies.

1.2 Whatever the concept of the federation, it is necessary for various reasons to emphasize that there is need for the distribution of powers among the list to the VII schedule of the constitution and also in regard to various other matters. We agree with the various recommendations made by the Rajamannar Committee for securing what is called Greater Autonomy. Devolution of more power and more finances to the States have assumed crucial significance not merely because of the views regarding federation or federalism but because of other compelling socio-economic and political circumstances.

1.3 We agree with the view that there is urgent need for substantial de-centralisation of powers and finances at various levels and more than all, of devolution of finances to secure effective functioning and to discharge the various responsibilities. We are of the view that during a real national emergency like say the Chinese agression during 1962, the States themselves voluntarily co-operated with the Centre and agreed to the central dispensation of many matters. From our point of view the optimum constitutional provisions is to see that many irritants in the centre-state relations which have cropped up over 35 years should be removed. Our Party at the Centre has given various proposals and the opposition parties' conclave at Srinagar have approved of some of the said suggestions. We stand by those suggestions.

1.4 In the said question it is not clear what is the—traditional type referred to as has been pointed out. The writers in the constitutional law are not agreed on the various ingredients of what is called pure traditional type. However, it is not difficult to envisage the States exercising independent power in their affairs without interference by the Centre. We wish to make it clear that we stand for a strong Centre. However we do not subscribe to the doctrine of a limping federation but we want a strong centre and at the same time we want a federal units with more power and finances. We are of the view that the Centre can be strong if the federal units are also strong and have sufficient power and finances to discharge their responsibilities.

1.5 We agree with the view that the relations between the union and the states have not been promoted or developed on a proper basis in accordance with the democratic intent of the electorate. However this does not mean that there is no need for changes in some of the articles of the constitution. The legal framework providing for devolution of powers, functions and finances require restructuring. At the same time, healthy conventions and procedures have also got to be evolved. We do not agree that there is no case for any change in the provisions. There is need for change in view of altered circumstances the expectations of the people, enormous responsibilities thrown on the States, etc.

1.6 We entirely agree that the protection of the independence of the country, securing the unity and integrity of the nation is of paramount importance. Due to various reasons, the unity has been threatened and divisive forces are growing. The constitution as a whole is designed to secure the objectives mentioned in the question.

1.7 Articles 256, 257, 354 to 357 and 365 all require modifications. They are not reasonable. They require re-casting.

1.8 Article 3 of the constitution does not require any change, particularly if our suggestion of an inter-State council as provided under article 263 of the constitution is properly worked it may not become necessary to amend article 3. At any rate, the stage has not arrived for reconsidering the frame of the said article.

PART II

LEGISLATIVE RELATIONS

2.1 The complaint that the union or the centre has encroached in the State Legislative field is to true. The Rajamannar Committee appointed by the Government of Tamil Nadu have pointed a number of instances ....

2.2 The suggestions made by the opposition conclave is fully acceptable to us. ....

2.3 Prior consultation with the State Government whenever Centre wants to undertake any legislation in the concurrent list (list 3-VII schedule in the constitution) it is but fair that the State Government be consulted.

2.4 We are of the view that Parliament should not encroach on the exclusive domain of the States either under the slogan of the national interest or public interest. We do not think that such a change is necessary.

2.5 We make the following proposals:—

More Legislative Powers for the States

The legislative powers of the State should be widened and the powers of Parliament to make laws in respect of the subjects enumerated in the state list (list II) in VIIth schedule of the Constitution be removed. Article 249 which empowers Parliament to legislate with respect to a matter in list II should be deleted.

Similarly, Article 252 which empowers Parliament to legislate for two or more States on being so requested by the States, should be deleted. Both these Articles impinge upon basic federal principle. Re-adjust entries in VII schedule.

Entry 52 in list I should be amended to restrict its scope and range in relation to the power of Parliament to legislate in relation to a matter falling within the exclusive jurisdiction of the States concerning "Industry" which is in the exclusive state list under its entry 24. Parliament may, however, retain the restricted power to legislate in respect of industries of All-India importance and in the overall interest of the national economy. At present Parliament and the Central Government have virtually unlimtied power to encroach on the jurisdiction of the States in regard to "Industry" on the ground of "public interest".

The States should have the right to take over the management of the closed industries and those threatened with closure so as to enable them to protect the workers' interests.

Entry 7 of the Union List gives overriding power to the Parliament to legislate in respect of Industry not only for the prosecution of war, but also for the purpose of defence. This provision should be made more restrictive to cover industries which are directly involved in the prosecution of war or engaged in defence production. "Communications" under Entry 13 in the State list is within the exclusive jurisdiction of the States, but here again centre comes in under Entry 23 in the Union list. Certain entries in the concurrent list (List III) empower the Centre to legislate and hence also exercise its executive powers in respect of some matters which have been assigned to the exclusive jurisdiction of the States under entry 27 (production, supply and distribution of goods) and entry 28 (markets and fares) Entry 33 in the concurrent list which makes this possible requires to be reformulated for reducing the scope of the centre's power and authority in regard to matters enumerated in entries 27 and 28 in the list II. Forests should be in the State List.

Entry of the concurrent list should be restricted to the property of the Union and the acquisition and reacquisition of property for the purpose of a State should be transferred to the States list. The mandatory provision for President's assent under proviso to Article 31(C) for any law passed by a legislature has naturally to go.

Entry 55 in list I (Regulation of Labour and Safety in Mines and Oil Fields) should be transferred to the concurrent list in order to enable the States to take initiative in ensuring measures for this purpose. Entry 43 in the concurrent list should cover only such trading Corporations as are of national importance from the point of view of the overall interest of national economy and in the context of national planning. Corporations having no such importance or significane in carrying on their business in a State should be left to the exclusive jurisdiction of the concerned State.

Residual Powers

Article 248 read with Entry 97 in the Union list vests the union, that is the Centre, with the residuary powers of legislation in all matters which are not included in lists II and III, including any tax. Such residuary powers for Parliament and the Centre should be confined to only matters that concern the security of the country and national unity and national integration. The rest of the residuary powers should be left with the States. Both the above mentioned Article and the entry should be amended accordingly.

President's Rule

Article 356 should be amended. The wide powers of dissolution and suspension of the State Assembly and the dismissal of the State Ministry by the President should be deleted. In the event of a situation arising when there is no possibility of any Ministry having a majority in the Assembly, elections should be held within four months to constitute a new Assembly, the existing Government functioning as a caretaker Government.

If, however, the Parliament decided that elections cannot be held in the State concerned due to such violence as disrupts normal life, it may, for a specified time, decree the imposition of President's rule in that State.

If the post of the Governor cannot be abolished, then that Governor's powers and functions have to be redefined. The Governor was intended to be purely ornamental functionary. His must be constitutional office not subject to the control of the Government of India. Unfortunately, Governors have acted more as agents of Central Government rather than as constitutional functionaries. Their actions have in many instances brought mis-understanding between their own role and about the Centre.

Status of Governor

3.2 The Governor of a State shall have no power of discretion to assent to any bill passed by a State legislature nor shall be have such power and discretion to reserve such a bill for the President's assent except under Article 288(2). All bills passed by a State Legislature shall automatically become law.

So long as the office of Governor continues, his constitutional and legal position in relation to the Council of Ministers of the State concerned shall be the same as that of the President in relation to the Union Council of Ministers except in respect of his responsibilities under the Vth and VIth schedules (re. the Scheduled Castes and Tribes). Article 163 should be amended and brought exactly in line with Article 74 so that the Governor has no functions to exercise in his discretion. The concept of Governor being an agent of the Centre must be given no quarter or encouragement. Powers so exercised by the Governor should be subject to the review of the State Assembly and Parliament.

The Governor should be appointed by the President on the basis of a panel approved in this behalf by the concerned state legislature and the Governor shall hold office at the pleasure of the State Legislature. There should be provision in the Constitution for the impeachment of the Governor by the concerned state legislature.

State's Say in the Appointment of High Court Judges

The state legislatures should also be given a say in the appointment of the judges of their respective High Courts, including the Chief Justice. The President shall appoint such judges for a State High Court from the panel of names which has been approved by the concerned state legislature.

3.3 Before making a report under Article 356(1) Governor should send notice to the Council of Ministers. In the notice, he should specify the reasons why he is making a report to the President regarding the situation in the State i.e., he should give an opportunity to the Council of Ministers to show that there is no room for holding that the Government in the State cannot be carried on in accordance with the provisions of the Constitution. Thereafter, the President also will have to give a similar opportunity to the Council of Ministers before he proceeds to pass any orders. This procedure need not be followed in the event of a no-confidence motion against the Council of Ministers has been passed in the Legislative Assembly. Generally, the right of the people of the State to have a Government or Council of Ministers enjoying the confidence of the State legislature should not be interferred with.

While dealing with the actions of the Governor under Article 164 we must keep in view the important fact that democratically elected representatives of the people are not deprived of their constitutional right to elect their own Governments. Unfortunately, the way in which Governors have exercised power under Article 164 have come in for a lot of criticism. Hence it is necessary to amend Article 164 to make it clear that the Governor shall appoint a person as Chief Minister who commands a majority among the members of the Legislative Assembly. Governor shall not dismiss the Council of Ministers who command a majority in the Assembly. It is further necessary to clarify that Governor acts in accordance with the advise of the Council of Ministers, save in situations where the Constitution requires him to exercise discretion. It is also necessary that this discretion should not be exercised arbitrarily but should be such as to advance the cause for which discretion has been vested in him.

3.4 Power under Article 200 has been abused to a considerable extent. Hence it is necessary to clarify that the bills when once passed by the Assembly should not be subjected to discretion of the executives and should be brought into force as desired by the Legislature.

3.5 We agree with the commands made by the Indian Law Institute. There has been delay in giving assent.

3.6 In most of the cases, the Governors have acted as agents of the Centre.

3.7 We agree with the suggestion contained in question.

In addition, the Governor must be appointed in consultation with the Legislature of the State.

3.8 We do not agree with the suggestion.

3.9 The suggestion based on article 67 of Basic Law of Federal Republic of Germany may be tried. But generally it will be better that elections are held.

3.10 In view of our other suggestions regarding Governors, this becomes unnecessary.

PART IV

ADMINISTRATIVE RELATIONS

4.1 It is stated that these articles 256 and 257 are designed to have co-ordination between the executive power of the State and the executive power of the Union. It will be possible that these powers may be abused to strike at a Government in the State.

4.2 We are of the view that Article 365 should be deleted. The power is an extraordinary power and is likely to be abused. It may not be subject to judicial review. Hence it should be deleted.

4.3 If articles 256 and 257 should stand in the present form, then the suggestion contained in the ARC report may be considered.

4.4 The extraordinary power under Article 356 has invariably been abused. In 1959 the Kerala Government was dismissed on a very specious plea of failure of law and order etc. But on such a specious plea the Congress Governments have not been removed though failure of maintaining law and order situations has been present in many instances of Congress Governments. In fact, there was no failure of maintaining the law and order in Kerala in 1959. Likewise, in 1976, the Government of Tamilnadu headed by Karunanidhi was dismissed on a novel charge that he indulged in corruption.

4.5 The 44th Amendment 1978 has rightly restored the previous position. However, in order to meet an extraordinary situation referred to in the said question (as in the case of Punjab) a safeguard in the arbitrary exercise of power may be to suggest that these matters be discussed in the Inter State Council (by resolutions) or by and Parliament.

4.6 No comments.

4.7 The criticism is justified. These organisations should not function in a manner so as to impinge on the State's autonomy. This must be subject to review in the Inter State Council, and also in the National Development Council.

4.8 The feature that has come up for criticism relates to the aspect of joint control over the All India Services by the Central and State Government, the loyalty of officers belonging to All India Services should be to the Centre though serving in the State. This has led to conflict and difficult situations. (instances of administrative and police officers in Andhra Pradesh and Jammu and Kashmir has come up for criticism). In this connection, the suggestion made by the State Government are worth considering. These are as follows:—

(i) all matters relating to the policy or rules affecting the All India Services should first be placed before the proposed Inter State Council and action initiated only after obtaining the approval of the Council by means of formal resolution,

(ii) Clause 3 of the All India Services Act should be amended to replace "consultation" with the State by "concurrence" of two thirds of the State Government,

(iii) the amendment to rule 6 of the I.A.S. (Cadre) rules made administrative grievances of officers to be referred to Tribunals in order to avoid delays that occur in courts. The selection of members for these Tribunals should be subject to confirmation of the Union Public Service Commission in order to ensure that the Tribunals are manned by persons of competence and integrity.

4.9 Police and maintenance of Law and Order is a State subject. But the States have been made to depend on the Centre for supply of paramilitary forces and Central Intelligence Services, etc. The Central Government expenditure is going on increasing on police forces. The Central Government had deployed both Border Security Force units and Central Reserve Police for dealing with peaceful agitation (for example Bihar). Recently in Andhra they were deployed for purely political reasons. The Central intervention through B.S.F. units and C.R.P. should stop. Expansion of the Central forces should also stop ; C.R.P. and other similar forces should not be deployed without the consent of the State concerned except to meet a grave threat to the life and property of scheduled castes, scheduled tribes and religious and linguistic minorities.

4.10 We are of the view that Radio and Doordarshan should be made autonomous and registered as a National Broadcast Trust. The board of trustees must be appointed in consultations with Inter State Council. The opposition and the State Chief Minister must have access to the broadcast media. Newspapers and periodicals have suffered a great deal as a result of newsprint allocation. Fixation of quota of newspapers should be completely abolished and import of newsprint should be put under Open General Licence. Small newspapers may be given assistance for procurement of newsprint. Broadcasting may be brought in the Concurrent List.

4.11. Zonal Councils have hardly functioned.

4.12 Inter State Councils under section 263 should be made to function effectively. In view of the fact that several parties have come to power, the Inter State Council becomes very important as a means of maintaining harmonious relationship and arriving at a consensus. Inter State Council must deal with matters like Co-Ordination of taxes and policies, minimum wage under the Minimum Wages Act, issues relating to regional imbalance, central investment in the State, etc. This must be linked with effective functioning of National Development Council, Planning Commission etc. The Council should have an independent secretariat which should be on a permanent basis.

PART V

FINANCIAL RELATIONS

Wider Financial & Economic Powers & Greater Resources for the States

In view of the expanding developmental and other welfare activities of the states on the one hand and a yawning lack in their resources, as well as their dependence on the centre on this account on the other, it has become imperative to augment the resources of the States such dependence on their part. These are, of course, inter connected tasks. The limitations of the financial and economic powers of the states are inherent in the scheme of the Constitution which would call for some radical modifications.

The taxing powers of the centre and the states are mutually exclusive and hence it is necessary to broaden the resource-raising base of the states by transferring certain items of taxes and revenues from the union list to the state list. But even this is not going to significantly increase the resources potential of the states. What is necessary is that the Centre must make more funds available to the states under the mandatory provisions of the Constitution itself, as well as under the laws made by Parliament. The scope of "discretion" by the executive should be drastically reduced in favour of the assured transfer of resources by the centre to the states.

Include Customs, Export Duties and Corporation Tax within the Divisible Pool

Certain items of central revenues, notably customs, export duties and company taxes, etc., are not now shared by the Centre with the States. A definite proportion of the net proceeds under each of these heads should be brought within the divisible pool for obligatory transfer to the states according to the guidelines and proportion laid down by the Finance Commission, which shall take into account all relevant factors. It may be left to Parliament to determine from year to year the proportion in each case that should be put in the divisible pool. But there should be constitutional guarantee that the share earmarked for the states would not be less than 50 per cent of the net receipts under each head. Similarly, there should be constitutional guarantee to ensure that adequate financial assistance is given for development of backward regions and areas, for development of the tribal areas as well as of other backward and weaker sections.

50 per cent of the Excise Duties for the Pool

At present the net proceeds of the excise of duties of the centre are shared with the states at the rate of 20 per cent under a permissive provision of the Constitution. This sharing should be made mandatory by including the union excise duties also in the divisible pool and the proportion should be raised at least to 50 per cent of the total net proceeds of such excise duties. Article 270 should cover the excise duties also and Article 272 should be deleted.

Enlarge Scope of "Grants-in-aid"

Article 275 which provides for "grants-in-aid" by Parliament should be amended to cover a wider range of purposes for making such assured assistance to a state with a view to among other things, reducing to the minimum the discretion of the union executive, whether exercised through the Planning Commission or otherwise, in the matter of financial assistance to the state. The Plan allocations should be linked with this and such other statutory provisions as may be made by Parliament for the purpose. Not only the fiscal needs of the states, but other needs as well should be taken into account in formulating the proposal for transfer of resources from the divisible pool.

Transfer to the State List

Estate duty in the union list under Entry 87, other than Agricultural Land Estate Duty in respect of property, should be transferred to the state list in respect of not only agricultural land but also buildings and all other immovable property. Duties in respect of succession to all immovable property in a state should be transferred to the state list. Terminal taxes under Entry 89 (terminal taxes on goods or passengers carried by railways, by sea or air; taxes on railway fare and freights) should also be transferred to the state list. Taxes under Entry 90 (taxes other than stamp duties on transaction in stock exchange; and future markets), 92 (taxes on the sale or purchase of newspapers and on advertisements published therein) should go to the state list.

Financial Institutions and Banks

The financial institutions should be made to invest more and increasing funds for the development of backward states and regions.

The states should be empowered to start their own banks in the public sector.

Royalties

Royalties for mineral resources, oil, gas, etc. should be raised and calculated on ad valorem basis to enable a fair share of the natural resources to the states.

Parliament to Recommend Appointment of Finance Commission

The Finance Commission should be appointed by the President on the basis of recommendation of a panel prepared in consultation with the states and approved by Parliament. The appointment should not be left to the discretion of the union executive alone. Parliament having no effective say whatsoever in the matter. The functions of the Finance Commission should be widened so as to cover ali transfer of resources from the centre to the states. The broad guidelines for its work should be empowered to go into all aspects of the states finances as well as that of the centre, instead of its function being more or less confined to a periodical assessment of the fiscal needs of the states and to making proposals for the devolution of taxes and "grants-in-aid" to the states.

Planning Commission should be a Statutory Body

The Planning Commission strictly speaking has no legal status. This lacuna should be removed and the Planning Commission should be made a statutory body with its functions and authority clearly defined. Apart from the Prime Minister who should continue ex-officio to be the Chairman of the Commission, as well as the Cabinet Ministers (not more than three) who may be made members of the Planning Commission should be experts and these members should be appointed by a resolution by Parliament.

Associate State Planning Bodies

Provision should be made by law for associating the representatives of the states in a meaningful manner with the formulation of the plan, and in overseeing its implementation.

There should be effective coordination and cooperation between the Planning Commission and the states planning bodies whose powers and authority, as well as scope of initiative and activity in the matter of planning in the state should be increased. In their own spheres these must be made instruments of planning.

Statutory Status for National Development Council

The National Development Council should be given a statutory status and its broad functions and relation to Parliament should be defined. The main task of the NDC should be related to the development activities, particularly those relating to planned development, as well as coordination

among the states for the purpose and their coordination with the centre. The relevant centre-state problems in this connection should also be brought within the ambit of the functions of the NDC.

Loans and Debts

The question of central loans to the states needs serious consideration. A good part of the outstanding loans by the centre to the states requires to be written off to lighten the huge indebtedness of the states. This debt burden is largely due to the denial of resources to the states by the centre. The states' authority to raise loans should be increased and there should be wider accommodation in the matter of the so called 'over-drafts' by the states. In this connection the relations of the banking, insurance and other public financial institutions under the control of the centre with the state should be reviewed with a view to improving the borrowing position of the states, subject, of course, to the necessary safeguards.

The above proposals will not only make the states strong for the discharge of their responsibilities but also at the same time strengthen the democratic content of the relations between the centre and states, thereby strengthening the unity of the country and its national integration. The implementation of the principal of "the unity in diversity" depends in no small measure on the just, democratic and dynamic relations between the centre and the states.

The Communist Party of India puts these proposals before the people as its initial contribution to the national dialogue on centre-state relations.

5.1 It is to be stated that mechanism for devolution of finances and its actual working over the past 34 years has not been found satisfactory. It has not fulfilled the aspirations of the people. The growing responsibilities of the State have not been kept in view properly in the scheme of devolution.

5.2 We agree with the suggestion contained in 5.2(d) and (e).

5.3 There has been total failure in the objectives enunciated in the directive principles of state policy. One of the important directive principles is contained in 39(d) and (e). Very little has been done in this behalf but on the other hand concentration of wealth and means of production has gone on in an unchecked manner. We have big monopolies who are growing from year to year and the growth of monopolies is a source of common detriment. The growth of monopolies and the capitalist system that prevails in the country is at the root of many ills and has an impact on the Centre-State relation also. The system has produced vertical and horizontal inequalities. In this situation, it is necessary that the Centre should follow a policy of reducing the inequalities interse between the states and otherwise. It may also curb the growth of monopolies. However, it is not proper to counter-pose the giving of more financial powers to the states, to the idea of concept of a strong centre. At present, it is necessary to give more financial assistance to the states and at the same time it is also necessary to reduce the imbalance between the states. The plan has to be formulated in order to overcome the inter-state differences and reduce them to tolerable levels. We have to add that as long as the capitalist system prevails and with the growth of monopoly these inter-state differences and the uneven level of development cannot be eliminated.

5.4 Suggestions (1) and (2) are acceptable, but taxation should be on those who can afford and not through commodity taxes and administrative prices, etc. Deficit financing is not at all in national interest. Taxation should be made to fall on owners of property and producers of goods (capitalists, landlords and traders).

5.5 We agree with the view submitted by the State Government.

5.6 The suggestion based on Yugoslav constitution may be tried.

5.7 We have indicated above the taxes and sources to be transferred.

5.8 Suggestion as above.

5.9 The suggestion that the Finance Commission should deal with all plan and non-plan expenditures may be tried. However, the Planning Commission's functions as stated in the question seems to be limited.

5.10 The objective of narrowing down the disparity in public expenditure has not been achieved.

5.11 We have suggested that the states' role in planning should be greater and increased and also transfer of resources on a proper basis as above. The said suggestion would be a corrective.

5.12, 5.13 and 5.14 We have already made suggestions at the commencement and we are also in agreement with the States' view on financial transfers.

5.15 and 5.16 The question of growing indebtedness of the state has also been dealt with in the State Governments' memorandum. At the commencement we have also dealt with the question of loans, etc. We agree with the views expressed by the State Government.

5.17 The ARC study teams' observations are true. The suggestions have been made by our State Government to remedy the situation. We agree with these views.

5.18 It is true that the States' capacity to borrow has been restricted. The State Government has made the suggestion of Debt and Credit Councils on an All India basis. They may be able to look into these problems. Anyway, rescheduling of loans is an absolute necessity.

5.19 As far as possible, Centre should not charge to the States a higher rate of interest than what it pays. At any rate, the difference should be nominal and it should not be a source of revenue.

5.20 The State Government has already made a suggestion regarding credit and debt council. We assume the same views.

5.21 One of the reasons for the overdraft is the financial position of the states. At any rate, in the case of Karnataka it is not due to want of any tax effort.

5.22 It is not correct to say that the State of Karnataka has not been exploiting their own source of revenue.

5.23 Public Sector has no doubt attained high levels of interest but by and large the public sector has been used in aid of the private sector. The rapid growth of the private sector would not have been possible if the public sector particularly financial institutions had not gone out of their way to help them (even Swarajpal—disclosed this). The performance of public sector has to be assessed in detail with reference to each of the institutions. They are varied character. Some of the earning profits and some are not. There is an element of propoganda by the private sector in the criticism of the public sector. This does not mean that there is no room for improvement of working of the public sector undertaking. Bureaucratisation of the management is one of the serious obstacles. Considerable improvements both in terms of policies and administration if effected would certainly put them in a better footing. We agree with the view that there is substantial leakage in the central tax revenue.

5.24 We agree with the suggestion.

5.25 We agree with the suggestion that these taxes should be transferred to the state list.

5.26 Subject to what we have said above the suggestion to increase the grant is in order.

5.27 We are of the view that the four Union Territories must be conferred with statehood. Subject to this, the suggestion in 5.27 is correct.

5.28 The central assistance to calamities must be made adequate to cover the costs.

5.29 We agree with the suggestion made by the State Government in this regard.

5.30 No comments.

5.31 We agree with the criticism. That is why the suggestion of National Expenditure Commission.

5.32 to 5.35 No comments.

5.36 No doubt this reports are examined by the various committees of the legislature. This itself an important check; but we cannot say that it is a sufficient check since there is a big time gap and the suggestions made are not fully followed.

5.37 We agree with the suggestion.

5.38 The scope of the Expenditure Commission is different from the functions of comptroller and Auditor General.

5.39 We agree with the suggestion.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 We agree with the suggestion made by the Government so as to avoid repurcussions that are referred to in the said question. Effective functioning of National Development Council, National Credit Council, National Debt Commission is a must. The concept of decentralised planning has got to be resorted to in a vast country like ours; there is no point in the Planning Commission having a detailed scrutiny of state plans. The states must be made more and more responsible for the state plans. The Planning Commission should consist of experts and three or four ministers who have to be appointed by resolution of the Parliament. The states should be assisted in the formulation of plans.

6.2 We agree with the proposal.

6.3 The Planning Commission must take the State Government into confidence.

6.4 We prefer 6.4(i).

6.5 We agree with the suggestion.

6.6 These matters have been clarified in the memorandum given by the State Government and we agree with them.

6.7 and 6.8 We agree with the views of the State Government.

6.9 The criteria adopted by the Finance Commission for allocating central plan assistance have proved to be inequitable. As far as our state is concerned, the Government have brought out these aspects in the memorandum both to the finances commission and other bodies. We agree with the suggestion.

6.10 We agree with the view expressed by the Chief Minister of Karnataka regarding the centrally sponsored schemes. He has referred to this recently in his budget speech and also in his press interview.

6.11 ......

6.12 We agree with the view expressed in 6.12.

6.13 The formulation of the state plans have been done by the state government from time to time. Discussion in the assembly and at various levels is not adequate. People's participation in the formulation has got to be improved.

PART VII

MISCELLANEOUS

Industries

7.1 We agree with the view that the expansion of the Industries in the schedule has encroached upon the state, sphere. Article 24 in the state list also deals with the industries. Hence it is not proper to virtually take over the right of the states to legislate under Article 24 in the state list.

Parliament may however retain the restricted power to legislate in respect of industries of All-India importance in the overall interest of national economy.

7.2 As indicated above industries of All India importance should alone find a place in the first schedule.

7.3 The intervention of the centre in the field of industries on the ground of public interest may not be necessary.

7.4 . . . . . .

7.5 The state government memorandum has made some comments on the head "Market borrowings". We agree with their suggestions. Allocation of market borrowings should be on a fifty fifty basis between the centre and the states. The criteria for inter state allocation has been properly made by the state governments.

7.6 The criticism is justified. The case for Vijayanagar Steel Plant is an instance in point. More than 10 years ago the foundation stone was laid and indications were made by the Central Government that the steel plant would be taken up but nothing has happened in this behalf.

7.7 The central investment on public sector has to be decided at the national level in order to obviate this criticism ; matter should be discussed at the various All India bodies and inter-state councils and a longterm plan should be drawn up taking the potentialities of different states.

Trade and Commerce

8.1 We agree with the suggestion in 8.1.

Agriculture

9.1. So far as agricultural research is concerned the states' efforts should be supplemented by the centre in view of the paucity of resources in the state. Otherwise, we agree with the comment made by the administration i.e., State Government.

9.2 We agree with the view of the National Commission on agriculture.

9.3 The suggestion on National Commission of Agriculture is quite in order but it is not being satisfactorily implemented.

9.4 Price fixation for many agricultural commodities has led to conflict between the state and the centre sometimes. The centre must take the state into confidence and have adequate discussion.

9.5 We agree with the suggestion made by the State Government.

Food and Civil Supplies

10.1 and 10.2 We have no comments.

Education

11.1 and 11.2 We have no comments.

11.3 There is need for discussion and consultation arriving at a consensus between the state and the centre.

11.4 A comprehensive bill on education was passed recently by the State Government. So far the central clearance has not been given. It is necessary that early clearance may be given. However, we have one observation regarding denominational educational institutions. While we agree with the need for protection of such institutions, we feel that the employees employed by such educational institutions are deprived of the most elementary protections which are available for other employees in other educational institutions. We fail to see why the minimum protection given to the employees in non-minority educational institutions should not be extended to employees in the minority educational institutions. It is discriminatory to deny the employees that protection. Hence there must be an amendment to the constitution so as to secure some minimum protection to the employees employed in such institutions.

Inter-Government Co-Ordination

12.1 Such a machinery would be useful.

COMMUNIST PARTY OF INDIA

State Unit—Kerala

REPLIES

For the people of Kerala, a re-ordering of Centre-state relations is a problem of immediate, even day-to-day concern.

The question of more powers to the States has assumed an acute and urgent character, in Kerala which is be set with a host of problems generated over the last three decades of the working of our constitution.

The State Council of the C.P.I. therefore welcomes the constitution of this Commission and hopes that the Commission will be able to reach necessary conclusions and present their recommendations to the Government and the people in the shortest possible period of time. The views of the C.P.I. has already been explained to the commission by our National Council in their reply to the Commission's questionnaire in April last. The following is only a brief note of some of the major issues mainly concerning this State which we would like the commission to deal with.

We shall be presenting a more detailed memorandum of important points in due course at the Commissions convenience.

Greater Powers to the State

The experience of the last three decades clearly shows that there has been a continuous erosion of the powers of the State political, economic and administrative.

We do not subscribe to the view-point which stands for a centre which deals only with three or four subjects like defence, foreign affairs, Communications and currency. The unity and integrity of India which presently face threats from several quarters, has to be strengthened. Only with a strong sense of oneness and on urgent for unity,

free involvement and a sense of participation in nation building at the grass roots level, local initiative on the part of the people, can we successfully face these threats. It is for this that State autonomy to the maximum possible extent is sought for. Such a dispensation where the people at the State and regional level are really autonomic will strengthen, not weaken, the nation and the popular base of the centre.

It is often claimed that the States in India are co-equal with the Centre in legislative and executive authority in the respective spheres apportioned to them by the constitution and are in no way dependent on the centre. But no one can deny that there has been an all round curtailment of the State's powers, resources and capabilities, economic, financial and administrative by misuse of the various provisions of the constitution and by other means. Even the limited powers to which the States could lay claim under the constitution have been curtailed or negated, reducing the States to the position of helpless clients supplicating before an all powerful central authority.

India is called a federation. But our constitution in actual fact has features which are more of a unitary nature than federal. Political evolution after its adoption has worked in a manner which has weakened the States further. It is incumbent therefore that the role and powers of the States be enlarged, to suit the needs of the multi-lingual multi-religious, multi-cultural national if sub-continental proportions that is India.

The role of Governors

The role of Governors today is chiefly that of a representative or agent of the centre, carrying out the centre's bidding. Their role as head of the State has become marginal. To effect a change in the situation, in our view, the appointment of Governors should be made from out of a panel submitted by the State Government concerned. His position should be in no way be different from that of the President. Their duties and functions, tenure of office and guide-lines for work should be reviewed and suitably re-enunciated. The relative articles of the constitution may be amended along these lines.

Art. 248 gives Parliament powers to legislate in subjects which would come within list II or III (State list and concurrent list of the seventh scheduled) in the name of national interest should be deleted.

Art. 200, 201, authorizing the Governor to withhold assent to any bill passed by the State Legislature, or reserve it for consideration of the President may be deleted. Kerala's experience in the matter is unhappy, if not bitter.

Article 356, which authorise the President to dissolve the legislature of a State on the ground of a breakdown of administration has been grossly misused in the past against the spirit and purpose of the framers of the constitution. The article may be reviewed and amended suitably to prevent any misuse. The maximum period of operation of a proclamation under 356(4) may be limited to six months.

Article 365 giving the centre powers to declare that the administration has suffered a breakdown in a State for the reason of failure to carry out directions of the centre may be deleted.

The States shall have full and effective control over and regulate the work and conduct of members of the All India Services, during their tenure of service under the State Governments. Necessary provisions in this regard may be made by legislation.

The Judiciary

A Judges' Council consisting of the all the sitting members of the Supreme Court may be formed to make recommendations regarding appointment of judges of the Supreme Court. They shall also make recommendations regarding the appointment and transfers of judges of the High Courts in consultation with the Chief Minister and the Chief Justice of the States concerned.

Inter-State Council

The formation of an Inter-State Council as provided for in Art. 263 of the constitution shall be made mandatory. Such council consisting of the Prime Minister and Chief Ministers of the States shall deal with disputes between States and issues of Common interest to the States and the Centre.

National Development Council

The functioning of the existing non-statutory national development council, so far has been only of marginal value. The Council may be given constitutional basis. It shall be constitute in such manner that proper representation is given to States. It shall have as members, Chief Ministers of the States and the Prime Minister. The Council shall be the highest authority on issues of economic and social policy. It shall be charged with the task enunciation and supervision of economic development programmes. The Planning Commission should function as the instrument to work out the policies enunciated by the council and keep liaison with the states.

Economic and Financial

The skewed-up character of the relation between the centre and the states is most evident in the realm of economic policy and in financial matters.

Under the label of a mixed economy and a "Society oriented to Socialism" what is developing in India is a society based on private enterprise and the profit motives.

Unevenness is a basic law of development of Capitalism.

It is not only the concentration of wealth at one end and the spread of abject poverty on the other that characterises this type of development. Under this pattern of development, a few metropolitan centres grow in economic activity means of production wealth and power all get concentrated, while vast outlying areas of the country are reduced to the position of backward agricultural appendages, suppliers of raw materials and cheap labour

power and a market for the products of native and foreign capitalist. Most of the states fall into the latter Category. It is just impossible for a capitalistic Social structure to remedy regional and sectoral imbalances.

The programmes of industrialization which we call "five year plans" cannot halt or reverse this process. Under the plan, priorities are decided from Delhi. A uniform pattern of development in various areas is workèd out and imposed on every state irrespective of the local needs, resources or aspirations. It is the bureaucracy technocracy, sitting in Delhi who decide what development project should be taken up in which part of our farflung country. This has proved wasteful and counter-productive and have blocked local initiative. As against this, local grassroot level planning should be adopted and encouraged, to be coordinated and integrated into a nation plan at the Centre.

In the absence of such an approach states like Kerala have suffered.

Kerala produces valuable commercial crops giving them priority over food crops, much of which is exported and earns considerable foreign exchange for the nation. But the centre does not yet own its binding obligation to supply necessary foodgrains to Kerala in which it is short, by over 50%.

Non-resident Keralites make remittances from abroad, which adds to upto a huge sum. Most of the savings generated from these, are mobilized by central agencies and centrally owned financial institutions on a big scale. The report of the Thavaraj Committee appointed by the State Government which went into this question of savings and deposits has reported the facts. But not even a part of this money comes back to Kerala in the shape of capital, for whichever sector, public or private.

The State Government, however is prevented under existing law and central policy from marshalling any considerable part of these remittances.

Kerala Coconut, Oil, Rubber, copra, cocoa, minerals, etc. go to the metropolitan areas where they are processed into value-added finished goods, and bring profits to big business.

Inspite of the State possessing many varieties of raw materials over some of which it holds a monopoly, and labour with skills of a high order, a good infrastructure water, electric power, etc. deployment of the public sector capital resources by the centre not only remains small but declines year by year.

The State has almost reached 100% literacy, the goal set forth by the directive principles of the constitution. Life expectancy has gone up-Birth rate has fallen. The socio-economic infrastructure is well development. But it is as if Kerala has to be peralized for implementing the directive principles of the constitution. Unemployment mounts and is of the highest rate in India. For a population of 4% of the total the percentage of unemployed in Kerala is 10% of the total. Half of this figure consists of educated unemployed youth. The traditional industries Kerala which employ millions of our labour force have been languishing for three decades. Roads, hospitals, schools built up at high cost, cannot be maintained and have to fall into disuse. At the same time money is misspent in an infructuous manner to conform to the "Central Pattern".

What the centre allots to the state are loans and Ways and Means advances and only a minor part of the transfer to the States is by way of grant.

As in known 70% of the transfers from centre to states is what is classified as "discretionary" grants a which more often than not are made on arbitrary considerations.

The Centre has recently excluded several articles from liability to pay State Sales Tax and subjected them to levy of additional excise duty which goes wholly to central Coffers. This has resulted in substantial loss of income to the State exchequer, reckoned to be of the order of Rs. 183 crores.

The State's own revenue resources have shrunk year by year. Capital resource transfer in the public sector especially for industry has always been nominal, when it comes to Kerala.

At the same time the state is denied relief due on the ground of economic backwardness. The formula for determining backwardness adopted is so unrealistic and mechanical that Kerala has been left out.

Whenever the centre grants increases in D.A. to their staff the State Governments are also forced to follow suit. States like Kerala whose finance are already shattered are driven to a situation in which whatever meagre resources are available have to be diverted to meet these inescapable commitments. There is no scope for further taxation. Since D.A. etc. are non-plan items of expenditure the centre refuses assistance. The result is, each year the financial position of the State gets worse. The States economy is in doledrums, with declining productivity, depleted natural resources, agricultural pests, and on top of it a severe unprecedented drought. The import policy of the centre has resulted in prices of cash crops like copra, crashing, affecting not only the states revenue but the whole economy as well. It is now irretrievably in the red. While the centres' allotments go on shrinking, the overdrafts swell day by day. At the same time the plan size gets smaller and smaller and development has almost ground to a halt.

Borrowing by the State Government is not possible on any large scale because it in the centres' policy that only 10% of the total public borrowings could go to the states.

Having undergone as we do all this experience, in Kerala we submit the following suggestions :—

1 The present division of revenue between the centre and states be drastically modified so that the states are apportioned 70% of the total revenue (including corporation tax,

surcharge, additional duties, special duties etc. now assigned to the Centre).

2. The Finance Commissions function should be only to apportion the States' total shares between the different stages on the basis of these specific problems and actual needs.

3. The present practice of reckoning more than 70% of the total transfer to states as discretionary should be discontinued and criteria and procedure laid down for transfers as grants on a statutory basis on the recommendation by a Finance Commission.

4. Revenue arised by the Centre by increasing the administered prices of such goods as Iron and Steel, almunium coal, etc. be shared between the centre and states.

5. A National Loans Council be constituted for raising and utilizing public loans and apportioning them between the centre and states. Such council shall have representatives of the state at ministerial level.

6. Instead of treating the major part of plan assistance as loans, the states should be assisted to the extent of 70% of plan allotments as grants.

7. The current liabilities of states like Kerala be written off.

8. The existing restrictions on inter state trade on such articles as food grains, pulses etc. be reviewed and done away with the centre should take responsibility to supply foodgrains, Kerosine etc. to states.

9. Incursions of the centre into areas like industry which under schedule 7 is under the state list through legislation such as the industrial Development and Regulation Act and the rules and regulations of various centrally sponsored institutions, Boards and Corporations be reviewed and necessary changes effected, with a view securing the States' rights and prerogatives.

10. Representatives of state governments be nominated to central and state Boards of the Reserve Bank. Activities now undertaken centrally by such bodies like Employees Provident Fund, Employees State Insurance etc. be handed over to the states.

It is hoped the commission will give serious attention to the peculiar problems of outlying states like Kerala in making their recommendations.

COMMUNIST PARTY OF INDIA

STATE UNIT — WEST BENGAL

MEMORANDUM

Introduction

Our party is of the view that although our State structure is federal in appearance, practically all power and authority are concentrated in the Central Government. The constituent states of the Indian Union enjoy only limited autonomy and power. The distribution of power between the Centre and the States follows the pattern which was outlined by the British rulers in the Government of India Act, 1935.

Our party is of the view that the constitutional structure and practice we have today not only prevent the full integration of the various nationalities and their languages and cultures which feature immense and intricate diversities, but also foster disparities, disharmonies and tensions as are evident today.

In any federal structure worth the name, the federal centre derives its strength and authority in a very large measure from the willing co-operation of the constituent states. To ensure this, the powers of the states shall have to be widened so as to enable the fruition of the aspirations of the people of the states, strengthen the democratic content of the relations between the centre and the states and thereby strengthen integrity and unity of the country.

Legislative Relations

The way the constitution has distributed legislative powers between the centre and the states makes a mockery of the federal concept. The centre has been given enormous powers to encroach upon the jurisdiction of the states.

The blanket provisions of Articles 248 and 249 of the constitution and numerous entries of the Union List in Seventh Schedule such as 7, 23, 40, 48, 52, 53, 54, 61, 97 etc. empower the Union Government to abridge the legislative powers of the states even in the fields reserved for them.

For example, entries 7 and 52 of the Union list empower the Union Government to expand its jurisdiction at will over industry which is a state subject. The Union Government has already invoked these powers to extend its control over small industries like razor blades, match sticks, canned fruits, etc.

Likewise entries 23, 54 and 56 of the Union List curtail the jurisdiction of the states over subjects like highways, mines and minerals development and inter-state rivers and river valleys.

Such powers of unilateral transfer of legislative jurisdiction over matters reserved for the states given to the Union legislature is a gross encroachment on rights which states should normally enjoy in a federal set up.

Then again Article 249 which empowers the Union legislature to legislate with respect to any matter in State list and Article 252 which empowers parliament to legislate for two or more states on request imping upon basic federal principle.

All these powers given in the above mentioned articles and entries to encroach upon the legislative jurisdiction of the states should be removed and the legislative powers of the states should be widened.

The concurrent list makes provisions for further erosion of states rights. For example, entry 27 on the State list makes production, supply and distribution of goods a state subject. But entry 33 on the concurrent list abridges the right of the state legislatures to legislate on these matters. The scope of Centre's powers in regard to these matters should be reduced.

The concurrent list also introduces a lot of anomaly in the legislative powers of the Centre and the States, for it is made largely irrelevant by Article 254 which says that in case of a conflict between the Union and State legislations on any matter of that list, the central law will prevail.

Article 248 read with entry 97 on the Union List vests the Centre with powers to legislate on all matters, including taxation, not enumerated in the State or concurrent lists. This is a sweeping power which should be restricted only to matters concerning the security and integrity of the country. The rest of the residuary powers should vest in the states.

Role of Governor

Many governors in post-independent India have tended to act as Centre's agents. They have on many occasions dismissed in exercise of their prerogatives, duly elected Council of Ministers still enjoying the confidence of the legislature and have otherwise acted against the desire of the state Governments and have thus thwarted the will and intention of the democratically elected state legislatures.

If the abolition of the Governors' post is not considered feasible at the moment, he should be appointed by the President strictly on the basis of a panel approved by the concerned state legislature and should hold office at the pleasure of the State legislature. There should be a provision in the constitution for the impeachment of the Governor by the concerned state legislature.

Governors should have no right to withhold the assent to bills passed by State legislatures.

Articles 200 and 201 should be deleted and all bills passed by the State legislature on matters enumerated in the State list should automatically become law.

The Governor's position in relation to the Council of Ministers of the State should be the same as that of the President in relation to the Union Council of Ministers except in respect of his responsibilities under the V and VI schedules, on provisions as to the administration and control of scheduled and tribal areas.

Administrative Relations

Not only in the field of legislative relations, but also in matters of administrative relations, the constitution gives enough power to the centre to reduce the states to the status of administrative agents of the Union Government.

Articles 256 and 257, for example, empowers the Union Government to direct any state government to do things which it may find contradictory to its electoral mandate. In the past these two clauses have been invoked by the Union Government to pressurise state governments to suppress central government employees strike and to ratify the union legislation on detention without trial.

(*) These clauses should be drastically amended to allow the states the right to be consulted before any Central directive is served on them.

Then there is Article 356 which gives wide powers to the President to suspend or dissolve any elected state legislature and to dismiss an elected state Ministry. The Article has been grossly misused by the Union Government to get rid of State Governments which are not to its liking.

(*) Article 258A should be so amended that no power of any State be entrusted to the Centre without prior approval of the concerned State Government.

This Article and the consequential Article 357 should be drastically amended to prevent their misuse. The wide powers given to the President under Article 356 should be deleted.

In the event of a situation arising when there is no possibility of any ministry having a majority in the state legislature, a fresh election should be held within four months to constitute a new legislature and the existing cabinet should function as a caretaker government. In case the Parliament feels that no election can take place within the specified time due to disruption of normal life, it may, for a specified period, decrease the imposition President's rule in that State.

The other major administrative irritants to a healthy centre-state relation are Articles 154(II)(B) which authorises Parliament to confer by law functions on any authority subordinate to a state, Article 355 which empowers the Union Government to deploy central police and armed forces in a state at will and Article 360 which empowers President to interfere in a State's administration on the plea of a threat to financial stability.

All these powers of the Union Government should go. No State authority should be placed under the Executive jurisdiction of the Centre and cadres belonging to all India service working under a state government must be completely subject to the discipline of the concerned state government. Central forces should not be deployed in any state without prior consent of the state government except to meet grave threat to the life and property of scheduled castes and tribes and of religious and linguistic minorities. Article 360 should be deleted.

To improve Centre-State relations, Article 263 should be restructured to make establishment of inter-state councils mandatory and to extend its power. This Council should be a statutory body.

The Council will deal with disputes between the states and also between centre and states. It should include representatives of the state legislatures and should be constituted on the recommendation of the Parliament which should also determine its composition, powers and duties.

It is also important that the special constitutional status given to Jammu and Kashmir under Article 370 should continue.

The Scheduled and Trial Areas

Article 244(A) should be amended with a view to creating autonomous regions within a given state together with the democratic institutions for self-government. Parliament should decide the kind of democratic institutions necessary, as well as their composition, powers, functions, etc.

Financial Relations

Our party is of the view that the present economic imbalance, deprivation and backwardness of many states are the consequence of the over-centralisation of financial powers and resources.

The highly centralised economic and financial administration as it exists today has resulted in a system where priorities are imposed from above and bear diminishing relevance to the aspirations of the people. Given the overwhelming concentration of resources in its hand, the Centre has often been discriminatory in allocation of resources as between region and region and state and state.

Wider Financial & Economic powers & Greater Resources for the States

In view of the expanding developmental and other welfare activities of the States on the one hand and a yawning lack in their resources, as well as their dependence on the Centre on this account on the other, it has become imperative to augment the resources of the states and reduce such dependence on their part. These are, of course, interconnected tasks. The limitations of the financial and economic powers of the states are inherent in the scheme of the Constitution which would call for some radical modifications.

The taxing powers of the Centre and the states are mutually exclusive and hence it is necessary to broaden the resource-raising base of the states by transferring certain items of taxes and revenues from the Union List to the State List.

But even this is not going to significantly increase the resources potential of the states. What is necessary is that the Centre must make more funds available to the states under the mandatory provisions of the Constitution itself, as well as under the laws made by Parliament. The scope of "discretion" by the executive should be drastically reduced in favour of the assured transfer of resources by the Centre to the states.

Include Customs, Export Duties and Corporation Tax within the Divisible Pool

Certain items of Central Revenues, notably customs, export duties and company taxes, etc. are not shared by the Centre with the states. A definite proportion of the net proceeds under each of these heads should be brought within the divisible pool for obligatory transfer to the states according to the guidelines and proportion laid down by the Finance Commission, which shall take into account all relevant factors. It may be left to Parliament to determine from year to year the proportions in each case that should be put in the divisible pool. But there should be constitutional guarantee that the share earmarked for the states would not be less than 50 per cent of the net receipts under each head.

This is important because the share of total resource transfer from the centre to the states has, if anything, decreased over years, more markedly since 1969. During the period of the Fifth Finance Commission (1969-74) this share constituted 36.4 percent of the total. The same came down to the level of 32.6 percent during the period of Seventh Commission (1979-84). There should be constitutional guarantee to ensure that adequate financial assistance is given for development of backward regions and areas, for development of the tribal areas as well as of other backward and weaker sections.

50 percent of the Excise Duties for the Pool

At present the net proceeds of the excise duties of the Centre are shared with the states at the rate of 20 per cent under a permissive provision of the Constitution. This sharing should be made mandatory by including the Union excise duties also in the divisible pool and the proportion should be raised atleast to 50 per cent of the total net proceeds of such excise duties. Article 270 should cover the excise duties also and Article 272 should be deleted.

Enlarge Scope of "Grants-in-Aid"

Article 275 which provides for "grants-in-aid" by Parliament should be amended to cover a wider range of purposes for making such assured assistance to a state with a view to, among other things, reducing to the minimum the discretion of Union executive, whether exercised through the Planning Commission or otherwise, in the matter of financial assistance to the state. The plan allocations should be linked with this and such other statutory provisions as may be made by Parliament for the purpose.

Not only the fiscal needs of the states, but other needs as well should be taken into account in formulating the proposal for transfer of resources from divisible pool.

The criterion for *inter se* distribution among states should take account of the incidences of poverty, illiteracy, industrial backwardness, state of employment along with such gross indicator as level of per capita income.

Transfer to the State List

Estate duty in the Union List under Entry 87, other than Agricultural Land Estate Duty in respect of property, should be transferred to the State List in respect of not only agricultural land, but also buildings and all other immovable property. Duties in respect of succession to all immovable property in a state should be transferred to the State List. Terminal taxes under Entry 89 (Terminal taxes on goods or passengers carried by railways, by sea or air; taxes on railway fares and

freights should also be transferred to the State List. Taxes under Entry 90 (taxes other than stamp duties on transaction in stock exchange; and future markets), 92 (taxes on the sale or purchase of newspapers and on advertisements published therein) should go to the State List.

Financial Institutions and Banks

The financial institutions should be made to invest more and increasing funds for the development of backward states and regions.

The states should be empowered to start their own banks in the public sector.

Royalties

Royalties for mineral resources, oil, gas, etc. should be raised and calculated on ad-valorem basis to enable a fair share of the natural resources to the states.

Parliament to Recommend Appointment of Finance Commission

The Finance Commission should be appointed by the President on the basis of recommendation of a panel prepared in consultation with the states and approved by Parliament. The appointment should not be left to the discretion of the Union Executive alone. Parliament having no effective say whatsoever in the matter.

The functions of the Finance Commission should be widened so as to cover all transfer of resources from the Centre to the States. The broad guidelines for its work should be laid down by Parliament. The Finance Commission should be empowered to go into all aspects of the state finances, as well as that of the Centre, instead of its functioning being more or less confined to a periodical assessment of the fiscal needs of the states and to making proposals for the devolution of taxes and "grants-in-aid" to the states.

Economic and Social Planning

The existing planning relationship between the Centre and the States is superficial and arbitrary. The States' partnership in the planning process should be strengthened.

Among the deficiencies in the present planning process, the ambiguous status of the National Development Council and the Planning Commission are to be specially noted.

The National Development Council do not have any constitutional sanction behind it. The Union Government convenes its meetings, as and when it chooses, for consultation with the states. The discussions are seldom meaningful. It is, therefore, our proposal that the National Development Council be given a statutory status. The main task of the N.D.C. should be related to activities in the field of planned development as well as co-ordination with the centre. The related Centre-State problems should also be brought within the purview of the N.D.C.

Likewise, the Planning Commission should also be made a statutory body with its functions and authority clearly defined. Apart from the Prime Minister, who should continue ex-officio to be the Chairman, and other Cabinet Ministers. who may be made members of the Commission, all other members should be experts appointed by a resolution of the Parliament.

Provision should be made by law to associate the representatives of the states in a meaningful manner with the formulation of the plan and in overseeing its implementation.

There should be effective co-ordination and co-operation between the Planning Commission and the States Planning Bodies whose power and authority should be increased. The State Planning Bodies should be made real instruments of planning in the States.

The present authority of the Planning Commission and the Union Finance Ministry to offer discretionary grants to the states must be drastically curtailed. Such discretionary grants to the states must be drastically curtailed. Such discretionary transfers now account for more than 70 per cent of the total transfers to the states and constitute a major source of arbitrary behaviour on the Part of the Centre. All financial transfers should belong to the jurisdiction of the Finance Commission.

Under the existing arrangements 70 per cent of the Central Plan assistance to the states comes in the form of loans. All such assistance should be treated as grants.

COMMUNIST PARTY OF INDIA (MARXIST)

Central Committee

REPLIES

PART I

INTRODUCTION

In this part we would like to make some general observations on the circumstances in which the constitution was framed and came into operation on January 26, 1950 and how it has been working for the last 34 years. We are approaching this question not from the legal-juridical but from the historical-political angle. For, although couched in legal-juridical terms, the Constitution of India, as the constitution of any country in the world, expresses certain socio-political relations, Examination of the constitution and its working should therefore begin with the examination of the socio-political forces at work.

The British rulers who were in control for a century and a half set up a highly centralised administration in the country. Every aspect of administration was thus centralised in Delhi which in turn was controlled from London. Never before in the long history of this country did it have such a centralised administration.

Facing as the freedom movement did such a highly centralised administration, it had to forge the unity of the entire people cutting across caste, communal, linguistic differences and develop the unity of India based on democracy, equality and brotherhood. Since this posed a serious challenge to their alien rule, the British started devising ways and means to disrupt the growing popular unity.

Thus began the operation of the notorious "divide and rule" policy, setting the non-Hindu religious minorities, the depressed and backward castes, the mercantile and other monied interests in the cities, landlords, feudal elements including landlords and princes of native states etc., against the Congress which voiced the demand for political freedom. The "constitutional reforms", introduced in successive stages, insisted on "safeguards" for all these vested interests including European planters, merchants and industrialists.

While using all these forces in its game of disrupting the unity of the freedom movement, the British rulers had the "Hindu Muslim Problem" as the trump card in their hands. The leaders of the freedom movement of course saw the danger which this posed to the Indian unity. However, representing as they did the narrow upper-strata of society, they were unable to rally the mass of the working people on a programme of full democracy and genuine secularism. The culmination of the freedom struggle therefore was a compromise with the foreign rulers and their Indian allies.

The unity of India which the leaders of the freedom movement and the people at large wanted to preserve, thus came to be disrupted. The united India for whose freedom thousands had laid down their lives and lakhs underwent all manner of suffering was cut in two. This operation led to unprecedented carnage, straining the relations between the Hindu and the Muslim, the Muslim and the Sikh.

Framed as it was against this historical background the new constitution preserved most of the special powers which the British made constitution of 1935 had conferred on the Governors in states; the office of the Governor and the powers conferred on him came handy for the new rulers and they used them against the opposition to begin with and subsequently against the "dissidents" within the ruling party.

The biggest casualty of this process was provincial or state autonomy within the framework of a federal centre. The idea of state autonomy in a federal setup could alone maintain and strengthen the unity achieved in the course of freedom struggle because, (a) as the freedom movement developed, the various linguistic communities or nationalities in search of their distinct identity in the national setup started demanding the formation of separate states for themselves, (b) the Muslim leadership demanded that, as part compensation for the Hindu majority at the centre and in a majority of provinces, the Muslim majority provinces should have autonomy; and (c) the non-Muslim section of national leadership including the Congress considered it better to concede the demand made by their Muslim counterparts at the price to keep them in a United Front against the British rulers.

The idea of a federal centre with wide autonomy for the provinces came to be woven into the framework of the future constitution as spelt out in the Congress-League Pact of 1916, Motilal Nehru report of 1928 and so on, right down to the discussions of the 1940s. A major change however took place in 1947, when the country was divided into the Hindu majority Indian Union and the Muslim majority Pakistan. The bourgeoisie which stood at the head of the freedom movement and which became the ruling class was interested in an extensive home market which requires a centralised rather than federal state. It therefore went back on all its earlier commitments to the federal setup, state autonomy, reorganisation of states on linguistic basis.

While the basic nature of the constitution framed in 1950 was declared to be federal in principle, its content was excessive centralisation. Furthermore, in its actual making it became still more centralised. The fact that the same political party was in the saddle at the centre and in all the states for nearly three decades facilitated this process. The states were made to surrender "voluntarily" the rights that they had in the original provisions of the constitution. Many of the amendments made to the constitution during the last 37 years deprived the states of whatever elements of autonomy they originally had.

That is why, the moment other parties started heading the administration at the state level, the question of centre-state relations became the subject of hot debate. Once the non-Congress state governments started agitating for greater powers and resources, the Congress-led states too started joining the demand. The memoranda submitted by the state governments to the successive Finance Commissions will show that there is no difference between the Congress-led and other state governments in protesting against the inroads made into the state resources—a process that has been uninterruptedly going on during this entire period.

The entire question of the relations between the union and the states therefore requires thorough re-examination. In the very framing of the constitution the federal principle and state autonomy were to a large extent violated. We do not agree that there is nothing wrong with the constitution as it was framed, that what is wrong is only its working. At the same time, we hold that in its actual working the constitution came to be distorted; even the limited extent of autonomy that found a place in the constitution has been eroded. We therefore suggest a thorough re-examination of the basic provisions of the constitution. Before proceeding to spell out how this should be done, let us explain our general position with regard to centre-state relations.

Our Party stands for the unity of the country and fights all forces of disintegration; we definitely stand for an effective and efficient Centre capable

of defending the country, organising and consolidating its economic life and adequately armed with powers to discharge its other jobs like foreign policy, communications, foreign trade etc.

Unfortunately, this urge for unity among the people, their desire that India should be protected against external aggression, has been exploited by the ruling party to appropriate dictatorial powers to the Centre, abrogating and eroding the powers of the constituent states. The ruling party's idea of a strong Centre is a dictatorial Centre carrying out its behests. The fact that the notorious 42nd amendment of the Emergency days reduced the position of a subordinate dependent of the Government of India, showed that an attack on their powers was inevitable requirement of authoritarian rule. The question of Centre-State relations therefore not only relates to the question of defending Indian unity, it has become an issue in the struggle between the forces of dictatorship and democracy.

This is not accidental. The constitution that was framed after independence reflected the needs of the capitalist path of development which required India as unified, single, homogenous market. It reflected the needs of the big capitalists allied with landlords, who considered the demand of democracy, state autonomy or equality of languages, as obstacles to their economic domination and political power.

The Programme of our Party states : "It is but natural that in such a situation the contradiction between the Central Government and the States should have grown. Underlying these contradictions often lies the danger contradiction between the big bourgeoisie on the one hand and the entire people including the bourgeoisie of this or that State on the other. This deeper contradiction gets constantly aggravated due to the accentuation of the unevenness of development under capitalism."

The pro-vested interests policies of the Centre, the economic crisis, the impoverishment of the masses resulted in increased attacks on democratic rights and the rights of the states.

This process was accompanied by abject economic dependence of the states on the Centre. The Centre decides the amounts of public borrowing to be done by the states; it monopolises credit made available by the banking sector and makes the states dependent on ad hoc grants sanctioned by it. All this together with the method of determining the size of the State Plan reduced planning in the states to a mockery and makes it an adjunct of the Central Plan, to be curtailed or expanded according to the convenience and needs of big business which dominates the thinking in Central Plans. Backwardness and perpetuation of unevenness result from this. Planning in States is not geared to the needs of the people of the states or to the genuine need of all-India development.

Over the years this concentration of the political and economic power at the Centre has been making in roads into whatever federal elements there were in the constitution. The Emergency with its Constitutional Amendment Acts enabled the sending of the Central Reserve Police to the states without the prior consent of the state governments, with the further provision that these forces when deployed in the states would take their orders only from the Central government. These epitomised the process of extreme centralisation.

The Centre was armed by the constitution with sufficient powers to intervene and deal with any problem arising in any part of the country. Added to this are the powers which the Centre assumed for itself during the thirty-year-long central rule of one party, with most of the states being ruled by the same party. These enormous powers were often used against opposition parties duly elected in state elections. By misusing the Governor's powe.:, minority ministries of the ruling party were installed and the verdict of the electorate was nullified.

Similarly by withholding Presidential assent to bills passed by state legislatures, the Centre has succeeded in sabotaging progressive legislation passed in the interests of the people. The process of agrarian and educational reform started by the 1957-59 government of Kerala were blocked by the Centre. Recently the agrarian legislation passed by the Left Front Government of West Bengal was sent but has not received Presidential assent, though months have passed since the legislature voted it. The measure to grant recognition to trade union on the basis of secret ballot passed by an earlier Left Front Ministry was killed using the same device of withholding assent. The Andhra Bill to abolish the Upper Chamber in the State has also been now blocked.

The defence of the unity of India, the preservation of democracy, the coordination of planned economic development and other basic tasks cannot require full and real coordination of the activities of the Central and State Governments. That is why our Party proposed autonomy for the states. Without this, Indian unity will not be durable; the feeling of being one people and one country will be weakened. Against the attack of divisive forces what is required is a strong sense and urge for unity; state autonomy will go a long way in fulfilling this need. The state legislatures and Governments must have sufficient freedom and powers to fulfil the desires and mandates of the people electing them. Denial of this freedom to the elected legislatures and governments of states, as if the mandate received by the ruling party at the centre is all that matters, reduces the constituent federal units to the status of dependencies, and lops off one arm of Indian democracy.

Our Party does not believe that a correct solution of the question will *ipso-facto* solve the problems of the Indian people. Their solution relates to changing the basic structure of society. But arming the states with autonomous powers, relaxing the dictatorial grip of the Centre and the ruling party will help the people to fight the grip of the vested interests on the states and Central Government.

Today the party which rules at the Centre is not in charge of the administration in several states. This gives added urgency to the question of a proper redistribution of powers between the Centre and the States, so that the mandate received from the people by the party which wins the election at the state level gets adequate importance, along with the mandate received by the ruling party at the Centre.

PART II

LEGISLATIVE RELATIONS

It will be seen from the above that we do not agree with the view "that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States which ensures in normal times a substantial measure of legislative autonomy to the states", as is asserted in the questionnaire. On the other hand, the distribution of legislative powers, like other provisions written into the constitution, is a repetition of what had been provided for in the earlier, British-made 1935 Act. It will be recalled that the scheme of that Act was so repugnant to the democratic conscience of the freedom movement that the Congress Party rejected outright its federal part; even the provincial autonomy part was so defective that the Congress which secured majority in seven provinces demanded, before agreeing to form the ministries, an assurance from the Governors that this special power would not be used.

Coming to the actual distribution of powers between the centre and the states, the Union and Concurrent lists are so all-pervasive that state autonomy is in fact negated To add to this is the provision that parliament can legislate on certain subjects within the exclusive competence of the states "in the national interest" and "public interest". Furthermore, the Governor's power to *reserve* to the President important legislations adopted by the state and the right of the Central Government acting in the name of the President to withhold assent to the bills passed by the legislatures make a mockery of the legislative competence of the states.

We therefore suggest that to protect states' autonomy, an amendment to Article 248 should be made to the effect that the legislature of a state should have exclusive power to make any law with respect to any matter not enumerated in the Union or Concurrent Lists, as against the present provision which reserves this right to Parliament. In other words, the residual powers of the federation should lie with the states and not with the Centre. The states have to act in such a way while exercising their full rights in their own spheres that they do not transgress the sphere allotted to Central Government; the latter too, on its part should not interfere in the sphere of states, both legislative and executive. No state should use its powers to the detriment of other states. Article 249 giving power to the Centre to legislate on a subject in the states list under the plea of national interests should be deleted.

While enlarging the scope of the states' sphere, we must also try to preserve and strengthen the Union authority in subjects that could be carried out only by the Central authority and not by any single state, such as Defence, Foreign Affairs including Foreign Trade, Currency and Communication and Economic Coordination. In areas such as Planning, fixing of prices, wages etc., the Centre may not only coordinate but also issue general direction. In the matter of Planning and economic coordination however, the Centre will have to conform to the general guidelines laid down by the National Development Council, in which the states will have representation along with the Centre. At the moment, neither the Council nor the Planning Commission is specifically referred to in the constitution. This lacuna may be closed by introducing a separate Article which should also state clearly that the National Development Council will function democratically and that the Planning Commission will be a body appointed by and accountable to the Council. Loans and grants for developmental purposes are now the prerogative of the Planning Commission. It is thus important that the states have some say in the manner of operation of the Commission.

Heavy industries, electric power, oil and coal or irrigation schemes which concern more than one state have to be kept in the Union list, so that there can be a common policy. In matters concerning industrial licensing, etc., major modifications in regard to allocation of powers between the Centre and the states are called for. The list in the Seventh Schedule should be reformulated so that the States may be given exclusive powers in respect of certain categories of industries.

The right of the Central Reserve Police or other police forces the Union Government may raise to Operate in the States should be withdrawn. The subject of Law and Order and the police should be fully in the States' sphere and the Centre should not interfere with its own specially created forces.

PART III

ROLE OF THE GOVERNOR

This is another provision taken over from the previous British made constitution and written into the 1950 constitution. The Governor under that constitution was the appointee of the British Government and was responsible to it through the Governor General. The only change made in the new constitution of free India is that the Governor is an appointee of the Central Government which means the agent of the ruling party at the Centre. That office has in fact been used by the ruling party at the Centre to deny the people of states to have Governments of their choice and impose on them unwanted Government, etc. The office has also been used to provide for the leader of some faction in the ruling party who has become inconvenient to its "high command". It is therefore ridiculous for anybody to attribute the quality of "impartiality" to the Governor. The post should be abolished and, if this is not possible for any reason, the post should be filled by somebody who enjoys the confidence of the state legislature; no Governor

to continue when there is a change in the elected legislature. The present provision leads to conflict between the elected executive, namely, the Council of Ministers and the formal head of state who is responsible not to the elected legislature but to the executive at the Centre.

PART IV

ADMINISTRATIVE RELATIONS

Apart from the office of the Governor, there are several other provisions which enable the Centre indirectly or directly to interfere in the administration of states. The most important of them are the powers vested in the Central Government to dismiss the state governments, dissolve state legislatures etc. These have been used in a notorously partisan way.

All-India services like the IAS, the IPS etc., whose officers re-posted to the States, but remain under the supervision and disciplinary control of the Central Government, must be abolished. There should be only Union Services and State Services and recruitment to them should be made respectively by the Union Government and the state government concerned. Personnel of the Union Services should be under the disciplinary control of the Union Governmtnt and those of the state services under the disciplinary control of the respective state governments. The Central Government should have no jurisdiction over the personnel of the state services.

PART V

FINANCE RELATIONS

No other part of the constitution has been subjected to such universal criticism from state governments including those headed by the party ruling the Centre, as its financial provisions. The Memoranda submitted by the state governments to successive Finance Commissions would show how wide is the gap between the Centre and the states on the question of financial powers and resources. A complete overhauling of the entire field of financial relations is thus in order. While almost every department of administration involving heavy expenses (except defence and foreign affairs) falls within the purview of the state governments, almost all the revenue-earning items are with the Centre.

The articles regarding the Finance Commission and distribution of revenues should be amended to provide for 75% of the total revenues raised by the Centre from all sources for allocation to different states by the Finance Commission. This is necessary to end the mendicant status of the states. In what proportion and on what principle this 75% of the total realisation should be divided between the States should be decided by the Finance Commission. It should not be the job of the Finance Commission to decide the proportion of revenues to be distributed between the Centre and the States. Its task should be only to keep the proportion that each State should get from the total financial realisation by the Centre 75% of which is to be allotted to the states, Article 280, Clause 3, sub-clause (a) which provides for "the distribution between the Union and the states of the net proceeds of the taxes which are to be or may be divided between the Union and the States" should be omitted and the entire clause be redrafted so as to make it clear that it is the duty of the Commission to make recommendations to the President as to the allocation between the states of their respective shares of the proceeds. The states must also be accorded more powers for imposing taxes on their own, and to determine the limit of public borrowing in their respective cases. To achieve these objectives the Seventh Schedule. Union, States and Concurrent list should be suitably amended.

PART VI

ECONOMICS & SOCIAL PLANNING

We have explained above that the planning and coordination of economic development should be the responsibility of the Centre which however should be carried out in a democratic way through the national development council in which the states should have equal representation along with the Centre and whose executive organ the Planning Commission should be. The process of planning however is unfortunately being used by the Central Government and the party that controls it as it likes. Added to this are such policies of planning pursued by the ruling party as have proved their bankruptcy, national economy is as a consequence in shambles.

The real solution for the crisis emerging out of this is a total reversal of planning policies. This does not perhaps fall into the purview of the legal-constitutional changes which are under consideration by this Commission. We however would urge that this Commission should not accept either the drive towards centralisation of the work of all economic activity in the states in the name of central planning (which is demanded by the ruling party) or the abandonment of the centralised planning as is suggested by some other parties. The solution is centralised planning with the active involvement of the states in the formulation and the implementation of policies, or state autonomy under centralised but democratic guidance.

MISCELLANEOUS

We would in the end touch upon three aspects of Union-State relations which are relevant in this context. They are the language of administration, the electoral system and the special status of Kashmir within the Indian Union.

Our Party is of the view that, in the course of the growing economic, social and intellectual intercourse the people of different states of India will develop in practice the language of inter-communication most sutiable to their needs. This natural process requires that no single language is sought to be imposed on the other linguistic groups. While our party is all for encouragement to the learning of Hindi by non-Hindi speaking peoples, we are of the view that the equality of all Indian language all Acts, Government orders and resolu-

tions of the Centre should be made available in all Indian languages. The use of English in the field administration, legislation, judiciary and as the medium of instruction in education should be discarded, replacing it with the people's language of the state concerned. Right of the people to receive instruction in their mother-tongue in educational institutions as well as its use as the medium of education in the state upto the highest standard should be recognised. The Urdu language and its script should be protected. The Eighth Schedule should be amended to include languages like Nepali.

The present electoral system enables a party with minority of votes to secure a majority of seats in Parliament of Legislatures. The disastrous consequences of this were seen during the Emergency when the Congress Government elected on a minority vote introduced measures which made inroads into the civil liberties and democratic rights of the people, reduced the Parliament and State Legislatures to rubber stamps of a single party—all in the name of asserting the "Supremacy of Parliament". Whatever remained of state autonomy also came under the axe.

It is therefore necessary to introduce the system of proportional representation and provide for right to recall.

The present special status of Kashmir within the Indian Union should be retained.

COMMUNIST PARTY OF INDIA (MARXIST)

State Unit — Karnataka

MEMORANDUM

The Central Committee of CPI(M) has already submitted its views to the questionnaire of the Commission. In the light of our experience in Karnataka, State Committee of CPI(M) wish to express its views on some of the topics of the questionnaire.

Our Party stands for the Unity of the country and fights all forces of distintegration. We definitely stand for an effective and efficient Centre capable of defending the country organising and consolidating its economic life and adequately armed with powers to discharge its other jobs, like Foreign Policy, Communication, Foreign Trade, etc.

Unfortunately this urge for unity among the people, their desire that India should be protected against external aggression has been exploited by the Ruling Party to appropriate dictatorial powers to the Centre, abrogating and eroding the powers of the constituent States. The Ruling Pary's idea of a strong Centre is a dictatorial Centre carrying out its benefits. The fact that the notorious 42nd Amendment of the Emergency days reduced the States to the position of a subordinate dependent of the Government of India, showed that an attack on their powers was inevitable requirement of authoritarian rule. The question of Centre State relations therefore not only relates to the question of defendnig Indian unity, it has become an issue in the struggle between the forces of dictatorship and democracy.

This is not accidental. The constitution that we framed after independence reflected the needs of the capitalist path of development which required India as unified, single, homogenous market. It reflected the needs of the big capitalists allied with landlords, who considered the demand of democracy, state autonomy or equality of languages, as obstacles to their economic domination and political power.

The Programme of our Party states : "It is but natural that in such a situation the contradiction between the Central Government and States should have grown. Underlying these contradictions often lies the danger contradiction between the big bourgeoisie on the one hand and the entire people including the bourgeoisie of this or that State on the other. The deeper contradiction get constantly aggravated to the accentuation of the unevenness of development under capitalism".

The provested interests policies of the Centre, the economic crisis, the improvement of the masses resulted in increased attacks on democratic rights and the rights of the States.

This process was accompanied by object economic dependence of the States on the Centre. The Centre decides the amounts of public borrowing to be done by the States ; it monopolises credit made available by the banking sector and makes the states dependent on *ad hoc* grants sanctioned by it. All this together with the method of determining the size of the State Plan reduced planning in the States to a mockery and makes it an adjunct of the Central Plan, to be curtailed or expanded according to the convenience and needs of big business which dominate the thinking in Central Plans. Backwardness and perpetuation of unevenness result from this. Planning in States is not geared to the needs of the people of the states or to the genuine need of All India Development.

Over the years this concentration of the political and economic power at the Centre has been making inroads into whatever federal elements there were in the constitution. The Emergency with its Constitutional Amendment Acts enabled the sending of the Central Reserve Police to the states without the prior consent of the state governments, with the further provision that these forces when deployed in the states would take their orders only from the Central Government. These epitomised the process of extreme centralisation.

Legislative Relations

We do not agree with the view "that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States which ensures in normal times a substantial measure of legislative autonomy to the States", as is asserted in the questionnaire. On the other hand, the attribution of legislative powers, like other provisions written into the Constitution is a repetition of what had been provided for in

the earlier, British made 1935 Act. It will be recalled that the scheme of that Act was so repugnant to the democratic conscience of the freedom movement that the Congress Party rejected outright its federal part ; even the provincial autonomy part was so defective that the Congress which secured majority in seven provinces demanded, before agreeing to form the ministries, an assurance from the Governors that this special power would not be used.

Coming to the actual distribution of powers between the Centre and the States, the Union and Concurrent Lists are so all-pervasive that state autonomy is in fact negated. To add to this is the provision that Parliament can legislate on certain subjects within the exclusive competence of the States "in the national interest" and "public interest". Furthermore, the Governor's power to reserve to the President important legislations adopted by the state and the right of the Central Government acting in the name of the President to withhold assent to the bills passed by the legislatures makes a mockery of the legislative competence of the States.

We therefore suggest that to protect states' autonomy, an amendment to Article 248 should be made to the effect that the legislature of a State should have exclusive power to make any law with respect to any matter not enumerated in the Union or Concurrent Lists, as against the present provision which reserves this right to Parliament. In other words, the residual powers of the federation should lie with the states and not with the Centre. The states have to act in such a way while exercising their full rights in their own spheres that they do not transgress the sphere allotted to Central Government; the latter too, on its part should not interfere in the sphere of States, both legislative and executive. No State should use its powers to the detriment of other States. Article 249 giving power to the Centre to legislate on a subject in the States List under the plea of national interests should be deleted.

While enlarging the scope of the states' sphere, we must also try to preserve and strengthen the Union authority in subjects that could be carried out only by the Central authority and not by any single state, such as Defence, Foreign Affairs including Foreign Trade, Currency and Communication and Economic Coordination. In areas such as Planning, fixing of prices, wages, etc., the Centre may not only coordinate but also issue general direction.

Role of The Governor

This is another provision taken over from the previous British made constitution and written into the 1950 constitution. The Governor under that constitution was the appointee of the British Government and was responsible to it through the Governor General. The only change made in the new constitution of free India is that the Governor is an appointee of the Central Government which means the agent of the ruling party at the Centre. That office has in fact been used by the ruling party at the Centre to deny the people of States to have Governments for their choice and impose on them unwanted Government, etc. The office has also been used to provide for the leader of some faction in the ruling party who has become inconvenient to its "high command". It is therefore ridiculous for anybody to attribute the quality of "impartiality" to the Governor. The post should be abolished and, if this is not possible for any reason, the post should be filled by somebody who enjoys the confidence of the State legislature; no Governor to continue when there is a change in the elected legislature. The present provision leads to conflict between the elected executive, namely, the Council of Ministers and the formal head of State who is responsible not to the elected legislature but to the executive at the Centre.

The recent experience of dismissal of Telugu Desham Government in Andhra Pradesh, National Conference (F) Government of Jammu & Kashmir are striking examples of Governors misuse of powers at the behest of the Central Government.

With regard to Article 200 and 201, no interference by the centre or the Governor should be allowed on any ground. Hence these articles should be done away with.

The misuse of the Provisions in the Constitution can also be seen in the deliberate delaying for political considerations the President's Assent to Karnataka Zila Parishad, Mandal Panchayat, etc. Bill, 1984 and Karnataka Education Bill 1984 submitted to the Governor.

Many cases of conflicts between the Elected executive of the State and the Governor has come to light in Andhra Pradesh and in West Bengal in the recent days.

Administrative Relations

Apart from the misuse of the office of Governor there are several provisions which enable the Centre to indirectly or directly interfere in the administration of States.

Under Article 263 an Inter-State Council can be established. It must be made mandatory for such an inter-state council consisting of the Prime-Minister and the Chief Minister of all the States. The Council will deal with all disputes between the States and the Union with any other matter of national importance.

Articles 365 which empowers the President to dismiss the State Government should be so amended as to prevent its misuse.

Articles 356 and 357 which enable the President to dissolve a State Government or its assembly has been invoked several times since 1950 to deny the rights of the People in different States to have the Governments of their liking. The recent instances have been quoted already. This Article should be deleted forthwith. In the case of a Constitutional break-down in a State, provision must be made for the democratic steps of holding election and installing a new Government as in the case of the Centre.

Article 312 which provides for All India Services like IAS, IPS. The personnel from these All India Services are posted to States but remain under supervision and disciplinary control of the Central Government. This must be abolished.

As the nation knows the radio and television are being increasingly misused by the ruling party at the Centre. In a democratic society, the people who have the right to know the doings and misdoings of those whom they have elected. They have also the right to know and understand details of various opinions regarding government policies. A statutory Central Communications Council should be set up. Its membership should include ministers of Central and State Governments, leaders of political parties and experts. This Council should oversee the functioning of the radio, television and other government managed media. Similar Councils should also be established at the State level.

Financial Relations

No other part of the Constitution has been subjected to such universal criticism from State Governments including those headed by the party ruling at the Centre, as its financial provisions. The Memoranda submitted by the State Governments to successive Finance Commissions would show how wide is the gulf between the Centre and the States on the question of financial powers and resources. A complete overhauling of the entire field of financial relations is thus in order. While almost every department of administration involving heavy expenses (except defence and foreign affairs) falls within the purview of the State Governments, almost all the revenue earning items are with the Centre.

Constitution has entrusted the States with major responsibility of providing education, food, water, health and roads to the people. It has to provide all the infrastructural facilities for agriculturists and industrialists for creating conditions for the growth and development of industry and agriculture.

States have also to go to the succor of the people during drought, famine, floods and other natural calamities the occurrence of which have been frequent in our State. They have become a drain on the economy of the States upsetting normal course of development.

States are compelled to go on increasing the pay and dearness allowance of its staff in proportion to the inflationary affect on prices and value of the rupee over which the States have no control whatsoever. The periodic increases in D.A. by the Central Government compels the State Government to increase D.A. of its employees in correspondence with the rates of Central Government.

Karnataka Special Features

Karnataka has one of the lowest areas under Irrigation (16.5%) in the country. Hence it is chronically prone to droughts. This year more than 16 districts of the 19 districts that constitute our State, experienced severe drought. One or the other parts of the State will also be hit by floods causing severe losses. The question of providing drinking water to the people and fodder to the cattle is a recurring problem of great magnitude. In the present system States approach the Centre for grants as soon as occurrence of natural calamities. Even the meagre money given to States are to the large extent treated as advances against the plan amount. Even in cases of World Bank projects for development only 70% of the money is released to the States due to which progress of the projects will be impeded.

Karnataka was formed in 1956 out of portions of various provinces subjected to naked colonial exploitation and of various princely States. This has led to wide inter-regional disparities in levels of living and levels of various basic services like health, education, communications etc., which has persisted uptil now.

The Eighth Finance Commission should keep in view these special features of Karnataka in the devolution of funds to this State.

The Approach

The ways and means position of the States are worsening year by year. Expenditure on non-plan sector is increasing. Consequently deficits are mounting and repeated resorts to overdrafts are made. Natural calamities as already pointed out have further curtailed planned expenditure.

Hence the Finance Commission should take overall view of the Development of the States. It should give up the so called 'Gap Filling' approach and take a comprehensive approach. We consider it the duty of the Finance Commission to help the States run the administration smoothly and efficiently.

The Government of India has elastic source of income. It can resort to heavy borrowings internally and externally. It has all the financial institutions to fall back upon to meet exigencies. It can resort to huge amount of deficit financing.

Central Government is making inroads into the States' share of taxes through various unfair devices. It has hit upon new ways of encroaching into resources of the States. The Financial Commission should devise ways and means to share the financial resources equitably between Union Government and the States.

The articles regarding the Finance Commission and distribution of revenues should be amended to provide for 75% of the total revenues raised by the Centre from all sources for allocation to different States by the Finance Commission. This is necessary to end the medicant status of the States. In what proportion and on what principle this 75% of the total realisation should be divided between the States should be decided by the Finance Commission. It should not be the job of the Finance Commission to decide on the proportion of revenues to be distributed between the Centre and the State should get from the total financial realisation by the Centre 75% of which

is to be allotted to the States. Article 280, Clause 3, Sub-clause (a) which provides for the "distribution between the Union and the States of the net proceeds of the taxes which are to be or may be divided between the Union and the States" should be omitted and the entire clause be redrafted so as to make it clear that it is the duty of the Commission to make recommendations to the President as to the allocations between the States of their respective share of the proceeds. The State must also be accorded more powers for imposing taxes on their own, and to determine the limit of public borrowing in their respective cases. To achieve these objectives the Seventh Schedule Union, States and Concurrent List should be suitably amended.

Heavy industries, electric power, oil and coal or irrigation schemes which concern more than one States have to be kept in the Union List, so that there can be a common policy. In matters concerning industrial licensing etc., major modifications in regard to allocation of powers between the Centre and the States are called for. The list in the Seventh Schedule should be reformulated so that the States may be given exclusive powers in respect of certain categories of industries.

Economic and Social Planning

We have explained above that the planning and coordination of economic development should be carried out in a democratic way through the national development council in which the States should have equal representation along with the Centre and whose executive organ the Planning Commission should be. The process of planning however is unfortunately being used by the party that controls it as it likes. Added to this are such policies of planning pursued by the ruling party as have proved their bankruptcy, national economy is as a consequence in shambles.

The right of the Central Reserve Police or other police forces the Union Government may raise to operate in the States should be withdrawn. The subject of Law and Order and the police should be fully in the States' sphere and the Centre should not interfere with its own specially created forces.

The real solution for the crisis emerging out of this is a total reversal of planning policies. This does not perhaps fall into the purview of the legal constitutional changes which are under consideration by this Commission. We however would urge that this Commission should not accept either the drive towards centralisation of the work of all economic activity in the States in the name of central planning (which is demanded by the ruling party) or the abandonment of the centralised planning as is suggested by some other parties. The solution is centralised planning with the active involvement of the States in the formulation and the implementation of policies, or state autonomy under centralised but democratic guidance.

When National Development Council is made statutory and Planning Commission operates under the control of Planning Commission, the composition of Planning Commission be dealt by the NDC. Incorporation of National priorities and procedures of scrutiny will also be dealt by the NDC in the same manner.

Unfortunately now both the NDC and Planning Commission have functioned in a manner entirely vitiating their original role. The view of the various State Governments should be heard before finalisation of the 7th Plan, and incorporated into the Plan.

Centrally sponsored schemes do tend to distort the State Plan priorities as they forced the State Governments to opt for them whether they respond to the needs of the State or not. The suggestion we have made that 75% of total realisation should be allotted to the State Governments will enable the State Governments to formulate the Plan Schemes according to the State Plan priorities.

Miscellaneous

Industries :

We agree that as a result of the indiscriminate extension of the first schedule to cover a very high proportion of industries in terms of value of their output, the basic constitutional scheme has been patently subverted and industries have been virtually transformed into Union Subject.

Therefore major modifications in the allotment of powers between Centre and States are called for. The lists in the Seventh Schedule should be reformulated so that States may be given exclusive powers in respect of certain categories of industries.

Locational decisions on Central Investments in the Public Sector are matters of crucial interest to the States. The criticism that States are not taken into confidence before deciding on such locations is valid. Centre favouring the States with Governments of same party and its stepmotherly attitude towards State Governments of other parties has been exposed time and again.

Our State has been discriminated against in the case of Vijayanagar Steel Plant and Mangalore Oil Refineries Complex, in Railways, Extension of Routes, Conversion into Broad-gauge, etc.

Trade and Commerce :

The restrictions that are imposed on buying food articles from the surplus States even in case of severe drought conditions or floods and discrimination experienced in this regard by certain States has been voiced. West Bengal for instance, during droughts has requested the Central Govt. to allow it to purchase the foodgrains necessary from the surplus States in open market. But that was turned down. The refusal to permit the States to buy the food grains in such cases amount to nullifications of the voice of the people of these States expressed through the elector's manifesto of the concerned party.

Agriculture :

The Centre affects the programmes of the State Government in the case of agriculture, through numerous centrally sponsored schemes, many of which do not huge relevancy to a particular State. Research and Development and Educational Policies are regulated through ICAR and the World Bank Projects.

Centre has made its exclusive sphere to fix the fair prices to agricultural produce without any regard to the opinions expressed several times, in National Development Council by past Chief Ministers of the State D. Devaraj Urs, Sri Gundu Rao, and also the present Chief Minister. The increase in prices of fertilisers, agricultural machineries, etc., laying out the Credit policy through RBI without any regard for demands of mass upsurges of peasants in various States and Forest policy through a highly centralised Tree act, with total disregard of the interest of native tribal population and forming community in and around the forest are for example, of high centralisation and need for decentralisation.

Food and Civil Supplies

The discrimination in allocation of food grains and other essential commodities or delay in supply are evident in case of Karnataka very recently when drought engulfed 16 of the 19 districts of the States and spread over a long period. The plan of the State Govt. for increased supply were not complied with due to low per capita. Due to low per capita income that it is necessary that the informal rationing has to be extended, which suffers from lack of adequate foodgrains.

Education

Education which was in the State List of 7th Schedule has been transferred to Concurrent List. This has lead to the increase of central interference every now and then.

Education in one of the place where social relevance and adaptation to the needs of the different States are very essential.

Hence, it should be transferred back to the State List immediately.

THE COMMUNIST PARTY OF INDIA (MARXIST)

State Unit — Kerala

MEMORANDUM

Introduction

1. The Central Committee of the Communist Party of India (Marxist) has already sent its reply to the questionnaire of the Sarkaria Commission. We wish to reiterate the points raised therein with special reference to the problems of the State of Kerala.

2. The issues concerning the Centre-State relations should not be treated merely as legal-juridical problems but must be approached from historical-political angle. Before Independence, the region which today forms the State of Kerala constituted three distinct administrative regions : the princely States of Travancore and Cochin and the Malabar District of Madras Province. The British were the paramount power controlling the fate of the region through a centralised administrative system headed by the Collector in Malabar and the Residents in Travancore and Cochin with all powers concentrated in Delhi, which in turn was controlled from London. Never before in the long history of this country did it have such a centralised administration. It was in the freedom movement, which had to fight this centralised administration, that the unity of the entire people — not only among the Malayalis but also between them and the people of other nationalities in India — began to develop cutting across caste, communal and administrative barriers. On the attainment of Independence, in the background of fierce popular struggles like the Punnapra-Vayalar uprising in Travancore, the feudal States were merged with the Indian Union. But it refused to reconstitute the States on a linguistic basis. Travancore and Cochin were merged together to form Part B State while Malabar continued to be a part of the Madras Province. Fierce popular struggles had to be waged before the demand for the formation of the linguistic States was conceded. Thus the State of Kerala came to be formed in November 1956.

3. However, the aspirations and the expectations of the people of Kerala at the time of its formation still remain to be fulfilled. Its relative backwardness still continues. In fact, its relative position vis-a-vis the top income States has deteriorated. The agricultural sector which is the mainstay of the Kerala economy has been literally stagnant for a decade now. The industrial sector is weighed down by the orisis-ridden traditional industries with no immediate solution in sight. The share of the secondary sector in the State domestic product in 1950-51 which was more than the All-India average has declined to below that level by 1977-78. The deepening all-round economic crisis has been steadily undermining the historical legacies of widespread public health care system, generalised school education and such other social infrastructural facilities. The causes of this State of affairs are no doubt, partly, rooted in the history of the region and in its internal structural maladies. However, few will dispute that this crisis has to be situated in the unevenness of the economic development of capitalism in India, under the policies pursued by the Central Government. The discrimination of the Centre towards the State, its neglect and unhelpful attitude to the special problems of the region, its export-import policy, industrial policies, etc., have all contribution to the accentuation of the backwardness of the State. The people of the State are increasingly becoming conscious of the fact that the present structure of the Constitution that concentrates all political and economic powers in the Central Government, making the constituent States dependent on the whims and fancies of the Central Government, is increasingly becoming a barrier to their full social

and economic development. The keen response of the people of the State to the issues related to Centre-State relations is an expression of this growing discontent.

4. The above developments were not accidental. They were inevitable given the basic framework of our Constitution and the social forces that shaped it. The bourgecisis which led the freedom struggle and took over the reins of power in 1947 was motivated by the need for an extensive home market which requires a centralised rather than a federal State. This is the background of its betrayal of all the commitments made during the Congress-League Pact of 1916, Motilal Nehru Report of 1928, the debate on 1935 Act and so on, for a federal set-up with linguistic States and genuine State autonomy. The emphasis of the Constitution adopted in 1950, whether one prefers to call it federal or not in principle, no doubt, was excessive centralisation. Thus the present — day tensions between the Centre and State emanates not from any misunderstanding of the true spirit of the Constitution Units wrong interpretation but from its basic framework itself. The Centre which even according to the original Constitution was empowered with extensive powers has made further inroads into the power of the States during the last 34 years. This process was facilitated by the fact that the same party ruled both at the Centre as well as nearly all the States for a long pariod. The various amendments to the Constitution and the 'voluntary' surrender of various rights, forced upon the States, have all made a mockery of the concept of State autonomy, the so much cherished ideal of the national movement.

5. This is the reason why the moment our Party took over the administration of the State Government, after the first election following the formation of the State in 1957, the question of Centre-State relations came to the forefront as an important political issue. But for a brief political experiment in PEPSU in 1952, which incidentally was toppled through high-handed central intervention, this was the first serious challenge to the monopoly of Congress power in any State. The true 'federal' character of our Constitution was fully revealed in 1959 when the Central Government dismissed the ministry even though we enjoyed majority in the Assembly. Then, again in 1965, twenty nine members of the States legislature elected in them mid-term poll belonging to our Party, which had emerged as the biggest party in the Assembly, were detained under Defence of India rules and this fact was used by the Governor to report to the President that no party was in a position to form the Government. This led to the dissolution of the assembly even before the elected members took their oath of office. These and other bitter experiences, not only in the economic spheres but also in the political life have forced us to resolutely champion the cause of State autonomy and the restructuring of the Centre-State relationships so that the national aspirations of the people of the State are realised.

6. At the same time, it should be made clear that we have always opposed all separatist tendencies which might disrupt the unity of the Indian people. We understand that the strengthening of the fraternal bonds of class and national solidarity among the people of different nationalities and linguistic States is necessary for the successful completion of the democratic tasks before the people of India. Our party programme categorically states: "The People's Democratic India will be a voluntary Union of the people of various nationalities in India. The Communist Party of India (Marxist) is opposed to the drive of the ruling classes for concentration, denying autonomy and is also opposed to all disruptionist and secessionist movements. The Communist Party of India (Marxist) looks for the preservation and promotion of the unity of Indian Union on the basis of real equality and autonomy for different nationalities that inhabit this country and develop a democratic structure". It is the glorious record of Communists in Kerala to have resolutely opposed and defeated machinations of the feudal autocracy for an 'independent' Travancore and the secessionist political tendencies both ideologically and politically after the Independence.

7. As noted above, a primary condition for the preservation of the unity of a multi-national State like India is the guarantee of autonomy for the constituent units both in words and deeds. It was on the basis of this understanding that the Kerala Governments headed by our Party in 1957-59, 1968-69 and 1980-81 made their distinctive contributions to the debate in the National Development Council on the Five Year Plans. Our alternative policies advocated by the State Governments were premised on a serious restructuring of the Centre-State relations. The formation of non-Congress Ministries in other States in the country strengthened the demand for the autonomy of the States. Soon, the Congress-led State Governments also more often discreetly started to demand greater powers and resources. For example, even the Congress-led united front government that rules Kerala today, as can be seen from the memorandum prepared by it to be submitted to the Commission, has been forced to join, even if half-heartedly, the demand for greater powers and resources to the States. However, they are not in favour of any fundamental overhauling of the present set-up; their loyalty, evidently, is more to the party ruling the Centre than to the true interests of the State. On the other hand our party wishes to state that such a measure is necessary to end the slow disintegration of the Indian Union by the various separatist movements, to successfully fight the trends to undermine the democratic traditious and establish authoritarian dictatorship and to go forward to create conditions for the free and full development of the nationalities in India.

Legislative Powers

8. The scheme of distribution of powers between the Union and the States is a continuation of the tradition of British colonial rule as enshrined in the Act of 1935. In fact, the present distribution is a step backward even from the British Act. Many items from the State List and the Concurrent List of 1935 Act have been removed into the present Concurrent and Union Lists respectively. The pervasive nature of Central and Concurrent Lists,

the supremacy of central legislation in the Concurrent List subjects, the right of centre to legislate on the subjects in the State List in certain circumstances and the right to withhold assent to the bills passed by the State assemblies through the agency of the Governor have robbed the States of any serious legislative autonomy. Our Party in Kerala has enough bitter experiences as to how the above mentioned can be used to thwart genuine aspirations of the people of the State, during our tenure of offices, especially in the cases of the various agrarian legislations, educational reform acts and social welfare bills such as trade union laws. History is repeating today with respect to agrarian and trade union laws being enacted by the West Bengal Government, the Education Bill of the Karnataka Government and so on. Even today there are three bills passed by Kerala Assembly from 1978 onwards awaiting Presidential assent. The conclusion reached by the Indian Law Institute from its study covering the fate of 170 bills during 1956-65 period is erroneous. According to them, presidential assent have been denied only in a few cases. But more important is the threat of such an action through which during the legislative process itself the Centre is able to coerce the State legislatures to abide by its wishes. Further, there needs to be a more disaggregated analysis taking into consideration the nature and content of the bills.

9. In the interest of a balanced federal Centre-State relation in the legislative sphere we make the following suggestions :

(a) Amend the Article 248 to vest the residual powers with the States;

(b) Amend the Article 249 to remove the power of the Centre to legislation subjects within the exclusive competence of the States;

(c) Amend the 7th Schedule to enlarge the scope of the States' spheres preserving such subjects as defence, foreign relations, including trade, currency, communication, economic co-ordination, heavy industries, etc. which cannot be managed by a single State alone for the Central authority. We wish to make a special reference to the subject of Law and Order. This should be exclusively a State subject. This is of special importance given the present day tendency of the Centre to legislate repressive and authoritarian measures such as ESMA and impose them on the States and the right claimed by the Centre to deploy Central para Military forces in States even without the consent of the latter.

Role of the Governor and Administrative Relations

10. Even as envisaged in the Constitution, the provision for Governor, his powers and the nature of his relationship with the Centre gives rise to conflict between the elected executive of the State and the formal head of the State. We have already mentioned the grave misuse of Governor's discretionary powers in 1959 and 1965. Another glaring instance was in 1969 when a minority Ministry was foisted upon the people of Kerala by the Governor. The appointment of the Vice-Chancellor of the Kerala University in 1980, when the Governor chose to ignore the advice of the Council of Ministers, is a recent case in Kerala that comes to mind. The conflict becomes very apparent when opposition parties rule the States or the factional fighting within the Congress Party ruling the State becomes acute. These fears have been more than confirmed by the history of past 34 years during which the Governor has degenerated not merely into an agent of the Central Government but also of the political party at the Centre conspiring against the State Government of which he is the formal head or interfering in the inner party struggles within the Congress in support of faction favourable to the central leadership of that party. Most disgusting episode in this drama has just been enacted in Sikkim. We feel that it is better to abolish the post of Governor itself rather than try to reform it. If this not possible for any reason, the post should be filled by some one enjoying the confidence of the State legislature.

11. There are various other provisions in the Constitution, apart from the Office of the Governor through which Centre can meddle with the administration of the States. Among them, the Article 356 empowering the Centre to dismiss the State Government and dissolve the State Legislature is the most notorious. It has been used nearly 70 times since the adoption of the Constitution. This provision which impinges on the administrative autonomy of the States should be deleted. The present all-India Services should be abolished and there should be separate Union and State Services, recruited and controlled by the Union and the States respectively. The monopoly of such mass media as a broad-casting, cinema and television by the Centre has degenerated them into instruments of propaganda for the ruling party at the Centre. They have been used in most partisan way against the State Governments headed by the opposition parties. These facilities must be shared between the Centre and States on a fair and reasonable basis.

Financial Relations

12. A review of the working of the mechanism for financial devolution and of the details of the resources transferred by the Union to the States in the last 34 years shows the following :

(a) The States have been facing serious financial crisis. This situation has not been due to any laxity on the part of the States to exploit their own sources of revenue. The proportion of States' revenue receipts to the combined receipts on revenue accounts of the Centre and States improved from 32.9 per cent during the 1961-66 period to 36.5 per cent during the 1979-84 period.

(b) The share of the States in the total revenue receipts of the Centre during the 6th Plan period is 35.9 per cent. However, the share of the States in the Central capital receipts is only 27.1 per cent. The share of the States in the total receipts of the Centre (both Capital and Revenue) is only 32.6

per cent during the 6th Plan period — nearly 4 per cent less than the share during the 5th Plan.

(c) It has created serious strain on the financial balances of the States. The indebtedness of the States to the Centre has grown, laying a heavy burden of debt rescheduling on their budgets. At the same time, various Central restrictions on the market borrowing have reduced the importance of direct market loans in the State budgets. It was 14.4 per cent of the capital receipts of the States in the First Plan. By the 6th Plan, it has steadily declined to 8.1 per cent. In the background of the inadequate transfer of resources from the Centre, the above situation has been resulting in widening state budgetary deficits (even though they have been much smaller in relative scale when compared to the Central deficits) and overdraft problems.

(d) The mechanical application of the overdraft limits have pushed some of the States, at times, to the verge of bankruptcy. It was done, it should be remembered, by a Central Government who have been quite liberal in meeting its deficits by taking recourse to creation of new money. The scale of deficit financing under-taken by the Central Government has been an important source of inflationary spiral in the country which again threatens to upset the fine balance of the State budgets by escalating the expenditures.

(e) Finally, the scheme of the Central transfers that exists today has not promoted either efficiency and economy in expenditure or narrowed down the disparities in public expenditure between the States. The resources transferred by the Centre has not promoted more equitable distribution of development benefits. Inter-regional disparities have continued to widen in the post-Independence India. In short, the excessive fiscal control of the Centre has been an important instrument to subvert the autonomy of the States during the last 34 years.

13. The description of the salient trends in the Centre-State financial relations is applicable to Kerala even with a greater force. In the case of Kerala it has affected the development of the State even more sharply due to the special circumstances of its situation. It should be remembered that Kerala is an export-oriented region that had given up lucrative and elastic customs and excise revenges at the time of merger with the Indian Union — a fact that has not received due consideration from the Finance Commissions. At the same time, it had inherited a heavy burden of expenditure on basic social infrastructural facilities like universal primary education, widespread public health care system and so on. This fact has camouflaged the economic backwardness of the region as revealed by the low proportion of secondary sector in the SDP (around 18 per cent at present), lack of modern industries, low productivity of the industrial sector, acute unemployment problem and so on. It should be remembered that the multiplier effect of investment on such an economy dominated by stagnant export-oriented traditional industries will be very small given the leakages across the border. This fact has also been not given due consideration while estimating the financial requirements of the region.

14. In the light of the above observations we make the following suggestions :

(a) The States should be accorded more avenues for raising resources directly. There is a strong case for greater scope for independent taxation without any detrimental effect on economic co-ordination or inter-State Commerce. The present tendency to make inroads into the Sales-tax revenues, for example, should be ended.

(b) The States should be allowed to determine their own limits for market borrowings. The tendency of public savings institutions to discriminate against the State should be reversed. For example, the share of State Government securities held by LIC in its total holdings has been declining from 35.7 per cent in 1969 to 18.5 per cent in 1982.

(c) The Constitution should be suitably amended to provide 75 per cent of the total revenues raised by the Centre to be allocated to the States regardless of the source. At present the ratio is around 35 per cent.

(d) Finance Commission should draw up from time to time, the criteria for the equitable distribution of the so determined resources among the States.

Economic and Social Planning

15. Our planning process has been in threes of a deepening crisis. The reasons must be sought in the basic economic policies pursued by the Central Government. However, the ruling party has been using it as an opportunity for excessive centralisation. The observations of ARC Study quoted in the questionnaire are fully born out by facts. The method of determining the size and components of the State plans as well as the tendency for the Centre to plan out even the details of the schemes which fall legitimately within the State jurisdiction has reduced the State-level planning into a meaningless exercise.

16. We suggest that the National Development Council should be set up as a statutory body under provisions of the Constitution with representation to the States and the Centre. The Planning Commission should be appointed and accountable to the Council and not to the Central Cabinet as at present. The NDC will constitute a forum that will ensure the active participation of the States in the formulation and implementation of the plans without impinging upon the need for national perspective and co-ordination for a centralised planning.

17. One of the objectives of the national planning must be to reduce regional imbalances and this must be an inbuilt criteria for regional plan allocations. The present criteria for determining the backward regions are far from satisfactory. With special reference to Kerala, it is important to distinguish between general social backwardness and economic or industrial backwardness for reasons already noted. Unfortunately, this distinction has not been borne in mind in the past to the detriment of the interests of the State :

(a) There has been severe discrimination against Kerala in the allocations for Central public sector investment. The Central Plan outlays in Kerala has been 31 per cent below all States average during the period 1950-80.

(b) Equally disturbing is the trend of the loans from national financial institutions like IDBI and ARDC. In the latter case, Kerala has received only half the all States' average for period 1956-81. There is a case for giving special consideration for States like Kerala whose backwardness is partly necessitated by its present export orientation and earns large amounts of foreign exchange through exports and remittances.

(c) Further, the compensation for the adverse effect on the economy of the region due to central economic policies like the decision to import copra or rubber or industrial policies of the Centre that is undermining the traditional industrial structure has also got to be considered while considering equitable plan allocations. Our argument is that it is not enough to look at the financial transfers to various regions but it is also necessary to consider regional impact of the totality of economic policies pursued by the Centre.

Miscellaneous

18. Due to the peculiar cropping pattern of the State which is heavily weighted in favour of non-food crops, Kerala constitutes a region with the lowest per capita production of cereals and chronically deficit in food requirement. Through a massive network of public distribution systems, the State Government has tried to insulate the people from the vagaries of food availability. The present arranegments of Centre-State relations for the procurement, pricing, storage, movement and distribution of foodgrains have been most unsatisfactory, often creating disruptions in the public distribution system and serious social unrest in the State. Our experience shows that foodgrains allocations has been used against State Government in most partisan manner while we were in power. Similarly, there is need for reviewing the arrangements for administering the essential commodities Act and other regulatory Central Act affecting States' areas of responsibilities. For example, the Central Acts regulating the coconut husk prices and movement has become an issue of serious contention between the State and Central Government.

19. While our party is all for encouragement to the learning of Hindi in the State, we are of the view that for equality of all Indian languages, all Acts, Government Orders and resolutions of the Centre should be made available in all Indian Languages. The use of English in the field of administration, legislation, judiciary and as medium of instruction in education should be discarded replacing it with the mother tongue. Attempts to impose Hindi as the language of inter-communication on other linguistic groups will only create discontent and disrupt the natural evolution of the link language.

20. The present tendency towards centralisation in the educational sector should be reversed. A national policy on education should be arrived at, not through the imposition of the will of the Centre, but through a process of consultation and dialogue between the States as well as between the States and the Centre. The present function of the University Grants Commission is far from satisfactory. In the allocation of funds, mofussil universities like Kerala or Calicut have been several discriminated against while a handful of Central universities and colleges in certain regions corner bulk of the funds.

21. Our Party is committed to safeguard the cultural heritage and the traditions of the religious minorities and their right to preserve them. However, the right to impart religious education must be distinguished from the general public education. Our experience in Kerala shows that the vested interests, in the name of minority rights, are able to obstruct the efforts to eliminate corruption and nepotism in the appointment of teachers and the admission of students, check the mismanagement of the educational institutions and such other steps to ensure improved standard of education.

Need for a Wider Discussion

22. In this brief interim reply to your questionnaire we have not gone into a detailed discussion of all the questions you have raised. The issues raised by the Commission are vital to the preservation of national unity and democratic set-up. We firmly believe that there is great need for widest possible debate on these issues in which academicians in the various disciplines, professionals like lawyers and judges, political leaders and the general public actively participate. In this context we wish to draw the attention of the Commission to certain steps initiated by the Government of Kerala intended to curb and limit such a debate. A virulent attack has been launched on Shri Subramaniam Potti, the Chief Justice of Gujarat High Court, by no less persons than the Chief Minister and the Home Minister as well as Congress leaders of Kerala for the statements he made while participating in a recent seminar on 'Centre-State Relations' sponsored by A. K. G. Centre for Research and Studies. Chief Minister went to the extent of stating that the Chief Justice must resign his post and then only express his views on Centre-State relations. We fear that these and other vailed threats are a part of a concerted move by the Government to stiffle the dissenting views. This type of intolerant and undemocratic interventions of Governmental

authorities and leaders of the ruling party must be ended. We appeal to the Commission to ensure an atmosphere for a free frank discussion of the important issues that it has raised.

COMMUNIST PARTY OF INDIA (MARXIST)

State Unit—Madhya Pradesh

MEMORANDUM

The Communist Party of India (Marxist), State Committee, Madhya Pradesh at the outset disagrees with the suggestion of the M.P. Govt. that there is no need to make fundamental change in the provisions in the Constitution relating to centre-state relation. The very fact that your honourable Commission is undertaking trouble to go throughout the country on this issue contradicts understanding of Chief Minister of Madhya Pradesh. It is obvious that your honour would not like to travel countrywide to know such simple things as enumerated in the M.P. Government memorandum as if everything is going on well under Central ruling party at Delhi.

Our party wants to treat this issue of Centre-State relations not as a heresay to be hunted down or to be regarded as a separatist fad and disruptionist slogan. Even the ex-President of India Republic Shri Sanjeeva Reddy expressed the opinion that centre-state relations deserved a fresh look. Life's realities have posed it as a problem of Indian democracy, of its advance which cann't be ignored without doing harm to the democratic process. The fact that the notorious 42nd amendment Act reduced the state to the position of a subordinate dependent of the Government of India, showed that the attack on there powers was an inevitable requirement of dictatorial rule. Thus the Centre-State relations have become an issue in the struggle between the forces of dictatorship and democracy. All states including Madhya Pradesh feel that even financial grip of the centre paralyses them.

However all those who support a change in the Centre-state relations don't necessarily represent the democratic urge behind it. This important issue of Indian democracy is often reduced to the narrow proportion of provincial and regional claims and attempts are made to rouse chauvinistic feelings. That has nothing in common with the democratic demand for state autonomy, expansion of democratic rights and end to concentration of power at the centre.

The existing Centre-State relations are not based on greater democratic or economic freedoms to any state but on the suppression of freedoms for all states. The central point is the subordination of all states to the centre and not favour shown to this or that state.

The nation today is in the grief of a crisis and the future of our polity is imperilled. The cherished democratic values of our freedom struggle are under assault, and the authoritarianism has resulted in disturbing signs of alination in some parts of the country. The golden thread of unity created by the freedom struggle still runs throughout the length and breadth of the country. It is to be ensured that this thread is strengthened in the times to come. A document of great relevance to the democratic advance of our people and it has undergo changed keeping in step with experiences and demands of people.

The question of Centre-State relations has acquired a great importance in the context of growing alination between centre and constituent states. This alination arising from constant attacks and erosion of powers of states is growing in the background of assaults of divisive forces to disintegrate Indian unity.

To stop this process of alination between the Centre and the constituent units of the Indian union is therefore urgently necessary in the interest of Indian unity. Our party stands for the unity of the Country and fights all forces of indisintegration. We definitely stand for an effective and efficient centre capable of defending the country, organising and consolidating its economic life and adequately armed with powers to discharge its other jobs like foreign policy, communication, foreign trade etc.

Unfortunately, this urge for unity among the people their desire that India should be protected against external aggression has been exploited by the ruling party to appropriate dictatorial powers to the centre. Abrogating and eroding the powers of constituent states.

The provested interests policies of the centre, the economic crisis, the impoverishment of the masses resulted in increased attacks on democratic rights and rights of the states. This process was accompanied by abject economic dependence of states on centre. The centre decide the amount of public borrowing to be done by the states, it monopolises the credit made available by the banking sector and makes the states dependent on an ad-hoc grants sanctioned by it. The method of determining the size of state plan reduces planning in the states to a mockery and makes it adjunct to central plan.

The centre was armed by the constitution with sufficient powers to intervene and deal with any problem arising in any part of the country. And it assumed for itself powers during thirty years long rule of one party when most of the states were ruled by the same party. There enormous powers were often used against opposition parties duly elected in state elections. By misusing the Governors power, minority ministries of the ruling party were installed and the verdict of the electorate was nullified.

Similarly by withholding Presidential assent to bills passed by state legislatures, the centre has succeed in sabotaging progressive legislature passed in the interest of the people. The agrarian legislatures passed by the Left Front Government of West Bengal has yet to receive the Presidential assent though months have passed since the legislature voted it.

The measure to grant recognition to trade unions by secret ballot passed by earlier left front Ministry was killed using the same advice of withholding the assent. Similar measure passed by Left Democratic Government in Kerala and Tamilnadu legislatures met same fate.

Our party proposed real equality and autonomy for states. The state governments and legislatures must have sufficient freedom and powers to fulfil the desires and mandate of the people electing them. Denial of the constituent federal units to this status of dependencies and off one arm of Indian democracy.

Today, the party which rules at the centre is not the ruling party in several states. This gives added urgency to the question of a proper redistribution of powers between the centre and the states. In fact the states are reduced to the position of clients so far as the resource mobilisation and allocation are concerned. They have also controlled key administrative services for fashioning a bureaucracy to be utilised at their behest.

A question may be asked to those who argue that more powers to the states will endanger the unity of the country. Who do these people think that all patriotism is concentrated at the centre so that whatever power can be given to will be used in national interests, while the powers to the states will be used to betray national interests. While this thinking alinates the people from the centre which is supposed to represent the will of the united nation. Unity of the whole country is possible only on the basis of a status of equality and freedom to the constituent linguistic units and not on the basis of domination by the centre and subordination of the states to its needs.

Taking into consideration the necessity of maintaining an effective centre, combind with urgent need to expand the powers of the states to protect Indian unity and democracy, we make the following proposals :

1. To protect states autonomy an amendment to article 248 should be made so that the residual powers of the federation should be with the units and not with the centre.

Article 249 giving powers to Parliament to legislate on a subject in the state list under plea of national interest should be deleted.

2. Heavy industries and power or irrigation scheme which concern more than one state have to be kept in the Union list. The list in the Seventh Schedule should be reformulated so that states may be given exclusive powers in respect of certain categories of industries.

The right of the Central Reserve Police or other police forces the Union Government may raise to operate in the states should be withdrawn. The subject of law and order and the police should be fully in the state's sphere and they should not interfere with its own specially created forces.

3. Articles 356 and 357 which enable the President to dissolve a State Government or its Assembly or both should be deleted. In the case of a constitutional breakdown in a state provision must be made for the democratic step or holding elections and installing a new Government as in the case of centre. Similarly Article 360 which empowers the President to interfere in a state administration on the ground of a threat to financial stability or credit of India should be deleted.

4. Articles 200 and 201 which empower the Governor to reserve Bills passed by the Assembly for President's assent should be done away with. The States Legislatures must be made supreme in the states sphere and no interference by the Centre in this sphere should be allowed on any ground.

5. All India services like the IAS, the IPS, etc. whose officers are posted to the states but remain under the supervision and disciplinary control of the Central Government, must be abolished. Personnel of the Union services should be under the disciplinary control of the Union Government and those of the state services under the disciplinary control of the respective State Governments. The Central Government should have not jurisdiction over the personnel of the State services.

6. A correct approach to the languages of the people is necessary in the interest of Indian unity and promoting a sense of equality.

The use of English in the field of administration, legislation judiciary and as the medium of instruction in education should be discarded.

7. The present electoral system enables a party with a minority votes to secure a majority of seats in Parliament or the Legislature. It is therefore necessary to introduce the system of proportional representation and provide for the right of recall.

8. The present special status of Jammu and Kashmir within the Indian Union should be retained.

Economic And Financial Issues

The political administrative and legislative issues apart the economic and financial relations obtaining between the Centre and States deserve the most careful reappraisal. We therefore suggest the following changes in the existing fiscal arrangement :

1. The proceeds of the corporation tax be made sharable with the States.

2. The surcharge on income tax be abolished; alternatively its proceeds be shared with the States.

3. The scheme of additional duties of excise be abandoned.

4. A review be made of the principles guiding decisions as regards 'declared' goods and the rate of sales taxation with respect to such goods.

5. Legislation be introduced in Parliament so that the provisions of Amendment 46 to the Constitution could be implemented properly.

6. Even after these proposed changes have been carried out, there would be need for a Finance Commission to decide upon additional transfers to the states and for deciding the *inter se* allocation between them. Notwithstanding the provisions of Article 74 of the Constitution, the President should consult the State Governments before deciding upon the composition and terms of reference of the Finance Commission.

7. We feel equally strongly that the working of the National Development Council and the Planning Commission should be seriously reappraised. The Planning Commission, which has no constitutional sanction nor any statutory one was set up by a resolution of the Union Government; its composition is decided upon by the Centre and its expenses are also defrayed by it. It has become a convention that Union Cabinet Minister is the working head of the Commission.

8. The National Development Council too has no constitutional or legal sanction. It has nonetheless been described as the supreme policy making body concerning problems of social and economic development.

9. We suggest that the Planning Commission be converted into full time secretariat of the National Development Council and that it be jointly financed by the Centre and the State Governments. Its composition too should be decided in consultation with the State Governments. Arrangements should be made to detach it from the Union Government, so much so that even the retirement benefits of persons working in it should be made from out of a fund contributed jointly by the Centre and the State. It should be empowered to discuss and analyse on its own vital issues affecting social and economic development and make its recommendation to the Council.

10. In deciding upon the principles of Central Plan assistance to the States the Planning Commission should be enjoined to take into account the current imbalances in the pattern of economic development in the country the relative incidence of poverty in the different States, the state of unemployment, the proportion of harijan and tribal populations in the States, the levels of irrigation power generation and industrialisation, and similar other factors.

11. We would also suggest that the present arrangement, whereby as much as 70% of the Central Plan assistance recommended by the Planning Commission is treated as loan to be repaid, should be abolished. All Central assistance for the Plan should be converted into grants; the outstanding loans on this account should be written off.

12. Reflective of the total dominance that the Union Government has come to assume in fiscal matters, a substantial proportion of the aggregate transfers to the States at present taking place is not in terms of the recommendations of the Finance and Planning Commissions, but on the basis of discription exercised by the Centre. Such discretionary transfers are anatheme to sound principles of federal finance and must be spedily brought to an end.

13. A mechanism must be established whereby the States Governments are associated in the formulation of the nation's monetary and investment policies.

14. The State Government must be allowed rotational representation on the Boards of Directors of the Reserve Bank of India. It may be considered whether they could not be represented by rotation on the Central Board of Directors of the Bank too.

15. The Union Government can finance any excess of its expenditure over its income. These securities bear a rate of interest of only 6.5%. In contrast the States are subjected to specific limits in the overdrafts they occasionally draw with Reserve Bank of India and for which they are charged interest at the rate of 13%. This anomaly deserves to be removed, and the States allowed an equitable share in created money.

16. It may also be useful to have a permanent Expenditure Commission which could advise both the Centre and the States in case their expenditures tended to be profligate.

17. The Centre has been raising additional resources by raising administered prices of commodities like petrolium products, coal, iron and steel, and so on instead of adjusting the excise duties on them. As a consequence, the States. have been deprived of thousands of crores of rupees of revenue. We suggest that the Centre be asked to share 40% of the extra resources raised through any such increase in administered prices.

18. The States are currently left with a lowly share in total market borrowings, which can be undertaken only with the approval of the Union Government. Here at least 50% of the total borrowing in any year should be allocated to the State Governments.

19. State Governments have serious reservations about the provisions and working of the Industrial (Development and Regulation) Act. Certain guidelines could be laid down by the National Development Council and the Planning Commission, reserving some areas of licensing for the Centre and the rest to the States.

20. We also urge that the Union Government be pursuaded to assume the responsibility for ensuring the supply of 15 to 20 major foodgrains, industrial raw materials and essential commodities all over the country at uniform price.

21. The States should be taken into confidence in deciding the Central investment in public sector.

22. Administration of the civil population in cantonment area should be given to the respective municipalities.

23. Specific powers should be conferred to the state Governments for levy of cess on minerals for the development of mine area.

24. Investing some powers in the states to remove hardships caused by the operation of the Forest Protection Act.

25. A national policy for salaries, wages and dearness allowance of both Central and state government employees should be made.

26. Location of Central Government undertakings and offices should be based on achieving regional balance and economic considerations rather than on the concessions offered by the State governments.

27. Fixing of support price for agricultural commodities keeping in view local conditions like productivity and market prices.

We hope that the suggestion submitted by us will make the centre lose only those powers which it has assumed by violating the federal spirit of the constitution and there will be some guarantee that the states will not be treated like municipalities in future.

COMMUNIST PARTY OF INDIA (MARXIST)

State Unit — Andhra Pradesh

MEMORANDUM

Our party had welcomed the constitution of your Commission to specifically study the present Centre-State relations, as by doing so, the Government of India has endorsed the consistent stand of several non-Congress(I) parties and demands of the several State Governments regarding the necessity to revise and redefine the relevant Articles of the Constitution of India reflecting the true Federal/Union spirit envisaged by the framers of the Constitution under Article 1. The basic approaches to be taken into consideration and the direction of the headed changes in the Constitution, specially these affecting the Centre-State relations were already elaborated by our Party at the national level. Therefore, we will confine ourselves for the present to highlight some of the difficulties of our State (Andhra Pradesh) which directly arose due to the imbalances in the distribution of powers between the State and the Centre.

1. Arbitrary exercise of powers by The Governor

The turmoil caused in the State due to the arbitrary exercise of powers by the then Governor either while dismissing the then State Government headed by Shri N. T. Rama Rao or swearing in of the succeeding Chief Minister, Sri N. Bhaskar Rao, the denial of even twenty four hours of time to establish the majority enjoyed by Shri N. T. Rama Rao on the floor of the Legislature and at the same time giving a month's time to Shri Bhaskar Rao, accepting all sorts of people as Legislators presented by Sri Bhaskar Rao, is too well known to the country and is now a part of history, whatever the powers that were at that time might have said or say now. The exercise of powers by the then Governor, disregarding the wishes of the Government directly responsible to the people, in the matter of appointing Vice Chancellors to some of the Universities is another example of arbitrary functioning of the Governor which is totally alien to the very basic concept of democratic functioning of the Government. The very fact that the above could happen, which were legally interpreted as the powers exercised as per Constitution, clearly establish that the present provisions regarding the institution of the Governor in our Constitution are against the democratic spirit of our Constitution and go very much against the Federal/Union set up envisaged in our Constitution. The instances of abuse of powers by the party controlling the Centre through the office of the Governor in almost all the States is too well known and hence the office of the Governor should be abolished as such. For any reason if it is felt that the institution of Governors cannot be totally abolished, then we suggest that the Governor be appointed from among a panel of three names suggested by the States Legislature. Similarly, it should be expressly made clear that all the bills/enactments made by the Legislature need not be sent to the Governor for approval/signature as long as the subject falls within the jurisdiction of the State. Similarly, the present provision empowering the Governor to reserve any bill passed by the Legislature for Presidential acceptance should be totally removed as long as the subject on which the enactment was made, falls within the jurisdiction of the State.

2. Distribution of powers between the State and the Centre

The power conferred on the States to make legislation on the subjects mentioned in List II of the Seventh Schedule should be absolute. Some of the subjects listed in List III of the Seventh Schedule like Administration of justice, Constitution and organisation of all Courts excep's Supreme Court, Forests, Education, Internal trade and commerce and Electricity should be transferred from List III to List II. This would enlarge the avenues for mobilising resources by the State Government and for developing the State. This is very vital for our State's development.

3. Financial Relations

At present, the powers to raise finances through raising loans from the internal market, from foreign countries and through deficit financing are totally controlled by the Centre and are unlimited. Similarly, the avenues for imposing taxes are more concentrated in the Centre making the State Governments to be always at the receiving and for day to day maintenance and development. Due to the deficit financing and market borrowings, the impact is felt by the State through rise in prices for all the articles forcing the State Government to grant enhancement in the D.As. from time to time and to spend more towards not only for its day to day administration but also towards developmental activities. Against this situation, the State Governments have to take approval and

have to limit the borrowing to the quotas fixed by the Centre so much so that the pace of development and size of the plans are dictated by the Central Government :—

The share of Andhra Pradesh in the net market borrowings (data next page) is gradually decreasing from plan to plan forcing it to curtail its developmental activities including construction of irrigation projects.

Share of Net Market borrowings of A.P. in the total Central borrowings

Period	Total Central borrowings (Rs. in crores)	All States share (%)	Share of A. P. Amount (Rs. in crores)	% in total Central net borrowing
1. Third Plan 1961-62 to 1965-66.	838.86	49.6	43.77	5.217
2. Annual Plan 1966-67 to 1968-69	481.38	47.8	19.73	4.098
3. Fourth Plan 1969-70 to 1973-74	2,130.89	27.2	46.54	2.184
4. Fifth Plan 1974-75 to 1977-78	3,821.21	22.4	72.70	1.902
5. Annual Plan 1978-79 to 1979-80	3,981.31	9.5	26.23	0.658
6. Sixth Plan 1980-81 to 1984-85	14,766.27	10.2	278.77	1.887

Similarly, the share of the States in the total developmental expenditure in the country has decreased over the years after independence. It has decreased from 75.4% during the First Five-Year Plan to 60.5% during the Sixth Five-Year Plan. The total transfers of the Central receipts decreased from 36.4% during First Five-Year Plan to 32.5% during Sixth Five-Year Plan. The decrease was more spectacular in case of Central loans given to the States from the Central Capital Account inclusive of deficit financing. It decreased from 61.5% during the First Five-Year Plan to mere 27.1% during the Sixth Five-Year Plan. This is more painful. That the Central is resorting to substantial transfers to the State through discretionary grants can be seen from the data presented below :

Period	Statutory Transfer Rs. crores (%)	Discretional transfers Rs. crores (%)
1951-56	447 (31.2)	634 (44.3)
1956-61	1918 (32.0)	892 (31.1)
1961-66	1,590 (28 4)	1,495 (26.7)
1966-69	1,782 (33.3)	1,798 (33.6)
1969-74	5,421 (35.9)	6,145 (40.7)
1974-79	11,168 (44.2)	6,357 (25.1)
1979-84	22,757 (43.1)	14,703 (26.9)
Total 1951—84	44,083 (40.7)	31,524 (29.1)

Ref : (i) For the periods 1951-1979 report of Seventh Finance Commission (1978).

Ref : (ii) For 1979-84, Finances of State Governments, R.B. I. Bulletins.

From the above, it could be seen that discretionary grants of the Centre to the States is very substantial and is almost as much as of the Plan transfers. Transfer of such large amounts through discretionary grants is leading to political discrimination of the States and regional imbalances. For example, special assistance for the development of hill regions in U.P. is given by the Centre but no such assistance is given to our State for developing the chronically drought affected areas. Therefore, the discretionary grants should be limited to the extent of meeting unforeseen national calamities and the bulk of the transfers should be converted to statutory grants. Therefore, the financial relations between the State and the Centre should be so redefined that every State, including ours, has a definite share in the market loans raised, in the quantum of deficit financing resorted to, in the incomes received through the administered prices, Central Surcharges and in the total Central revenues commensurate with the responsibilities assigned to the State.

4. Planning and Financing the Plans

Due to the exclusive powers vested in the Centre and exercised through the Planning Commission, the Seventh Five-Year Plan prepared by our State Government was pruned from over Rupees seven thousand crores to just Rupees five thousand one hundred crores. The approved Plan outlay is grossly inadequate to meet the requirements of the people. Though the Planning Commission has no specific provision in the Constitution it is having overwhelming influence on the development of the State. Therefore, there is a necessity to make adequate and specific provision in the Constitution such that the planning process and fixation of priorities starts from the grass root level, finalised by the State and approved at the national level. Such a step will enable the State to develop planning in the right perspective, which is more need-based and which also involves direct people's participation both while planning and implementation. Similarly, the State should be given adequate powers to generate necessary funds for the Plan proposed by it.

5. Agriculture, Price fixation for Agricultural commodities and Food Grain Trade

Though agriculture has been included under the State subjects, the factors governing the economy of agriculturists and agricultural development are totally vested with the Centre at present. This policy has not only curbed the development of agriculture in our State but also has very badly affected the economy of the agriculturists and of our State. Our State has no say in the fixation of prices for agricultural products and also in the food grain trade both within the State and outside. Similarly, our State is not empowered to procure adequate quantity of food grains for public distribution system and other welfare programmes. For example, our State enjoys pre-eminent position in the matter of producing tobacco, castor, cotton, foodgrains etc. The trade of tobacco, castor and cotton is totally controlled by monopolists and the farmers are forced to sell at the prices fixed by

them, notwithstanding the entry of Central Corporations at times of distress. Similarly the procurement price for food grains is fixed based on the bulk production costs rather than the conditions obtaining within the State. Due to this the farmers of our State are put to loss and the State also is losing the base for raising necessary finances for its own planning. Therefore, specific provisions should be made in the Constitution empowering the States to constitute bureaus for computing the cost of production and for fixing the selling price for the agricultural products of the State. The State should be made the sole purchasing agency for the agricultural products and it should be allowed to indulge in wholesale trading between the States within the country, after contributing to the Central Pool, and export the surpluses outside the country with the Centre's concurrence.

6. Implementation of construction of irrigation projects as exclusive subject of the State

Central approval for the construction of irrigation projects proposed by our State like Varadarajaswamy Project, Sriram Sagar IInd Phase, Telugu Ganga, Polavaram etc. is pending for years resulting in very steep escalation in the cost of construction imposing heavy burdens on the State exchequer and on the people. Many times the once remunerative projects are becoming unremunerative due to the reduction in the value of money consequent to the fiscal policies of the Central Government (as inflation and administrative prices). Very often, the delays are caused on the plea that some areas of forests will have to be deforested . In all such cases, if the State Government agrees to compensate the area through afforestation, there should not be any objection for undertaking the construction of the Irrigation Projects. Therefore, construction and development of irrigation projects for utilising the quota of water allotted by the Central Water Commission should be included in the exclusive State subjects to avoid delays in their approval.

7. T.Vs and Radios

Mass communication media like Radio and T.Vs are totally controlled by the Centre and the views of the State regarding its policies and developmental programmes generally do not find adequate representation in the daily programmes. This is specially so when the parties in power at the Centre and in the States are different. The past experience also has shown that these mass media are liable to partisan use specially during elections. The right of the State Government to communicate its views to the people through mass media like Radio and T.V. should be constitutionally recognised. To prevent abuse of these media, these should be entrusted to autonomous corporations charging with the responsibility to give only factual information. Time in these media should be allotted to the States for conveying their views and their developmental programmes.

8. Dispensing with the posting of central services personnel for the State's posts

At present, IAS and IPS Officers of the Central Cadre are being posted to the State's posts and the State has no control over them. The Central Government, on the other hand, has direct control over them and through them on the State's administration. For example, the Government of A.P. has recently suspended some IAS/IPS Officers on corruption charges and abuse of office but the Central Government reinstated them. This has very badly affected the State Government to curb corruption in day to day administration.

Therefore, posting of Central Cadres like IAS/IPS Officers to the State's posts should be abolished. Central Cadre and State's Cadre posts should be filled only by their respective cadre employees and the Centre should not have any control over State Cadre employees or vice-versa. A specific provision should be made in our Constitution keeping the above in view.

9. National Development Council (NDC)

National Development Council, on which both the Centre and the States are represented, should find a specific provision in our Constitution. The Planning Commission, which is charged with the responsibility of formulating priorities, finding resources for development etc., should function under the direct control of the N.D.C. Such a step will make the involvement of the different States in the country's development, both while fixing plan priorities, raising resources etc. for development, more fruitful and effective.

We request, on behalf of our Party, to consider the above while finalising the recommendations on the changes needed in our Constitution so that we can achieve the full objectives of Federal/Union set up envisaged in our Constitution.

INDIAN NATIONAL CONGRESS

(All India Congress Committee(I))

MEMORANDUM

The Government of India has constituted a Commission of Centre-State Relations, generally known as Sarkaria Commission. The following are the terms of reference :—

"1. The Commission will examine and review the working of the existing arrangements between the Union and States in regard to powers, functions and responsibilities in all spheres and recommend such changes or other measures as may be appropriate.

2. In examining and reviewing the working of the existing arrangements between the Union and States and making recommendations as to the changes and measures needed, the Commission will keep in view the social and economic developments that have taken place over the years and have due regard to the scheme and framework of the Constitution which the founding fathers have so sedulously designed to protect the independence and ensure the unity and integrity of the country which is paramount importance for promoting the welfare of the people".

The intention of this Paper is to submit to the Commission the views of the AICC(I) in this regard.

The Sarkaria Commission in its questionnaire has divided the entire issue of Centre-State Relations into seven parts. These are :—

I. Introductory (Essentially questions on Federalism and connected matters).

II. Legislative Relations.

III. Role of Governor.

IV. Administrative Relations.

V. Financial Relations.

VI. Economic & Social Planning.

VII. Miscellaneous; under this Part, there are six sub-paras :—

(i) Industry

(ii) Trade & Commerce

(iii) Agriculture

(iv) Food & Civil Supplies

(v) Education

(vi) Inter-Governmental Coordination.

For the purpose of this Memorandum, it is proposed to follow the same division to put forth the views of the AICC.

PART I

INTRODUCTION

Any comprehensive review of the working of the Constitution with specific reference to the existing arrangement between the Union and the States in regard to powers, functions and responsibilities in all spheres must, of necessary, begin with a historic perspective and evaluation of the factors, circumstances, strains, pulls and pressures that ultimately led to the present structure enshrined in the Constitution.

From very early times under Ashok and Harsha Vardhan to the Moghuls and till 1857, India had monarchical States and even when the writ of the Central Government ran through the length and breadth of the country, the political structure was monarchical in character. On the advent of the British power, the Crown represented the central political authority and those parts of the country which came under the direct administration of the Crown were demarcated as separate units of administration. The Crown represented by the Viceroy was the fountain source of all power and the province under a Governor was the unit of admission. Briefly stated, the political structure was unitary and the concept of a federal structure was not known.

On the formation of the Indian National Congress under the inspiring leadership of a Britisher Oliver Home, a movement started for demanding greater share in the Governance of the country. The Indian Councils Act, 1861 and 1892 introduced a grain of popular element in so far as it provided that the Governor-General's Executive Council which was all along composed exclusively of officials, should include certain additional non-official members, while transacting legislative business as a Legislative Council. All the Members of the Council were nominated. The Indian Councils Act, 1892 had as its object an attempt "to widen the basis and expand the functions of the Government of India, and to give further opportunities to the non-official and native elements in Indian Society to take part in the work of the Government." The Indian Councils Act, 1909, enacted to give concrete form to the Morley-Minto Report, provided the first concrete step in introducing a representative popular element. It is unnecessary to go into its details here. The Government of India Act, 1912 and 1915 were in the nature of consolidating or amending, without giving much substantive advance or change in the constitutional structure. The administration remained wholly unitary. The Montague-Chelmsford Report (1918), for the first time, envisioned a federal pattern for the governance of this vast subcontinent. As an aftermath of the First World War and the Indian National Congress coming out of the control of the moderates along with the emergence of Mahatma Gandhi on the political scene, the British Government called for a report from the then Secretary of State for India and the Viceroy for taking further steps towards giving increased opportunities to the Indians in the governance of the country. The British Government made a declaration on August 20, 1917 that the policy of His Majesty's Government was that of :

> "Increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to progressive realisation of a responsible government in British India as an integral Part of the British Empire".

This led to the enactment of the Government of India Act, 1919. The importance of the Act of 1919 amongst the landmarks in the pre-Constitution development of the political system in India may be best explained in the words of the Royal Proclamation made by His Majesty George V in 1919 by which the enactment of the Act of 1919 was announced :

> "Another epoch has been reached today in the annals of India. I have given my Royal assent to an Act which will take its place among the great historic measures passed by Parliament of this realm for the better Government of India and for the greater contentment of her people. The Acts of 1773 and 1784 were designed to establish a regular system of administration and justice under the Hon'ble East India Company. The Act of 1858 transferred the administration from the Company to the Crown and laid the foundations of public life which exist in India Today. The act of 1861 sowed the seeds of representative institutions; and the seed was quickened into life by the Act of 1909. The Act which has now become law entrusts elected representatives of the people with a definite share in Government and points the way to full representative government hereafter".

It is necessary to briefly refer to the main features of the system introduced by the 1919 Act. While introducing Dyarchy in the Provinces, without imparing the responsibility of the Governor (and through him of the Governor-General) for the administration of the Provinces, responsible government was sought to be introduced. The subjects of administration were divided into two categories; Central and Provincial. The Central subjects were those which were exclusively kept under the control of the Central Government. The provincial subjects were sub-divided into 'transferred' and 'reserved' subjects. The 'transferred subjects' were to be administered by the Governor with the aid of Ministers responsible to the Legislative Council in which the proportion of elected members was raised to 70 per cent. The germ of responsible government was thus sown in the limited sphere of 'transferred subjects', to the extent of the subjects of administration designed as provincial as set out in the Devaluation Rules. The Central control over the Provinces not only in administration but also in legislative and financial matters was relaxed. Even the sources of revenue were divided into two categories so that the Provinces could run the administration with the aid of revenues raised by themselves and for this purpose, the provincial budgets were separated from the Government of India and the Provincial Legislature was empowered to present its own budget and levy its own taxes relating to the provincial sources of revenue.

Here one may be tempted to say that this arrangement marked the beginning of a quasi-federal structure. But that would not be correct because the Provinces get power not by the Constitution Act, 1919 but by way of delegation from the Centre under the Devoluation Rules framed under the 1919 Act. The Central Legislature retained power to legislate for the whole of India, relating to any subject, and it was subject to such paramount power of the Central Legislature that the Provincial Legislature got the power "to make laws for the peace and good government of the territories for the time being constituting that province". The Unitary structure with the Governor-General at the apex was retained by providing that a Provincial Bill, even though assented to by the Governor, would not become law unless assented to also by the Governor-General. It would, therefore, appear that while under the 1919 Act the unitary character of the political structure remained intact, the Montague-Chelmsford Report probably pointed the direction to some distant dream of a federal polity. The Report specifically stated that 'the conditions for a federation did not then exist because the Provinces of India were not self-governing States which could surrender certtain powers to a federal government (1).

The aftermath of the Rawlatt Act and the conviction and incarceration of Mahatma Gandhi under Sec. 124A, a prince amongst the political sections of Indian Penal Code, and the barbarous sentence of six years RI imposed upon him in the wake of which the non-cooperation movement was started, led to a country-wide stir for Home Rule. This forced the British Government to appoint a Statutory Commission as envisaged by Sec. 84A of the GOI Act, 1919, to enquire into and report on the working of the Act and to announce that Dominion Status was the goal of Indian political developments. The notorious all-white Simon Commission, condemned in advance by all politically conscious sections of the society, visited India. To make the bitter pill sweet, it was announced in 1929 that Dominion Status was the goal of Indian political developments. The Commission submitted its report in 1930. It was for the first time that the new political society sought to be set up was expected to include all monarchical Indian Princely States owing allegiance to the British Crown and subject to its suzerainty. The British Government convened a Round Table Conference to consider the report of the Simon Commission. The delegates of the British Government and of British India and the Indian States participated in the deliberations of the Conference. A White-paper drawn-up on the deliberations of the Conference was examined by the Joint Select Committee of the British Parliament and the Government of India Bill was drafted in accordance with the recommendations of the Committee, and passed, with certain amendments, as Government of India Act, 1935.

At this stage it would be advantageous to focus attention on the main features of the GOI Act, 1935. It made a bold departure inasmuch as in place of the unitary structure of the Indian polity, the Act prescribed a Federation, treating the Provinces and the Princely States as units of the Federation. The Joint Parliamentary Committee noticed that:

> "A unitary and centralised government with the Governor General in Council as the key-stone of the whole constitutional edifice; and it is through the Governor-General in Council that the Secretary of State and ultimately Parliament discharge their responsibilities for the peace, order and good government of India."

A federal structure envisaged under the Act necessitated the breaking-up of the unitary State into a number of autonomous Provinces which were to derive their authority directly from the Crown instead of from the Central Government as under the previous system, and then building them up into a federal structure, in which both the Federal and Provincial Governments should get definitely demarcated powers by direct delegation from the Crown. The hurdle in the way of federal structure coming into existence was the expectation that it was optional for the princely States to join the Federation. The expected consent never came forth. Even though the federal part of the polity never came into existence, the part relating to provincial autonomy was put into operation, effective from 1st April, 1937. Some of the dubious features of the scheme need not detain us for further consideration, as they are irrelevant to the present submissions. But one important feature must be noticed and that is the division of powers between the Centre and the Provinces, because the Constitution of India largely adopts the same division.

(1) Para 120, page 78 of the report quoted by H M. Secsvai in Constitutional Law of India, 3rd edition, Vol. 1.

There were three divisions namely: (1) Federal List, (2) The Provincial List and (3) Concurrent List. As far as the allocation of the residuary power of the legislation is concerned, there is the unique provision, nowhere to be found in any other part of the world, in that this power was vested neither in the Central nor in the Provincial Legislature, but the Governor-General was empowered to authorise either the Federal or the Provincial Legislature to enact a law with respect to any matter which was not enumerated in the Legislative List. The developments subsequent to the introduction of the Provincial part of the Federal structure in the 1935 Act have a bearing on certain aspects of the Constitutional framework with which we are concerned.

India was dragged into the Second World War against its will by the decision of the Governor-General as representing the Crown. As a first consequence, the Congress called upon all Congress Ministries in the Provinces wherein they were in power, to resign and also simultaneously called upon the members of the Central Legislative Assembly to refrain from attending the next session of the Assembly. Thereafter, the Congress Working Committee invited the British Government to declare in unequivocal terms what their war ends were in regard to democracy and how those ends were to apply to India and to be given effect to immediately. The Governor-General deferred any further political advance on the specious plea of disagreement between the major communities. This has reference to the demand of the Muslim League for a separate State styled as Pakistan.

After the "victory in Europe day", there was general election in Britain which had an unexpected out-come of the Labour Party forming the Government under Mr. Attlee. A white-paper was published on June 14, 1945 with a view to breaking the political deadlock in India. However, while clarifying the British position, the then Governor-General said that it is not the intention of the Government to introduce any change contrary to the wishes of the major Indian communities. This diabolical approach gave a veto to the Muslim League which was bent upon the vivisection of the country. Soon followed a Cabinet Mission headed by Sir Pethick-Lawrence, the then Secretary of State for India. In the plan put forward by the Cabinet Mission, the advance over the past position was that India was to choose what will be her Constitution, what will be her position in the world and the British Government would make the transition as smooth and as easy as possible. Before the Cabinet Mission, the Muslim League firmly submitted that unless the long term question associated with the setting up of the Constitution-making machinery was settled, it could not discuss the composition of the interim Government. There was a slight ambivalence in the approach of the Indian National Congress in that it swayed in favour of a unitary polity but argued for a federal India while the Muslim League insisted upon the vivisection of the country. The Cabinet Mission plan failed. Prime Minister Attlee made a statement in the House of Commons in which the demand for Pakistan was rejected in no uncertain terms on administrative, economic, military, geographical and statistical grounds. In terms, he said that the Government is unable to advise that "the power which at present resides in British hands should be handed over to two entirely separate sovereign States (of Hindustan and Pakistan)" [2]. One hoped that the demand for the vivisection of the country was thereby disposed of for good.

Leaving aside the transitional developments leading to the independence of the country, accompanied by the painful partition, only two developments in the interregnum worthy of note may be mentioned. To avoid at all costs the partition of this land, a proposal for a loose confederation was mooted, with only four legislative heads reserved for the Centre, namely: (1) Foreign Affairs, (2) Defence, (3) Communications and (4) Currency, the rest of all legislative power including non-enumerated residuary power to be given to the States/Provinces. This was how the Muslim League was sought to be appeased. The Indian National Congress on the other hand wanted a strong centre with a federal structure and the residuary legislative power with the Union. The native States were expected to join the Union on these terms. The choice was between parting company and a loose confederation or a federation with a strong Centre. Ultimately, the country was divided. All accommodation sought to be given to the Muslim League by setting up a loose confederation lost relevance. This was the situation that emerged on August 15, 1947. This historical background had its hang-over on the Constituent Assembly which proceeded to frame a Constitution for India *i.e.* Bharat.

Let us first concentrate on the theoretical aspect as to whether conditions germane to the setting up of a federal polity were in existence when the Constituent Assembly, largely emulating the GOI Act of 1935, proceeded to provide for a federal structure. A federal polity involves a dual system of government. 'Confederation' means 'an association of States who agree to limit the exercise of their sovereignty in order to assist in the achievement of a common objective, but who do not permit any direct contact between the organs of the association and their citizens. Prof. Dicey says: "condition absolutely essential to the founding of a federal system is the existence of a very peculiar State of sentiment amongst the inhabitants of the countries which it is proposed to unite. They must desire Union and must not desire unity [3]. The aim of Federation is 'to reconcile national unity and power with the maintenance of 'State rights,' [4]. The distinction between a Confederation and Federation need not be lost sight of because in the former, only the State Governments operate directly upon the people and the Central Government acts through the State Governments while under Federation, both Central and regional Governments operate directly upon the people.

(2) Parliamentary Debates, House of Commons, Vol. 422, Col. 2113.

(3) See Dicey's Introduction to the study of the Law of the Constitution, tenth edition, 1973, Page 141.

(4) Ibid page 143.

Prof. K. C. Wheare had defined the federal principle to mean 'the method of dividing powers so that the general and regional governments are each within its sphere coordinate and independent' ([5]). After applying this test, he was of the opinion that large number of so called federations are quasi-federations. Shri Anirudh Prasad described this as a traditional approach ([6]). According to him, this traditional or classical approach has obvious limitations in that it ignores compulsions of socio-economic forces operating in the modern era which have not left unmoulded even the traditional federations of Prof. Wheare such as United States, Canada and Australia and Switzerland. The modern approach according to him is to get solutions to the national and regional problems of the federating countries for which the traditional approach of independence in the mutual relationship of the States and the national government would have been too unrealistic to be followed in the present age of inter-dependence. The modern writers assert that 'federal system of Government is one in which there is a division of powers between one general and several regional authorities, each of which in its own sphere, is coordinate with each other' ([7]). Prof. Sawer on the other hand asserts 'that it is necessary to inquired whether a federal situation existed in a country before it adopted a federal constitution. Writing of India, he said: 'The sub-continent of India was another area which by reason of size, population regional (including linguistic) differences and communication problems presented an obvious federal situation, if not the possibility of several distinct Nations" ([8]).

The question that must be posed is whether at the time the Constituent Assembly proceeded to forge a Constitution for India, keeping in view the hopes and aspirations generated during the war of independence, whether a federal situation existed in India at the relevant time? History is replete with concrete instances where in order to meet with the second condition, namely, that the separate States desired union and not unity, a federation was formed by breaking unitary States into several States and then to unite them together under a federation. To revert to our own history and experience, upto and inclusive of the GOI Act, 1919, the Indian political entity was highly centralised and unitary in character. The Simon Commission, probably with a view to applying brakes on Jawaharlal Nehru's outspoken insistence on complete independence and limiting the scope of the matter to Dominion status, recommended the inclusion of a new factor viz. the princely States in the Union. This was calculated to induct all element which would blindly support the British Government. Accordingly, under the Government of India Act 1935 a federal polity as devised. Faculty, provinces which were units of administration of a centralised unitary State, were broken up and redesignated as States to provide for such independent States getting ready to merge in a federation. This was a device and not a position obtaining. Writers on Constitutional Law including Mr. H. M. Seervai has wrongly asserted that the federal situation existed in British India, that all the parties involved desired a federal solution and that therefore, the Constituent Assembly devised a federal structure ([9]). Indeed with the creation of Pakistan and the abolition of the native States, whatever justification had existed for a loose federation disappeared.

It is against this historical backdrop leading to the adoption of the Constitution that the whole gamut of Centre-State relations must be examined. Normally speaking, in a federation, the independent States which desire union but not unity, shed a part of their sovereignty to set up a Central authority, retaining all the residuary powers with themselves. We had to break up the unitary structure to create States which as provinces had enjoyed only delegated powers of administration. It is erroneous to state that they shed any part of sovereignty in order to set up a federation; they just did not have any sovereignty. Truly speaking, the Centre had all the powers concentrated in the unitary form and parted with some powers in favour of provinces being converted into States. Princely States were historical anachronisms. They were feudal ligarchies and as such, had hardly any place in modern India. By an astute political device, they were merged; no tears were shed for their extinction. But their existence at the time of the framing of the Constitution provided a semblance of a political legal situation for a federal structure.

The lessons learnt during the war of independence, the consequence of vivisection of the country, the Hyderabad imbroglio and several other events taught us the hard lesson that our political structure should have a strong Centre. Giving up the traditional system of drawing up two lists of powers, one for the Centre and other for the States, we followed the precedent in GOI Act, 1935 and drew up three lists but the ambivalence about the residuary power was done away with when it was given to the Centre. Rejecting the concept of a loose confederation by giving legislative power to the Centre in respect of four topics only, we have drawn-up a long list of 96 legislative heads reserved in favour of the Centre, and 66 heads in favour of the States and in addition, 47 heads in the Concurrent List. In respect of the legislative entries in the Concurrent List, both the Parliament and the State Legislature can make laws, but even here, supremacy of Parliament is established by providing in Art. 254 of the Constitution that in the event of inconsistency between the laws made by the State Legislature and the Parliament, the latter will prevail and to the extent of repugnancy the former would be void. Even in such exhaustive lists being drawn-up, the residuary power of making laws vests in the Parliament. Therefore, the conclusion is inescapable that the framers of the Constitution provided for a strong Centre with State autonomy as demarcated in and deriving from, the Constitution.

There is one more piece of evidence to sustain this conclusion in the Constitution itself. Provisions contained in Part XVIII of the Constitution headed as 'Emergency Provisions' clearly indicated a strong Centre, and such a provision is inconsistent with a traditional federal principle.

Before going into details it will be relevant to start with the Preamble of the Constitution itself, the relevant portion of which is reproduced below :—

"We, the people of India, having solemnly resolved to constitute India into a sovereign socialist, secular democratic Republic and to secure to all citizens fraternity assuring the dignity of the individual and the unity and integrity of the Nation".

The words "socialist secular" were introduced by the Constitution (42nd Amendment) Act, 1976 and words "and integrity" (in the latter part) were also introduced by the same. Going into the pre-amendment situation, the Preamble as passed by the Constituent Assembly contemplated a "sovereign democratic Republic" assuring the "unity of the Nation". Subsequent events obviously made it imperative for the Parliament to make it abundantly clear (though the position was never in doubt or dispute) that the sovereign democratic Republic is also socialist and secular in nature and also to make it clear that the Constitution is concerned not only with the unity of the Nation but also with its integrity.

The Preamble makes it abundantly clear that the Founding Fathers wanted a democratic Republic which is sovereign and also wanted to ensure the unity of the Nation. The men who were members of the Constituent Assembly envisaged India as a sovereign democratic Republic of a United Nation.

The very first Article of the Constitution envisages a Nation which is a Union of States. Even though they contemplated a democratic Republic in the Preamble, they have very advisedly avoided the use of the word 'federation' anywhere in the entire Constitution. This avoidance—obviously deliberate—of the word 'federation' is presumbaly due to the fact that there is no situation here of a number of States surrendering a part of their powers to the Centre in the common interest, as was the case in several federations of the world.

The Indian Constituent Assembly has constituted a Committee for the Union Powers under the Chairmanship of Pt. Jawahar Lal Nehru. In the Report of the Committee dated 5th July, 1947, addressed to the President of the Constituent Assembly, Pt. Jawahar Lal Nehru *inter alia* stated as follows :

"Now that the partition is a settled fact, we are unanimously of the view that it will be injurious to the interest of the country to provide for a weak central authority which will be incapable of keeping peace, or ensuring peace, or coordinating vital matters of common concern or speaking effectively for the whole country in the international spheres. At the same time, we are quite clear in our minds that there are many matters for which authority must lie solely with the units and that to frame a constitution on the basis of a unitary State would be a retrograde step, both politically and administratively. We have accordingly come to the conclusion—conclusion which was also reached by the Union Constitution Committee—that the soundest framework of our Constitution is a federation with a strong Centre. In the matters of distributing powers between Centre and the Units, within that the most satisfactory arrangement is to draw up three exhaustive lists on the lines followed in Government of India, Act, 1935, viz., federal, provincial and the concurrent. We have prepared three Lists accordingly and these are shown in the Appendix.

We think that residuary powers should remain with the Centre. In view, however, of the exhaustive nature of the three lists drawn by us, the residuary subjects could only relate to matters which, while they may claim recognition in the future, are not at present identificable and cannot, therefore, be included now in the Lists."

The above report of the Union Powers Committee was discused by the Constituent Assembly alongwith the reports of many other Committees involved in the framing of the Constitution. The present Constitution is a result of all those discussions and decisions arrived at by the Founding Fathers.

For the first 17 years, after the Constitution came into force, the Centre as well as almost all the States were ruled by governments formed by the Congress Party, then predominantly in power throughout the country. Therefore, any dispute between the Centre and State invariably used to be settled across the table at the Party level and these disputes never came in the form of Centre-State problems. This was mainly possible because of the outstanding personality and knowledged leadership of Pt. Jawahar Lal Nehru. It was after the life time of Pt. Jawahar Lal Nehru that in addition to one State during his life-time, a few more States immediately also elected parties other than the Congres to form the Gvernment. But those governments did not last long.

Subsequently, there was a split in the Congress Party. Those who challenged the policies adumbrated by the Prime Minister, Smt. Indira Gandhi, left the fold and contested the 1971 elections as a separate party, although with the same name. The results of 1971 proved beyond doubt that Smt. Indira Gandhi's leadership had the overwhelming support of the people. Then followed Bangladesh which underscored her greatness as a leader of unrivalled calibre and vision.

Events, however, took a different turn when those rejected at the polls took to the politics of the street and created, in State after State, situations wherein the Government could not be carried on in accordance with the provisions of the Constitution in the normal course and the pledges given to the people could not be redeemed under the requisite conditions of peace and order. An Emergency

was declared to meet the situation. While the intended purpose of the Emergency was achieved, some aberrations of the period resulted in the Government of a new Party being installed at the Centre in 1977. The spectre of instability became a reality when the Janata Party Government feel halfway through its term. Once stability was restored at the Centre and several States in 1980, the defeated forces took to the streets once again, especially in Punjab. The Akali Dal raised untenable and unconstitutional demands, which had the effect of putting a premium on secessionism taking recourse to extremism and employing the methods of terrorism. Subsequent developments leading to 'Operation Blue Star', consequent assassination and martyrdom of Smt. Indira Gandhi, the general elections that brought about the reestablishment of stability at the Centre, are recent events and need no further explanation.

The brief resume given in the foregoing paragraph gives a bare chronology of important events. But it can be no means provide even a bare outline of the trials and tribulations the country went through in that long fifteen year period. Nor does it describe, in any detail or with specificity, any of the numerous situations where our strong and stable Centre alone actually succeeded in preventing disintegration of the country; nothing else could have succeeded. Suffice it to say that these events have proved, again and again, that India's unity and integrity cannot be taken for granted and that therefore, the strength of the Centre cannot and should not be diluted in any manner whatsoever at any time in the foreseeable future.

The "strength" of the Centre, however, is not a static concept. What is considered adequate "strength" at a given time may well fall short of the needs thrown up at another time. "Strength", therefore, should be taken as a function of effectiveness. Any fresh power calculated to ensure the continued effectiveness of the Centre should not be looked upon either as unwarranted assumption of more power by the Centre, as such, or as erosion of the power of the States. The very attitude of looking at the question in terms of Centre vs States is untenable. The right approach would be to look upon the Centre and the States as partners and the division of powers as the modus to get the multifaceted functions of Government performed by the appropriate Constitutional agency.

There are several areas in which the inadequacy of the Centre's existing powers has been demonstrated in recent years. Law and order problems, particularly in the context of communal or sectarian clashes have underscored the limitations of local law-enforcing agencies. This is nobody's fault; in fact despite the limitations, those agencies have done their best. But our overall experience in this respect is enough to bring out existing inadequacies and the need to empower the Central Government to take more effective steps to meet the said situations whose complexity is, if anything, expected to increase, given the determined efforts of disruptionist forces operating within the country under various guises and destablishing forces operating from abroad. The point to be remembered is that by such empowerment of the Centre, the States would lose nothing, while if no such steps are taken, the nation's unity and secular character could be imperilled. Inter-State crime, terrorism, drug and other smuggling operations and economic offences, tensions in bi-lingual and multilingual areas and areas close to our international borders, Citizenship, collation of vital statistics at the national level, control of communicable diseases, national system of education with particular reference to a common core curriculum, educational institutions of high excellence at the national level etc. etc. are some of the numerous items which will require Central intervention in an increasing degree and for which the adequacy of powers as available to the Centre at present would need to be examined.

USA, Canada and Australia are having strong Centres. Judicial pronouncements in these countries have strengthened the Centre to the maximum extent. Separate short notes are attached at Appendices A, B & C about the position in these countries.

We have a very long border to protect on the West, North and the East (including Bangla Desh). Even though our policy is one of non-alignment and peaceful co-existence, the latter has not always been reciprocated from the other side of the border. Past events clearly and unequivocally compel continued vigilance and preparedness for which a strong Centre with adequate powers is indispensable.

Under Article 355, it is the duty of the Nation to protect the States against external aggression internal disturbance. Sufficient powers have to be vested in the Centre to discharge this obligation.

Any review of Centre-State Relations under various heads must, of necessity, keep in view the historic evolution of the present polity, the experiences of the war of independence, the wisdom of the Founding Fathers, the present visible fissiparous tendencies and the numerous serious challenges to our unity and integrity. The review has to be in the light of these very relevant considerations, which would evidently brook no weakening of the Centre.

A list of important Articles and incidental subjects relating to Centre-State relations is placed below at Appendix 'D'.

Judicial Pronouncements

There has always been a debate whether our is really a federal structure *stricto sensu* or it is a unique constitutional document not inhibited by traditional concept of federalism, designed to meet our requirements of governing a sub-contient with diverse cultures and languages all seeking unity in diversity.

Let us look at this aspect from the vantage point of courts. In state of West Bengal vs. Union of India (10), the plaintiff, the State of West Bengal sought a declaration that the Parliament is not competent to make a law authorising

(10) (1964) 1 SCR 375

the Union Government to acquire land and rights in or over land which are vested in a State, and that the Coal Bearing Areas (Acquisition and Development) Act, 1957 and in particular Section 4 and 7 thereof were *ultra vires* the legislative competence of Parliament and for a consequential relief. One of the contentions canvased before the Court was (Bench consisting of Seven Judges) that the constitution having adopted the federal principle of Government, the States share the sovereignty of the nation with the Union, and therefore, power of the Parliament does not extend to enacting legislation for depriving the States of property vested in them as sovereign authority. This contention necessitated the examination of the true character of federal policy. It was observed that the Indian sub-continent comprised a territory too much for a democratic set up with wholly centralised form of Government. Decentralisation of power for effective governance being must, the federal polity was conceived. There was also a problem of Indian States, which were in a sense sovereign. Then came the observation that "the Constitution of India was erected on the foundations of the Government of India Act, 1935; the basic structure was not altered in many important matters, and a large number of provisions were incorporated verbatim from the earlier Constitution". After having noticed that it was essential for the transformation of the nation from the backward to the developed State, greater degree of economic unity would be required to be secured and accordingly subjects having an impact on matters of common interest were transferred to the Union List. It was then asserted that the result of this exercise was a Constitution which was not true to any traditional pattern of federation. There is no warrant for the assumption that the provinces were sovereign, autonomous units which have parted with such power as they considered reasonable or proper for enabling the Central Government to function for the common good. The legal theory on which the Constitution was based was the withdrawal or resumption of all the powers of sovereignity into the people of this country and the distribution of these powers, save those withheld from both the Union and the States by reason of the provisions of Part III — between Union and the States. Our Constitution differs from the traditional form of federation especially (1) in the matter of surrendering or parting their sovereignty by the independent sovereign units for their common interest and vesting it in the Union and retaining the residue of the authority in the constituent units; (2) supremacy of the Constitution which cannot be altered except by the constituent units (see Article 368 and the entrenched clause): (3) distribution of powers between the Union and the regional units each in its sphere guaranteed and independent of the other; yet there is a departure in Part XVIII of the Constitution (Emergency Provisions); and (4) the constituent units and the Centre do not have their own separate and independent judiciary for enforcement of their laws (e.g. Federal and State Judiciary). We have provided one uniform Judiciary for State and Central laws. Subba Rao, Justice, in his minority judgement does accept that the Indian Constitution accepts the federal concept and distributes the sovereign powers between coordinate constitutional entities, namely, the Union and the States. However, he has not pointed out the distinguishing features of our federal polity with the traditional federations as set out in the majority judgement.

In the State of Rajasthan & Others *vs.* Union of India etc. [11] the court (7 Judges Bench) made certain observations about the nature of our federation. M.H. Beg, Chief Justice observed that : 'a conspectus of the provisions of our Constitution will indicate that, whatever appearances of a federal structure our Constitution may have, its operations are certainly, judged both by the content of power which a number of its provisions carry with them and the use that has been made of them, more unitary than federal'. After referring to Dicey's classical postulate for a federal principle, it was observed that 'if the special needs of our country to have political coherence, national integration, and planned economic development of all parts of the country, so as to build a welfare State where Justice, social, economic and political are to prevail and rapid strides are to be taken towards fulfilling the other noble aspirations set out in the Preamble, a strong Centre seems inevitable. It is the Country's need. That at any rate, seems to be the basic assumption behind a number of our constitutional provisions." The statement of Dr. Ambedkar was recalled that our Constitution is to be both unitary as well as federal according to the requirements of times and circumstances. Number of provisions may be referred to with special reference to Article 365 which provides that 'where any State has failed to comply with, or to give effect to, any directions given in the exercise of the executive power of the Union under any of the provisions of the Constitution it shall be lawful for the President to hold that a situation has arised in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution', which would bring into operation immediately the power set out in Part XVIII of the Constitution to issue a proclamation of emergency. Shorn of embellishment, the polity structurable is unitary clothed in the garments of federalism.

In State of Karnataka *vs.* Union of India [12] (7 Judges Bench) two compositions were laid down which have relevance to the present submissions. Beg, Chief Justice observed that the unitary character of the polity is discernible from the fact that there is no question of dual citizenship. The Union of India, acting through the Central Government, could be said to represent the whole of the people of each individual State and their interests. Untwelia, Justice, who was with the minority observed that the Indian Constitution is not federal in character, but has been characterised as quasi-federal in nature.

In Shamsher Singh *vs.* State of Punjab [13] (7 Judges Bench) Krishna Iyer, Justice, in his concurring opinion observed that 'the law of our Constitution is partly scientific but primarily an Indo-Angalian version of the Westminister model

---

(11) (1978) 1 SCR 1.
(12) (1978) 2 SCR 1.
(13) (1975) 1 SCR 814.

with quasi-federal adaptations, historical modifications, geo-political mutations and homespun traditions—basically a blended brew of the British Parliamentary system, and the Government of India Act, 1936, and near-American nomenclature-wise and in some other respects'.

PAR II

LEGISLATIVE RELATIONS

Part II of the questionnaire deals with legislative relations. The Commission has formulated five questions relevant to this subject. The main question is regarding the powers of the Union to encroach upon the legislative field by a declaration that the legislation is in national interest or in public interest. Obviously, the Commission has in mind Article 249 which confers power on the Parliament to make laws with respect to any matter enumerated in the State List subject to the limitation that a resolution to that effect is passed with requisite majority by the Council of States specifying the matter on which legislation is to be enacted as also the territory in which the proposed legislation would operate. It is an incorrect contention of some of the States that Industries (Development & Regulations) Act, 1951 and Mines and Minerals (Regulations and Development) Act, 1957 were enacted in exercise of the power conferred by Art. 249. These two legislations were enacted under Entries 52 and 54 in the Union List which carve out an exception to the Entries 24 and 23 respectively of State List See Ishwari Kheitan Sugar Mills (P) Ltd. v. State of Uttar Pradesh (14), State of Haryana v. Chandan Singh (15), State of West Bengal v. Union of India (16).

Art. 249 envisages a situation where the subject or head of legislation squarely falls in the State List and on the Council of States adopting the requisite resolution, deeming fiction is introduced as an exception to Art. 6(3) inasmuch as Parliament will be able to legislate on a topic reserved in the State List with exclusive power in the State Legislature to make law on that head of legislation. It is not shown during last 35 years that the power conferred by Art. 249 has been exercised to the detriment and disadvantage of any State. No change is called for in this behalf.

The Commission has asked whether any change is necessary in the distribution of powers in the Seventh Schedule or the contents thereof. This has been dealt with under Part I where it has been suggested that the Centre may be armed with more powers for protecting the unity and integrity of the nation and to prevent tendencies to secede including powers to deal with terrorism.

It is not necessary for the Centre to consult the States every time a legislation is undertaken on the subject included in the Concurrent List. If the circumstances permit and the subjects so warrant, the Centre will certainly consult the States concerned and that is the practice even now. But if it is made a constitutional obligation, it may create more problems than it is expected to solve. On the question whether a legislation is in the national interest or public interest on a State subject made by Parliament and whether it should be perpetual or for a particular duration, it can be confidently stated that Sub-Art. 2 of Art. 249 limits its duration to one year with a yearly extension if considered appropriate. There will thus be a continuous and on-going check on the exercise of power every year. This is an inbuilt safeguard against the apprehended misuse of power. The provisions at present contained in Art. 249 are therefore adequate and appropriate. No change is called for.

PART III

ROLE OF THE GOVERNOR

Part III of the Questionnaire deals with the role of Governor. Before going into the question, it is necessary to consider the role of the Governor generally.

The very fact that the Governor has been assigned a number of functions under various provisions of the Constitution makes it abundantly clear that the office of the Governor is indispensable in our set up. Pandit Nehru speaking of the office of the President said that while he is not invested with real power, his position is made one of great authority and dignity. This applies *mutatis mutandis* to the position of the Governor at State level. In Sanjeevi Naidu v. State of Mysore (17) it was observed that: 'all matters excepting those in which the Governor is required to act in his discretion have to be allocated to one or other of the Ministers on the advice of the Chief Minister'. Who would exercise discretionary powers if the office is to be abolished? In Shamsher Singh v. State of Punjab (18) law was declared to the effect that the Governor, though he is a custodian of all executive powers, shall exercise them only upon and in accordance with the advice of the Minister save in the exceptional cases. No argument for the abolition of the office of the Governor can be sound or acceptable because if that office is abolished, there will be a vacuum which will again result in confusion and bad government, creating a lot of problems those including, law and order, in its wake.

Functioning of the Parliamentary type of government necessarily implies and assumes that the Governor acts or exercises his powers on the advice of the Council of Ministers. Even though this is the normal rule, there are certain occasions when the Governor has to exercise his powers in his own discretion—such discretionary powers are either expressed or implied in the provisions of the Constitution. It is necessary for the Governor to do so in order to fulfil his constitutional obligations towards the State and also for the preservation of the unity, integrity and sovereignty of the Nation. The Governor has got the power to select the Chief

(14) (1980) 4 SCC 136

(18) (1975) 1 SCR 814 at 875

Minister under Articles 163 and 164. Under Article 164 he has got the powers to dismiss the Ministry since the Chief Minister and the other Ministers hold office during his pleasure. Article 174(2)(b) empowers the Governor to dissolve the Assembly. Article 167 empowers the Governor to ask information from the Chief Minister relating to certain matters and to ask the Chief Minister to submit certain matters for the consideration of the Council of Ministers. Article 200 empowers the Governor to refuse to give an assent to a bill passed by a legislature and send it back for reconsideration. The same Article empowers the Governor to reserve a bill passed by the State Legislature for assent by the President. Article 213 empowers the governor to seek instructions from the President before promulgating an ordinance dealing with certain matters. Article 356 empowers the Governor to send a report to the President advising Presidential rule.

The above are some of the important functions under various articles of the Constitution which the Governor is duty bound to carry out.

When the Governor exercises his discretionary powers, he is to ensure that he is not exercising the powers arbitrarily. In fact, the powers under Articles 163, 164, 167, 174(2)(b), 200, 213 and 356 make the Governor an indispensable functionary in the administration of the Government of the State and at the same a link between the Centre and the State. In the case of President's Rules under Article 356, he virtually becomes an agent of the President. It is clear from the above that the office of the Governor is indispensable and it is also necessary that the person holding the office must have sufficient maturity, understanding, experience, tact and knowledge of many matters and also the ability to carry a team of Ministers with him keeping the welfare of the people of the State in mind always, with the paramount duty to protect the unity, integrity and sovereignty of the Nation.

It may be mentioned that Articles 256, 257 and 365 may also provide situations where the role of the Governor can assume great dimensions.

In the light of the above, the following answers emerge for the various questions raised under Part III :

3.1 The Governors have so far played their role successfully and satisfactorily in the context of Centre-State relations. Aberrations, if any, are few and far between and can be attributed only to unpredictable human factors.

3.2 The Governor's role should be positive. He must be able to carry his Council of Ministers with him and convince the Chief Minister about the need for a positive attitude towards the Centre keeping in view the progress and prosperity of the State as also the progress and prosperity of the nation as a whole. He should have the paramount consideration of unity, integrity and sovereignty of the Nation.

3.3 (a) A report to the President suggesting action under Article 356(6) must be made by the Governor only if he is unable to find an alternative to the imposition of President's rule. In other words, action under Article 356(1) must be the last resort. Here the tact, maturity and experience of the Governor will play a very important part to avoid the contingency of the President's rule since it is always preferable to have democratic rule by the representatives of the people.

(b) In ordinary circumstances where a party gains absolute majority in the legislature and elects a leader, the choice of the Chief Minister is a matter of course. But the difficulty will present itself if there is no single Party which commands a majority in the State Legislature. In that case, there will be claims by combinations of Parties. It may be that even such combination may not result in a stable majority or a majortiy demonstrable at a particular point of time. There are various situations that can be envisaged. Here again, the experience, maturity and tact of the Governor will have to play an important role in making a selection of the Chief Minister. Under these circumstances, it is impossible to lay down any hard and fast rule nor is it possible to lay down a definite pattern or convention because circumstances will change from time to time and from legislature to legislature.

(c) The Governor must exercise his discretion with utmost caution and after convincing himself that what he does is in the interest of the State and of the people thereof.

3.4 The purpose behind Articles 200 and 201 is to see that there is no conflict inherent or apparent between a State law and a Central law. Further, it is also to be ensured that a State law does not in any way contravene any provision of the Constitution. No doubt, the Governor and the State Government will take care of all these aspects while introducing a bill and while it is under discussion in the State Legislature. However, a further check at a third stage at the Central level if the Governor so decides is a desirable step. Here again, the State Cabinet itself can ask the Governor to refer it to the President or the Governor can do it in his own discretion. By following this procedure, there may undoubtedly be delay but certainly it is neither wilful nor with any ulterior motive. There is no harm if the salutary articles 200 and 201 remain in the Constitution in the present form. In fact, it is necessary to have these provisions.

3.5 The findings of the Indian Law Institute apparently consist of two parts. In the former part they say that the Centre does try to dictate its policies to the State in giving Presidential assent. In the latter part, they say that the assent has actually been withheld only in a few cases which seems to indicate that this process of Presidential assent has not acted as a threat to the autonomy of the States. The two parts, though they seemingly contradict each other, in effect operate in two different spheres. The findings of the Indian Law Institute are based on misapprehensions and a misreading of the situation. Closely read, it would reveal that the instances are not of dictation of policies by the Centre, but suggestions to the State

to conform to the Constitutional principles. This in no way could be termed as dictation of policies. The very fact that the Institute finds that the assent has been actually withheld only in a few cases is itself indicative of the correctness of the argument as put forth supra. It is not alleged that the assent has been withheld on invalid grounds. This by itself negatives the contention of dictating policies by the Centre. It is no doubt true that where constitutional necessity warranted, suggestions were put forth by the Centre to the States in diverse cases.

3.6 The view suggested in the question presents only an aspect. The correct position is that the Governor is an agent of the Centre under certain circumstances and head of the State in other circumstances and a close link between the State and the Centre in varied circumstances. His role is of multifarious nature depending upon the circumstances in which he is either asked or compelled to play a role. The Governor in practice has generally acted impartially, fairly and according to the provisions of the Constitution and in terms of the healthy conventions that have developed in discharging the multifarious responsibilities of the institution. As stated earlier, if there had been any disputable or debatable decisions by Governors at any time in the past, they are few and far between and are attributable only to human error of judgement and never to political or any other ulterior motives.

3.7 The Governor holds office during the pleasure of the President (Article 156). It is not necessary for him to have a guaranteed period of 5 years in office. Normally, if he discharges his functions as required and demanded according to the high standards expected of his office, there will be no reason for the President to exercise his pleasure affecting the normal 5 year term. In short, a 5 year term should not be a legal or constitutional guarantee, but it is certainly a guarantee by the Governor's own dignified and impartial way of conduct according to the expected standards of the high office that he holds. History of independent India reveals that the President's pleasure in abridging the term of a Governor had been used very and even in rarely cases where such power was exercised, there were justifiable, valid and compelling reasons for the President to so act.

3.8 It is not necessary for the Governor to summon the legislature to enable him to check and verify the limited question as to who is in majority. He must be able to do it by virtue of his experience, assessments of the situations, talks with the political leaders and his own judgement based on all the data available. A strait jacket formula as suggested could be wholly inadvisable in certain circumstances, besides giving room to manoeuvrabilities during the interregnum leading in unhealthy practices and situations.

3.9 It is not correct to say that under the circumstances stated, the Governor does not act fairly but in a manner calculated to advance the interest of a particular political party or group. It is not necessary for us to go into the practice prevailing in Germany or any other country. The whole situation must be tackled by the Governor according to the facts and circumstances prevailing and his own assessment of the situation. The very fact that the delicate power has been vested in such a high dignitary is by itself a guarantee for the proper exercise thereof.

3.10 As has been stated earlier, the situation in State may vary from time to time depending upon the political parties and many other circumstances which cannot be anticipated or indicated with a reasonable degree of precision. Under these circumstances, it will not be possible to issue any guidelines to the Governor regarding the discretionary powers and in fact if guidelines are issued, the discretionary powers to be exercised will cease to be so discretionary. Nothing can be done to interfere with the discretion of the Governor to compel him to act in a particular manner under certain given circumstances. His own experience, wisdom, knowledge and the provisions of the Constitution, the welfare of the people, the unity, integrity of the Nation and the sovereignty of the citizens should be the guiding factors. To put it in a nut shell, a discretion is a discretion which cannot be clothed in a strait jacket formula.

An Additional Note

There has been a demand at least by one of the State Governments that the office of the Governor may be abolished. That Government is fully aware of the role of the Governor which has been explained in some detail in the earlier part of this note. It has already been stated how the office of the Governor is indispensable in a parliamentary democracy and to effectively work the provisions of our Constitution.

If for the sake of argument one accepts the proposal, it is submitted that on parity, the office of the President could equally be argued to be abolished. On an examination of the provisions of the Constitution, it will be seen that the President has to play almost the same or similar role or even in a lesser degree in certain respects, with reference to Central Government as the Governor plays with respect to the State. In fact, the Governor has more discretionary powers than the President. Such arguments for abolition of Governors only lead to create chaotic conditions without seeking proper solutions. Nowhere it is suggested how the vacuum is to be filled. If constitutional chaos is the purpose, this would be one way to achieve that objective.

A new situation that had recently arisen adds a fresh dimension and supports the continuance of the institution of Governor. Section 6 of the Prevention of Corruption Act 1947 requires that a public servant cannot be prosecuted under the provision of that Act and several Sections of the Indian Penal Code except upon the sanction of the authority specified in Section 6 of that Act. A Chief Minister of one State was sought to be prosecuted under the provision of that Act upon a private complaint. The complaint was dismissed on the ground that no cognizance of the offence can be taken in the absence of requisite sanction.

The question arose: who was competent to grant sanction? If the power to grant sanction to prosecute the Chief Minister vests in the Governor, he is in-effective in that he has to act according to the advice of the Council of Ministers which, when sought, would make the accused the sanctioning authority. The court resolved the impasse by holding that the Governor in granting sanction must act in his discretion. Abolish the office of the Governor and the resultant chaos stares us in face.

In the light of this, the argument of the particular State Government is not acceptable. Further elaboration on this point does not appear necessary.

PART VI

Part IV of the Questionnaire deals with Administrative Relations. The first part essentially confines to Articles 256, 257, 365 and 356. In the later part, the Commission has gone into certain arrangements between the Union and the States, the establishment of certain Central agancies, All India Services, use of the paramilitary forces of the Union in aid of civil power in any State, mass media, Zonal Councils and finally the Inter-State Council.

A plain reading of Articles 256 and 257 makes it clear that the executive power of the Union is extensive and pervasive. The reason is not far to seek. It is the duty of the Union to ensure compliance of laws made by the Parliament and to State by any stretch of imagination can be permitted to act in contravention of the laws made by Parliament. Sovereignty vests in the people and so far as the subjects contained in List I of Seventh Schedule are concerned, they are to be administered by the Union. Above everything, the Union has got the supreme and unquestioned responsibility to ensure the unity and integrity of the Nation and also to ensure its democratic and secular character. These are fundamental principles on which our Constitution rests. Under these circumstances, there can be no argument to deprive the Union of its right to give directions to any State in exercise of the executive powers of the Union and any such challenge to this power of the Union should indirectly be looked upon as a challenge to the unity and integrity of the country. Further, Article 256 read with Article 365 would show that the State Government may not respond to the directions given by Government of India on pain of imposition of President's rule. Certainly, the Union is not going to give any direction to a State on subjects contained in List II except in accordance with the provisions of the Constitution and there is no grievance that the executive power of the Union is so exercised as to interfere with the power of the State in respect of subjects contained in List II. These arguments also apply to the provisions of Article 257.

What has been stated above is only the principle underlying Articles 256 and 257 and that too in a nutshell and in broad terms. As a corollary to Articles 256 and 257 (and certain other articles), the Constitution provides Article 365 where it has been laid down that failure on the part of the State to comply with any directions given in exercise of the executive power of the Union, shall be construed to mean that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. This takes us to Article 355, which enjoins upon the Union Government to ensure that the Government of every State is carried on in accordance with the provisions of the Constitution or even without the aid of Article 355, the provisions of Article 356 can be invoked and President's rule can be imposed in a State by proclamation because of the non-compliance with the directions issued by Government of India. The Article envisages an intervention when a situation arises in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. Article 256 enables the Union to give such directions to the State as may appear to the Government of India to be necessary for that purpose. Article 257 provides for control of the Union over States in the matter of exercise of the executive powers of the Union. Apart from Articles 256 and 257, there are certain other Articles also (Article 350(A) for example) where the President can issue directions to the States. The State Government can ignore these directions on pain of imposition of President's rule within the meaning of Article 356.

As a matter of fact, there is nothing new in this Article since it is virtually a successor to Section 93 of the Government of India Act, 1935. This article has made provision for the President to issue a proclamation by which he would assume to himself all or any of the functions of the Government of the State and all or any powers vested in or exercisable by the Governor or any other body of the Government other than the legislature of the State and do certain acts incidental thereto. But before issue of the proclamation and assuming the authority, the President has to be satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. He may arrive at this satisfaction either on receipt of a report from the Governor or otherwise. This provision provides a novel feature in our Constitution and is inconsistent with the claim that ours is a federal polity *stricto sensu.*

This provision has been put into use about 73 times upto the end of February 1984. But if every case of exercise of power under Article 356 is examined on its own merits, one can justifiably assert that the power was exercised in the larger public and national interest. Some States complain of an arbitrary exercise of this power. This grivence is unmerited because of Constitution (Forty-fourth Amendment) Act, 1978, suspension of State Legislature cannot be continued beyond one year. This must allay any apprehension in this behalf.

One glaring fact which stands out is the action taken by the Janata Party Government in 1977 when they enforced Article 356 in as many as 9 States on the ground that the electorate in those States had exercised their franchise in favour of the Janata Party in the Parliamentary elections. They were proving that the people in those States had lost faith in the Congress Governments then governing those States. The matter was tested in the Supreme Court where six of the States filed suits against the Union of India.

The court held that Article 356 was applicable to the situation then prevailing and dismissed the suits. In short, the Supreme Court upheld the action taken by the Janata Government in imposing the Presidents rule in 9 States on the grounds stated above.

In 1980, when the Congress came into power, the same procedure was repreated, of course without challenge of the action in court. Thus 18 of the cases came into one category, viz the result of the elections to Parliament where the electorate expressed confidence in favour of a particular Party. That leaves us with about 50 cases where President's rule was imposed during the last 35 years. By and large the reasons for the imposition of President's Rule in these cases was the fact that no Party was in a position to form the Government, either due to defections or for some other reason. The main reason however, is defection and a careful analysis of the cases will show that the President did interfare wilfully in any case in order to promote the interest of any particular party. The general complaint by the Opposition that the Centre has been misusing the provision for promoting the interest of the ruling Party is politically motivated and not based on facts. There might have been an error of judgement on the part of the Governor in a case of two and the remedy for prevention of repetition of such a situation is the vigilance of the Governor and this will depend on his farsightedness, wisdom, statesmanship and experience. With the best of care exercised in the choice of Governor, no failsafe guarantee can be given that they will never commit errors of judgement. One thing has to be definitely stated that the Centre has not created the situation any-where to enable the President to take over the administration of the State.

As word about the necessity for retention of Article 356 will not be out of place. As stated in the beginning, this Article is only a successor of Government of India Act, 1935 (Section 93). This issue was debated at length in the Constituent Assembly and ultimately the consensus was that the Centre must have the power to take over the administration of the State in the circumstances laid down in the Constitutional provisions. The reason is that in unstable conditions in the State, the first casualty would be law and order and the Presidential rule avoids such complications and calamities. The Centre cannot be a spectator to Party defections, unstable ministries and wide-spread horse trading. Therefore, if such circumstances prevail, it is not only necessary but it is the duty of the Centre to take over the administration of the State, restore normalcy and instal a democratic Government according to the Constitutional Procedure. This is what has been done in the past and there is no reason to deviate from this principle and procedure. The Anti-defection law largely retrieves the situation.

On clauses 4 and 5 of Article 356, it is submitted that the situation prevalent before the promulgation of the 44th Amendment of the Constitution deserves to be restored in view of the experiences in certain States as a result of which Constitutional amemdment had to be resorted to. The possibility of such situations in the Indian Polity cannot be ruled out and resorting to Constitutional amendments everytime for such purposes would be an unnecessary luxury. Even if for any reason clause 4 is not sought to be disturbed, clause 5 deserves to be restored to the position of pre-44th amendment.

After covering the first portion of this part, we may now come to the second portion. It starts with question No. 4.6.

Census, elections, etc. which are the functions of the Union Government are, at present, by mutually satisfactory arrangements, implemented by the States. There has been no complaint either from the States or from the Centre of any unsatisfactory results of such arrangements. In fact such arrangements are highly laudable; they speak volumes of harmonious Centre-State relations now existing in the country. By such cooperation of the Union and the State Governments, costs are reduced to the barest minimum resulting in a saving to the Exchequer which can be diverted for developmental activities for the upliftment of the poor and down-trodden. Similarly, a question has been asked about Central agencies such as Agricultural Prices Commission, Central Electricity Authority, Monopoly and Trade Practices Commission, Food Corporation of India etc. It may be stated that in most of these agencies, the executive power can normally be traced either to the Union List or to the Concurrent List. These agencies are doing excellent work in the respective fields assigned to them. Not one of these agencies can be said to be an avoidable surplus; on the other hand, each one of them with active cooperation of the State Governments is carrying out functions of national importance and the benefits of such activities are mainly enjoyed by the States. There is the question of All India Services which actually has proved to be blessing to the entire administrative set up of the country as the officers of the All India Services utilise their experience in the States when they come to the Centre and vice versa. If anything, there is need for more All India Services which unfortunatley are being resisted to by the States. Apart from utilisation of experience, the All India Services inculcate a broad national outlook in the officers which is very essential both for efficiency and in the larger interests of the society. The All India Services are generally not guided by narrow regional or parochial consideration but inculcate a broad national outlook, so essential for the unity and integrity of the Nation.

What about the Central Reserve Police and the other Armed Forces of the Union ? The developments in Assam, Punjab and Gujarat during the last 4 years speak volumes for the necessity to strengthen the Central forces in order to act whenever there is a breakdown of law and order. Apart from this, there are other cases of frequent disturbance to law and order where the Centre's help has to come in. All these instances demand the necessity for arming the Union with the powers to utilise the para-military forces to restore law and order in an area within a State where the State forces are not able to do so.

There is a question on newspapers, books, printing presses and broadcasting and other communications. The former is in the Concurrent List and the latter is in the Union List. It is submitted that the present arrangement with respect to newspapers, books and printing presses being in the Concurrent List is a well thought out arrangement. There are numerous

newspapers in regional languages which are confined to regional circulation. Books of local interest are innumerable and printing presses cover a wide range from a modified cottage industry to the most sophisticated modern methods. Under these circumstances, it is advisable to retain them in the Concurrent List so that the States could have control over them at the same time enabling the Centre to intervene in cases where national interests warrants such an intervention. Along with this, dealing with the bigger newspapers having wide circulation in more than one State required the subject to be in the Concurrent List. The same argument applies to books as well.

Broadcasting and other forms of communication including T.V. have necessarily to be in the Union List, because a matter put on the air from the broadcasting Station is received and heard not only in one State but all over India and in the case of a powerful station, all over the world. It is also the duty of the Union to ensure that the relationship with foreign countries is not adversely affected by such broadcasts. For example, one has to be very careful in broadcasting sensitive news or subjects which may affect our relations with neighbours. Giving complete powers to Government of the States to broadcast as they please, could lead to results that could better be imagined. The same argument also applies to T.V. In principle, where communication crosses inter-State boundary, national interest requires that the same should be dealt with by the Union. In view of these considerations, there is no necessity to change the present arrangement.

The Zonal Council were set up in view of the provisions of the Reorganisation of States Act, 1956. Unfortunately, it cannot be said that they have served any useful purpose.

Pertinent at this stage is Article 263 of the Constitution. The Article reads as follows :

"If at any time it appears to the President that the public interest would be served by the establishment of a Council charged with the duty of—

(a) inquiring into and advising upon disputes which may have arisen between states;

(b) investigating and discussing subjects in which some or all of the States, or the Union and one or more of the States, have a common interest; or

(c) making recommendations upon any such subject and, in particular, recommendations for the better coordination of policy and action with respect to the subject,

it shall be lawful for the President by order to establish such a Council, and to define the nature of the duties to be performed by it and its organisation and procedure."

The establishment of such a Council has been recommended by the Administrative Reforms Commission.

As a matter of fact, it should be possible for the Union and the States to settle differences which may arise between them by having a dialogue at an appropriate level. The Prime Minister as the Head of the Government will always be willing to hear the authorities of the States either himself or through the Central Ministers who could look into and resolve the matter. There cannot be anything which defies solution after mutual discussion for the simple reason that the interests involved are of the people and in the ultimate analysis there need not be a conflict.

There is yet another difficulty in establishing such a council. The States will have a tendency to approach the Council for every partly and sundry matter blowing up the differences out of all proportion. This apart, if the State is aggrieved and the State approaches the Inter-State Council, the Union Government will also have to present its point of view before the Council. If unfortunately, the Council's view happens to be against the Union Government which presents the case in the larger interests, then the Union Government will be embarrassed to accept the recommendations of the Council. This in effect will make the Inter-State Council a body more powerful than the Union Cabinet without the responsibility to Parliament or the pople. Therefore, the general establishment of such a Council is fraught with unsavoury consequences even if the Council is to be presided over by the Prime Minister. In fact, if the Prime Minister presides over the Council, the position will be worse; it will be embarrassing for the Prime Minister to over-rule his own decision as Chairman of the Council in his capacity as Prime Minister if circumstances and national interest warrant such an action. This does not mean that in appropriate cases of dire necessity Article 253 should not be invoked as has been done sometimes in the past.

PART V

FINANCIAL RELATIONS

Part V of the Questionnaire deals with the Financial Relations between the Union and the States. The questions are very elaborate and there are 39 posers under this subject.

The financial relations between the Centre and the States are primarily based on the Constitutional division of taxation powers and expenditure responsibilities between the two and have evolved over the years to meet emerging requirements. To enable the Centre and the States to discharge their respective duties and responsibilities, it is necessary to ensure a fair distribution of the total national resources between the two. It is equally important for the system to promote equity and redressal of regional imbalances in view of the tremendous diversity of the country with its 22 States at different levels of economic development and resources potential. The existing system seeks to achieve a balance between these objectives through various transfer mechanisms.

One very salient feature of our Constitution is that the Entries regarding taxation are dealt with in the Seventh Schedule List I and List II separately. The Constitution provides for a division of taxation powers whereby some taxes are exclusively reserved for the States while the others are reserved for the Centre. This division has a sound economic rationale. Taxes which have a local origin and or the collection is generally traceable to the geographic limits of a

State are in the State List (e.g. land revenue, sales tax, State excise duties, motor vehicles tax, entertainment tax etc.). Taxes which have an inter-State base or whose collection is necessarily to be handled by the Centre, as for example, Wealth Tax, etc. are in the Union List. Entries 82 to 92-A of List I of Seventh Schedule deal with the taxation power of the Union. Similarly, Entries 45 to 63 of List I deal with the taxation powers of the States. Another Entry 92-B has been added to List I by the 46th Amendment but is yet to come into force. This division avoids distortions. The Constitution, however, recognises that this division alone will not result in providing adequate resources to the States to enable them to discharge their functions. It, therefore provides for a system of transfer of resources from the Centre to the States. Even though the Union Government has got the taxation powers under Entries 87, 88, 89, 90, 92 and 92-B of List I, by virtue of Article 269 the Union Government has got to share in the net yield of these taxes with the States according to the prescription of the Finance Commission. A percentage of the net proceeds of income tax is also assigned to the States while the Union Excise Duties are being shared between the two since the commencement of the Constitution. Similarly, the tax under Entry 92-A is levied by the Centre, but the States collect the tax and appropriate it to themselves. Entry 91 and the States collect and appropriate the tax to themselves.

This leaves us with Entries 82, 83, 84, 85 and 86.

By virtue of Articles 270 and 272, the Centre has also got to share in the taxes collected under Entries 82 and 84. They are taxes on income, other than agriculture income and duties of excise on Tobacco and other goods manufactured/produced in India except alcoholic liquors, Indian Opium, Indian Hemp etc. Thus, taxes collected under Entries 82 and 84 i.e. income-tax and excise duties are also sharable by the Union alongwith the States, 82 mandatorily and 84 by law. This leaves us only with the taxes under Entries 83, 85 and 86 which the Centre collects exclusively and appropriates those collect to itself. The taxes are in common parlance Customs Duties, Corporation Taxes and Wealth Taxes.

Corporation tax is actually an income-tax collected from bodies corporate. This has two elements, one is that the tax payable by the bodies by themselves on their income and other is the tax collected by those corporate bodies in respect of the dividents payable by them to the share-holders. By an amendment of the Income-tax Act, in 1959, this tax which was earlier divisible in part has ceased to be so. The earlier sharable part was the dividends portion.

In respect of sharable portion of the taxes, that is the taxes under Entries 82 and 84, the distribution is made in accordance with the recommendations of the Finance Commission which is appointed every 5th year or earlier which is charged with the duty *inter alia* to recommend as to the distribution between the Union and the States of the net proceeds of the taxes etc. The Finance Commission is also charged with the duties to determine the respective shares of States in respect of taxes levied by the Centre where the Centre has no share.

Article 275 provides for grants in aid to States which may be in need of assistance under Article 282 the Union or the State may make any grants for any public purpose irrespective of the fact whether it has got the executive power in respect of the subject which is covered by the public purpose. Voluminous grants in the event of natural calamities bear testimony to the fact that when real need arose Centre rushed to the aid of the State.

To ensure smooth and adequate devolution of funds from the Centre to the States. the Constitution provides for a regular statutory machinery viz. appointment of the Finance Commission every 5th year (and earlier, if necessary). A reference to Finance Commission has been made *supra*. The Commission undertakes a thorough review of the finances of the States, their revenue potential as well as their expenditure commitments, and recommends allocation of shares in taxes and principles governing grants-in-aid. In recent times, issues relating to provision of assistance for natural calamities and debt relief to the States have also been referred to this Commission for suggesting principles governing provision of such assistance and relief wherever necessary.

The existing provisions of the Constitution have proved to be satisfactory over the last 35 years since the Constitution makers had taken the various socio-economic and regional factors into account while incorporating these provisions. They do not seem to require any alteration. Any alteration is likely to create imbalance leading to weakening of the national fabric.

The rate of taxation has reached the maximum and perhaps is at a climax. Therefore, the question of enhancing the revenue by increasing the rates of taxation just may not arise.

The basic issue for consideration at this stage is whether there is scope for larger transfer of resources from the Centre to the States. This would have to be viewed with reference to the obligations of the Centre in the fields of Defence and External Affairs as well as the Plan priorities that have a bearing on the national economy as a whole. It is equally important to assess whether the States can mobilise additional resources within the areas remarked for them by the Constitution. It is generally argued that the Centre should transfer more resources to the States as its budgetary position is stronger than that of the States. This view is based on an inadequate appreciation of the resources constraints facing the Centre which arise partly from the difficulty in raising current revenues beyond a certain level and partly from the progressive devolution from the Centre to the States as a result of the recommendations of the successive Finance Commissions. As a result, there has been a major structural transformation in the Centre's budgetary position since 1979-80. Substantial surpluses on the revenue account which were a feature of the Central budget have given way to deficit on the revenue account. In 1985-86, for the first time, the balance from current revenues itself has become negative. A stage has now come when the capital receipts have to be tapped to meet the expenditure on the current account.

The question that arises here is whether there is scope for effecting economic in expenditure and improving tax and non-tax revenues for making the balance from current revenues positive. The present rates of Central taxes as referred to above are already quite high. As regards expenditure commitments, the national priorities should always be kept in view. Security of India is the highest priority. It requires huge investment in security forces, and for providing latest equipment and weaponary. It needs research. This expenditure is mainly dependent on global conditions as also the security environment in the neighbourhood. Defence preparedness is an essential pre-requisite for the survival of any nation. The investment may appear to be negative or unproductive but it is abundantly indispensable. 1962 Chinese perfidy should not be forgotton. Centre must have enough adequate funds at its disposal, and Centre has not avoided the unpleasant task of taxing to the maximum.

Interest payments represent contractual obligations and will have to be necessarily provided for. The subsidies are critical for ensuring self-sufficiency in food production and the present comfortable food situation is largely due to the provision of subsidies as incentives for improving production.

An analysis of the balance from current revenues indicates that expenditure of Defence, provision of subsidies and interest payment comfortable food situation is largely due to the provision of subsidies as incentives for improving production.

An analysis of the balance from current revenues indicates that expenditure of Defence, provision of subsidies and interest payments account for more than 70% of the non-Plan revenue expenditure.

While the situation on the non-plan front is non-too-bright, the Centre cannot shed its responsibility towards accelerated development of the nation through productive investments in the core sector. The Centre's Plan outlays are concentrated in areas like communication, petroleum, steel, coal etc. that have on overall national importance. It may be noted that nearly 35% of Centre's outlay is on energy sector alone, while industry and minerals, and transport utilise another 35% of the outlay. A reduction in these outlays would become inevitable if more resources are transferred from the Centre to the States. Such a change would have an adverse effect on the economic growth of the country and would, in the long run, erode the resource potential of both the Centre and the States.

It is pertinent at this juncture to examine whether the States cannot, through own efforts, expand the resource base in areas earmarked for them. It is generally argued that the States have inelastic sources of revenue. But actual performance in the last decade reveals that the States' total tax revenues have grown more rapidly than those of the Centre and the States' tax revenues have increased from 31.5% of the total tax revenue in 1974-75 to 34.6% in 1984-85. There is, thus, considerable buoyancy in the taxation base of the States under the existing system.

Coming to the States' taxation powers, it will be seen that they are contained in Entries 45 to 63 of List II of the Seventh Schedule. Numerically, there are 19 Entries. Factually the revenue yielding capacity is comparatively less. Perhaps, their maximum revenue comes out of Sales Tax.

On a close examination of the taxation powers of the Union and the States, it will be found that it is not possible to transfer any of the taxation powers of the Union over to the States. The Founding Fathers of the Constitution have made such an elaborate procedure in respect of powers of taxation, the collection and distribution with a provision for periodic review regarding the shares due to the States so that one would find it difficult to improve upon the system now in vogue. The result is that there is no question of transferring any taxation powers to the States.

Now look at the performance of the States. Under Entry 46 of the State List, the State can levy tax on agricultural income. Because of the efforts as to the enormous expansion of irrigation facility, hybrid seeds, chemical fertilizers, and research in soil fertility, a very large number of agriculturists have come to occupy the upper bracket of elite group in the society. Green revolution to the extent of bludgeoning stocks of Food Corporation of India, search for export market of wheat and rice, and over-rising support prices for agricultural products have combined to bring into existence an affluent class of agriculturists. Yet, save Kerala no States has levied agricultural income-tax. An employee with yearly salary of Rs. 18,000/- is subjected to income-tax but a farmer with an income of a lack of rupees per annum does not pay a farthing as income-tax . It is a truism that State Government in order to keep in tact their vote banks do not levy taxes and shed crocodile tears of shortage of resources.

Another disturbing feature is that the irrigation and power projects executed by the States in successive Plans at huge cost are not providing any return to the States. In fact, returns from the irrigation projects so far have not been adequate even for covering the working expenses. The performance of the State Electricity Boards and Road Transport Corporation has also been far from satisfactory, resulting in considerable losses. Through suitable measures, the States can generate more resources on these accounts.

Keeping the above in view, the complaint of the States regarding an inadequate and inelastic tax base appears to be unfounded. The potential resources base available for the States is quite large and relatively more elastic. If effectively managed, the tax base of the States can yield much larger revenues and this alone would solve the present problems. In a situation of overall resources constraint, maximum effort at mobilisation of resources is required on all fronts and mere transfer of additional resources from the Centre can only be a temporary measures at the cost of wider national interests.

The present problems have arisen not because of the inadequacy of our system but because the system is being operated in situation of constraint on resources. It is necessary that the Centre and the States

exploit the resources available to them fully. Public Enterprises would have to be geared up to generate adequate resources for both. This does not require any changes in the system. In fact, such a change in favour of the States would create more problems than it would solve, since; any diminution in the Centre's financial capacity would adversely affect not only the national security as also its integrity but also the economic growth of the country in general and the upliftment of the backward States and the under-privileged masses in particular. It must also be clearly recognised that a change in the present system of sharing of financial powers would not create more resources. The answer to the problem lies in better financial performance on all sides within the existing system.

In view of the position explained above, the most equitable stand that can be taken in respect of financial matters is to continue the policy of existing system which should remain undi turbed.

PART VI

Part VI of the Questionnaire deals with Economic and Social Planning. Essentially these questions relate to the functions of the National Development Council, the Planning Commission etc.

The Commission invites suggestions for improvements of the existing systems.

It is the Congress culture to view the Nation as a whole for development. Regional development must be so planned as to bring all parts of the country on even keel. Regionalism, parochialism, casteism, communalism and narrow sectarian interests are foreign to Congress culture and Congress ethos. Planning is undertaken to give a push to the backward areas to some on par with industrially developed areas. Subsidies for setting up and running industries in tribal/backward areas, ignoring State boundaries, speak volumes in this behalf, Throughout this has been the target and object. The Planning Commission itself has been set up with the object of achieving an all round development of the country. In actual practice, it is absolutely necessary to have a coordinating body for planned development at various levels in various States. The Planning Commission undertakes this task. The necessity of coordination cannot be over-emphasised and the system has worked successfully. Planning for the country of the size of a sub-continent like India cannot be left to small regions. Such an approach would further accentuate imbalances. The plan of each State has necessarily to be an integral part of the national plan because the aim is not the development of one State alone but the development of the Nation as a whole. For this purpose, the Planning Commission takes into consideration the resources available in various States and suggests the plans for various States to fit in National plan. Plan targets of each State are approved by Planning Commission. At the risk of repetition, it may be said that the State's Plan is only a part of the National Plan. The concept of the National Plan is given by the Planning Commission. The States formulate their plans accordingly. The whole programme is approved by the Planning Commission and then the plan is carried into execution.

In this process, the Union certainly assists the States either by undertaking centrally sponsored schemes in various regions where the States are unable to undertake such schemes : sometimes giving outright grants for planned development and sometimes giving matching grants, etc.

On these vital and relevant considerations, it is submitted that there is no justification for any change in the present pattern adopted for economic and social planning and development.

PART VII

The last part of the Questionnaire covers a number of items under the heading 'Miscellaneous'. The first one is Industry.

Entry 52 of List I enables the Union to legislate on the subject of Industries provided it is declared by the Parliament that the control of such industries by the Union is expedient in public interest. In the absence of such a declaration, Industry in general is covered under Entry 24 of List II. There is a general complaint that in the guise of national interest, the Union encroaches upon the subject of industries which is otherwise State subject. There is a particular complaint regarding the Industries (Development and Regulation) Act, 1951. This Act has come into existence almost at the threshold of the Constitution, it has been amended many a time to add to its schedule more and more items of industries over which the Centre would get control. This expansion of the first schedule to this Act is what is complained about as an encroachment of the Union over the States' rights in the field of industries.

This approach betrays a lack of legal and constitutional understanding. Undoubtedly, once declaration as envisaged by Entry 52 of the Union List is made, the industry becomes a scheduled industry and its control vests in the Centre. But the degree of control depends upon the provisions of the Act under which the declaration is made and is limited to that Act alone. In Ishwari Khaitan Sugar Mills (P) Ltd. v. State of U.P. (17) a Constitution Bench of the Supreme Court of India held that legislative power of the States under Entry 24 of State List is eroded only to the extent, control is assumed by the Union pursuant to a declaration made by the Parliament in respect of declared industry as spelt out by legislative enactment and the field occupied by such enactment is the measure of erosion. In all other respects even the declared industry is within the legislative competence of the States. The Court held that even in respect of declared industry the power of acquisition can be exercised by the State. Power to make a reference under Section 10 of the Industrial Disputes Act, even in respect of declared industry, continues to vest in the State. (See Rashtriya Mill Mazdoor Sangh, Nagpur v. The Model Mills.) (18)

At first sight, one may be inclined to think that there is substance in this complaint. But if we go deeper into the subject, it will be found that almost all these products covered by the industries in the

(17) (1980) 4 SCC 136

(18) C. A. No. 1619 to 1622 of 1971 decided on 18-9-84 reported in 1985 (1) SCR 751

IDR Act require the use of one raw material or the other which is in short supply or it may be for the use of a material by the consumer which is in short supply as in the case of Kerosene oil for the stoves. If these factors and the duties of the Union towards the entire population are taken into consideration, it will not be easy to agree that the Union is making an avoidable trespass into a subject reserved for the States. Again, the location of the industries in rural areas where it has to provide employment, the utilisation of its products and the necessity for the industries in certain backward States and areas are all taken into consideration by the Union Government. All this is possible only through the Act mentioned earlier and the intention behind this Act is not the trespass into the rights of the States but to implement the duty enjoined upon the Union by Articles 38 and 39 of the Constitution which are Directive Principles of the State Policy of the highest importance.

In the light of the above, all the questions under this item of industries stand answered by supporting the present system.

The next question is with reference to Article 307 which empowers the Parliament by law to appoint an authority such as it considers appropriate for carrying out the purposes of Articles 301 and 304. The purpose in general relates to inter-State trade and commerce. It may be mentioned that no such authority has so far been constituted. If there had been the necessity and existence of such an authority, such a necessity should have been felt many a time during 35 years and such an authority could have been establihsed. The very fact that such a necessity has not been felt so far and no such demand has been made by any State in the past, only shows that this Article is an enabling provision to be used as and when the necessity arises. Nothing has been brought out either in the Questionnaire or elsewhere to justify establishing such an authority and the benefits to be derived therefrom.

The next part in the Questionnaire is on Agriculture. This subject is actually is in the State List under Entiry 14, but indirectly this is also a part of Entry 33 of the Councurrent List in so far as the trade and Commerce of the products of agriculture is concerned. The Entry in the Concurrent List is justified, as the past events have proved that the Centre's intervention sometimes was necessary. If food is in short supply, it may be necessary for the Parliament to intervene on that very subject. Further, it is an essential commodity for uniformity etc. That perhaps is the reason why this Entry was found necessary in the Concurrent List inspite of the presence of Entry 14 in the State List. In any case, agricultural development and food and civil supplies are complementary to each other and in the matter of coordinating the production and supply activities the Centre has necessarily to have a role to play.

Education is a subject covered by Entry 25 in List III of the Seventh Schedule, but subject to Entries 63 to 66 of List I. The reference to List I is only regarding certain institutions of national importance etc. and those have necessarily to be with the Centre. So also the matter of coordination and determination of Standards of higher education have to be with the Centre. There is no necessity to interfere with the present situation.

The last question pertains to Inter-Governmental coordination. The question refers to a Commission in existence in the USA which was created by the Congress in 1959. The question is whether we should also have an institution of a similar nature with a similar purpose. The answer appears to be in the negative since the necessity for such an institution has neither been felt nor has the question been assessed except by the Commission itself.

APPENDIX A

UNITED STATES OF AMERICA

The Central tenet of American Constitutionalism is that all power is derived from the people and must be held in check to preserve their freedom. A number of free sovereign States gathered together to form a Union. Exercising the mix of functions delegated to each branch of Government by the people in the social compact, that was the Constitution, each power centre would remain dependent upon the others for the final efficiency of its social designs. (1) The result was that the central authority, namely, the President enjoyed limited functions. It represented a loose federation. The Constitution as originally framed did not include a Bill-of-Rights. It was Jefferson who urged amendment of the Constitution to include such a Bill. The Civil War made a crucial difference. The first fourteen amendments were not directly designed to strengthen the central authority. People being the repository of residuary rights, this fact was constitutionally recognised in the Ninth Amendment introduced in 1791 which provided that "the enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people".

The Central authority derived much of its present strength by judicial innovation. The Courts recognising the paramount national interest so construed the provisions of the Constitution, that the federal authority is made more powerful. It is worth noting that sub-clause (18) of Section 8 of the Constitution which is a sort of a residuary clause was more often invoked to make the federal authority stronger. Sub-clause (18) reads as under :—

"To make all laws which shall be necessary and proper for carrying into Execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof".

The expression "a necessary and proper" came in for construction in McCulloch vs. Maryland.(2) The court took note of the fact that the earlier Articles of Confederation had provided that each State retains "every power not expressly delegated". Keeping in view the Tenth amendment which provided "that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people held, that "the sword and the purse, all the external relations, and no inconsiderable portion of the industry of the nation, are entrusted to its government.

It can never be pretended that these vast powers draw after them others of inferior importance, merely because they are inferior. Such an idea can never be advanced. But it may with great reason be contended that a government, entrusted with such ample powers, on the due execution of which the happiness and prosperity of the nation so vitally depends, must also be entrusted with ample means for their execution. The powers being given, it is the interest of the nation to facilitate its execution." The court held that even though the words 'bank and incorporation' are not found in the enumerated powers of the Federal Government, they *can be comprehended in the necessary and proper powers for carrying the other powers into execution. The federal authority mightly benefited by this opinion.

In Ware Vs. Hylton (3), the court held that under the 6th Article of the Constitution, all treaties made or which shall be made under the authority of the United States shall be the supreme law of the land. Accordingly, the court rejected a statutory scheme enacted by the State of Virginia in 1777 creating an impediment to the payment in full of debts owed by Virginians to British creditors, as it was found to be in conflict with the treaty of Paris and was held void under the supremacy clause of the United States Constitution. This affirmatively established that a treaty entered into by a federal authority known as Treaty of Paris had an overriding effect on the State Legislation. The Supremacy of the federal authority was clearly spelt out.

In Gibbons Vs. Ogden (4), the court after referring to the commerce clause observed that the whole Act on the subject of coasting trade according to those principles with govern the construction of statutes, implies unequivocally an authority to license vessels to carry on the *d trade. Approaching the matters from this angle a statute of the New York State which granted exclusive privilege for operating a steamboat between New York and New Jersey was declared invalid. Wide interpretation of the commerce clause enabled the court to uphold the action of the federal authority.

In Osborn Vs. The Bank of the United States (5), the facts were that the State of Ohio levied at $ 50,000 tax on each branch of the congressionally chartered United States Bank in Ohio, when in MsCulloch V. Maryland (2), a similar tax by Maryland was declared unconstitutional, yet the Ohio official decided to ignore the court decision to enforce the State Law. The United States Bank went to the United States Circuit Court and received an injunction prohibiting Ralph Osborn, the Ohio State Auditor from collecting the amount. Osborn defied the injunction and forcibly seized funds from the bank. The Bank sued Osborn for damages and the State Court ordered to repay the amount seized.

Osborn carried the matter in appeal to the Supreme Court which affirmed the decision of the State Court. Reaffirming the earlier decision it was observed that "Bank is an instrument which is necessary and proper for carrying on the fiscal operations of government. To tax its faculties, its trade and occupation, is to tax the Bank itself. To destroy or preserve the one, is to destroy or preserve the other". Again the balance tilted in favour of strengthening the federal authority.

Coming to the present day, it would be advantageous to refer to City of Philadelphia v. New Jersey. (6) The State of New Jersey enacted legislation that prohibited the bringing of garbage into New Jersey from out of State. The affected cities and the privately owned garbage dumps brought suit against New Jersey in the State Court. The State Court held that the law was unconstitutional as it discriminated against inter-State commerce. The State *Supreme Court reversed the decision. The matter was taken to the United States Supreme Court. Reversing the decision of the State Supreme Court, it was observed that the Supreme Court has consistently found parochial legislation of this kind to be constitutionally invalid. This gives effect to the federal principle.

These illustrative cases tend to indicate that it was the judiciary which by a progressive interpretation of the Constitution made the federal authority for more powerful than what the Constitution framers intended it to be. The vacillation of the legislature was set at naught by the Judiciary keeping in view the requirements of a developing society, international relations and cohesive development of a nation. The trend is by judicial activism to strengthen the federal authority. From the point of view of a traditionalist, a question was always posed; whether federalism is more than a legal fiction and this question generates considerable controversy amongst scholars in law and the social scientists. From a loose conglomeration to a strong central authority, the movement has been over a Century taking into its sweep legal formulation. Progressive re-interpretation of the role, character and nature of central authority, tended to make it stronger more or less by judicial interpretation to the provisions of the Constitution.

APPENDIX 'B'

CANADA

The Judicial Committee of the Privy Council was the Final Court of Appeal for Canada in Constitutional cases till 1949. The Privy Council, a highly respected judicial body, but generally considered to be conservative in its approach, did not recognise the fact that the Centre was strong while interpreting the provisions of the British North America Act 1867. Narrow interpretations were given to the principal Federal Powers.

The above position is obvious on the basis of a number of decisions of the Privy Council. One leading case is that of Attorney General of Canada Vs. Attorney General of Ontario and others reported in 1937 A Page 326. The Dominion of Canada in order to comply with an international Agreement passed two labour welfare legislations. By a very narrow interpretation of Sections 91, 92 and 132, the Privy Council held that the Dominion had no power to enact the legislations. The concept of Federal supremacy was cut in the neck by one stroke.

After the abolition of the appeals to the Privy Council in 1949, the Supreme Court of Canada was vested with the jurisdiction as the final authority to decide constitutional issues. The trend has since been reversed. In the year 1977, in Capital Cities Communication Inc. Vs. Canadian Radio Television Commission, reported in 81 DLR Page 609, it has been held that the Federal Power to control Television, Radio etc. includes the exclusive authority of Parliament of Canada to control the content of Broadcasts and Television Programmes.

Again in Konard Johannesson and another Vs. Rural Municipality of West St. Paul reported in 1952 (1) SCR page 292, the Supreme Court held that if a provincial statute is not authorised under any legislative head of Section 92 of British North American Act, then it is *'ultra vires'*. The Supreme Court upheld the rights and supremacy of the Parliament to maintain peace, order and good government. Thus a new dimension has been added to the Central powers.

By the above illustrative authorities, it can thus be concluded that in spite of the narrow interpretation of the Privy Council earlier, the Spreme Court of Canada had been interpreting the Canadian Constitution in such a way as to make the Centre strong.

APPENDIX C

AUSTRALIAN CONSTITUTION

The Constitution of Australia (Australian Constitution Act 1900) makes the division of powers between the federation and the States.

The exclusive powers of the Commonwealth are enumerated in Sections 52, 90, 111, 114 and 115. Section 52 deals with the seat of the Government of the Common wealth; Section 90 deals with the imposition of uniform duties of customs, excise and bounties; Section 111 deals with surrender of territories by the States to the commonwealth; Section 114 with the Defence Forces and Section 115 with the coinage.

The Concurrent powers of the Commonwealth Parliament to be shared with the States are enumerated in Section 51 and embraces as many as 39 items. Being so wide in range, details of such powers need not be gone into here for the sake of brevity.

In Australia each State has a separate Constitution and residual powers are vested in them. Under the Commonwealth Constitution, the bulk of the legislative powers are concurrent and are shared with the State Parliaments.

The framers of the Commonwealth Constitution, recognised the potential of the conflict between the Commonwealth and States and therefore made express provisions to deal with such situations under Section 109 of the Commonwealth Constitution Act. The said Section 109 is a simple statement that "when a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of inconsistency, be invalid."

The above said provision had a varying impact on State legislations. In the early years of this century, the Section was given a relatively narrow interpretation by the High Court of Australia which is the highest court. Thereafter, the High Court developed a more liberal interpretation of Section 109, so that many legislations which have escaped this Section earlier came to be struck down on the ground of inconsistency with the Commonwealth legislation. The leading case on the subject is Engineer's case reported in 1920 (28) CLR 129. In this case, the Court declared that "that Constitution was to be interpreted by its words alone." The earlier view was that the Commonwealth itself was a contract between the Commonwealth and the federating States and this mistaken notion was corrected for the first time in the Engineer's case. It was realised in this case that the words of the Constitution were to be regarded as creating a nation and therefore central supremacy as a corollary was permitted and the march of the time demanded the same.

In the case of Victoria Vs. the Commonwealth (1937) 58 CLR 618 at 630, the High Court of Australia further clarified the legislative authority of the Commonwealth Parliament in the following words :—

> "When a State law, if valid, would refer, impair, or detracted from the operation of a law of the Commonwealth Parliament, then to that extent it is invalid. Moreover, if it appears from the terms, the nature or the subject matter of a federal enactment that it was intended as a complete statement of the law governing a particular matter or set of rights and duties, then for a State law to neglect or apply to the same matter or relation is regarded as a detraction from the full operation of the Commonwealth law and so is inconsistent."

In another case Australian Railways Union Vs. the Victorian Railways Commissioners (1930) 44 CLR 319, the High Court declared that the Commonwealth Conciliation and Arbitration Act, binds both the Commonwealth and States and their agencies and therefore the Act will apply to an industry carried on by or under the control of a State or Commonwealth or any public authority constituted under the Commonwealth or a State. Thus the authority of the Commonwealth to bind the States and their agencies was upheld in the above case. Subsequent decisions of *the Court confirmed this legal position.(1).

In another case, the question regarding the legislative power of Commonwealth over radio broadcasting came up for consideration. The High Court upheld the legislative powers of the Commonwealth Parliament on the ground that the subject, "Postal, telegraphic, telephonic and other like serivces," includes the power over radio broadcasting. Similarly, the legislative powers of Commonwealth Parliament were recognised in respect of many other subjects, by giving liberal interpretation of the subjects under the Concurrent List. Two such cases are cited below-(2) & (3).

Under the Constitution, taxation is a concurrent subject and both the Commonwealth Parliament and States levied income tax through separate legislations. In 1942, the federal Parliament passed uniform tax legislation which excluded the States from levy of separate income taxes. The Act gave each State a fixed tax reimbursement grant equal to its average collections in the previous two years. The Act which gave the Commonwealth Parliament a monopoly of income tax was upheld by the High Court in spite of the opposition of four of the six States in the case of South Australia and others Vs. Commonwealth, reported in 1942 (65 CLR 373) first uniform tax case.

The Constitution gave exclusive legislative powers with regard to levy of customs and excise duties to the Commonwealth Parliament. The general power of taxation other than customs and excise in the concurrent list was also interpreted as a Central power to the exclusion of States under certain circumstances. Thus the fiscal power under the Constitution was effectively centralised over the years. Now, under the Constitution, Commonwealth Parliament may use its taxing powers to achieve a wide range of objectives and over the years, the States

(1) Radio Corporation Pty Ltd. Vs. the Commonwealth (1938) 59 CLR 170,

(2) Minister of Justice (WA) Vs. Australian National Airlines Commission (1976) 12 ALR 17, and

(3) Murphyores Inc Pty Ltd. Vs. Commonwealth (1976) 136 CLRI.

were excluded from two significant sources of taxes on income and on commodities. [1] The Commonwealth Parliament has also been conceded the right to spend money on whatever way it chooses.

With the centralisation of fiscal powers, the Federal Government became strong. However, Commonwealth wanted to be fair to the States and objectives in approach. For this purpose the Australian Loan Council and the Commonwealth Grants Commission were established in 1928 and 1933 respectively.

The illustrative cases thus establish that the history of the Australian Federation has been a history of the gradual growth of the powers of the *Commonwealth Parliament in relation to the States. Many factors social, political and economic, have contributed to this movement. The period since the close of second world war was one of the great significance in the Constitutional history of the country. The war measures increased the influence of the Commonwealth Parliament. The judicial interpretations of the provisions of the Constitution than the framers of the Constitutions contemplated or would have approved.

APPENDIX D

IMPORTANT ARTICLES REGARDING UNION-STATE RELATION

1. Article 73—Extent of excutive power of the Union.
2. Article 153—Governors of States.
3. Article 155—Appointment of Governors.
4. Article 156—Terms of office of the Governor.
5. Article 163—Council of Ministers and discretionary powers of the Governor.
6. Article 164—Other provisions as to Ministers.
7. Article 169—Abolition or creation of Legislative Councils in States.
8. Article 174—Summoning the Legislature.
9. Article 200—Assesnt to Bills, reservations of bills for consideration of the President.
10. Article 248—Residuary powers of legislation.
11. Article 249—Power of Parliament to legislate with respect to a matter in the State List in the National interest.
12. Article 252—Power of Parliament to legislate by consent or adoption.
13. Article 256—Obligation of the State and the Union.
14. Article 257—Control of the Union over States in certain cases.
15. Article 263—Inter-State Council.
16. Articles 268—269 & 270 Appointment of Taxing powers and Sharing of Taxes.
17. Article 271—Surcharge on certain duties and taxes for *the purpose of Union.
18. Article 272—Taxes which are levied and collected by the Union and may be shared between the Union and the States.
19. Article 275—Grants from the Union to certain States.
20. Article 280—Finance Commission.
21. Article 282—Expenditure defrayable by the Union or a State out of its revenues.
22. Article 293—Borrowings by the States.
23. Article 302—Powers of Parliament to impose restriction on trade, commerce, and intercourse.
24. Article 304—Restriction on trade, commerce, and *intercourse amongst States.
25. Article 312—All India Services.
26. Article 355—Duty of the Union to protect States against internal aggression and internal disturbance.
27. Article 356—Provisions in case of failure of *Constitutional machinery in States.
28. Article 385—Effect of failure to comply with or to give effect to directions given by the Union.

INCIDENTALS

INDIAN NATIONAL CONGRESS

State Unit- -KERALA

MEMORANDUM

Indian Constitution is federal as well as unitary according to the requirements of time and circumstances. While in normal times, it can be made to work as a federal system, our constitution retains to itself the choice to convert itself into a unitary system. Considering the size of the country and the multitudinal differences in culture, language, and levels of economic and social development of the different regions and people inhabiting them, the Constitution makers have given us "the soundest frame-work" in a federation with a strong centre. Last 34 years is a long enough period for us to take stock of the legislative powers of the union and the states in so far as their working is concerned especially in the field of ever-increasing responsibility of the States in development programmes and social welfare measures. Regional disparities and imbalances have not been completely eliminated during the past era of planning. These imbalances are but one manifestation of the oligarchic and spatial distortions of the Indian political economy that had built themselves up from the very inception of planned development. Without minimising the attempts made in the past to redress these regional imbalances, it is clear that a meaningful effort in this direction has to begin with a clear analysis of the present institutional set up that wields economic power both at the Centre and in the States. *There is concentration of economic power at the Centre;* the economic power of the State Governments and that of the Districts vis-a-vis the States in turn, is seen to be for too meagre in relation to their clearly defined responsibilities. The evolution of public finance over the last three decades presents a picture of concentration of financial resources at the top and funneling of these large quantum at the higher layer and corresponding paucity lower layers where in fact, lie the largest areas of development activities.

2. One of the issues needing immediate solution is the basic problem of Centre-State financial relations. Substantial responsibilities relating to the economic and social well-being of the people are entrusted to State Governments whose command over financial resources for discharging the same is too meagre. Right from the beginning, a rigid compartmentalisation was introduced between resource transfers for meeting the so called continuing or committed revenue expenditure and the resources transfers for the so-called plan expenditure intended for the new projects of the State. The latter is kept out of the scope of the Finance Commissions. So are the entire capital transfers, irrespective of whether they are grants or loans, plan or non-plan. While the Finance Commission is enjoined to probe the scope for better fiscal management and economy in the State's administration, maintenance, developmental and other expenditures, the expenditure by the Central Government is never exposed to the same degree of scrutiny by the Commission. As a result, the Finance Commission has had no role in determining the part that should be retained by the Centre out of the aggregate resources mobilised and the part that should be made available to the States. In actual practice, it is the Central executive represented by the Finance Ministry which has been deciding upon the quantum of resources to be placed within the jurisdiction of Finance Commission for distribution among different States. And the detailed exercises of the Finance Commissions have been essentially confined to devising just and equitable measures for distribution of the given quantum of resources among the different States in the form of share in tax revenues and grant-in-aid. The growth in the transfers of financial resources of a non-statutory nature from the Centre to the States since the inception of planning calls for a critical review.

3. It is indeed surprising that no serious notice is taken of the dead-weight of the artificially accumulated indebtedness of the States to the Centre. In fact, failure to find a solution to this problem has rendered Central Plan assistance to the States without desired results. Loans from the Centre to the States have been consistently well over three-fourths of the aggregate non-statutory transfers. The late Prof. Gadgil made an attempt to sort out the 'plan' component of these non-statutory transfers and found that the 'Plan assistance' in the form of grants was only of minor importance, loans accounting for 78 per cent of the 'Plan assistance'. It may be noted that the rate of growth in the indebtedness of the States to the Centre has been essentially due to the manner in which Plan assistance is presently being dispensed. It is necessary to recognise the fact that a substantial portion of the capital expenditure of a State in its early stages of development would be on infrastructure in the form of roads, bridges, irrigation facilities, buildings for education and health services and so on. They are essential but not capable of yielding direct returns in the manner investment on industries and transport is expected to yield returns. However, the Planning Commission made no such distinction in capital expenditure in so far as the States were concerned and practically the entire plan assistance for capital expenditure in so far as the States were concerned and practically the entire plan assistance for capital expenditure has been in the form of loans, grants being of negligible dimensions. Large sums of money made available to the States for undertaking operations such as famine relief and anti-sea erosion (which create no tangible assets) have been treated as loans to be repaid with interest. The Planning Commission and the Central Government must take these hard realities into account so that full and equal justice is done to every State.

4. The drift in Centre-State capital transactions is seen in the net flows from the Centre to the States, which have fast tapered off and alomst turned negative. It is pertinent to draw attention to the fact that whereas practically the entire "Capital assistance" to the States is treated as loan, irrespective of the purpose for which it is utilised, a distinction is drawn between grants and loans in respect of capital expenditure concerning Centre's own undertakings. For instance in the developmental capital outlay of the Central Government, the entire expenditure on Civil Works is financed out of capital grants, whereas "Central assistance" for similar item of capital expenditure on the part of the States is in the form of loans. Once does not see the reasons why when the purposes of capital expenditure are identical for the economic and social development of the people of the country (and, in the ultimate analysis, all the resources are supplied by the people themselves), that part of the capital expenditure undertaken by the Centre is met out of grants, while the part undertaken by the States through "Central assistance" be subjected to repayment with interest.

5. Again, Central Government's financing of large size industrial undertakings are to a substantial extent through equity participation in those undertakings and in deciding upon the terms of repayment and interest charges for the loans given to those undertakings, due note is taken of the gestation period and the capabilities in earning returns. It only stands to reason that projects of a similar nature undertaken under the auspices of the State Governments should merit identical considerations of financing, instead of "assistance" given to the States for such purposes being entirely in the form of repayable loan.

II

Financial Relations

6. The scheme of devolution envisaged by the constitution was one under which most of the transfer of resources from the Union to the State was through the recommendation of the Finance Commission. The transfer of resources under centralised planning was not visualised at that time. Alongwith the planning process there developed more and more centralisation of savings in the country. Thus the percentage of resources transferred to the State through Finance Commission is only 40 per cent while the transfer of resources taking place *defacto* outside the Finance Commission is around 60 per cent. It is clear therefore that the original scheme of devolution envisaged by the constitution-makers has been over-stopped by resorting to additional mechanisms of resource transfer in practice.

7. In the context of planned development, it is necessary to take an overall view of the financial needs of the State so that concentration of all tax powers with the Centre is avoided by making it possible to share all income taxes and all excise duties. There should be a clear provision for a more equitable distribution of resources between the Union and States in respect of resources other than taxes as well. The experience of the past 34 years clearly shows that the Central Government has taken care to see that the receipts from those sources exclusively reserved for the Centre are increased from year to year while the revenue from those sources or items which are shareable with the States are not increased in the same proportion. Sometimes, the Central Government shows a tendency to grant concessions in the case of shareable items causing the quantum of the shareable pool to go down. The net result is that the discretionary powers enjoyed by the centre in this regard is very often not exercised in the State interest.

8. Over the years, there has emerged a fairly large deficits on the central revenue account. There is a tendency to ascribe the increase in revenue deficits to increasing devolution to State Government. This is not factually correct. The proportion of total central resources transferred to the States over the last 34 years beginning with the First Plan (1951-56) and ending with Sixth Plan (1980-85) shows that there is no increase. It has remained around 32·6% over the years. This indicates the need for efficient exploitation of income-tax, Excise and Customs and better control over expenditure. This aspect of India's finances has remained obscure and escaped public scrutiny, because of the lack of institutional arrangements to over-see them.

9. The Commission may kindly note that the concentration of economic power in the centre and its operation over the last 34 years has resulted in the growth of the centre in the field of fiscal and monetary policies without the States ever getting their adequate share by way of direct participation in the policy formulating process. The present institutional framework does not give the States sufficient role. It is, therefore, necessary to create a statutory body like an "Inter-State Council" with adequate representation to State Governments ensured. Whether the present National Development Council could be restructured to meet the requirements is examined elsewhere in this note.

10. The poorer States are not getting a fair deal in the sharing of total resources. The present devolution mechanism has not bridged the gap in resources and in development between the poorer and richer States. The share of the States in the totality of Centre's resources inclusive of taxes, non-tax and capital has shown a progressive decline from plan to plan. If the State's share was 43 per cent in the First Plan period (1951-56), it was only 31 per cent in the Fifth Plan period (1974-75). The quantum of central assistance to the State's plan is now fixed on an *ad hoc* basis on the advice of the Finance Ministry. It is interesting to note that the resources for the Central Plan has increased from one Plan period to another in response to increasing costs of Central investment and inflationary rise in prices, whereas there is no corresponding increase in the central assistance to State Plans. The high rates of inflation and escalation of costs have made a substantial erosion in the resources of the States. In addition to the unfavourable impact on the resource position of the States on account of Centre's predominant position in the fiscal and monetary policy formulation process, the per capita revenue surplus of States resulting from the Finance Commission's award has shown a very wide divergence. The minimum surplus per capita is Rs. 15 in the case of Orissa and maximum Rs. 676 in the case of Haryana. The

resulting ratio between the lowest and the highest per capita surplus is one to forty-five. An examination of the recommendation of all the Finance Commissions would show that the awards have always helped to make the richer States richer. In the existing design of things the States with large non-plan revenue surplus will have a strong and large resources base for the ensuing Five Year Plan. The size of the State Plan is fixed on the basis of the available central assistance determined by the modified Gadgil formula to which is added the States' own resources including the revenue surplus arising out of the Finance Commission's award. The present system of inter-state allocation of resources through the Finance Commission and Planning Commission has in practice resulted in an unhappy state of affairs breading in the process a large number of irritants in the Centre-State Financial relations. The States which have the benefit of larger surpluses from the Finance Commission award are *ipso facto* allowed to have larger State Plans. This is clearly an unacceptable situation. The Finance Commission and the Planning Commission should work in unison and on the same data-base which is not unfortunately the case today. Any well thought out formula for devolution of resources from the Centre to the States should be able to ensure that all States should have the same amount of per capita revenue surplus at the beginning of every plan period. But the total sum to be earmarked for devolution during a plan period both through the award of the Finance Commission and the Planning Commission should have some live relation with the resource gap assessed on the basis of a more scientific data base. The present annual exercise of the Planning Commission to fix plan outlays and Central assistance each has become a mechanical exercise bureaucratic in form and arithmatic in content. Recently, it is seen that as much as 50 per cent of the Central Plan assistance is allocated outside the Gadgil formula. The balance amount is distributed purely on the exercise of central government's discretionary powers. Thus it is clear that the transfer of resources, both statutory and discretionary on the advice of the Finance Commission and Planning Commission have not promoted either efficiency and economy in expenditure or reduced disparities in public expenditure among the States. This is because the devolution has been organised not on the basis of a well co-ordinated examination and study of the specific needs of the committed expenditure or of development.

11. Over the last three decades, there has grown up a degree of concentration of savings in the hands of Central financial institutions like LIC, GIC, UTI, IDBI and IFCI. This has become in effect the strong arm of the Central Government in the working of which the States have not been intimately associated. On the other hand, the dependance of the States on these institutions for investment in agriculture, industry, housing, water supply and urban infrastructure is quite large. In the circumstances, while the total savings available in the community have to be shared between the public and private sectors, it has to be ensured that the share mobilised by the public sector has to be distributed between the Centre and the States and their respective public undertakings.

12. There is a clear trend notice over-time highlighting a decline in the State share of total Public sector resources which is largely due to the sharp decrease in the transfer of capital resources. In this context, it may be noted that most of the States suffer on account of the growing indebtedness and overdraft problems. The States do not possess elastic sources of revenue and the repayment of loans therefore becomes a major burden on them. The States also find that there is a substantial erosion of resources due to grant of instalments of additional dearness allowance and other items of expenditure related to cost escalation. The State's resources are thus squeezed between the increasing demands both on the non-plan and plan leading to over-drafts. Recently, the difficulties are multiplied to a significant extent by the growing tendency on the part of some State Governments to indulge in non-plan schemes which are non-productive, inflationary and welfare oriented. There are a whole variety of such items of expenditure which are growing in number and spread. The real answer to this situation lies in ensuring price stability. As things are, the Central Government alone is concerned with the price situation, while in the management of prices and costs and in the initiation of the inflationary spiral, the part played by State Governments is also becoming a significant factor next only to that of the Central Government. Therefore, there is an additional reason why the developing situation should be continuously studied concurrently both in respect of the design of a development strategy and the instruments of policy formulated for their faithful implementation. Direct participation of the State Governments alongwith the Central Government in a common forum is therefore needed. The NDC with the Planning Commission as its Secretariat can be such a forum. Such a body can also discuss and decide the market borrowing policy and the pattern of distribution of the proceeds between the Centre and the States. One of the functions of this body would be to undertake continuous studies on Centre-State finance which, of course, will include the review of the revenue and the expenditure of the States and the Union Government. Such a scrutiny is bound to create a more desirable climate for avoidance of waste and economics of expenditure. This would also involve modernisation of accounting procedures of Government which would help it to reflect the correct position at any given time. This would immediately call for modernisation through computerization. Timely reports presented to State Governments, Central Government and Estimates Committees would go a long way to enable people's representatives at all levels to go into wider aspects of policies and programmes and thus act as a watch dog on plan schemes and programmes.

III

Planning

The concrurrent list of the Seventh Schedule of the Constitution has recognised "economic and social planning" as an instrument of vital social and economic change which the Central Government may initiate in consultation with the States. Economic Planning has to have a national perspective, national

priorities, inter-sectoral and inter-regional balance. Planning has to be, therefore, a national endeavour ensuring in the process the full commitment of the States in the primary task of designing development strategies and policy instruments. Planning, therefore, has to be total and cannot be partial. It aims at total social and economic transformation which will leave no room for any hurried or superficial treatment.

13. A review of the attempts by the Planning Commission to extend its role and functions at different levels of Planning and implementation starting from the Union Government to the States, the District, Blocks and Panchayats—would clearly show that they were fighting a loosing battle all through. The efforts to streamline the Planning machinery through a plethora of expert committees, Government orders and a system of subsidies and persuasions did not, over these 35 years achieve much to our credit. Planning process is getting more and more bureaucratised, with the result that the necessary means for the perpetuation of the old order is placed in the hands of the traditional centres of power.

14. The Planning machinery at the Centre, the State, District and the Panchayat levels have to be organically linked in a two way process-top-down and bottom up-in identification, formulation, implementation and evaluation of development schemes. The financial resources to set the physical resources in motion could be provided through a channelisation of (i) profits of pulic sector industries, (ii) contribution of the pleasantry in the form of delivery to the State of part of their products at reduced prices, (iii) nationalisation and State Control of all the commanding heights of the economy, (iv) increased taxation and State loans, and (v) deficit financing. It may be noted that in the management of these important levers of the economy, the Planning Commission and the Planning machinery in the State should have a commanding role. In designing policy instruments in the above areas, the National Development Council ably supported by the Planning Commission and the State Planning Boards will have to play a direct and innovative role. The Distribution control and responsibility in State owned industries, incentives in the new industrial order, the role of trade unions, measures for facilitation social mobility are all important areas where relevant policies and machinery for implementation have to be built up by both the centre and States as a Joint Co-operative venture.

15. In actual practice, the Planning process as evolved and implemented by use has resulted in a stereo-types system of project preparation covering the length and breadth of this huge country with its immence diversities. This makes the Planning process loose its responsiveness to specificity of regional and local situations. This also leaves out from intimate study of the vast development potential of different planning regions represented by the States. The only remedy is to democratise the planning system giving greater emphasis on local initiative paving the way for better national integration. The detailed sectoral planning may be left to the States as advised by the Administrative Reforms Commission. The Central Government should be the supreme co-ordinator providing initiative and leadership to the States. As for as subjects in the State list are concerned recently there is a tendency to increase the number of centrally sponsored schemes by Central Ministries in this area on the plea that some schemes of national importance have to be taken up and implemented all over the country which will call for initiative, direction and co-ordination by the Centre. The experience is, on the other hand, that these increasing number of centrally sponsored schemes only tend to distort the State Plan priorities. In cases when it becomes absolutely necessary to take up a few schemes, it should be only on the basis of 100% Central assistance and not on the basis of matching contribution. Both at the Centre and in the States the Planning, monitoring and evaluation organisations have to be build up as fullfledged progressional organisations. While Government body could be used for concurrent evaluation, independent centres of study can be made use of in the evaluation of major Plan Programmes both at the Centre and in the States. This would help to ensure unbiased reports on performance.

16. The State Planning Boards/Committees/Commissions have been created in few States whereas in a majority of States planning is still left to the respective state planning departments of the secretariat. These bodies today are not endowed with much of a status in the heirarchy even though they are contributing a grat deal in collecting data, initiating research studies and formulating development programmes. Every often a Five Year Plan that gets formulated for a specific time-frame differes in several respects from the actual plan that gets implemented during the same period. The reason is that a large number of new shemes and programmes are sanctioned in each year's plan. Budget making a serious erosion either in resources or priorities or sectoral balances. In making such changes in the plan, the Planning Boards do not seem to play any role.

IV

The Machinery for Planning and Implementation

17. From the very inception of Central economic planning in India, it was recognised that there is need for building up institutional arrangements for plan formulation in respect of economic activities which call for community involvement at different levels. Form the selection of projects in a sector and preparation of preliminary reports to the allocation of priorities between them and their implementation through proper phasing. there are a whole series of studies, consultation with interest groups and mobilisation of mass participation that have to be ensured. is usually during these various stages through which a project or a programme has to pass that scare appear and mar the total effects in the end. Defective conception, wrong appraisal and faulty implementation may damage even otherwise viable schemes. Governments whether at the Centre or in the States should recognise the social and administrative costs of directly conceiving and running a number of development programmes—small and big—from the headquarters for a large number of territorially dispersed and disadvantaged sections of

society by delegating responsibilities for formulation of projects, concurrent evaluation and monitoring and implementation to lower eschelons. The Central Government or the State Government concerned will be able to define strategies, introduce desirable changes, where necessary, on the basis of increased avenues for learning from experience. This will help to accomplish the desired economic and social objectives. It frequently happens that several Governmental or non-governmental agencies participate in a project during its various states which makes it necessary to define clearly the relations between them and the type of administrative arrangements necessary to co-ordinate their activities and avoid points of conflict. The greatest harm being done presently to a project is through the avoidable delay and waste caused by duplication of functions at different levels of administration. Bureaucratisation is, very often, in the nature of shifting responsibilities to others, no matter what it costs in terms of time and manhours wasted. The speed and promptitude with which developmental tasks are attended to and carried out will generally depend on the thoroughness with which clarifications are sought at the very inception and the care the executive devotes to the choice of presonnel and their continuity on the job. A hold up in construction activity due to delay in administrative sanction has extended in the case of innumerable projects the period of their investment maturity. The experience of our past Five Year Plans points out clearly the need for introducing maximum decentralisation in planning and administration and financial flexibility. Careful planning by Central and State Governments therefore have to ensure that various delivery systems function in synchronisation and that enlargement and improvement are well co-ordinated. The marked inequalities in ownership of land and other scarce commodities have to be narrowed and the benefits ensured to reach the poorer households, notwithstanding their pitiful asset position.

18. It is high time, therefore, that politics and administration recognise the pertinence of decentralising certain planning and implementation functions so that the Central Government and State Governments in turn will be able to concentrate more on emergent tasks of drawing up development strategies, shaping up of policy instruments, initiating high powered research, co-ordination and more effective supervision which would help sustain improved quality of service. In fact, the parting with powers relating to increasingly routinised aspects of development management, would not involve any loss at all either to the Government at the Centre or the States. The elective or administrative institutions at the respective levels of political power should be left free to focus their sights on the managemet of the challenges of development administration in areas such as inter-sectoral balances, industrial growth, universalisation of literacy, preventive medicine and hygiene and Planning for the strategy for a fuller exploitation of natural resources.

19. It is in this context that the Commission should review the series of attempts made by the Planning Commission to decentralise the Planning process to the States, regions, districts and lower levels. In 1962, the Planning Commission suggested to the States that they should set up State Planning Boards to help them in the preparation of long term perspective and medium term plans, to recommend policies and measures for realisation of major social objectives, to evolve criteria for location of major projects and to assess the costs and benefits of alternative proposals. The expectation was that all State Governments will fall in line with this national efforts, since these expert bodies will be endowed with sufficient status and authority to advise State Cabinets, Secretaries and Heads of Departments on all matters of Planning and implementation within the national policy and plans frame work. But nothing substantial was done in any of the States till 1972. The study team of the Administrative Reforms Commission therefore found it necessary to make a strong case for State level planning bodies with sufficient authority and status. The study team found that wherever Planning Boards or Committees had been constituted their functions were only vaguely defined. Membership of those bodies range from 5 to 65 with very few exports involved. These bodies were serviced by the State Planning Secretariates which did not have any technical expertise to boast of. The study team therefore concluded that none of the Board meetings were constructive or fruitful. Following the recommendations of the ARC, the Planning Commissions again suggested a model State Planning machinery. According to the suggested model the apex body (The State Planning Board) should have the Chief Minister as the Chairman, Finance and Planning Ministers and experts representing certain disciplines as members. They were to be supported by Steering Groups chaired by technical experts preferably from outside the Government who are also members of the apex body. A full-time non-official should be the Deputy Chairman of the apex body, and the Planning Department to be organised into functional units for perspective planning, plan formulation, plan monitoring and evaluation, project formulation and appraisal. As an incentive for the States, the Planning Commission agreed to share two-thirds of the expenditure involved.

20. Most of the States took advantage of the Central subsidy and set up large or small Planning bodies as the case may be. If one were to apply the search for excellence as the test of excellence, none of these boards could boast of having attracted the desired level of expertise or even administrative experience. Most of the Boards work only as appendages of Planning Departments advising them in the formulation of medium term plans. These Boards generally were not involved in annual plan formulations or relevant discussions with the Planning Commission. It may be seen that in the formulation of Annual Plans and subsequent discussions in the Planning Commission which alone had any operational significance, the Planning Boards were religiously kept at a distance. No wonder, these bodies did not grow up in prestige and status within the State or vis-a-vis the Planning Commission.

The need for decentralised planning in the States

21. The extent and form of democratic decentralisation of planning and plan administration have varied from state and there have been ups and downs in the earnestness with which this has been pursued.

Many states started as a first step to renew the old concept of gram-panchayats and gramsabhas so that peoples' involvement in their affairs at the grass-roots can be started. The community development programme and the National Extension Service helped to focus the need for decentralisation further.

22. The Balwantarai Mehta Committee was appointed in 1957 to assess the extent to which the C.D. movement has succeeded in utilising local initiative and in creating institutions to ensure continuity in the process of improving economic and social conditions in rural areas. This committee argued that there should be administrative decentralisation for the effective implementation of development programmes and the decentralised administrative system should be under the control of elected bodies since they felt that development cannot progress without responsibility and power. Development can be real only when the community understands its problem, realises its responsibilities, exercises the necessary powers, through its chosen representatives and maintains a constant and intelligent vigilence on local administration. With this objective they recommended an early establishment of statutory elective local bodies and devolution to them of the necessary resources, power and authority. Unfortunately nothing very much was achieved on the ground even though sporadic attempts were made to set up Panchayati Raj Institutions in most parts of the country. In fact, the Panchayati Raj Institutions were rarely given an opportunity to take up planning or implementational work on a sizeable scale. The Panchayati Raj experiment gradually lost ground due to the weakening of administrative will.

23. During the IV Five Year Plan period the Planning Commission indicated to the States' the need to formulate district plans. Recently the planning Commission has offered financial assistance on a fifty-fifty matching grant basis for setting up the district level planning machinery. Many states have set up planning units at the district level even though they differ in form and content from state to state. The differences are to be attributed partly to the varying interests evinced by the state leadership in decentralised planning and partly to the absence of uniformity in the Panchayati Raj institutions which provide spatial and political base for decentralised planning. But the devolution of power and authority to the district or lower level planning bodies has not taken place so far.

24. The next attempt at decentralisation was in 1978, when Ashok Mehta Committee on Panchyati Raj Institutions was constituted. The government resolution clearly stated that 'the Government considers that the maximum degree of decentralisation both in planning and implementation is necessary'. As a continuing process in the development of necessary. As a continuing process in the development of ideas on planning from below and multi-level planning, the Ashok Mehta Committee found that at the district level the data base is better and expertise in these various departments is sufficiently of a high order. The assessment of total resources, the credit availability and also the formulation of strategy convering the several blocks could be done at the district level. The Dantwala Working Group on Block level Planning referred to this coordination, integration and the need for harmonisation of the block plans with the district plan since 'the preparation of Block and District Plans will be part of the same exercise'. The emergence of the need for executing a very large number of location of specific projects on numerous action point s at a great distance from the state headquarters would emphasise the advantage of planning at the district level. Progress has also been achieved in institutionalisation and standardisation of techniques and procedure for district level planning.

25. Recently, the Economic Advisory Council appointed by the Prime Minister was asked to go into the question of decentralised planning and administration. They have examined the question denove and have recommended on intermediate tier of authority between the state and the districts. The proposal is that this may be introduced at the level of a cluster of four contiguous districts on an average falling within the same agro-climatic regions large enough to provide some of the advantages of scale where they are essential and yet not so large as to lose the advantages that come from compactness and easy accessibility. Decentralisation of development planning and administration within the state could then take the form of devolution of specified functions to the Divisional Development Authorities (DDA) constituted for the purpose and through them to Zilla Parishads and Panchayat Samities.

26. The main objective of decentralised development planning should be in fact to visualise possibilities and potentialities concretely within each region and sub-region in a systematic and practical manner. This would also help to build up the infrastructural facilities required, and assist in every way the changes in technology and organisation that are needed for a broad-based process of economic and social transformation.

27. The foregoing overview of planning processes, policy instruments and institution-building should serve the purpose of highlighting the serious shortcomings endemic to the system of planning in India. There was no serious attempt to relate the process of economic development and planning to resource endowments and needs of the people, living and working at the grass roots level. The result was that we could not tap the full potentialities of specific regions for growth and development in terms of increased agricultural production, development of minor irrigation, small scale industries, manpower development and resource mobilisation. Planning to be effective has to be planning from below as against planning from above.

28. Over the years there has been a visible tendency to make greater in-roads into the powers of the states with the result fissiparous tendencies are allowed to develop endangering the concept of unified India where there will be an assurance of the fullest development of the democratic aspirations and the distinctiveness of the people of the different states. At the same time, the devolution of powers should not be such that it will lead to a weak centre either-Different states and different regions within state

are experiencing problems of growth which are specific to the differences in the levels of development of these states or regions within states. A dead uniformity therefore is not conducive to the evolution of a relevant and workable solution. Co-ordination could be best assured in the sphere of planning and economic affairs through only new and innovative institution building. In our constitutional frame work the need for constant consultation and discussion among states *inter se* and between states and the union has manifested itself almost from the beginning of the working of the constitution. The Five Year Plans are a continuing major exercise in this process. Other closely related problems are power generation, regulation of industries and trade, assured distribution of food and essential articles, central financing institutions, procurement and supply of raw materials and marketing arrangements etc. All these matters which are of common concern to the states should be brought within the purview of an inter-state council as envisaged by Art. 263 of the constitution. This Article has been pressed into service only for setting up Central Councils of Health, local self Government, National Integration Council, Chief Ministers Conference etc. There are proposals to create All India Institutions like the National Loan Corporation, Nation Credit Council and National Economic Council. Though a lot of coordination is necessary in the matters affecting the interests of the States and the Centre, there is no need to create a number of independent bodies. Instead it should be possible to make the existing National Development Council a statutory body under Article 263 of the Constitution. It must be endowed with wide powers in matters relating to Centre-State relations covering the entire spectrum. The States could be effectively represented on the N.D.C. The National Planning Commission must be made to function as the Secretariat of the National Development Council. The Planning Commission should be so structured so as to enable it to take up problems for study and research on reference from respective State Governments. The NDC should meet at fixed intervals say at least once in every quarter. The meetings should be made more purposive so that the Chief Ministers of the States are able to study all plan documents and other important problems in detail and take decisions on them. The N.D.C. and the Planning Commission could thus be transformed into a strong instrument of change and development not only of the Central Government but also equally of the State Governments paving for better national integration. This will democratise the planning system and decentralise it, while at the same time giving the Central Government necessary regulatory and corrective authority. The process of resource allocation will thus be made to sub-serve new economic priorities which are implicit in a dynamic and growing economy.

29. The State Governments on their part may be advised for the same set of reasons to decentralise the Planning process to regional level, district, block and panchayat levels by an Act of Legislature so that the process will be insulated from the instability and fragmentation likely to prevail in the present political situation. The State Planning Boards should be built up as a Centre of expertise and administrative experience. Such a body can naturally function as the Planning Secretariat to Government which alone can ensure the required status and authority to the Board.

30. The Sarkaria Commission will do well to recognise the dialectical and integrative processes involved in development planning. The institutions built up at different levels in both the Centre and the States should represent legitimate authority so that they are enabled to apply sanctions at all strategic points of our social and economic life. A special machinery legitimatised and protected by the Constitution along can provide the required level of leader ship and credibility.

INDIAN NATIONAL CONGRESS (I)

State unit-Madhya Pradesh

MEMORANDUM

मध्यप्रदेश कांग्रेस कमेटी (इं) का यह निश्चित मत है कि केन्द्र राज्य सम्बन्धों के लिए जो प्रावधान संविधान में है उनमें कोई आधारभूत परिवर्तन की आवश्यकता नहीं है। संविधान में इन सम्बन्धों में समय समय पर आने वाली परिस्थितियों को झेलने के लिए पर्याप्त लचीलापन है।

2. कांग्रेस कमेटी का यह मत है कि संविधान में इस बात की व्यवस्था है कि केन्द्र और राज्य राष्ट्र के प्रति अपने उत्तरदायित्वों का निर्वाह और एक दूसरे के प्रति अपने कर्तव्यों का निर्वहन भली भांति कर सकते है। इसी तरह कानून बनाने की जो शक्तियां संविधान के सातवें शिड्यूल के अन्तर्गत केन्द्र और राज्यों में बांटी गई है, उनमें भी परिवर्तन का कोई आवश्यकता यह कमेटी महसूस नहीं करती। परन्तु इस बात की आवश्यकता है कि ऐसे कानून जो केन्द्र के पास सहमति के लिए भेजे जाते हैं तो केन्द्र उनका परीक्षण कानून की संवैधानिक वैधता को ध्यान में रखते हुए करे, ताकि आगे चलकर न्यायालय द्वारा वह कानून निरस्त नहीं किया जा सके।

राज्यपाल की स्थिति

3. राज्यपालों के जो अधिकार केन्द्र और राज्यों के सम्बन्ध में संविधान में निहित है, वे पर्याप्त है और उनमें परिवर्तन की कोई गुंजाईश नहीं है। कुछ अपवादों को छोड़कर राज्यपालों की अभी तक की जो भूमिका रही है वह संविधान के आशाओं के अनुरूप रहा है, और इनके क्रियाकलापों में राष्ट्रीय एकता और सुरक्षा की भावना दृष्टिगोचर होती है।

4. जहां तक केन्द्र और राज्यों के प्रशासकीय सम्बन्धों का सवाल है कांग्रेस कमेटी का यह निश्चित मत है कि देश की एक सुदृढ़ केन्द्र की आवश्यकता है जिसके निदेश पूरे राष्ट्र पर लागू हों और इस उद्देश्य की प्राप्ति के लिए संविधान के आर्टिकल 256, 257 और 365 में जो प्रावधान दिये है वे जरूरी है। आर्टिकल 365 का रहना इसलिए और भी आवश्यक है कि यदि इसे हटा दिया जाता है तो आर्टिकल 256 के अन्तर्गत केन्द्र द्वारा दिये गये निर्देशों का राज्यों द्वारा पालन न करने पर केन्द्र के पास ऐसी कोई शक्ति नहीं रह जायेगी, जिसके द्वारा केन्द्र उन निर्देशों का पालन करा सकें।

5. इस तरह संविधान के सातवे शिडूल्य के अन्तर्गत जो विषय राज्यों को दिये गये है और सम्वर्ती सूची के जिन विषयों पर केन्द्रीय अभिकरण द्वारा कार्यवाही की जाती है उनमें भी परिवर्तन की आवश्यकता नहीं है और इस सम्बन्ध में राज्यों की स्वायत्ता के नाम पर जो आवाज उठायी जा रही है, वह उचित नहीं है। परन्तु ऐसो अभिकरणों की भूमिका के सम्बन्ध में समय समय पर राज्य शासन और केन्द्र के बीच में विचार विमर्श होना चाहिये। अखिल भारतीय सेवाओं, के सम्बन्ध में कांग्रेस कमेटी का विचार है कि इसने राष्ट्रीय एकता मजबूत करने की दिशा में महत्वपूर्ण भूमिका निभायी है।

6. जहां तक केन्द्रीय आरक्षित बल को राज्यों में ड्यूटी पर भेजने का सवाल है यह कार्यवाही विना किसी अपवाद के राज्य शासन की सहमति से ही की जानी चाहिये। पग्न्तु इसके साथ ही राष्ट्रीय सुरक्षा एव अखंडता को खतरा पैदा होने को परिस्थितियों के निर्मित होने पर केन्द्रीय शासन को ऐसे आरक्षित बल को राज्यों में भेजने का अधिकार अवश्य हो होना चाहिये।

7. जहां तक रेडियो, टेलीविजन को संविधान की सम्वर्ती सूची में शामिल करने का प्रश्न है, कमेटी का यह मत है कि इसको केन्द्र के हाथ में ही होना चाहिए।

आर्थिक सम्बन्ध

8. केन्द्र और राज्यों के बीच में जो आर्थिक सम्बन्ध है उनमें परिवर्तन की कोई आवश्यकता नहीं है। संविधान में इस बात की पर्याप्त व्यवस्था है कि राजस्व आय का बटवारा केन्द्र और राज्यों के बीच बराबर-बराबर हो और कमजोर राज्यों को केन्द्र से पर्याप्त सहायता प्राप्त हो, परन्तु इस सम्बन्ध में कमेटी नीचे लिखे तोन सिद्धांतों की ओर कमीशन का ध्यान आर्कषित करना चाहती है :—

(अ) राज्यों को इस बात का समुचित अवसर मिलना चाहिये कि वे अपने स्रोतों का दोहन कम से कम समय में पूरे तौर से कर सकें।

(ब) ऐसे राज्य जो अपनी प्राकृतिक सम्पदा का दोहन बराबर नहीं कर सके है, उन्हें ऐसा करने के लिए केन्द्र से पर्याप्त सहायता मिलनी चाहिए।

(क) राज्य में तथा राज्य के भीतर विभिन्न अंचलों में जो असंतुलन है उसे दूर करने के उपाय किये जाने चाहिए।

9. जहां तक राज्यों के वसूल किये गये करों के हिस्से का सवाल है, कमेटी यह चाहती है कि कुछ केन्द्रीय करों जैसे आयकर आदि का और अधिक हिस्सा राज्यों को मिलना चाहिए।

10. जहां तक राज्यों के बीच आय के बटवारे का प्रश्न है इस सम्बन्ध में सातवे वित्त आयोग द्वारा जो फारमूला अपनाया गया है, उसके ही अनुकूल योजना को सहायता राशि भी दी जानी चाहिये। इस फारमूले के अन्तर्गत आय के वितरण में जनसंख्या का 10 प्रतिशत, राज्यों के क्षेत्रफल का 15 प्रतिशत प्रति व्यक्ति आय का 25 प्रतिशत, आय के साधनों का 25 प्रतिशत और राज्य की गरीबी का 25 प्रतिशत के हिसाब को ध्यान में रखकर आय का बटवारा किया जाना चाहिए। इसके लिए एक महत्वपूर्ण सुझाव यह भी है कि आर्थिक नीति तैयार करने के लिए केन्द्र और राज्यों के वित्त मंत्रियों को सम्मिलित होना चाहिए। इस तरह संविधान की धारा 269 के अन्तर्गत जो टेक्स केन्द्र सरकार लगाती है और उनका कुछ भाग राज्यों को देती है, ऐसे टैक्सों को कुछ सीमा तक लगाने के अधिकार राज्यों को भी मिलना चाहिए।

11. कमेटी का यह मत है कि सूखा पडने की स्थिति में केन्द्र सरकार से प्राप्त राशि को खर्च करने की अनिवार्य तिथि 31 मार्च के स्थान पर 30 सितम्बर होना चाहिए, क्योंकि 30 सितम्बर तक हर हालत में सुखा पीडीत जनता को राहत पहुंचानी होती है। इसके अलावा खरीफ की फसल सितम्बर माह के आ जाने के बाद सूखे की स्थिति में कुछ राहत मिल जाती है।

12. आदिवासी उपयोजना में केन्द्र सरकार द्वारा जो सहायता राशि राज्यों को दी जाती है, कमेटी की राय में, वह पर्याप्त है। किन्तु इस सम्बन्ध में योजना आयोग जिन क्षेत्रों के लिए और जिन मदों के लिए यह राशि उपलब्ध कराता है, उस पर राज्यों की सलाह योजना आयोग को निश्चित रूप से लेनी चाहिए। अभी तक जो केन्द्र द्वारा प्रवर्तित योजनाये है उनका खर्च केन्द्रीय सरकार केवल पांच वर्षों तक देती है, व्यवहारिक अनुभव के आधार पर इस सीमा को बढ़ाकर कम से कम 10 वर्ष किया जाना चाहिए।

13. जहां तक उद्योगों को लाइसेन्स देने के अधिकार का प्रश्न है, केन्द्र के पास केवल उन उद्योगों को लाइसेन्स देने के अधिकार होने चाहिए जो राष्ट्रीय सुरक्षा की दृष्टि से आवश्यक उद्योग हों। शेष सभो उद्योगों को लाइसेन्स देने का अधिकार राज्यों के पास ही होना चाहिए। इसी तरह कृषि के मामले में इसे केवल राज्यों का विषय नहीं माना जाना चाहिए, क्योंकि कृषि के सम्बन्ध में जो अनुसंधान आज के युग में केन्द्रीय धरातल पर ही होते है, उनके लिए राज्यों के पास आवश्यक सुविधाएं उपलब्ध नहीं है कृषि उद्योगों के उत्पादन के लिए जो मूल्य अभी सम्पूर्ण देश के लिए निर्धारित किये जाते है, वे हर राज्यों की स्थानीय परिस्थितियों को ध्यान में रखते हुए अलग अलग तौर पर किया जाना चाहिए, क्योंकि पूरे देश के लिए एक समान कोमत तय करना व्यवहारिक नहीं है।

14. फौजी छावनी क्षेत्र में जो नागरिक (सिविल) आबादी रहती है उनकी नगरीय व्यवस्था स्थानीय नगरपालिका परिषद या नगरपालिका निगम द्वारा की जानी चाहिए।

15. उपरोक्त सुझाव में संक्षेप में मध्यप्रदेश कांग्रेस (इं) कमेटी द्वारा इस दृष्टि से मूलतः प्रस्तुत किये जा रहे है कि केन्द्र और राज्यों के बीच सम्बन्ध और अधिक मधूर बनें और केन्द्र भी पर्याप्त रूप से ऐसा शक्तिशाली हो जाएं कि देश की अखंडता और सुरक्षा एवं राष्ट्रीय एकता अक्षुण बनी रहे।

—

INDIAN NATIONAL CONGRESS

State Unit—Andhra Pradesh

MEMORANDUM

General

The Constitution lays down in its very first article that India is a union of States. Indian Constitution is, therefore, federal in its nature, concept and functioning although in certain aspects it may exhibit an unitary character; in fields like Defence and Foreign Affairs wherein it would not be possible in infuse the theory of federalism or dual responsibility.

1.2 The underlying principle in framing the Constitution is that there should be a strong Centre. States have also been given almost autonomous powers in certain fields exclusively reserved for them. The Constituent Assembly unanimously resolved that Indian Constitution throws more responsibility on the Executive though there may be less stability. Eminent constitutional experts unequivocally held that the Indian Constitution is basically sound. The very fact that the Indian Constitution stood the test of time for more than 35 years should strengthen this view that basically the Constitution does not need any changes of far reaching consequences.

1.3 In any democracy, the functioning of the Executive depends much upon the strength of the Opposition. Unfortunately, even after 35 years of independence, we could not develop a two party system on all India basis to govern the Country. When a single party rules both at the Centre and States there was no friction nor was there any occasion to put any of the contraversial provisions in the Constitution, to test. It is only when the Regional parties sprang up and began to form Governments at the State level, without any all India character or adequate representation in the Parliament, the bogie of State and Central relationship, either administrative, legislative or financial have been raised.

1.4 A close analysis of the functioning of the regional parties would, more than confirm that this cry was raised merely to cover their deficiencies at the State level and in that they found that throwing the blame on the Centre is a convenient way of escaping from their short-comings and failures. It is incorrect to state that all this was due to lack of adequate provisions in the Constitution or the Constitution has vested the Centre with more powers and that the Centre has become an hindrance to free functioning of the State Government. One should not forget the fact that historically the Country was torn to pieces when it was not integrated or united. It is only during the British regime that the entire Country was brought under a single authority, although for practical reasons the Britishers encouraged Princely States but at the same time they had absolute control over their functioning. History, therefore, taught us that if India is to be integrated and united there should be a strong Centre. There should be no doubt that when once Centre becomes weak, the Country will again be divided leading to balkanisation of States. It is with this historical perspective that late Sri Sardar Vallabhbhai Patel took up the onerous task of integrating all the Princely Indian States and made them part of the Indian Union in a remarkably short time and to enable us to prescribe for ourselves this Constitution which is federal in nature.

1.5 Before thinking of any changes in the Constitution to vest more powers in States to make States more autonomous and more independent of the Centre, we should not forget our past history, the trials and tribulations that the Nation underwent during the past 5 or 6 centuries. Emotionalism or Parachronism approach cannot and should not be encouraged so far as the integrity and unity of the Country is concerned. The option, if any, should be to make Centre still stronger.

1.6 Unity in diversity can only be achieved through various regions, religions, languages, ethnic groups and weaker sections mainly fall in line with the doctrine of the concept of "One India."

It would therefore be necessary to see that all such groups are given equal opportunity in the economic and political fields not as a matter of charity but as a matter of right by all the power weilding institutions, Central and State Government and local authorities etc., so as to usher in an egalitarian society.

Any unrest in any part of our country due to non-fulfilment of the above-mentioned ideals has to be dealt economically and politically and not be deemed as any constitutional crisis. We are already aware of the damage the theory of the 'Sons of Soil is causing directly or indirectly in our body politic today. If a persons life and property are not safe if he does not belong to a particular State, while being an Indian citizen, where will it lead to except to chaos.

1.7 Coming to the functioning of the present Constitution it is difficult to even agree that the States have no autonomous powers under the existing provisions. In fact our experience in this State, and should also be the experience in other States ruled by other non-Congress Government under regional parties, which have no political philosophy or all India character and which are not controlled by an All India Apex Political body, the Governments or Chief Ministers of the States have enoromous powers under the Constitution either to use them benevolently or mis-use them. *Ex-facie* a glaring fact that strikes any reasonable person is whether at all the Centre has got adequate powers to check the States when constitutional provisions are mis-used by the States. The Constitution helped a State Govt. to stall the election of the Chairman of the Legislative Council, which is the highest Legislative body in the State and run that body with a nominated person, till such time the Government in power gets majority to elect the Chairman. The same Constitution enabled another State Government to abolish the Council itself when it found that the Government has no majority in the Council. It also enabled the State Government to pro-rogue the Legislatures while they were in session without even letting the Presiding Officer and much less the Legislature know about it, while the agenda was still to be transacted. The same Constitution is helping the State Government to mis-use the administrative machinery for political or party purposes. In all these spheres,

though the instances may look smaller, yet constitutionally there is no provision to check the Governments in power who are bent upon mis-using the powers or giving up well laid convertions. After all a democracy functions well whether it be under a written constitution or an un-written constitution, on the development of conventions and following conventions as if they have the force of law.

1.8 The primary function of the Legislative Assembly is to enact laws and to lay down policy for the Executive to carry out. A stage has come when the functioning of the State Governments have proved beyond doubt that even this vital function of the Legislative Assembly can easily be circumvented through promulgation of ordinances. Instances have become more, when ordinances have not been enacted into law by the Legislative bodies for years. When the Legislatures were in session also constitutional provisions have been completely ignored and ordinances have not been got ratified by the Legislatures. The most abnoxious system of re-promulgating ordinances was resorted to, rather than seeking the ratification by the Legislative bodies.

1.9 In the light of the above background and in the light of the working of many of the State Govt., we are of the firm view that the Constitution does not require basically any change. Our reply to question 1.5 in Part I is in the affirmative subject to the detailed reasons given against appropriate questions in other parts. We totally agree that the difficulties, issues, tensions and problems which have arisen in the Union State relations are not due to any substantial defect in the Scheme and fundamental fabric of the Constitution.

Legislative Relations

2.1 We strongly feel that Parliament should have basic authority to form a new State or to alter the boundaries, to increase or diminish the areas of any existing States and the existing provisions in the Constitution do not require any change.

2.2 We feel that the existing distribution of powers between State Legislatures and Parliament are adequate and are working satisfactorily. There are adequate provisions in the Constitution for ratification by State Legislature whenever the Centre wants to take up legislation of an all India character, on subjects in the State list of the Seventh Schedule to the Constitution.

2.3 Article 213 of the Constitution empowers the Governor to promulgate ordinances which shall have the same force and effect as an Act of the Legislature. This article also stipulates that every such ordinance shall be laid before the Legislature and shall cease to operate after the expiration of 6 weeks from the re-assembly of the Legislature, i. e. such ordinances shall be enacted as Acts of the Legislature within 6 weeks from the date it was laid down before the Legislature. Under the existing provisions ordinances will be placed before the Legislature only when the Legislature was summoned to transact normal business. Where the Legislature has not ratified ordinances and enacted them into Acts of the Legislature, the Ordinances cease to be in force but the same ordinances can be re-promulgated again after the Legislature is prorougued. It was the experience in the State during the last 2 years when ordinances were placed before the legislature but no effective steps were taken by the Govt. to get them enacted. With the result the ordinances lapsed and again re-promulgated after following the due procedure. It clearly shows that even though the Legislature would not be in favour of promulgating such ordinances, the Executive can circumvent the Legislature by re-promulgating the ordinance, whenever it suits their convenience. Infact, such acts of the Governor in re-promulgating the Ordinances should be treated as calculated erosion into the powers of the Legislature. It is, therefore, suggested that Article 213 should be suitably amended so as to provide.

(a) for laying the ordinances before the Legislature within a stipulated time and;

(b) for prohibiting re-promulagation of such ordinances, in any form which ceased to be operative because they were not approved by the Legislature.

Governors

3.1 Under the existing provisions of the Constitution, Governor is only a titular Head of the State. He has to function according to the advice of the Chief Minister or Council of Ministers headed by the Chief Minister. Though the Constitution empowers the Governor to exercise functions vested in him by the Constitution, under his discretion, in actual practice there was no field where the Governor is vested with power where he can function ignoring the advice of the Council of Ministers of the Chief Minister. The post of the Governor as representative of the President, in our view is essential as an authority to function in moments of constitutional crises.

3.2 The major constitutional function of the Governor is the appointment of the Chief Minister. Here again he has to go by the advice of the majority party, which elects their leaders, who in turn should be sworn in as Chief Minister. The fact that the Governor was vested with the powers of appointment of Chief Ministers has led to the conclusion that the Governor is equally competent to dismiss the Chief Minister. The question of dismissal, of Chief Minister arises only when the Chief Minister fails to command the majority of legislators or where the Governor has reason to believe that the Chief Minister is functioning without any majority in the House or confidence of the House. Our analysis in the functioning of the office of the Governor reveals that the Governor's office has become controversial, when he exercises power of dismissing the Chief Ministers on the ground that the Chief Minister did not enjoy majority support of the legislatures. This has become a major source of friction especially in the non-congress ruled States, because willingly or un-willingly the Governor is associated with the party in power at the Centre and is being regarded as a representative or agent of the Central Government at the State level. A close look shows that this development is only of recent nature. It is a debatable point whether the Governor should have absolute discretion to dismiss the Chief Minister

on the ground that the latter lost support of the majority of the legislatures in the House. On the other hand, a more practical view should be for the Governor to direct the Chief Minister, whenever he had a doubt that the Chief Minister was not enjoying majority support, to test his strength in the House. Under the present scheme of the Constitution, the Governor has not authority to summon the Legislature and direct the Chief Minister to face a trial of strength since prorogation or summoning of legislature should be done by the Governor only on the advice of the Council of Ministers. We would, therefore, suggest that whenever a Governor strongly feels, on the strength of material before him that the Chief Minister is not commanding majority support of House. he should have the right to summon the Legislature and direct the Chief Minister to prove his majority in a trial of strength. We, therefore, agree with the suggestion in question 3.8 in Part III.

3.3 The incorporation of the suggestion in question 3.9 will not be a workable proposition in the democratic set up envisaged by the Constitution. It should be left to the Members of the Legislature to elect the leader or dissolve the House and go in for elections.

3.4 Bills passed by the Assembly are presented to the Governor for his assent with due recommendations of the Chairman of the Legislative Council and the Speaker of the Assembly in respect of States with bicameral legislatures and the recommendation of the Chief Minister. The provision was functioning very satisfactorily and there is no occasion for any friction in this regard.

Administrative Relations

4.1 Our experience till now is that there was no occasion for the Central Government to invoke the provisions under Article 256 and 257 of the Constitution. In a Constitution of Federal nature obligations of the States and Unions play a vital role. Our experience was that in ensuring compliance with the laws made by the Parliament there was no occasion or need to invoke provisions under Article 256 as most of these Acts are self-contained defining the powers of the State Govt. and Central Government. The retention of these provisions in the Constitution are very essential whether we invoke or not to assert the supremacy of the Parliament or the Central Government to check the erring Governments in vital matters affecting the integrity and unity of the country.

4.2 Under the same concept, the powers under Article 356 for imposing the President's rule in extraordinary circumstances are very essential. The recent happenings in the border States like Assam and Punjab would strengthen this view further. It is the only effective provision in the Constitution for the Centre to interfere in situations affecting integrity of the States. The mere fact that these provisions might have been invoked for subserving the party interests when both Central Government and State Government are under the rule by the same party, should not be viewed with alarm but the need for the exercise of this extra-ordinary power should be viewed in the context of maintaining national integrity and unity of the country.

4.3 The provisions regarding All India Services as they are now conceived, is absolutely necessary. Infact, we should admit that All India Services have not fulfilled the expectations of the Constitution makers as the main link between policy makers and the Administration and as the main organisation to carry out the policies of the Government and to foster stability and national out-look conducive to national integration. All India Services should have more independence in their functioning. The existing controls over the All India Services by the State Governments are enough.

4.4 As regards the various Central Agencies and the multiplicity of these organisations, as mentioned in part IV Q. 4.7 it is absolutely a matter of administrative exigencies and for this purpose incorporation of any specific provision in the Constitution or amendment of existing provisions in the Constitution is not desirable. Whether such agencies are eroding in the State's autonomy, depends much upon the perspectives of the State and Central Governments and their out-look. These agencies are in a way intended to give a national approach in implementing schemes of All India nature and also afford the States with financial and infrastructural facilities. Infact, if functions of these organisations are totally transferred to the States, it casts a very huge burden on the States' exchequer with no apparent advantages. Some of these organisations infact only supplement the activities of the State Governments as in the case of F. C. I.

4.5 We would share the view that there is a need for an inter State Council on permanent basis. The existing National Development Council should be made a Constitutional body within the ambit of the Article 263 of the Constitution or the existing provisions in this Article be suitably amended to provide teeth to the National Development Council, instead of setting up a separate Council for this purpose. Our views in this context are elaborated in the subsequent paragraphs.

Financial Relations

5.1 The objectives of maintaining financial strength of the Centre, and proper augmentation of the States' financial resources, need a fine balancing. However, for proper coordination the Centre should have the power and means to ensure that fiscal policies laid down by the Centre are adhered to by the States.

Centre-State Financial relations should encourage efficient and economical use of resources and flow in the economy. We would have to recognise the fact that our Country has wide variations in Economic Conditions. In order to achieve an alround economic growth leading to a movement towards effective economic integration of the country, mutual economic dependence of different areas may have to be maintained. This will be a helpful factor in securing and cementing the national integration and cohesion, as the process of reducing economic disparities as between different States has its financial implications also. The relatively backward States have to be helped, the transfer of resources from the Centre to such States must be augmented.

5.2 The outstanding provisions in the Constitution relates to the provisions dealing with the financial relations between the Centre and the States. We have no doubt in upholding the existing provisions and express the firm view that the enforcement of the existing provisions has worked to the great advantage especially, to backward states as compared to the much advanced and industrialised States. We fully share the view that regional imbalance can be reduced by a strong Centre having elastic source of revenue and with more discretionary powers to use the funds available for the development of the poorer States. Giving more financial powers to the States, only adds to further tilt the balance in favour of the richer States; Except the Corporation tax the other major revenue yielding sources like income-tax, Excise, Customs should only be with the Centre for purposes of uniformity in levy and facility of collection also. The levy of tax on agricultural income is already with the State Governments. Except in respect of customs, tax collected against income or Excise is already sharable with the State Governments. By its very nature customs levies should be with the Centre only and it would not be possible also to share with the States. So the only field that was left where States may not be getting their due share in Corporation tax.

5.3 The present provisions in the Constitution provide for very equitable distribution of taxes among the States. If the existing provisions are in any way altered, modified or amended, by way of transferring to the States to collect the tax on any of the above items, it would only result in inequitable distribution of revenue with the economically forward States becoming more richer and backward States remaining backward for ever. To cite an instance, the total revenue yield against Salex Tax in the State of Andhra Pradesh was at one time, not equal to the Salex Tax collected in the city of Bombay in the Maharashtra State. The same would be the position in respect of income-tax or Excise duties etc. Equitable distribution of national wealth and resources would not be possible, on the other hand, the economically forward States become much stronger creating trouble and infact, threatening the unity of the Country itself, as is evidenced by the agitation going on in the rich border States. It should be concluded that the Finance Commission is very reasonble in apportioning the taxes among the States. Nearly 90% of the income tax is divided among the States while 40% of the excise duties are also shared by the States. In due course, if necessary share of Excise Duties may be further stepped up and it is a matter which can be looked at by the Finance Commission once in 5 years and for this purpose no amendment to the existing provisions in the Constitution would be warranted.

5.4 At one time Corporation tax was also divisible. Perhaps the original position may be restored in this regard. But any devolution of taxes or grants-in-aids should not have any negative effect on the effort of the State Governments in raising internal resources within the State. While the Governments led by the regional parties are very keen on taking up populistic programmes to woo the people and electorate, they are also equally keen in not raising the resources to the optimum extent, again to woo that section of people and electorate who will be affected by levy of taxes. Without substantial effort by the State Governments, it would be futile to argue that the Centre should come forward with more liberal assistance.

5.5 There was an oft-repeated complaint that taking un-due advantage of the existing provisions in the Constitution, the Central Government is levying surcharge and at the same time denying the States their due share in surcharge. The VIIth Finance Commission attempted rationalisation of their procedure also. At the best an amendment to the existing provisions of the Constitution may be thought of to limit the powers of the Central Government to levy the surcharge say for a period of 2 years and beyond that to merge with the main levies so that it would form part of the divisable revenue.

5.6 A time may come wnen provisions under Article 269 have to be regularly relied upon by the Central Government to improve the resources of the States. Here again the richer States will be contributing maximum revenue and care should be taken by formulating principles for distribution among the States so that under-developed States get a reasonable share.

5.7 The VIIth Finance Commission's view regarding the principles governing grants-in-aid are sound. We do not see any need for amendment of the existing provisions of the Constitution in this regard. In our view there is *no* need for setting up the National Loan Corporation, National Credit Council or National Economic Council.

5.8 Some suggestions have been made that Central Sales tax etc. should be further enhanced. In our view it is not warranted. Any such increase would be helping only the developed and richer States at the cost of the less developed and poorer States.

5.9 We should recognise the fact that our Country has wide variations both economic and political. Economic disparties manifest themselves in some fields like lack of basic, social and economic services. There has to be better utilization of the productive resources of the Country as a whole. Economic development cannot be separated from social inhibitions, exercise of authority at the lower levels of our present hierarchy- such as district Panchyatraj Institutions. No doubt, the directive principles of the Constitution have laid down that there should be decentralization of powers in the Country-experience has shown that the Zilla Parishads and Panchayaties are more used as Political pawns in the power chess board rather than as effctive instruments of development at the lower level nor there is devolution of real power to the people of order that the regional, backward, and economic aspirations of the local people are met. The Primary need and in fact the crying need of the hour is to give these bodies a place in the Constitution itself. We advocate provisions in the constitution ordaining the States :—

(a) To constitute village Panchayats,

(b) To constitute a Zonal body for a group of Panchayats, call it a Panchayat Samithi, Panchayat union etc.,

(c) To constitute a district body of Panchayats, call it a Zilla Parishad or so,

(d) To provide for the conduct of elections to the above bodies through the Election Commission of India as in the case of conduct of the elections to Parliament and State legislatures, and

(e) To provide for the constitution of a State Level Finance Commission somewhat on the lines of the existing Article 280 of the Constitution, providing for the distribution of taxes between the State Government and local bodies, to ensure the local bodies their share of taxes, without being fettered by the discretion of the State Government, which is bound to be influenced by political considerations.

5.10 While the States are clamouring for more resources from the Centre for successfully carrying out the socio-economic obligations, most of the States are conveniently for getting that the local authorities who have to carry out many of the schemes, are not adequately financed. In fact, most of the local authorities are starved of funds at the expenses of the populist programmes undertaken by the State Governments. The remedy lies only in making a provisions in Constitution itself to provide devolution of funds to local authorities like Z.P.s, Panchayat Samithis and Mandals by setting up a Finance Commission at the State level as in the case of Finance Commission. Incorporation of a provision on the lines of Article 280 of the Constitution empowering the State Governments for setting up a Finance Commission for devolution of funds between State and local authorities should be considered.

5.11 There is need for finding ways and means for devolution of more revenues to backward states, even if necessary thr ugh subventions from richer States under well laid principles; but care should be taken to see that it does not result in financial indiscipline in the backward States or encourages such States to lag behind in mobilising their financial resources.

5.12 The Centre is pumping large sums of money to secure economic and social justice specially to the weaker sections of the people. Most of these schemes are funded by the Centre and naturally there would be a desire on the part of the Centre to over-see the execution of these schemes and to monitor the utilisation of the funds and also to satisfy that the funds are spent properly by the State Governments without being diverted to other purposes. In order to involve the States in the execution of these schemes, the Centre is insisting on a percentage contribution from the States resources also. Though these schemes are *prima-facie* executed through State agencies only, the sharing of funds by the States and the Centre is in certain aspects leading to dual responsibility, leading to the danger of schemes not being executed at all. Proper execution of these schemes can be sabotaged either by the Centre or States withdrawing their support for some reason or the other. One possible solution to this would be for the Centre to finance the schemes cent percent without imposing any obligation on the States and execute them through their own Administrative channels or in the alternative the Centre should transfer the entire funds to the States and leave the execution of the programmes to the discretion of the State Governments.

5.13 There is no doubt that such interference, acts as irritant and a source of considerable delay as elsewhere mentioned in questionnaire. It all depends upon the proper relationship between the State and the Centre and it cannot be cured by deletion or addition of any more provisions to the Constitution.

Social & Economic Planning

6.1 The National Development Council which is a non-statutory body may perhaps be conferred with constitutional status under Article 263 of the Constitution, if necessary after suitably amending the same and we broadly agree with the suggestions in question 6.2 of Part VI. The National Development Council may also be consulted before the Central budget is finalised, just like the Finance Minister consulting the experts in various fields of Industry, Commerce and Taxation so that the States can also be afforded an opportunity to express their views on the formulation of the Central Budget. National Development Council can be entrusted with the functions envisaged by the National Loan Corporation, National Credit Council and National Economic Council mooted in question 5. 29 of Part V and can effectively function to resolving upon inter-State disputes or subjects of common interest to States. The NDC may by law made by the Parliament be clothed with statutory powers to implement its decisions.

Conclusion

Strong and autonomous States in a Federal set up is a concept advocated by the Western capitalistic States, especially the United States of America, who probably may feel that such set up may make the constituents depend more on them for their survival both economic and otherwise.

A classic example of such federation is that of the Federal Republic of Germany (West Germany) which being an ally of the USA., had to change its constitution to be in tune with this concept, although the people of that country always advocated for a strong centre.

Dr. H.L. Bhatia, in his book 'Centre - State Financial Relations in India' under the auspicious of the Birla Institute of Economic Research writes at Page 40 :

'The Federal Republic of Germany representative were in fav ur of a strong centre. They preferred fiscal uniformity at the national level and an attainment of financial equilization between different states to the interests of individual states. The Americans on the other hand were keen in selling their own philosophy of strong and autonomous states within a federal set up. This resulted in the provision for financial independence of the States and Federal Government'.

The Constitution of the Federal Republic of Germany was ammended under Article 109(1) of the Basic law 'The Federal and the lender shall be autonomous and independent of each other in their fiscal administration'.

India is a Welfare State, emerging Independent out of Centuries of exploitation degradation and poverty, being a colony of the British Imperialists. In

the words of our Late Prime Minister, Smt. Indira Gandhi, 'TO US THE CONCEPT OF SOCIALISM IS THAT CAPITAL IS SUBSERVIENT TO SOCIAL JUSTICE, FOR THE WELFARE OF THE COMMON MAN BY EQUITABLE DISTRIBUTION OF THE NATION'S WEALTH AND ITS ECONOMIC RESOURCES TO BE WITHIN HIS REACH IS OUR GOAL'. These perspectives still remain unfulfilled and hence we cannot allow India fall a pray to the vested interests. The Indian constitution therefore has to be moulded for the good of the entire nation for its unity and integrity. It cannot be changed into a document to meet the caprice of Regional chauvinism. We have already heard from the leaders of the Regional parties that 'Government of India has no territory' and that 'Centre is Myth' etc., exposing their hollowness about their knowledge of the Indian Nation. Vesting more powers in States by amending the constitution will only spell the doom of the Nation.

We conclude with the assertion that 'India lives'—it lives to serve the poorest of the poor living in any or every part of its vast territory with dignity and honour and never shall it yield to any force however high and mighty, that may be—nor, are prepared to be in shackles once again and subject itself to slavery and degradation in any modern form.

INDIAN NATIONAL CONGRESS (SOCIALIST)

MEMORANDUM

Background

1. Any debate or dialogue on re-structuring the Union-State relations within the existing Constitutional framework can only proceed from a correct understanding of the forces which have moulded our modern nation, and the ingredients and the roots of our nationhood. It would include a close examination of the historical, political, legal and Constitutional dimensions of the State entity called the Indian Union.

The Indian sub-continent has been a complex amalgam of a multitude of sub-national groups endowed with their own distinct assertive regional personalities, wide ranging social customs including customary laws, highly developed languages and cultures, seeking identity or a place in the sun and a number of religions and cults, often working themselves to competitive frenzy. Moulding a modern political nation out of these seemingly contradictory elements is the unenviable task that the nation builders have faced since the Indian Union become an independent national entity endowed with a nationhood on 15th August, 1947.

We have to be clear in our minds that there is no parallel to this unique historical experience assigned to the people of Indian Union—a modern nation carved out of the administrative boundaries of a colonial empire in the Indian sub-continent. The compelling logic of our evolution into nationhood is that there cannot be any uniformity but only harmony and unity in diversity acting as cementing bonds of the nation. The question before us, therefore, is whether through the instruments what we have forged for the Union and particularly through the Constitution of India as adopted in 1950, we can achieve these ends and promote the interests of millions who inhabit this great land and are partners in its progress and engaged in its development as a free sovereign independent republic.

While historically speaking there is hardly any parallel to this Herculean endeavour, it is worthwhile comparing ourselves to the great multilingual, multi-cultural or multinational States of the 20th Century. Comparison with China, U.S.S.R. and the United States would be a tempting endeavour. The Indian nation born out of our struggle for independence is in a fundamental sense different from these major populous nation—States of the world, that is China, U.S.A. and U.S.S.R. The question arises why is India basically different from these great national agglomerates ?

In the United States, the dominant influence of a single language and ever visible Anglo-Saxon Protestant influence in the formative years, has created the powerful melting-pot nation of the United Statesof America.

In the Soviet Union, the Russian language and cultural tradition has acquired a remarkable and crucial presence and importance in the post-revolutionary Soviet phase and even today many ethnic minorities name Russian as their mother-tongue. This is a fact recognised by every observer of the Soviet experiment and modern Soviet history, not excluding the present soviet leaders. To quote late Mr. Brezhnev :

> "And this historical community of people, the Soviet people, have inherited Russian Cultural traditions".

Thanks to the wisdom and foresight of the great liberator and leader of the soviet revolution, V.I. Lenin, the nationalities acquired a special identity of their own within the Soviet State.

In the Peoples' Republic of China, the ethnic minorities constitute only less than 8% of the total population. A major theme of the development of the modern Chinese nation has been the ever-increasing Han influence over other ethnic minorities.

But in India, our experience has been unique. We have a multitude of languages, sub-national groups, regional personalities, religions and cults. None of these groups can claim the majority but at the same time, there has been a steady evolution of Indian nationhood over the last several centuries beginning with the great medieval Bhakti Movement. One has only to travel from Manipur to Kutch in Gujarat or from Kashmir to Kerala to understand the distinctive trends in food, attire and habits, and the unique roots of the assertive regional cultures and personalities. Therefore, neither the concept of Indian unity or nationhood, or the institutions and constitutional arrangements we have evolved, can be based on a concept or uniformity. On the contrary, the emphasis has to be on acceptance of our great diversities and on harmony and unity

in diversity. Although the Moghul Empire did not embrace the whole sub-continent, Moghuls helped the growth of regional languages; even though their court language was persian. They helped growth and evolution of Urdu in their northern territoties—a language which had developed since the Delhi Sultanate period and there is historical evidence to suggest that they encouraged the use of Bengali, Marathi and Gujarathi.

With the advent of British imperialism, the priorities and compulsions of the alien imperial masters were different. Development of the British imperial interests demanded carving out of the sub-continent for opening up a vast hinterland for exploitation and promoting colonial trade through the port towns and the development of infrastructure, particularly railways, roads, communications for movement of their forces, to retain their strategic hold in the South Asian sub-continent. From 1773 to 1833, the British Parliament gave increasing authority to the Governor General in India. With the Charter Act, the situation underwent a change. After the revolt of 1857, and with the advent of Viceroy and Viceregal rule, it ought to be remembered that the British industrial capital also entered India. But the great revolt of 1857 compelled the colonial masters to think in the direction of certain decentralisation. Sir Charles Travelyan, who was Governor of Madras and Sir Bartrel Ferere, Governor of Bombay, in the second half of 19th Century, strongly advocated a decentralised set up for governance of this sub-continent and in 1861 the Presidency Governors of Madras and Bombay were assigned increasing powers. And as a logical corollary, in 1877, income from land revenue, excise and stamp duty were allotted to the provinces but these arrangements did not last long. The ever-growing need for policing changed this policy as the records would show, and a new policy of sharing these revenues came into existence.

The first decade of 20th century saw the birth pangs of Indian nationalism, particularly in Bengal, which had entered a phase of renaissance. The emerging national consciousness had given birth to a pan-Indian nationalism. The first political manifestation of this great awakening was the Swadeshi Movement and the massive upheaval against the partition of Bengal in 1905 led by Sri Aurobindo and other nationalist leaders. It is interesting to recall that when the agitation succeeded in the annulment of partition in 1911, a new Bengal province was created which contained only Bengali-speaking districts and for the first time in the history of the sub-continent, a political and administrative territory was carved out with well-delineated linguistic and cultural features. This development, as Dr. Pattabhi Sitaramiah ramarks, greatly influenced the nationalist opinion in manv States.

The British Colonial authorities were not unaware of this trend and while trying to buttress their rule over the sub-continent, they were keenly aware of the need to implant federal elements in their administerative framework of the sub-continent. The Montague-Chelmsford Reforms of 1911 reflected this trend. Lord Hardinge, the then Viceroy, remarked while introducing these reforms :

"The only possible solution for the difficulty would appear to give the provinces gradually a large measure of self-government, until at last India would consist of a number of administrations, automonous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in the case of misgovernment, but ordinarily restricting their functions to matters of imperial concern".

That was a clearly spelt out rejection of the unitary form of government by the colonial masters, and it is not difficult to discern how it evolved into a specific emergency provisions of the Indian Constitution of 1950. The Simon Commission Report of 1927-28 and the Butler Committee Report of 1927---30 and the framework of round-table conference of 1930—32 underline this basic perspective of a federal union in the sub-continent.

The Indian National Congress which had become the vehicle of India's movement for national liberation was also simultaneously coming to grips with this problem. The Motilal Nehru Committee Report on Indian Constitutional reforms thus envisaged a federal system and the Lucknow Pact of 1918 was a landmark in the history of Indian nationalism. The Pact recognised the need to develop provinces and strongly upheld the view that residuary powers should always be with the provinces.

Under the leadership of Mahatma Gandhi, Indian National Congress had adopted an approach which suited the needs of Indian democractic advance. Gandhi's acceptance of the demand for linguistic provinces in 1920 and the subsequent reorganisation of Indian National Congress on the basis of lingusitic units has to be viewed as a historic landmark in the growth of nationalist movement in India. The resurgence of regional languages and cultures provided a new thrust to Indian nationalism and the great figures who emerged on the national cultural firmament like Rabindra Nath Tagore, Subramania Bharati or Vallathol is only reflecttive of this trend. The Indian National Congress as well as other progressive social movements through its spokesmen like Maulana Azad and C.R. Das supported the idea of autonomy for States.

The Government of India Act of 1935 took note of this assertive opinion. But the Mountbaten Plan or partition and the growing threats of balkanisation and fragmentation which flowed from the partition, changed the political atmosphere in India and had its great impact on the Constituent Assembly deliberations. Thus the Indian Constitution of 1950 adopted by the Constituent Assembly followed the Government of India Act of 1935 and a concept of national citizenship with sovereignty of Parliament, and a uniform and impartial judicial system, kept intact, other provisions of the 1935 Act. The Constitution makers had created a united India and a dominant Centre with unique executive powers assigned to the Union in the context of the early challenges of national integrity.

The role of the States in this Constitutional scheme was quite diffierent from the role assigned to them in the new Constitution. As Dr. Ambedkar one

of the architects of the new Constitution, pointed out : "*The Indian Union was not the result of an agreement between the states nor did the states join the federation in their individual capacity; on the contrary an indissoluble federal union was created out of the British-made provinces and the princely states*". But in this process, the States lost their autonomy and became partners with limited rights with limited spheres of legislative authority assigned to it along with limited revenues and methods of disbursement. The Legislative lists in the Constitution are exhaustive; but 97 subjects were placed in the Union List while only 66 including pilgrimage, cattle trespass, burial grounds, theatres and dramas put down in the State List.

However, there were strong objections to the treatment given by the national leadership to the States as is clear from the debates of the Constituent Assembly and the deliberations of the Union Contitution Committee. Govind Vallabh Pant, B. G. Kher and Dr. Srikrishna Sinha were among the stalwarts of the freedom movement who strongly resented the move to curtail state rights but having agreed to a federal structure with a strong Centre and residuary power with the Union, there was hardly any escape route. It is important to remember these early reservations had come from the stalwarts of the national struggle who were also leaders of the States who had risen from their roots. While examining the case for re-distribution of political and financial powers and consequent changes in the Constitution, the question before us, therefore, is whether we are prepared to have a fresh review of the Union dominance over the States as reflected in the present Constitution.

Need For A Review

2. The basic premise of such a review should be that there is a fundamental disequilibrium in the Constitutional system as it has existed for the last 35 years. It may be wrothwhile recalling that some of these articles reflective of the trend of Union dominance were smuggled in at the last moment. The story of Article 365 empowering the President to compel the States to comply with and to give effect to executive directions of the Union is a case in example. It was introduced during the last week of the deliberations of the Constituent Assembly and surprised many members, as the debates would reveal.

It is worthwhile having a close look at some of the provisions of the Constitution through which the instrumentality of Union dominance over the States has been clearly implanted leading to many distortions in the system.

3. Some Constitutional Provisions and Their Implications

Articles 2 & 3 :

Article 2 enables Parliament and Parliament alone to admit into the Union or establish new States on such terms and conditions as it thinks fit and under Article 3 Parliament alone is empowered to alter the boundaries of any State, to increase or diminish the area of any State or change its name or constitute a new territory out of the territories of one or more States. In contrast, in the United States, consent of the State was a pre-requisite to any proposed change of its boundaries. No such rights have been conferred on the States of Indian Union under our Constitution. They have been compelled to remain as partners but with limited rights.

Article 73 defines Parliamentary authority over the Concurrent List and extension of Concurrent List, giving the Union considerable leverage.

Article 154 spells out the executive power of the State being vested in a Governor who is a Union Nominee.

Article 200 which is the most reprehensible article endows the Union nominee functioning as Governor of the States with a power of assent and Article 201 enables the Governor to forward legislation passed by the State Assembly to the President.

Articles 248/249/250/252 make Union and Parliamentary supremacy complete; they give drastic powers to the Union and Parliament—read alongwith Entry 97.

Articles 270/275 which deal with divisible taxes, grants, and other assistance, are again heavily weighted in favour of the Union and has only helped to create an inverted pyramid with absorption of revenues at Union layers and paucity at lower layers of the States, leading to a system of dependence of the States on the Centre.

Article 356 There is no other provision or article in the Constitution which has been so consistently been abused leading also to the misuse of the office of the Governor. It has been used through the instrumentality of the high office of the Governor to keep opposition parties out of office but even to resolve the differences within the ruling party, thus clearly abusing an emergency provision of the Constitution for partisan ends. It would be worthwhile to bring some of these cases to refresh the memory of the Commission :

(1) On Nov. 29, 1975, Shri H. N. Bahuguna resigned as the Chief Minister of U.P. and at the Governor's recommendation, President's Rule was imposed on November 30, only to be lifted on Jan. 12, 1976, when Shri N. D. Tiwari became the Chief Minister. The Union Home Minister justified the action as "being necessary" just to sort out some small problems including election of the leader by the Congress Party. (INDIAN EXPRESS Dec. 1, 1975).

(2) The D.M.K. Party in Tamil Nadu was overthrown in January, 1976 only because of its opposition to the declaration of State of Emergency. It had 184 members in an Assembly whose strength was 234 and whose term was to expire only in March, 1976.

(3) In May 1982, Governor Shri Tapse of Haryana asked Shri Devi Lal on May 22 to bring his supporters to Raj Bhavan at 10 a.m. on May 24. In a House of 90, Congress-I had won only 36 seats, and the Lok Dal 31, supported by B.J.P. and Cong(J)

with respective strength of 6 and 3, and alongwith independents, Mr. Devi Lal had a clear majority. But on Sunday May 23, even before the deadline for Mr. Devi Lal to produce his supporters was over, the Governor Tapase sworn in Shri Bhajan Lal as the Chief Minister.

(STATESMAN—HINDUSTAN TIMES—May 24, 1982)

And on May 24, majority of the M L As—46 in numbers—went to Raj Bhawan to register their protest.

(4) Between 1980 and 1983, Shri Sarat Chandra Sinha, leader of Congress(S) Party in Assam Assembly who had the majority support was repeatedly denied the right to form the Government.

(5) More recent examples of Sikkim, Jammu & Kashmir and Andhra Pradesh needs no reiteration.

Thus, through the instrumentality of the Governor, this provision has been consistently misused, eroding into the letter and spirit of the Constitution.

Article 365 which empowers the President to dismiss the State Government for not implementing the directions of the Centre should be suitably amended to prevent its misuse.

Regional Imbalances and Continuous Drain of the States

4. The present Constitutional scheme which gives major initiative to the dominant Centre or Union in economic sphere has only aggravated the problem of regional imbalances. The problem of distribution of powers, functions and resources between the Union and States needs to be reviewed afresh. It is to be remembered that the Union has an inherent advantage with the basic levers of the economic life of the nation within its ambit, like the currency, credit, monetary policies and other instruments under the control of the Reserve Bank of India. With the nationalisation of banking and insurance and creation of new funding agencies and financial institutions like the Unit Trust, I.D.B.I. and I.C.I.C.I., these powers were gradually enlarged in '60s and '70s. With firm control over foreign assistance, foreign exchange resources and foreign trade, its control over major levers of the Economy has been total and complete. With income and corporate taxation, excise and customs duties, use regulation and distribution of foreign exchange and foreign loans, it scaled heights of peaks of authority over the economic life and activity of the nation unparalleled in similar federal set ups. This has been further buttressed by the existence of the Planning Commission overse ing the national economic planning but with no statutory authority and a Union-oriented Finance Commission. All this resulted in growing regional imbalance and disparities and this state of object helplessness and total dependence among the States.

Transfer of Resources and Growing Indebtedness of the States

5. The Story of the transfer of resources from Union to States ought to be an eye-opener. Soon after the Constitution came into being in the years of 1951—1956, transfer of resources from Union to States constituted 32% while by 1970-71, it had grown to 59%, and 1979-80, to 65% and in 1980—82, to 72%—all of a non-statutory character, resulting in an increasing dependence of States on the Union. There can be no greater disturbing distortion of the original Constitutional framework than this. Consequently, the indebtedness of the States to the Union has been phenomenal, generating tensions of various types within the Union and the State.

The outstanding of the States to the Centre rose from Rs. 239 crores in 1951-52 to 4094 crores in 1965-66 and Rs. 5508 crores in 1968-69, and a phenomenal amount of Rs. 26,571 crores by 31st March, 1983. Thus in 1983-84, the provision of Central loan assistance to States was Rs. 4290 crores out of which repayment of principal and interest alone constituted Rs. 2963 crores.

The system of persistent unauthorised overdrafts is another danger signal, inherent in the existing system.

All these call for a major review of the constitutional provisions as these distortions are threatening the integrity and fabric of the nation itself.

It is very important to overcome the feeling of dependence in the states which has crept into the psyche of the States. In any federal set-up the states or units are always given means and instruments of effective resource mobilisation and revenue raising efforts but unfortunately that is not so in India where the direct tax powers of the States are very limited. Even a large part of the net capital receipts of the States is derived from the Central loans and even their market loans not only need clearance from the Reserve Bank but are wholly dependent on the response of the nationalised banks and the Life Insurance Corporation both under the Union.

The Role of Planning Commission and the Finance Commission

6. Under the system of planning that we have adopted, we have also created a new distinction between Plan expenditure and non-Plan expenditure. While on revenue account there is a fairly clear-cut distinction on capital account, the difference between Plan and non-Plan expenditure is gradually changing, while the plan expenditure is looked into by the Planning Commission, the Finance Commission looks after non-plan expenditure. At the end of each plan, substantial part of revenue expenditure on Plan account turns into committed non-plan expenditure. Grants under Article 275 based on the recommendations of the Finance Commission can at best only enable the States to cover the deficit at the existing levels of economic and social services, while they will have no surplus from existing source to cover additional services

whatever be their need or urgency. Thus, poorer States like U.P. and Bihar have been at a great disadvantage with low level of public services. It is true that successive Finance Commissions have been looking into this problem but unless there is a basic Statute change, it will always be dependent on the whims of those who constitute the Finance Commission. In this context it is interesting to examine the role of Planning Commission and the Finance Commissions. The Planning Commission which is conceived as a national planning body has steadily turned into an appendage of the Union Government and has failed to play its historic role in a subcontinental nation like India. It is essential to give it a Constitutional status to this body and put it under the National Development Council and make it a nodal agency between Centre and States.

The Structure of the Finance Commission should be looked into and it must be statutorily incumbent on the President to consult the States on the composition and terms of reference of the commission and its staff should be recruited from different States and the Commission should not be dependent on the Centre, for its funds or Secretariat.

Attack on the Powers of the States

7. In the economic sphere there are certain other issues which should come up for an immediate review. Since the passage of Companies (Development & Regulation) Act of 1951, list of industries to be regulated by the Centre have been so manipulated that 90% of industries are now with the Centre, even industries like gum, match sticks, cutlery, household electrical appliances, soaps and toilet requisites, hurricane lanterns and bicycles and even agricultural implements—all articles of daily use and essentially catering to the huge rural population and markets—have been taken away by the Centre. This made late Prof. D. R. Gadgil, a pioneering economist and once the Deputy Chairman of the Planning Commission to observe :

"Such strangehold of activities by the Centre and its agencies and officials make any real progress impossible".

Other Unhealthy Trends

8. Manipulations and sabotage of even the existing provisions of the Constitution continue to threaten healthy evolution of Union-State relations. It has become a common practice of the Union now to raise the administered prices of commodities like petroleum products, coal, iron & steel and aluminium. Instead of adjusting the rates of excise duties, wheih should have resulted in a proportionate share going to the states, the entire accruals from these revenue raising exercises have gone to the Central agencies and the States deprived of thousands of crores of rupees on account of these unethical and arbitrary practices. For example, in 1982-83 alone, the Centre covered Rs. 6500 crores (now it is more than 8000 crores) by raising administered prices with no share for the States. If it was an adjustment of excise duties, at least Rs. 2600 crores would have been accrued to the States. This is true of raising of market loans also.

Other Distortions

9. There have been increaring interference even in the legitimate areas meant for States exclusively. The Constitution conceived law and order as a State subject but from a small beginning with the Central Reserve Police Force numerous police forces have sprung up which go beyond even their own respective sphere of permissible activity and these paramilitary forces have been impinging on the area which the Constitution-makers themselves had left entirely to the states and their expenditure has been mounting, even the Public Accounts Committee of Parliament, in their 131st Report (1973-74) has remarked :

"The Committee are very much concerned with large-scale and continuous increase in unproductive expenditure of these agencies, from Rs. 3 crores in 1950-51 to Rs. 48.27 crores in 1966-67, to Rs. 130.91 crores in 1972-73 and Rs. 156.42 crores in 1974-75, an increase of 52 times in 24 years. This is by any standard an alarming increase........ "The Committee feel that expenditure on police organisation has been increasing at such a rapid rate that it calls for an immediate review by an independent high-powered commission".

No such review was undertaken and presently the expenditure on these law enforcement agencies is nearing 800 to 900 crores a year. To cap it all a new department of "Law and Order" and 'States' have been added to the Union Home Ministry in a highly arbitrary and un-constitutional manner recently.

Thus, it would be seen that while States are left with unelastic sources of revenue, the expenditure of the Centre is mounting even on items demarcated exclusively for the States under the existing Constitutional framework and provisions.

Need for A Review

10. Thus, the present situation calls for a review of the major determinants of the institutions, issues and policies which had led to the present situation.

Such a review should cover implications of the Constitutional provisions like—

(a) Appointment and powers of Governors ;

(b) Experience with emergency provisions and with President's Rule in the States and the practice of Presidential assent for Bills passed by State Assemblies.

(c) The role and structure of All-India services and Central Police forces and an exhaustive review of the Union-State relations and the Concurrent List and the residuary powers.

(d) In the economic sphere, such a review should go into the role of the Planning Commission and Finance Commission, fiscal transfers and divisible pool of taxes and plan assistance under Articles 282/275 and the way the lever of administered prices have been used to rise reasources and deprive States of its legitimate resources.

(e) The role of the National Development Council as an important adjunct of policy making has to be further explored.

(f) The role of deficit financing and financial institutions and domestic and external borrowings have to be reviewed and a national borrowing authority based on the Australian Laon Council set up.

(g) The question of foreign exchange budgeting within the overall control of the Reserve Bank and the States' rights to negotiate and obtain foreign loans, have to be at length.

(h) The Administrative Reforms Commission's Report had inadequately dealt with setting up of inter-State Council under Article 263. This needs to be further explored in the context of recent changes in the body politic. These powers may extend even to disputes between the States and an amendment to the constitution is called for.

Radio and Television

11. Another major area of considerable importance is the role of radio and television, presently under total Central control. In the context of the texture of our nationhood and polity, it is imperative that States should have a voice in the evolution of the media policy and in its overall control; even in an autonomous set-up.

To sum up, major changes as we have outlined above, are called for in many articles of the Constitution.

We hope the Commission would address itself to this historic task at this crucial juncture of our national existence.

INDIAN NATIONAL CONGRESS (SOCIALIST) State Unit—Kerala

MEMORANDUM

I. Introductory

1. Indian Constitution is federal in from. It was never intended as unitary. Indian Constitution contemplates a "Union of States" and the Union Govt. is the Govt. at the apex of the Federal Polity, while the States form the base.

The Union Govt. and the State Govts. simultaneously exist and have sway over every inch of Indian territory. Both are independent responsible institutions created under the Constitution. Since India is a large and heterogenous country there is need for substantial decentralisation, territorial as well as functional, of powers and functions in the interest of efficiency and equity. Suitable provision can be had for effective control during times of external emergency, while Inter-State Councils envisaged under Art. 263 will help better co-ordination between the States. The provision enabling the President to assume emergency powers on the assumption of failure of Constitution in the States under Art. 356 is against the federal spirit and has to be deleted. For the successful working of our federal system we require more than anything else a federal spirit which is a firm determination to maintain both diversity and unity by way of continuous process of mutual adaptation. There has to be an ideal compromise between centrifugal and centripetal forces. National Unity has to be preserved, political stability preserved, economic growth and defence capability achieved and social justice brought about. For a proper realisation of these objectives we have to uphold the federal spirit.

II. Legislative Relations

List III of the seventh Schedule actually includes items which ought to have been included in list II. The autonomy of the States has dwindled considerably as the centre has made in-roads into the legislative powers of the States. There has been over the years encroachment in a substantive measure on the legislative autonomy of the States under cover of "national interest" or "public interest". Many items have been shifted from the State list to the concurrent list. The States have been lowered to the level of glorified municipalities. This trend needs to be corrected.

3. It should be made obligatory on the Union Govt. to obtain the concurrence of the State Government in matters of legislation on items included in the concurrent list.

4. Item 97 of list I is to be shifted to list II. It is only reasonable and in conformity with the federal spirit envisaged in a federal constitution that the residuary power rests with the States.

III. Role of the Governor

5. The institution of Governors has been a subject of controversy. The Governors behave more as agents of the Union Government serving partisan ends than functioning independently and impartially as "Head of State".

Articles 200 and 201 which give the Governor power to withhold assent to bills passed by the legislature or to reserve them for the consideration of the President do not agree with the democratic and federal spirit and that power has to be deleted.

IV. Administrative Relations

6. When a no confidence motion has been adopted by the Assembly against the Chief Minister it shall be obligatory on the Governor to give the opposition a chance to present the next Chief Minister, who will seek the confidence of the House on the same day and the Governor shall not dissolve the Assembly before giving the opposition such an opportunity.

7. Central intervention under Art. 355 against internal disturbance is improper. The Union Government may locate and use its Central Reserve Police and other armed forces in aid of civil power in any State only on request by the State Government and not *suo-motu* as suggested by the Administrative Reforms Commission.

8. Broadcasting and television (Entry 31 List I) facilities should be shared on an equitable basis between the Union and the States.

9. Establishment of Inter-State Councils under Art. 263 will help better co-ordination between the States. They have to be on a permanent basis with an independent secretariat.

V. Financial Relations

10. The scheme of devolution of the revenue-gap between the resources and the fiscal needs of the States to discharge their responsibilities by sharing proceeds of Central taxes and duties and by grants-in-aid from the Union has not worked satisfactorily. It has only done havoc to the interests of the States. The grants-in-aid portion has not been adequate. The States' share of the Central taxes has to be raised to 75%.

11. There has to be a pattern for mandatory distribution of schemes and aids meant to provide social and economic justice and equality. Non-plan expenditure incurred by the States on account of welfare programmes have to be aided substantially by the Union.

12. There shall not be any encroachment on the taxation power of the States. Transfer of resources by transferring items from the State list has to be avoided. More items are to be transferred to list II (State list). More central taxes have to be brought to the shareable pool. Financial resources other than tax revenues also are to be brought to the shareable pool.

13. The Finance Commission must be a permanent body dealing with all financial transfers (Plan and non-plan) on an assessment of capital and revenue resources. The Planning Commission's role has to be limited to functioning as an agency for overall investment, planning and decision making in the interest of rational utilisation of scarce capital resources.

14. The yield from schemes like the Special Bearer Bonds Scheme and the revenue accruing from raising administered price items like petroleum, coal etc. should be brought within the divisible pool of resources.

15. The Centre must not charge from the States higher rate of interest than what it pays to the foreign lender. The Centre shall not play the role of an usurer in its relationship with the States.

16. The Union has to ascertain the views of the State Governments and give them due consideration before moving a Bill to levy or very the rate-structure or abolish any of the duties and taxes enumerated in Articles 268 and 269.

17. While dealing with natural calamities the States have to be adequately assisted by the Centre. All calamities such as drought, sea-erosion, cyclone, floods etc. have to be treated as natural calamities requiring immediate central assistance.

VI. Economic and Social Planning

18. Planning Commission should be a statutory advisory body of specialists and it must not usurp powers of the National Development Council. Planning has to be de-centralised. The present practice of having centralised Planning have lowered the role of the States reducing their status to that of local bodies. The States have to formulate their plans according to their requirement as per the norms fixed by the Planning Commission and the National Development Council must act as an agency for national co-ordination.

19. The Planning Commission should not be a department of the Central Government but should be an autonomous body under the National Development Council for overseeing Planning, investment and decision-making at the national level.

20. Federalism and Democracy being the two main streams of Indian political evolution, no attempt should be made to belittle the status and auhority of the constituent units. The overseeing role of the Centre is incompatible with the traditional ideals of federalism. The strength and stability of the States give strength to the apex of the Federal Pyramid viz., the Centre.

JANATA PARTY

MEMORANDUM

I. Introduction

The unity of India is the unity of a land of diversity. The democratic Constitution of our country has therefore to be in essence a federal Constitution. However, in the historical circumstances that prevailed at the time of the birth of independent India, some unitary features were considered essential to preserve the unity of the country. More than three decades have elapsed since the Constitution came into force. The experiences of these years have enabled us to see the strength and the weaknesses of the Constitution. They have revealed the loopholes and the short-comings that can result in the subversion or erosion of some of the basic values and concepts of our Constitution including democracy, federalism and decentralisation. It has therefore become imperative to have a second look at the Constitution to take corrective action through Constitutional amendments and conventions. These amendments should strengthen the federal character of the Constitution with emphasis on devolution of political and financial powers not only from the Centre to the States, but further down to the Panchayats as well. The edifice of a strong Centre can be raised only on the firm foundations of strong States.

II. Legislative Relations

Some of the existing provisions in the Constitution lend themselves to be used either by the executive at the Centre or by Parliament to make inroads into the legislative powers that the Constitution has assigned to the States. Thus, we have seen that some of the powers enjoyed in theory by the States become

inhibited and illusory in actuality. For instance, the provisos to articles 31 A, 31 C and 304 (b) of the Constitution provide ample scope for the encroachment by the executive at the Centre on the legislative powers of the States. These provisions must be carefully examined and necessary amendments made in the Constitution to protect the legislative powers of States.

In matters concerning assent to a bill passed by a State Legislature or in reserving it for President's consideration, provisions should be made in the Constitution to ensure that the Governor acts strictly on the advice of the Council of Ministers. To prevent the blocking of bills for an indefinite period, there is need for a Constitutional amendment to provide for the completion of consideration of the bill by the President within three months.

III. Role of the Governor

The unfortunate experience about the high Office of Governor has been that in several cases, this Office has been misused to subserve the interests of the ruling party at the Centre in total disregard for the Constitution. Keeping this in view the appointments of Governors are often made in a partisan way, as a political patronage and without any well-defined norms and guidelines. These appointments are generally made without consultation with and the consent of concerned Chief Ministers. The absence of calibre, independence and impartiality in the persons appointed in this high Office are often overlooked.

Against this background, certain Constitutional safeguards and conventions relating to the powers and functions of Governors are urgently called for.

The claim for a majority in a State legislature must be tested on the floor of the legislature without delay and not in the cosy chamber of the Governor. If at any stage a doubt arises about the majority support enjoyed by the Chief Minister, he must be directed by the Governor to test the majority on the floor of the State legislature. The same procedure should be adhered to by the President of India in relation to testing the majority on the floor of Lok Sabha as well.

If, after the fall of a government, no party or a coalition of parties is able to demonstrate its majority on the floor of the legislature, the Governor must dissolve the Assembly, and elections must be held at the earliest.

On the advice of a Chief Minister who has lost majority support, the Governor must not prorogue the State legislature or promulgate Ordinances.

IV. Administrative Relations

At present a number of Central agencies such as the Agricultural Prices Commission, Central Water Commission, Central Electricity Authority, Director-General of Technical Development, Monopolies and Restrictive Trade Practices Commission, Employees State Insurance Corporation, National Savings Organisation, Employees Provident Fund Organisation, Bureau of Industrial Costs and Prices, Food Corporation of India, etc., handle activities relating to subjects in the State and concurrent lists of the Seventh Schedule of the Constitution.

Some of these Central Organisations have been making inroads into the autonomy of States. This encroachment must be effectively prevented.

Though there is a clear Constitutional provision for the setting up of an Inter-State Council, this has not been done and many Inter-State disputes and disputes of States with the Centre have remained unsettled for a long period resulting in tensions and bitterness. The Administrative Reforms Commission has also referred to this failure to benefit from this Constitutional provision. The Inter-State Council should therefore be set up without further delay.

It has been claimed that article 355 of the Constitution permits the Union government to deploy in States, Central Reserve Police and other para-military forces even *suo-moto*. This is highly objectionable and the Constitution should be suitably amended to provide for the concurrence of State governments before deploying such para-military forces in the concerned States, since law and order is a State Subject.

As the provisions of the 44th Constitutional amendment were introduced to prevent the misuse of article 356 of the Constitution regarding President's Rule, these should be retained.

The Centre's monopoly of media like television and Radio has been used to deny legitimate access to State governments and to serve the interests of the ruling party at the Centre. This monopoly must be ended by vesting the control of television and radio in autonomous corporations.

V. Financial Relations

If States suffer from inadequacy of financial resources and powers, the autonomy of States faces severe constraints and the federal character of the Constitution is also jeopardised. Against this background the Centre-States relations on financial matters acquire greater significance.

In matters of resources allocation to States, there cannot be a rigid demarcation between "Plan" and "non-plan", "developmental" or "non-developmental", "revenue" or "Capital" accounts. The problem of resource allocation to States must be viewed in a wider and a more comprehensive perspective. For this purpose, the following steps are essential :

(1) Income tax including tax on companies should be shared by the Centre and the States.

(2) The Surcharges levied for general revenue purposes on duties and taxes, including income tax, should be treated as a part of the divisible pool.

(3) Auxiliary and special duties should be merged with the basic excise duty, and at least 60 per cent of the net proceeds should be made available for the divisible pool.

(4) The grants to the States under article 275 of the Constitution should not be drawn from the States' share of the divisible pool.

(5) The Railway Passenger fares tax under article 269 of the Constitution should be reimposed.

(6) A National Expenditure Commission should be instituted to go into the expenditures of the Central and State governments thoroughly and rationalise the basis for assessment of revenue surpluses for the guidance of Finance Commission.

(7) To deal with the acute problems of institutional finance, a National Credit Council consisting of representatives of Central and State governments at ministerial level. the Governor of Reserve Bank of India, the Chairman of NABARD, IDBI, Export-Import Bank and LIC should be established under the aegis of the National Development Council.

(8) When the Centre resorts to the revision of administered prices. except when such revision is intended to meet the losses. the additional income that accrues should be included in the divisible pool.

(9) The Centre must not monopolise market borrowing but the same facility should be available to the States for their projects. The National Debt Commission should be set up. It should decide the general principles to be observed in regard to the relative shares of the Central and State governments in market borrowing, interest differentials etc. It should also work out, in consultation with the Planning Commission and the Reserve Bank of India, the conventions that should be observed by the Central and State governments when borrowing against dated securities from banks and other financial intermediaries.

(10) In times of natural calamities like floods, Cyclones, famines etc., there are inordinate delays in sending Central Study Teams to assess the damage and recommend the quantum of Central assistance. Such delays should be avoided and adequate Central assistance should be available to the concerned States.

(11) The main reason for the overdrafts that are run up by the States is the lack of balance between their developmental responsibilities and the financial resources at their disposal. Steps should therefore be taken to correct this imbalance so that there may be no scope for discrimination between one State and another on political grounds in permitting overdrafts.

VI. Economic and Social Planning

The very concept of devolution of power and decentralisation is rendered meaningless if in the planning process—right from formulation of Plans upto the stage of implementation, there is no effective participation of the States as well as lower local bodies. At present, in effect, planning has remained a highly centralised process at the apex.

It is essential that the National Development Council becomes the forum for discussion not only of national planning but of decentralised planning through various agencies indicated in the previous Section on 'Financial Relations'.

In decentralised planning, it is not necessary for the Planning Commission to scrutinise all the details of the proposals by the State governments. The national priorities to be observed even in State Plans can emerge on the basis of consensus arrived at between the Centre and the States in the National Development Council.

The finalisation of the State Plan outlays should allow the States to make allocations to the districts to facilitate district and block development planning. This is possible if the Planning Commission accords its approval of outlays only for some major sectors of development and leaves the rest to the States to determine the allocations to the districts on the basis of a well defined formula.

To the extent the devolution of power from the Centre not only to the States but right upto the Panchayats as well becomes effective, the decentralised economic and social planning will become a reality.

The concrete changes and steps suggested by the Janata Party in this Memorandum regarding States' legislative powers, role of Governors, administrative apparatus, States' financial resources and powers, and decentralised economic and social planning, if implemented effectively will make the Centre-State relations more harmonious with the federal spirit of our Constitution and in the process democracy will take deeper roots through the devolution and decentralisation of power.

JANATA PARTY

State Unit — Kerala

MEMORANDUM

This memorandum deals briefly with only some important aspects of Centre-State Relations and it is not an exhaustive reply to the Questionnaire issued by the Commission.

General

1.1 Our Constitution envisages India to be a Union of States and naturally states have as much an important role as that of the Centre, if not more, in Indian polity. The Constitution of India as framed by its founding fathers is federal in character. But thirtyfour years of functioning of this Constitution has only helped to erode the rights, powers, and status of states. The states have now been reduced to the position of municipalities under the Central Government. This degradation was effected through a series of constitutional amendments and legislative, administrative and fiscal measures of the Central Government. So, the views expressed by the Rajamannar Committee as pointed out in Q. 1.2 of the Questionnaire of the Commission have to be generally endorsed.

1.2 The hope that healthy conventions would maintain and strengthen the democratic and federal

structure of the Constitution has been belied and hence clear and unambiguous provisions have to be made in the Constitution for greater autonomy, powers and financial resources for the States. Decentralisation of power should not stop at the State level and it should go down to the district and town/panchayat levels. For this, mandatory provisions should be incorporated in the Constitution.

The Election Commission should be entrusted with the task of ensuring periodical fair and free elections to the local bodies *viz.* Panchayats, municipalities and Zilla Parishads also.

Legislative Relations

2. The tendency of the Centre to encroach upon the legislative powers of the States should be curbed. More subjects from the Union and Concurrent lists may be transferred to the State list. Residuary powers of legislation under article 248 and entry 97 of the Union list, particularly in respect of taxation should be transferred to the State list. The powers given to Parliament under Article 249 to legislate on subjects within the exclusive competence of the State should be straight away annulled. The suggestion made in Q. 2.3 of the Commission's Questionnaire regarding prior consultation with the State Government whenever any legislation by the Centre on a concurrent subject is undertaken is good.

Role of the Governor

3. The founding fathers of the Constitution had envisaged a high and independent position for the Governors. But, unfortunately no other office under the Constitution has degraded itself as that of the Governor. In fact, the Governor has become "a glorified servant of the Centre". At the same time, the Governor has not even the security of service that is enjoyed by a last grade employee of the Government. The Karnataka Government's White Paper on the Office of the Governor gives a correct picture of the role and status of Governor. It would be ideal, if the Office of the Governor is done away with. But, in case it is retained, the Governor shall be appointed with the concurrence of the State Government concerned. The Governor shall function only on the advice of the Council of Ministers of the State. The Governor should not have the power to withhold assent to any bill that has been passed by the State Legislature. Nor shall he has the power to reserve any bill for the consideration of the President. A time limit of not exceeding two months should be fixed in the Constitution for the Governor to give his assent to any bill. It should be mandatory on the part of the Governor to invite the leader of the majority party or combination of parties who enjoys the support of the majority of the members of the Legislative Assembly to form the ministry. In case there is no leader who can get the support of majority of the members of the Assembly, the leader of the single largest party should be invited to form the ministry. Any doubt regarding the majority support to the Chief Minister shall be tested only on the floor of the House. Clear-cut constitutional provisions and guidelines should be made in this regard. It is in the choice of Chief Ministers and removal of ministeries that the Governors erred most and so, no discretionary powers shall be left, with them in this regard. The practice of keeping the Assemblies under suspended animation should be abandoned altogether.

Administrative Relations

4.1 If the Union Government can be run without a President's Rule, there is no reason why President's/Governor's rule should be resorted to in the States taking advantage of Article 356. This Article has been used most often to the political advantage of the party in power at the Centre. So either this Article should be scrapped or it may be amended in such a way that it could be enforced to only in the rarest of rare occasions and conditions. The suggestion made in Q. 4.5 of the Commission's Questionnaire of enlarging the scope of Article 356 to that existed under fortysecond constitution Amendment Act can in no way be accepted.

4.2 Regarding Q. 4.6 it may be observed that census operations carried on through State Governments are satisfactory. But in the case of elections some changes at the top level of state election machinery are necessary. For example, the Chief Electoral Officer shall not be a State Government Officer. He shall be an independent officer appointed by and functioning directly under the Election Commission.

4.3 There need not be anymore new All-India Services. The armed forces like C.R.P. and B.S.F. should not be used in states without the civil authorities of the State Governments asking for it. *Suo-moto* action by these forces or the Central Government in this regard can on no account be allowed.

4.4 Broadcasting and Television should be included in the concurrent list and the States should be allowed to establish and run their own broadcasting and television institutions.

4.5 Zonal Councils have become practically defunct. Inter-State Council under Article 263 will serve its desired purpose, if only it is a permanent body, consisting of the Prime Minister and Chief Ministers having an independent secretariat.

Financial Relations

5.1 The observation of the A.R.C. study team that outstanding feature of financial relationship between the Centre and States "is that the former is always the giver and the latter is the Receiver" is quite correct. Further, the Centre also insists on the dictum that the Receiver cannot be the chooser. Devolution of financial resources through the mechanism of the Finance Commission and the Planning Commission has only worked to the disadvantage of the States and to maintain and increase the disparities between the States.

The richer states have grown richer while the poorer states remain poor even after 34 years of the working of the Constitution. Transfer of a few more elastic taxation heads to the State List will help the states to improve their condition. Similarly more central taxes such as Corporation tax, Customs duty etc. and also financial resources other than tax-revenues of the Union should be under the divisible

pool. Surcharges on Union taxes and duties should be abolished. The divisible pool of Central taxes may be raised. The suggestion that 75% of taxes and duties collected by the Centre should be brought under the divisible pool may be favourably considered.

5.2 Liberal Central grants may be given to the states which are economically backward so that special schemes for their economic uplift to the level of the richer states could be implemented. The suggestion in Q. 5.6 can be accepted. When natural calamities such as drought, flood, earthquake etc. occur the Centre should rush adequate financial aid to the States. Very often the Centre moves slowly and in a stingy manner. The failure of the Central Government to appreciate the extent of loss to the cash crops in Kerala on account of the unprecedented drought in 1983 is an example of this sort of attitude.

5.3 The Centre as well as the States are not exploiting adequately their sources of revenue. The public sector undertakings both under the Central and State Governments are not yielding adequate returns on the capital investment. The loop-holes in taxation laws and procedures should be plugged and the collection machinery should be geared up to make maximum collection under the law. Political interference in tax collection also should be avoided. Managerial inefficiency, wasteful expenditure and corruption are some of the reasons for the poor performance of public sector undertakings. Persons of very low qualifications, experience and efficiency are appointed at key positions of public sector undertaking purely on political considerations. And, they not only mismanage the affairs of the undertakings but also indulge in all sorts of waste, luxury and corruption with immunity because of their political connections. This type of functioning has to be put a stop to.

Industries

6.1 In the Industries sector also there has been too much of centralisation. There is no justification in bringing industries like production of gum, matches, soaps, foot wear etc. under the Central Sector (ref : Q. 7.1 of the Questionnaire). In fact goods which can be produced in the small-scale and village industries sectors like the ones mentioned above shall be reserved for these sectors and they may be totally excluded from the large industry sector. Necessary legislation may be enacted to ensure this safeguards to the small & Village industries.

6.2 Development of industrially backward states and regions should be one of the major consideration while Central Government makes investments in industries. Unfortunately this has not been the case in the past. Kerala is a glaring example of an industrially backward state being neglected in the field of Central Sector Industries. Statutory and administrative steps should be resorted to ensure special central investment in industrially backward states and regions.

Conclusion

Now that our Nation has declared its objective to be a sovereign Socialist Secular Democratic Republic many more constitutional changes, enactments and administrative measures are required to achieve this end. These are particularly required for Socio-economic transformation. For example, Right to work has got to be included as one of the fundamental rights and all citizens of India should be ensured of remunerative work. While matters of Central-State Relations are considered, it may be noted that this is only part of the overall changes that are required.

LOKDAL

MEMORANDUM

Introductory

This is an admitted proposition that the Constitution of India is not unitary and that it is federal. In evolving federation, one need not go by the definition of that term in political science. Strictly speaking from that point of view no Government in any country adopting federal principles is truly federal. All depends upon historical development preceding the formation of the Government.

Our Country is geographically a big country and has got the second largest population in the world. In this context, it is not possible to have a unitary form of Government, and federation is a 'must' for administrative purposes.

The principle of federalism has to be adapted in a manner so as to suit the genesis of the people. While we have re-organised states on linguistic and cultural background still the unity of the country has to be maintained. In other words, 'unity in the midst of diversity' is our moto.

At the same time one should not go by phrases. It is true that the Centre should be strong but should it be or can it be at the cost of its constituents ? Centre can be strong even when States are strong. As a matter of fact, like biological process, Centre can be strong only when States are strong. If the States are dependencees of the Centre, they will have no real initiative for development. So, the constitutional relationship between the Centre and the States should be such that while the Centre should remain strong enough not only to meet any foreign aggression, it should also have powers to curb fissiparous and secessionist tendencies in any State or its part. At the same time the States should have freedom and resources enough to develop. Mere different political ideologies in the Governments of States and the Centre should not be regarded as a sign of fissiparous or secessionist tendencies.

The history of the Central Government in the past 36 years of the enforcement of our Constitution has shown that decisive central intervention has taken place more because of differing political ideologies in the Central and State Governments rather than for checking any disruptionist trends in the States. It is that misuse that has to be checked, while maintaining the essential features of Indian Federalism.

The most important requirement of Federal Constitution is that distribution of the legislative power between the Centre and the States. The Centre and the States should be independent of each other

in their respective spheres. Both the Centre and the States derive their powers from the same source, *i.e.*, the Constitution.

The well-known authority on constitutional law, Mr. K. C. Wheare, defines the Federal Principal as "the method of dividing powers so that the general and regional Governments are each within a sphere, co-ordinate and independent".

The subject of Centre-State relations has now acquired vital importance and has become crucial to the preservation of unity and integrity of India within the framework of Constitution. For the last two decades, the States were making demands for greater powers for making 'States autonomy' real meaningful, purposeful and effective.

During the British Regime also, the Government of India Act, 1935 which came into force in 1937, provided certain basic features of Federalism. The Constituent Assembly in framing the Constitution of India, followed, to a large extent, some of the basic features of that Act. Thus, the Indian Constitution was meant to be a federal one. But in the working of the Constitution, some unitary features have emerged dominantly as a result of one party rule at the Centre for long.

The need for review of the Centre-State Relations has become imperative, we have gone through the questionnaire sent to us by the Commission and we are making our suggestions in respect of salient points on Centre-State relations :—

1 Inter State Council

Article 263. It should be amended. The provisions should be made mandatory. The President must appoint such a Council at the beginning of its Session of the Lok Sabha. Its composition should also be defined. It should comprise of all Chief Ministers, Leaders of the Opposition in the State Assemblies, the Prime Minister and leader of the Opposition in the Lok Sabha, the leader of the house and the leader of the opposition in the Rajya Sabha. The Prime Minister should be its Chairman. The Leader of the opposition should be defined as the person who is the leader of the largest opposition party or group.

The council must be consulted on all steps to be taken by Centre against any State. It will evolve its own procedure for effective functioning and decision making. *Inter alia* the Finance Commission and the Planning Commission should be appointed on the advice of the Inter-State Council and they should be answerable to it. They should be made permanent bodies and should not be left on the whims of the Central Government.

2. Legislative Relations

Parliament to make laws in respect of matter specifically included in the State List :

(i) **Article 249** : Article 249 can be invoked with the aid of the resolution passed by the Council of States by two-thirds majority that it is necessary or expedient that the Parliament should make laws. This is in total violation of the baisc principles of Federalism. The Centre can easily invade the jurisdiction of the State, if the political party ruling at the Centre can command two-thirds majority in this council of States. Hence this Article should be deleted.

(ii) **Articles 200, 201 and 213** : Under Article 200, the Governor can reserve the bill passed by the Legislature of the State for the consideration of the President and the Governor shall assent to any bill and is bound to reserve for the consideration of the President if that bill, in his opinion, if it becomes law derogate from the powers of the High Court as to endanger its position which that Court by the Constitution is designed to fill. Except the bills of this nature the Governor should not have the discretion to reserve the bill for the consideration of the President. Article 200 should be suitably amended. Under Article 201, time limit is prescribed for Presidential consideration. Any bill can be put in cold storage. As the President is bound to act under Article 74 on the advice of the Council of Ministers and since he has no options at all the legislative power of the State can be easily interfered with by the use of Presidential veto. In other words, both in theory and practice the legislative process of the State Legislature in certain respects are subordinate to the supremacy and subject to political convictions or prejudices of the Union Executive. Most Governors own their loyalites to the party at the Centre as most of them are party men or obliged to the party in several ways. They are always chosen mainly to watch the political developments or even to manipulate development some time. Hence it is very difficult to accept that the Governors act on the advice of Council of Ministers of the State. These bills mainly dealt with welfare measures which were far more progressive than the legislation initiated by the Central Government. When a State legislature passed a bill it need not be sent for the assent of the President. If there is any violation of Constitution, judiciary can deal with the matter, instead of allowing a political judgment or political prejudices to prevail. Hence Article 201 should be repealed. Proviso to sub-clause (1) of Article 213 should also be deleted for the same reasons. Article 200 should be so amended as to delete the provision of reservation of the bill for consideration of the President.

Emergency :

(iii) If the President is satisfied that grave emergency exists and the security of the country or any part thereof is threatened by war or external aggression or armed rebellion, he may declare emergency by proclamation. While the Central Government should have the power to declare external emergency on the basis of armed rebellion should be totally deleted or if it is considered necessary to retain it, the same should not be declared without consulting the Inter-State Council.

Similarly financial emergency under Article 360 should be promulgated only after the matter is placed before Inter-State Council.

Article 360 has not been invoked so far. Financial instability can be the result of mismanagement of economy the Union Government and in case of emergency the States pay the penalty

This is an anomalous position regarding the financial emergency. Hence placing the proposal for financial emergency before the Inter-State Council is absolutely necessary.

President's Rule

(iv) **Articles 356 and 357 :** If the President on the receipt of the Report from the Governor of the State or otherwise, is satisfied that the situation has arisen in the State, in which the government of the State cannot be carried on in accordance with the provisions of the Constitution, he can invoke Article 356 and 357, dismiss the State Government and even dissolve the legislature (optional) and assume all powers to himself. This only means that it is the Government at the Central that assumes all powers and is the Government that decides, whether to impose President's rule or not. In actual practice, the governors are told by the Home Ministry when they should write the reports and how they should write the report. The governors are helpless in these matters, as they continue to be governors at the pleasure of the President (this only means the pleasure of the Prime Minister). Under Article 356 as it stands even the governor's report is not necessary, it is only the satisfaction of the President that is necessary: in other words, it is the satisfaction of the Prime Minister who heads the Council of Ministers. It is both a tragedy and a farce that the State Governments and State Legislatures owe their existence to the pleasure of the Prime Minister and his Council of Ministers. It is suggested that the Inter-State Council should be consulted before invoking the powers under the aforesaid Articles of the Constitution.

(v) **Article 365 :** Article 365 is no less obnoxious. If any State Government fails to comply with or give effect to any direction given in exercise of executive power (by the Executive), Article 365 would enable the President to invoke it and impose President's Rule. Here again it is only the judgment of the political executive and not the result of determination by the Judiciary. Hypothetically if the directions given by the Central Executive are themselves obnoxious or violate rule of law, is a State Government still bound to carry out the directions ? Except at the time of war, at other times any direction issued, should satisfy the test of public interest and a State Government cannot be compelled to carry out the directions given by the Central Executive, which can even be malafide sometime. This Article itself was incorporated eleven days before the Constitution was finally adopted by the Constitutent Assembly. This is obviously an after thought. This Article should also be deleted.

It may be of interest to know that historically the President's Rule was imposed for the first time (after Constitution came into force) on 21st June 1951. Ever since that day till today the President's Rule was clamped more than 70 times in 21 States, excluding the Union Territories. In the scheme of the Constitution, the Council of States and the President are the custodians of the interests of the States. But since the President has to act on the advice of the Council of Ministers under Article 74, the President is reduced to rubber stamp, and in effect it is the Prime Minister and the Council of Ministers who take decisions.

(3) Financial Relations

(i) The Primary source of public income are :

(1) Taxes, (2) Domestic Borrowings, (3) Economic surpluses generated by the Public sector undertakings, trade and commerce. Certain revenues are collected exclusively by the Central Government. These are transferred to or shared with the States. The Finance Commission set up under Article 280, advise the President in the matter in which these revenues should be shared.

But, however, a substantial part of the financing by the Government of India is done under the enabling provisions of Article 275. The Finance Commission has no say in this matter. The Government of India can play havoc with the State Governments by utilising. discretionary grants. This has political overtones. Therefore, the National Development Council every year should formulate general principles for distribution of grants-in-aid and the deficits in the State budgets must be made good by the Government of India, by distributing these grants in an appropriate manner. And such deficits that arise in the State budgets as a result of developmental programmes which are part of productive wealth and approved by the National Development Council and Planning Commission should be treated as deficit in the Central budget of the Government of India. Such developmental programmes should be given recognition in the Constitution. The Constitution should be suitably amended for this purpose.

(ii) **Central Sales Tax :** There are many defects in Central Sales tax Act, 1956 preventing State legislature from imposing sales tax on commodities, which are declared by the Central law as commodities, of Special importance for inter State trade and commerce. There should be a complete review of all matters relating to the fundamental issue, that is the division of National Financial resources between the Union and the State in order to maintain and protect the federal nature of the Indian policy and the financial strength of States, finances. For example it may be mentioned that customs duty export duties and corporation taxes should be included in the divisible pool. Regarding profits earned by Government of India on sale of commodities such as petroleum, coal etc., relating to which the Government of India has exclusive trading rights and right to fix prices, that are called administered prices, the States should have a share and the Finance Commission can prescribe the principles of sharing.

Finance, Trade and Commerce

(iii) According to Prof. Wheare one of the essential requirements of federalism is that Union and State must each have under its independent control financial resources sufficient to perform its exclusive functions. The financial position must be adequate as well as elastic according to the division of financial resources and tax structure. The resources for raising funds available to the States are practically inelastic and comparatively very inadequate. In the context of development plans efforts to reduce uneven development and disparities, the States are in need of increasing resources. The Union Government apart from the resources available as per provisions of the Constitution has the facility

of foreign aid and recourse to deficit financing. These two avenues are denied to the States. If the States have to depend totally on Central Government for financial resources, the federal structure would end up a unitary State. This is the danger inherent in the situation.

Corporation Tax

(iv) Clause 6 of Article 366—Corporation Tax means any tax on income so far as tax is payable by companies. In pittance substance Corporation tax is a tax on income but this is not included in the divisible pool. Thus Corporation Tax should also be treated on the same footing as income tax. Customs and export duties should also be compulsorily distributed between the Union and States. Tax on capital values of assets of individuals and companies should be within the divisible pool.

Article 272 should be amended to make the division compulsory. As the sharing of basic excise duties between the Union and States, as it stands today is discretionary and not mandatory. The additional duties and excise on goods of special importance (Act 1957) authorise the Parliament to impose certain duties and excise on specified goods namely sugar, tobacco, cotton fabrics, rayon, artificial fabrics and woollen fabrics produced or manufactured in India and these goods were declared to be of special importance in inter-state trade and commerce for the purpose of Central Sales Tax Act, 1956. While it is true that the Government of India has assigned these additional duties to the States, the rider in the Act that the State would preclude from getting any part of the proceeds of the additional duties from the Government of India if any State imposes a tax on the sale of these goods. This rider prevents the States to impose sales tax on a number of commodities or they should lose the benefit of additional duties of excise.

Under statutory devolution of resources not less than 50% of tax revenues of the Central Government should be transferred to the States. The surcharge on excise duties should also be shared.

Grants

(v) There are two types of grants (a) grants-in-aid which are statutory grants under Articles 273 and 275 (b) non statutory or discretionary grants.

Article 282 empowers the Union of States to make any grant for any purpose when it falls outside the area of legislative authority. All grants for Plan schemes to considerable extent are discretionary under Article 282. These discretionary grants have overwhelmingly outstripped the statutory grants recommended by the Finance Commission and they have reduced the position of the States to that of supplicants for Central assistance. Discretionary grants will today range between 71.3% to 88%. These discretionary grants naturally fluctuate depending upon the Centre's financial position. Therefore, the position of the State becomes nebulous and since dependence on the Central becomes more pronounced in a federal structure while different parties may come to power in different States, it would be better that an independent body like the Finance Commission lays down the principle even with regard to the discretionary grants without allowing discretionary grants to be used for political manipulations.

Inter-State Trade and Intra State Trade

(vi) Article 302 empowers the Parliament to impose restrictions on trade and commerce not only relating to inter-State trade but also intra-State trade in public interest. There is no point in empowering Parliament to impose restrictions on intra-State trade. It is an exclusive sphere of the State. Trade and commerce are in Entry No. 26 of the State list out it is subject to Entry No. 33 of the concurrent list. Entry No.33 of the Concurrent list is as follows—

"Trade and commerce, in and the production, supply and distribution of :

(a) The products in any industry where the control of such industry by the Union is declared by Parliament by law to be expedient in the public interest, and imported goods of the same kind as such products;

(b) Foodstuffs, including edible oilseeds and oils;

(c) Cattle fooder, including oilcakes and other concentrates; and

(d) Raw cotton, whether ginned or unginned, and cotton seed; and

(e) Raw jute".

While there may be force in the contention that production, supply and distribution of certain products of an industry which may be of vital interest connected with a defence or integrated planning, it is not necessary to subject the power of the State legislatures to that of Parliament relating to trade and commerce. Therefore, Entry No.33 of the Concurrent list will have to be suitably modified.

Clause (b) of Article 304 uses the expression 'reasonable, restrictions' relating to the power of the legislature of a State whereas Article 302 use only the expresssion 'restriction. (without being qualified by the word 'reasonable'. In article 302 restriction must be qualified by the word 'reasonable'.

Under Article 302 no bill or amendment for the purpose of imposing reasonable restrictions on the freedom of trade and commerce by the legislature can be introduced without the previous sanction of the President. Such previous sanction may be necessary in relation to inter-state trade but it would not be necessary when the State legislature has to deal with intra-State trade. If the restrictions imposed by the State legislature are not reasonable and not in public interest the High Court or the Supreme Court are empowered to strike down the law. The previous sanction of the President cannot render invalid law valid. Hence the proviso to Article 304 should be omitted.

Article 307 contemplates the appointment of an authority for carrying out the purposes of Articles 301, 302, 303 and 304. It is similar to inter-State

Commission in the U.S.A. It would be desirable to appoint such a commission to deal with such cases in the course of inter-State trade rather than leaving it to the political executive of the Centre.

(4) **Para Military Forces**

Under Article 355, it is the duty of the Union to protect every State against external aggression and internal disturbances. The Administrative Reforms Commission is of the view :

"Under Article 355 of the Centre is entitled to send or station the units of the CRP in States without consulting the State Government or even contrary to their express wishes".

Except in case of external aggression against the state without the express request or the consent of the State Government para military forces of the Central Government should not be sent or stationed in any State. Hence, Article 355 should be amended so as to make it abundantly clear that the Centre shall not interfere in the States without the express request from them. Even when the para military forces of the Centre like CRP are sent or stationed in a State at the express request or the consent of the State Government as along as they are there they must function and operate under the discipline and control imposed by the State Government and the State Government should have the power to deal with the violations of law except the service conditions.

(5) **IAS and IPS**

All India Services like IAS and IPS officers are posted in the States but they remain under the supervision and disciplinary control of the Central Government. It is forcibly contended that when different political parties come to power in States and the Centre, the Central Government attempts to use the IAS and IPS officers and advice them to non-cooperative and some time to subvert State Governments and bring these Governments to disrepute. While there is considerable truth regarding the attempts made by the ruling party at the Centre to use these officers and also that some of them succumb to the pressures and temptations, all officers cannot be treated to belong to the same category, some of them are persons of conviction, high integrity and character. But for some such officers belonging to IAS and IPS there would not have been even a semblance of administration in States like Bihar. Hence a balance must be struck regarding their position in States Administration. It is undoubtedly true they must remain under the supervision and disciplinary control of the State Government primarily but they must have reasonable protection from harassment and insecurity from some unscrupulous political heads of the Government and various ministries. There are good governments and there are not a few bad governments too. Hence while these officers must be primarily under the control of the State Government, the Administrative Tribunals should protect them against victimisation.

(6) **Judiciary**

In a federal structure created by the Constitution providing for distribution of powers between the Central Executive and the Parliament on one hand and State Legislatures and State Executives on the other the Supreme Court has to act not merely as the interpreter and the guardian of the Constitution but also as a tribunal for the determination of disputes between the States and the Union and among the States. Under the Constitution Supreme Court is vested with jurisdiction to deal with these matters under Article 131. With the multiplicity of political parties coming to power the judiciary has a vital role in maintaining the stability of the federal structure. Hence no political party should be suspected of taking advantage in the appointment of Judges.

Under Article 124 every Judge of the Supreme Court is appointed by the President after consultations with such Judges of the Supreme court and High courts in the States as the President may deem necessary and in the case of appointment of Judges other than the Chief Justice, the President is bound to consult the Chief Justice of India. The President under Article 74 is bound to act on the advice of the Council of Ministers. He has no discretion in the matter. Hence the Law Ministry, the Home Ministry and the Prime Minister are generally concerned in the appointment of Judges and ultimately it is the Prime Minister who decides. Thus the Judge's appointments are made by the Executive. With the multiplicity of different political parties coming into power in the States and the Centre the appointment of Judges must be above controversy. Therefore, it is suggested that Article 74 should be amended suitably so that the Council of Ministers will not be concerned with the appointment of Judges and they cannot render any advice under Article 74 and the President need not act on their advice in that sphere.

We are of the view that the unanimous resolution of the All India Convention of Lawyers held at New Delhi in August, 1973 under the Chairmanship of late Shri M. C. Setalvad, be adopted, for the appointments of Supreme Court and High Court Judges and Chief Justice. The said convention was attended by eminent lawyers and jurists. The resolution of the convention was presented to Shri V. V. Giri, the then President of India. It was recommended that there should be a judicial committee of seven seniormost Judges of the Supreme Court, including the Chief Justice of India and similarly judicial committees of seven seniormost Judges in each High Court. These committees will make consultations among them and then ultimately the President of India would act on the advice of the Supreme court. Judicial Committee and the executive will have no say in this matter.

Regarding the transfer of High Court Judges, the same procedure should be followed. While transfer in certain cases cannot be disputed, that matter has to be left to the Judicial Committee of the Supreme Court. It is also suggested that the judges and Chief Justices of the High Courts and the Supreme Court shall not be eligible for further office (including that of Commission of Inquiry) under the government of India or under the government of any State after they have ceased to hold their offices. This appears to be the only way how the judiciary can be made totally independent of the political executive and how different political parties with their socio-economic philosophy coming into power in the States and the political party ruling at the Centre treating some of the State Governments, with utter hostility can have confidence in the federal system thus strengthening

the forces of national unity and national integration. There are attempts now to denigrate and to destroy the sacred institutions created by the Constitution. It is ultimately the quality, integrity and the stature of men who fill these posts and matters. Their appointment should not give scope for suspicion or controversy. Suitable amendment in Article 74 of the Constitution therefore, should be made.

Under Article 143(1) the President can refer certain questions of law to the Supreme Court for their opinion. It has been recommended by Shri Rajmannar's Committee that a provision on the lines of Article 143(1) may be made empowering the Governor to refer the question of law of public importance to the High Court. In a number of States in the American Union, it is constitutionally provided for this purpose. A provision may be made for such reference to the High Court by the State Government.

(7) Election Commission

Under Article 324(2) of the Constitution, the President appoints the Chief Election Commissioner and other Election Commissioners. When any other Election Commissioner is appointed Chief Election Commissioner acts as the Chairman of the Election Commission. As the President is to act on the advice of the Council of Ministers under Article 74, in practice for all purposes it is the political executive that appoints the Chief Election Commissioner and other Election Commissioner, if any.

Sanctity of democratic processes and confidence in democratic institutions depend to a large extent on the independence and *supremacy,* strength of character and democratic conscience of the Chief Election Commissioner and other Election Commissioners, if any, if they act as agents of political executive of the ruling party at the Centre, democratic processes would be subverted and democratic institutions would be destroyed.

In the context of political pluralism if there should be harmony between the Centre and States with different political parties in power, the Election Commission should not only be independent but also its conduct should be beyond suspicion. For achieving this purpose, the Chief Election Commissioner should not be appointed by the political executive.

The judicial committee of the Supreme Court referred to in the preceding paragraph, should select sitting Judge of the Supreme Court, for the post of Chief Election Commissioner and sitting High Court judges for the posts of Election Commissioners. The President should act on the advice of that committee for their appointments. Suitable amendment in Article 74 of the Constitution should be made.

The Election Commission should consist of at least three Commissioners, *i..e,* the Chief Election Commissioner and two Election Commissioners. The Election Commissioners in consultation with the Chief Justice of the respective State High Court should appoint the Regional Election Commissioners or Chief Electoral Officers for every State. The Chief Election Commissioner and the Election Commissioners shall not be eligible for further office either under the government of India or under the government of any State after they have ceased to hold their respective offices.

(8) Appointment of Governors—Articles 154 and 155

The President should appoint a Governor on the advice of the Inter-State Council and not on the advice of the Council of Ministers headed by the Prime Minister. The role of the Governor under our federal structure is very important. He should act as constitutional head of a State and not as an agent of the Central Government. He should have the same protection, as a Supreme Court judge in the matter of removal from his office. It is necessary for fearless and independent working by him.

(9) Formation and dismissal of Ministries in a State —Article 164

This Article has been variably abused. The Centre can topple a Ministry in a State through the mechanisation of Governor.

Examples of Andhra Pradesh and J & K are there for every one to see. It was tremendous public pressure and steadfastness of legislature of Andhra Pradesh that Government had to yield. Hence, this Article should be amended as follows :—

(i) **Appointment of Chief Minister :** Only that person should be appointed as Chief Minister who gets approval from the Assembly. Hence before appointing a Chief Minister, he should summon the Assembly within three days of vacancy.

(ii) **Dismissal :** Only when a Chief Minister is voted out of office that he should be dismissed if he himself does not resign.

If a situation has arisen during a period when Assembly is not in session and it appears to him that the Chief Minister has lost confidence but the Chief Minister disputes it, he should call a meeting of the legislatures within 3 days to enable him to seek vote of confidence.

(10) Radio and Television

There is need to prevent central monopoly for media like television and radio which should be in the hands of a corporation which would work under the Inter-State Council.

11. On the advice of the Prime Minister, who has lost majority support, the President must not prorogue the Parliament or promulgate ordinances or dissolve the House of People. Similarly, on the advice of the Chief Minister, who has lost majority support, the Governor should not prorogue the State Legislature or promulgate ordinance or dissolve the Legislative Assembly.

12. Unfortunately we have not paid due attention to decentralisation of power to the local bodies *i.e.,* Village Panchayats, the Municipal Boards, and town areas, through whom only the local problems of the people can be solved. No body bothers to hold elections of these bodies in time. They do not have finances and have to look to the State Governments for that purpose. It is therefore suggested that elections of all local bodies must be held after every five years. They should have sources of their finances to carry on their activities.

2. STATE PARTIES

ALL INDIA FORWARD BLOC

MEMORANDUM

Views of the Central Committee of the All India Forward Bloc

The questionnaire projects a fragmented approach and not comprehensive one, to the problem of the Centre-State relations as obtaining now. Further, the approach is more of legal and judicial nature than politico-historical. The Constitution of a country, is not only the embodiment of legal and judicial conceptual niceties but reflect the corelation of the politico-economic and social forces at work of a particular time-span. Our Constitution cannot be and is not an exception to that. As such, the unchangibility of it can not be the maxim, rather changibility should considered an essential element in any written Constitution, if it is to be attuned with the changes of the co-relation of the socio-economic forces. We, therefore, are of the opinion that amendments will be necessary in the Constitution to restructure the Centre-State relations.

The terms of reference of the Commission framed by the Government seeks to put limitations on the scope of the study of the subject when it, mentions *inter alia* that it shall have due regard to the scheme and framework of the Constitution which the founding fathers have so sedulously designed to protect the independence and ensure the unity and integrity of the country which is of paramount importance for promoting the welfare of the people.

Our party is second to none to defend the independence, unity and integrity of the country. The suggestions which we will give later on, have been formulated having due regard to those important aspects of our national duty and obligations. There should not be any misgiving about that. We hope this limitations will not inhibit the Commission for recommending suitable amendments in the Constitution.

Historical Evolution of the Constitution

2. The perception of the Constitution of Free India has its genesis in the long drawn peoples' struggles against alien British rule, which during its one and a half century domination, imposed a highly centralised administration, in their own imperial interests. The broad anti-Imperialist struggle for the attainment of national freedom, brought within its fold all the linguistic, cultural, ethnic and religious groups by projecting a living image of India's unity in diversities and defeated the Imperialist mechanisation of 'divide and rule'. The concept of a Constitution based on the principles of federalism, developed during the freedom movement itself. This federal concept found expression in Motilal Nehru Report of 1928 and other resolutions and discussions during the forties. The most clearest perception of the Federal Constitution of Free India, is reflected in the Election Manifesto of the Indian National Congress of 1945, which states, "The Federation of India must be a willing Union of its various parts in order to give the maximum of freedom to the constitutent units. There may be a minimum list of the common and essential federal subjects which will apply to all units, and a further optional list of common subjects which may be accepted by such units as desired to do so."

The political climate which obtained throughout the country after the transfer of power, particularly in the wake of the partition of the country, must have weighed upon the Constituent Assembly not to go beyond on the road to federalism what emerged as the present Constitution of India in 1950. To the great dismay of all sections of democratic opinion the Constitution contains some provisions which are closely similar to those of 1935 Act made by the British Government in many respects. It is replete with the conceptual framework found repugnant to the democratic opinions upheld by the leadership of the freedom movement.

State Autonomy eroded

3. The Constitution that emerged after Independence, although described as Federal, is essentially Unitary in character. It invested the Centre with enormous powers at the expense of the autonomy of the States in the legislative, economic and financial as well as in the administrative spheres, which will be evident from the analysis of the entries in the VIIth Schedule (List 1, 2 and 3) of the Constitution. Again whatever federal contents remained, have been increasingly eroded into during the last thirtythree years, reducing the autonomy of the States into a mockery. The process of erosion of the States' rights climaxed during the Emergency, when the State Governments were robbed of all autonomy. States, in this process have been brought down to a mendicant status. This was possible because of the fact that a single party enjoyed power both at the Centre and all the States, except for a brief period, that too, only in few States.

Now that the country has entered into the era of a multi-party polity, the existing arrangements between the Centre and the States, must undergo requisite changes in order to attune them with existing reality. The new arrangements must necessarily be based on the federal principles in the true sense of the term. Any move in the opposite direction will invite only perils.

The State Governments run by a Party or a group of parties other than the party in power at the Centre are always under threat of Central interventions. Imposition of President's Rule under Article 356 of the Constitution, has been the common practice of the ruling party at the Centre, to re-establish its rule negating the peoples' verdict. There are number of instances of the blatant misuses of this provision. This Article 356 has been invoked about 70 times to impose Presidential rule during the last 35 years. This has also been resorted to in order to solve the inner party squabbles within the Congress at different points of time.

Though the maintenance of law and order is exclusively within the State jurisdiction, the deployment by the Centre of the Central forces like the C.R.P., B.S.F., the Industrial Security Force, even without the consent of the State Government concerned cannot but be construed as deliberate erosion into the States' power and autonomy. This trend has reached such a stage, that the Union Government did not hesitate to declare certain areas of Tripura State as 'disturbed' in total disregard of the opinion of the Government of Tripura. Again the Centre's power to issue direction to the States under Article 256 and 257 of the Constitution are uncalled for curbs on the States' autonomy and power.

The recent refusal of the Government to initiate suitable legislation in the Parliament for the abolition of the Andhra Pradesh Legislative Council in pursuance of the resolution passed by the Andhra Pradesh Legislative Assembly in terms of the article 169 of the Constitution is yet another of the Centre's attempts at eroding the State Autonomy.

Withholding of the President's assent for the bills passed by the State Legislative reduces the power of the democratically elected Legislative bodies of the States. This, sometimes, denies the opportunity and right of the majority party in the Legislatures to carry out the mandate of the electorate.

The unusually inordinate delay in according Presidential assent to the West Bengal Land Reforms Bill, 1982, is a glaring example of killing a progressive legislation of States by the dubious method of delaying the assent or not giving the assent. This is virtually an extra-ordinary right of the Central Cabinet (a political body) to nullify the right of the State Legislatures to give effect to the election promises, if the Central Cabinet politically decides to do so, throwing to the winds all cannons of Parliamentary democracy.

The office of the Governor has been rendered subordinate and subservient to the ruling party at the Centre. The Governors have been reduced to virtually the same position as that of the resident agent in the native states in the days of British Raj.

Instances are there, when the Governors debased their high office by lending services to fulfil the partisan objectives of the ruling party at the Centre.

Financial Relation

The State's resources bearing capacities are very limited. There is no uniform policy of distribution of resources from the Central Divisible pool. The present devolution of resources is not commensurate with the responsibilities to be discharged by the States under the Constitution. The Finance Commission have not been able to solve the problem of distribution of divisible resources between the Centre and States in a satisfactory manner mainly because of the Constitutional limitations in this respect. There is an increasing tendency of the Centre to raise periodically the prices of Steel, Petroleum products and other commodities resulting in the erosion of States' financial resources and transfer of increased resources from the States to the Centre. The present system of determining the prices of farm produces, which does not take into account the actual cost of cultivation, reasonable margin of profit and risk allowances, adds to the burdens of the States because of their increasing expenditures on subsidies and subventions in this regard.

Hamstrung with the limitations arising of the widening gap between their legitimate needs and actual resources, the States have so long been managing their finances by borrowings, overdrafts and ways and means assistances from the Centre. The recent restrictions imposed by the Centre on States on the resort to 'over-drafts' in the name of financial discipline, have adversely affected the Manœuverabilities of the State Governments in tackling the financial affairs. The reaction of the States to these restrictions can be gauged from the comments in the Memorandum submitted by the West Bengal Government to the Eighth Finance Commission, which runs as follows :

"The interesting thing, however, is that the Government of India, themselves also need to resort to overdrafts. But they do not use the word. They simply issue treasury bills and draw money from the Reserve Bank. What is also interesting is that while we are made to pay interest at 13 per cent on our over-drafts, they pay only 4·6 per cent on their treasury bills".

Incidentally, it is to be mentioned here, that the assistances from the World Bank, and other international lending institutions are passed on to the States by the Centre, at higher rate of interest.

The Centre's policy adversely affects the revenues of the States. This is evident by another comment of the said Memorandum which is as follows :

"Popularity is courted by concessions in the spheres in which revenue is to be shared with the States, while compensatory imports are made on other spheres. For example, in the budget for the year 1983-84, there is a concession in the income tax upto a certain levels. The loss on this account is entirely that of the States. But there is also an enhancement of surcharge on income-tax (from 10 to 12·5 per cent). The profit on this account is entirely that of the Government of India."

It is to be noted that the Centre raised additional taxes which yield cumulatively Rs. 1430 Crores per annum, of which only the sum of Rs. 80 crores is transferable to the States. Further, it will not be irrelevant to mention that major sources of revenue such as Customs and Excise duties and Corporation tax are not included in the divisible pool.

Apart from the exclusive jurisdiction of the Centre over almost all the major revenue sources, the banking, insurance and other public financial institutions are under the control of the Centre. The States have no say in the investment pattern of them. Nor do they share the profits earned by them. Similarly the States have no say in the formulation of the fiscal and economic polities, the impact of which is bound to fall upon them.

Planning & Economic Co-ordination

5. Equally, the States have virtually no role in formulating the Five Year Plans, determining the priorities and shaping the implementation strategies. The Planning Commission, although a non-statutory and extra-constitutional body, enjoys wide powers and authority, administrative and otherwise in all matters relating to planning from formulation to execution. The National Development Council has become a deliberative body and its occasional meet at the behest of the Prime Minister is a ritual. Nor the National Development Council is a creature of the Constitution. It is the executive of the Central Government which is its creator and naturally it works at its behest.

Plan performances have not reduced the economic inequality, prevented concentration of economic power in the hands of the few, diminish poverty and un-employment, ensure better standard of life for the people, remove regional imbalance, in other words failed to fulfil the objects of the successive plans. Apart from contributing towards further deepening of the economic crisis, Plan administrations have given rise to frictions between the States and Centre by encroaching upon the rights of the States while seeking to establish the Centre's control over a number of subjects which come under the concurrent and State Lists.

Education and Culture

6. Education has been included in the concurrent list by the 42nd Amendment Act passed during the Emergency. Perhaps in no other federal country of the world, education or any other subject of cultural importance is under Central control in any way. But even after being invested with more power over education, the Centre have not made more money available for the States for educational purposes. States are also not provided with funds even for fulfilling the Constitutional obligation of making education free and compulsory for all children upto the age of 14.

Even the State Universities are being discriminated against by the University Grants Commission. *Of the* total financial assistance of the U. G. C.' 80 per cent is spent for the Central Universities while the the remaining 20 per cent is distributed among 113 State Universities. In a multi-lingual country like India, languages irrespective of the size of the linguistic groups. The imposition of Hindi does not help the process of emotional integration, rather impedes it, although we accept Hindi as official link language.

National Unity and Integration

7. The wrong economic policies pursued by the Government during the last three and half decades have resulted in regional imbalances. This breeds the fissiperous, chauvinistic, parochial and even secessionist tendencies which we witness today in different parts of the Country. The Imperialists do not miss any opportunity to take advantage of the situation in order to fulfil their sinister design of destabilising our country. This has naturally added new dimensions to the question of Centre-State relations.

With the rapid deterioration of the security environments resulting from the U. S. global strategy to perpetuate its domination in this subcontinent, the task of preserving the national unity and integration and strengthening the foundation of freedom and sovergnity has become imperative. A sound, balanced, healthy and co-operative relation between the States and Centre is essential to fulfil the task.

We have, therefore, come to the conclusion that, reshaping and restructuring the Centre-State relation are *sine-quanon*, for the preservation of democracy, for the relentless struggles against authoritarianism, for strengthening the unity and integrity of the country, for safeguarding the freedom and sovergnity of the country, for planned economic developoment in the interest of the people and for the fulfilment of other democratic tasks. And the fundamental basis of such restructuring shall be more power and autonomy for the States, which can alone make the States strong. Our object of making States strong does not mean the weakening of the Centre. Strong States do make the Centre strong. We want strong centre but not arrogant or dictatorial centre.

We are, however, not oblivious of the fact that the present Constitution is an instrument of class rule. That being so, it is incapable of solving the fundamental problems of the people. Nor do we believe that the restructuring of the Centre-State relation on the lines suggested by us, would bring about radical changes in the socio-economic conditions of the vast masses of our people and free them from class exploitation. Nevertheless, the reshaping of the Centre-State relation on the suggested lines would certainly enable the State Government, to provide relief to the people in greater measure than now and also provide the States greater opportunity to serve their people.

With this object, the Central Committee of the All India Forward Bloc submits the following proposals :

I. Political and Administrative Aspects

1. The preamble of the Constitution should be so amended as to include the word 'federal' in the description of the Republic of India.

2. The position of the Governor should not be any way different from that of the President. The Governor shall have no discretionary powers. The manner of appointment of the Governors should be changed. Governors shall be appointed by the President on the basis of a Panel forwarded by the State Government concerned.

3. Articles 356 be deleted. In case of a Constitutional break down in any State, provision should be made for holding election as in the case of the Centre.

4. Article 360 which empowers the President to interfere in the State Administration of the ground of threat to financial stability, should be deleted.

5. Article 200 and 201 should be so amended as to make the State Legislature supreme in the sphere of legislation on matters relating to the State List and all possibilities of interference by the Centre or the Governors are eliminated on any ground except in the case of bills which affects the powers of the High Court.

6. Article 248 and Entry No. 97 in the Union List vests the Union with the residuary powers concerning all matters. Such residuary powers should be with the States.

7. Article 249 which empowers the Centre to legislate on a subject in the State List under the plea of national interest should be deleted.

8. Article 252 which empowers the Union to legislate on the request of two or more States to pass laws on subjects mentioned in the State List should be deleted.

9. Article 263 empowers the President to establish the Inter-State Council. The existing article is recommendatory and not mandatory. It must be made mandatory. The Council should consist of the Prime Minister and all Chief Ministers of the States. The Prime Minister shall be the Chairman of the Council. The Council shall deal with all disputes b tween the States and the Union and between States and with any other matter of national importance. The Council shall have a permanent Secretariat of its own in the Capital.

10. Article 365 which empowers the President to dismiss State Governments, for their failure of implementing any direction given in the exericse of the Executive Power of the Union, under any of the provisions of the Constitution, should be deleted.

11. Article 370 giving special constitutional status to Jammu and Kashmir shall be retained and protected in the letter and spirit.

12. All India Services like I.A.S., I.P.S. etc. whose officers are posted to the States, but remain under the supervision and disciplinary control of the Central Government, should be abolished. There should be only Union Services and State Services and recruitment to them should be made respectively by the Union Government and State Government concerned. Personnel of the Union S rvices should be under the disciplinary control of the Union Government and those of the States Services, under the disciplinary control of the respective State Governments. The Central Government should have no jurisdiction over the personnel of State Services.

13. The Judiciary at all levels be free from political interferences. The Judges of the Supreme Court should constitute themselves into a judicial council and make recommendations regarding the appointment of judges of Supreme Court and appointment and transfer of judges of High Courts. Before making their recommendations, they should consult the State Governments, the Union Government and the Chief Justices and Judges of the High Courts. The advice of the Judicial Council of the Supreme Court shall be binding on the President.

14. The Election Commission should consist of three members to be appointed by the President on the recommendation of the Judicial Council as referred to para 13, in order to ensure its credibility and impartiality.

15. A Statutory Communication Council should be set up to oversee the functioning of the radio, television and other Government-managed media so that this important media may not be used for partisan interests. The State Governments shall have adequate representation in the Council.

16. Law and order is state subject and the prerogative of the State in the matter must be fully respected. Induction of Central Police forces may be allowed on the basis of prior concurrence of the State Government concerned. Disturbed Areas Act should not be extended without the concurrence of the State concerned.

II. Economic and Financial Aspects.

1. While enlarging the scope of the States' sphere, we must also try to preserve and strengthen the Union authority on the subjects that could be carried out by the Union authority and not by any single State, such as Defence, Foreign affairs including foreign trade, currency and communications and economic coordination and planning. The role of the Centre should be one of coordination. In areas such as Planning, fixing of prices, wages etc., the Centre may not only coordinate but also issue general direction.

2. In the matter of planning and economic coordination, however, the Centre will have to conform to the general guidelines laid down by the National Development Council, in which the States will have representation along with the Centre. At the moment, neither the Council nor the Planning Commission is specifically referred to in the Constitution. This lacuna may be removed by introducing a separate Article, which should also state clearly that the composition of the Planning Commission will be determined by the National Development Council. Loans and grants for development purposes are not the prerogative of the Planning Commission. It is thus important that the States have some say in the manner of operation of the Commission. The Commission should help the States develop in their own way, with more powers and resources at their command.

3. Industrial and power or irrigation schemes which concern more than one State have to be kept on the Union List so that there can be a common policy and final decision in regard to these multi-State Projects will be enumerated by the Union Government, while the execution and implementation should be done through the State Government.

4. In matters concerning industrial licensing etc., major modifications in the allocation of powers between the Centre and the States are called for. The lists in the Seventh Schedule should be reformulated so that States may be given exclusive powers in respect of certain categories of industries.

5. The Articles regarding the Finance Commission and the distribution of revenues should be amended to provide for 75 percent of the total revenues raised by the Centre from all sources for allocation to different states by the Finance Commission. This is necessary to end the mendicant status of the states.

In what proportion and on what principles this 75 percent of the total realisation shall be divided between the States shall be dicided by the Finance Commission.

It should not be the job of the Finance Commission to decide on the proportion of revenues to be distributed between the Centre and the States.

Its task should be only to fix the proportion each State should get from the total financial realisation by the Centre, 75 per cent of which is to be allotted to the State.

Article 280 clause 3, sub-clause (a), which provides "the distribution between the Union and the States of the net proceeds of the taxes which are to be or may be divided between the Union and the States," should be omitted and the entire clause be redrafted so as to make it clear that it is the duty of the Commission to make recommendations to the President as to the allocation between the States of their respective shares of the proceeds.

The States must also be accorded more powers for imposing taxes on their own, and to determine the limits of public borrowing in their respective cases.

III. Miscellaneous

1. In order to enforce the principle of equality of the federation units and to protect further erosion of States autonomy, elections to the Rajya Sabha also should be directly held by the people at the same time as Lok Sabha elections. All States must have equal representation in the Rajya Sabha except those with a population of less than three million. Both houses must have equal powers.

2. Article 3 of the Constitution which gives powers to the Parliament to change the area of a State unilaterally, should be suitably amended so as to ensure that the name and area of a State cannot be changed by the Parliament without specific cansent for that by the State Legislature concerned.

In the case of a conflict between two or more States in respect of territory, steps would be taken to settle the conflict in accordance with the provisions already made in the Constitution for settlement of other conflicts (*e.g.* use of water resources of the same river flowing *through* a number of States) between the States.

3. Languages mentioned in the Eighth Schedule should be allowed in the work of the Governments at the Centre and in the States at all levels. Any citizen of India will have the right to use his mother tongue in his dealings with any branch of the Government upto the highest stage. English should continue to be used for all the official purposes of the Union along with Hindi, till as long as people of the non-Hindi people should be encouraged. It is necessary to further amend the Eighth Schedule to include certain other languages such as Nepali.

DRAVIDA MUNNETRA KAZHAGAM

MEMORANDUM

Introduction

Thiru M. Karunanidhi, the President of the D.M.K. Party after becoming the Chief Minister of Tamil Nadu announced in a Press Conference at New Delhi on 17-3-1968 that the D.M.K. Government would soon constitute a Committee of experts to go into the Centre-State Relations in India. Accordingly a Committes was constituted by the Government of Tamil Nadu on 22nd September 1969 consisting of the following persons to examine the entire question regarding the relationship that should subsist between the Centre and the States in a federal set-up, with reference to the provisions of the Constitution of India, and to suggest suitable amendments to the Constitution so as to secure to the States the utmost autonomy:

Dr. P. V. RAJAMANNAR —Chairman
(Former Chief Justice of the High Court of Tamil Nadu)

Dr. A. LAKSHMANASWAMY MUDALIAR—Member
(Former Vice-Chancellor of Madras University)

Thiru P. CHANDRA REDDY —Member
(Former Chief Justice of the High Court of Madras)

The Rajamannar Committee, as it is popularly called, submitted its report in May 1971.

It was the first time that a State Government has obtained a comprehensive and scientific inquiry on the subject and the Rajamannar Committee Report is a bench-mark in the study of the working of Federal Constitution in India.

The D. M. K. Party appointed a Committee of its own to study the recommendations of the Rajamannar Committee and it offered its suggestions and comments. (page-3).

Largley based on this Report, on 16th April 1974 Thiru M. Karunanidhi, the then-Chief Minister moved a resolution on State Autonomy in the Legislative Assembly of Tamil Nadu. (Page-10)

The views of the Government of Tamil Nadu on State Autonomy and the Rajamannar Committee Report are given in Page 16.

The Assembly discussed the Report for five days and on 20-4-1974 the resolution was passed.

(That Resolution on State Autonomy was then sent to the Union Government for follow-up action).

D. M. K.'s Views on the Rajamannar Committee Report

The Sub-Committee was appointed by the D. M.K. by a resolution of its General Council in its meeting held at Coimbatore on 24th April, 1971 to examine the Report of the Centre-State Relations Inquiry Committee appointed by the Government of Tamil Nadu with Dr. P. V. Rajamannar as the Chairman; and to submit a report giving the outlines of the utmost autonomy of the States is a federal set-up without prejudice to the integrity of India as a whole.

If by federal principle we mean, along with K.C. Wheare, that each Government, both the Centre and the States, "should be limited to its own sphere and, within that sphere, should be independent of the other" and "neither general nor regional government is subordinate to the other" then autonomy is its life and soul, as sharply contrasted with mere decentralisation of powers as it is in England and was in Prussia which are examples of decentralised unitary State Governments.

It is common knowledge that the Constituent Assembly met to create a 'minimal federation' and then because of the partition the pendulum swung to the other extreme and the present Constitution —"*a new kind of federalism*"* was evolved in the dark background of Partition-phobia war in Kashmir, insurrection in Telengana and the Razakar troubles in Hyderabad, with the result States' rights and autonomy were the casualties.

As H. V. Pataskar has put it in the Constituent Assembly,

> "......at the time of the second reading, we developed a fear complex....The result was that the autonomy of the States, or their semi-autonomy came to be looked upon as a matter of national danger....It was with the idea of having a federation that we began changing the names of the provinces into States. If the present idea had existed throughout, we never would have made that change. But while the name of "State" is there, the power of the State is so curtailed that it is a misnomer to call it a "State" any longer". **

"The Constitution", as IVOR JENNINGS put it, "derives directly from the Government of India Act, 1935, from which in fact many of its provisions were copied almost textually"; and as DR. DURGA DAS BASU observes, "75 per cent of the Constitution owes its origin to that Act". It is a tragedy that a number of provisions of the very Act which was created by the 'Colonial Masters' to suit their exploitation and which was then totally objected to by the Congress Party had been incorporated verbatim in our present Constitution and that is why some authors call the present Constitution as the "palimpsest of the 1935 Act".

We understand that the term federal can be stretched without much difficulty to cover little more than a simple customs union as well as very tight federations which are virtually run as unitary States.

*GRANVILLE AUSTIN, "The Indian Constitution : Corner-stone of a Nation", p. 193

**C.A.D. Vol. XI, pp. 670-673.

But the peculiarity of our Constitution is that mild criticism calls it as a 'federation with unitary features' or 'quasi-federal'* while pungent comments describe the States as no better than "glorified municipalities" or "dole-getting Corporations"**1. This debate may be considered by some as an exercise in semantics; but in fact in this analysis what matters is not the written Constitution but the practice of Government. A country with a 'federal Constitution' may work it in such a way that its government is not federal. Or a country with a 'nonfederal Constitution' may work it in such a way that it provides an example of federal government. But our experience of the 25 years shows a perceptible trend of centralisation and "the independence of the States is forgotten and a unitary state is being established thoughtlessly"***. Even though the phrase "Co-operative Federalism" is often used by the powers-that-be to identify our type of federalism, instances are not lacking to show that the Centre is "Super-ordinate".

It is held by some that the Report of the Administrative Reforms Commission has produced a satisfactory solution for the frictions in the Centre-State relationships. We refuse to accept this view. Most of the basic questions and problems, however, remain where they were, mainly because of the Administrative Reforms Commission never went into those questions. For this we do not find fault with the wisdom of those eminent personalities who formed the Administrative Reforms Commission. As the name of the Commission itself suggest, it looked only into the administrative side of the Centre-State relationships. As the Study Team confesses, their "enquiry concerned itself with administrative reforms and not with basic constitutional and political reform".**** They did not take the legislative relationships "within the scope of this study". Other important aspects have not been dealt with by them. As the Study Team makes it clear, "We have not in this study taken up questions of substantive policy in individual spheres even though these may involve Centre-State relations in an intimate way. Thus issues concerning language or the procurement and distribution of food have been considered inappropriate for study by us. These undoubtedly have a decisive impact on the life of the people and on the tenor of Centre-State relationships but it is not for a body enquiring into the need for administrative reforms to go into such substantive questions" *****.

We like to quote what the Chairman of the Administrative Reforms Commission, Thiru K. Hanumanthaiya had said in the Constituent Assembly:

> "We were, during the days of freedom struggle, wedded to certain principles and ideologies as taught to us and as propounded to us by Mahatma Gandhi. The first and foremost advice which he gave in his picturesque language was that the constitutional structure of this country ought to be broad-based and pyramid-like. It should be built from the

*K. C. WHEARE, "Federal Government".

**1 DR. ANNA; "The Hindusthan Times", 5th Feb. 1963.

***RAJAJI, "The Hindusthan Times", 17th April, 1962.

****Report of the Study Team, Centre-State Relationships, (Administrative Reforms Commission), P. 8.

*****Ibid., pp. 8-9.

bottom and should taper right up to the top. What has been done is just the reverse. The initiative from the Provinces and the States and from the people has been taken away and all power has been concentrated in the Centre. This is exactly the kind of Constitution Mahatma Gandhi did not want and did not envisage".

——But the Administrative Reforms Commission has not done anything to change this situation.

Moreover, the Administrative Reforms Commission does not envisage sweeping changes in the Constitution because it is its view that the Constitution is flexible enough to ensure its successful working, irrespective of whichever party may be in power, "provided those who are in Power mean to work in the spirit in which the founding fathers have intended it to be worked". We know that the 'spirit' has not been taken into consideration always and the misuse of article 356 akin to fraud on the Constitution and democracy is one of the numerous examples. As such, it is very dangerous to give more weightage to the elusive spirit of the founding fathers than to their letters. Who can deny, that to give that job of searching and pin-pointing that spirit not to the Judiciary but to those who are in power, will not at times give place to a draconian scheme of autocratic authority? Moreover to say that 'the most lengthy and detailed constitutional document the world has so far produced' leaves some more things at the mercy of those in power is considered by us as euphemism for the inadequacy of the Constitution to meet specific needs. That is why, unlike the Administrative Reforms Commission, we lay emphasis on the reappraisal of the Constitution in the light of our experiment with federalism.

Our emphasis on federalism is not due to love towards any doctrinaire approach. No one would have a federal Constitution if he could possibly avoid it.*. As the Report of the Joint Committee on Indian Constitutional Reforms as long back as on 1934 said :

"Every student of Indian problems, whatever his pre-possessions, from the Joint Committee of 1919 to the Statutory Commission, and from the Statutory Commission onwards, has been driven in the direction of Provincial Autonomy, not by any abstract love of decentralisation, but by the inexorable force of facts".

The inexorable force of facts are the result of continental geographic dimensions of India, various nationalities living here with their distinct languages, cultures, history and habits and each State in different stages of economic development.

It was true that India enjoyed her pinnacle of glory whenever there were powerful rulers like Asoka and Akbar. But they could not keep tight control over the far-flung parts of their empires and their edifice crumbled the moment they were taken out of the scene. This establishes the historic necessity that for a mighty and prosperous India the Centre of power alone should not be strong but the units also should be made equally strong. Unitary form of Government had been experimented in our country; but was repelled ultimately as unsuitable to our needs and genius.

——As such, federal polity for India is an inevitability, as it provides a chance of linking union with diversity as the democratic alternative.

Our experience with the present Constitution for the past 25 years has brought to light its inadequacies to meet the growing needs of the people and various nationalities. A theme of subordination of the State to the Centre runs right through its fabric. As the present Constitution is largely adopted from the 1935 Act, it is based "on the suspicion of individuals and component units" which was necessary during that Colonial age. Even though nation-building activities are with the States, their financial resources are not commensurate with their responsibilities and the highly centralised administration at New Delhi has smothered the individuality and initiative and the social and economic innovation of the States. One tragic result of this scheme is that the problem of regional backwardness has not been tackled and the so-called advanced States are groaning that their further advancement has been frozen and many of State has raised the cry that the State is being treated as an "internal colony".

We firmly believe that State Autonomy will not be disadvantageous to the backward States; on the contrary we affirm that only when backward States are given the opportunity and freedom to utilise their own resources by the efforts of their own bset choice they would have the hope of getting out of the vicious circle of backwardness. Because of backwardness they depend upon doles from the Centre; because they are dependent on doles they do not have the self-confidence or the initiative or the economic strength to grow as strong economic units.

The States are nearer to the common men. But Delhi is distant physically and figuratively. So it is not an accident that the Simon Commission of the thirties and the Administrative Reforms Commission of the seventies have both used the phrase that "Delhi is distant". The hands of the States, the instruments for rendering social and economic services, are tied in their genuine efforts to ameliorate the conditions of the poor and to bring in socialism. Priorities are imposed on them from above without any relevence whatsoever to prevailing conditions. This is the sorry state of affairs, whether it is a State ruled by Congress or C.P.I. or C.P.I. (M) or D.M.K. and it is our firm belief that the present Constitution is not equipped to meet this challenge.

We once again reiterate that we are second to none in our concern for the unity and integrity of India and if we could once be accused of being guilty of preaching secession then the Congress too can be accused of having been guilty of offering self-determination to the units of India and the Communist Party (then united) too could be charged with having demanded the same in the past. The D.M.K. is an open organisation and it never believes in surreptitious designs and secret theories.

*IVER JENNINGS, "Some Characteristics of Indian Constitution". p. 55.

It is too easy to dub these regional claims as parochialism but to those critics we want to repeat what the "Report of the States Reorganisation Commission" has said :

"The national movement which achieved India's Independence was built up by harnessing the forces of regionalism. It is only when the Congress was reorganised on the basis of language units that it was able to develop into a national movement. The Congress under Mahatma Gandhi realised that the same forces which worked for our national unity had also helped to develop the regional languages, which led to the integration of language areas. It is this alliance between regional integration and national feeling that helped us to recover our freedom".*

An "true development will be possible only if we are able to utilise genuine loyalties which have grown up around historic areas united by a common language".**

It . our firm belief that national unity should be based on State Autonomy. Along with the Royal Commission on Dominion--Provinces in Canada, we say :

"National Unity and Provincial Autonomy must not be thought of as competitors for the citizens allegiance, for...they are but two facets of the same thing, the same federal system".

As Mac Iver has rightly pointed out, "a federation once formed on sound basis is a continuous process of integration. It by no means follow that the autonomy of states will finally disappear"***

We also believe in the strong Centre—strong in the sense that the Centre should have strong army, strong navy and a strong air-force; but the strength does not lie in emasculating the initiative of the units and in heaping up hills of files in the Central Secretariat. Strength does not lie in the width of assorted powers assumed by the Centre but in the depth and efficiency in the chosen fields necessary to maintain the unity and integrity of the country. To quote the Government of West Bengal under the Chief Ministership of Dr. B.C. Roy in their Memorandum to the First Finance Commission, "an attempt to build a strong Centre of the foundations of weak States is like an attempt to build a strong building on the foundation of sands. Strength means in this context ability to perform adequately and properly the duties assigned to each." It approvingly quoted the recommendations of the Constituent Assembly's Expert Committee on the financial provisions of the Constitution which said: "The basic functions of a Federal Government are defence, foreign affairs and the bulk of the national debt."

Pandit Jawaharlal Nehru has put in unequivocal terms that "it is not difficult if passions and unreasoning emotions are set aside, to devise such freedom with the largest autonomy for provinces and States and yet a strong central bond."

Powers heaped up in one centre may lead to serious dangers to the nation; for, if not today, some other day, it may become easier for facist forces to grab power and sabotage the very democratic basis of our society.

The country needs urgent measures of economic development by using the natural resources available in the States to mitigate the pitiable plight of the toiling millions. No country of the size and population of India can ever deliver the goods by accumulating powers at one point and by remote control. So with a view to avoiding frustration and feelings of helplessness, we sincerely advocate State—autonomy to prevent further division; and the restructuring of the relations between the Centre and States is a task which should receive top priority among the democratic forces as it would be the culmination of the democratic revolution in India.

Our beloved leader Dr. ANNA in his own inimitable way described the position of D.M.K. in power *vis-a-vis*, the demand of autonomy :

"Dear brother, Never have I been mad after power. Nor am I happy of being the Chief Minister of our State under a Constitution which on paper is federal but in actual practice tends to get more and more centralised. On that account, I do not declare that it is my intention to irritate the Centre or pick up quarrels with Delhi. That helps none. True, a sense of determination at the appropriate stage is all important. But this should be preceded by educating the public on federalism itself. In fact. dear brother, I am quite confident of your active cooperation and intimate participation".

Thus, he wrote in his last epistle published in "HOME RULE", Pongal Number, 1969.

As he has put it, educating the public on federalism procedes all other efforts. In this regard, the D.M.K. has already dedicated itself to that task and it is our plea to give greater momentum to this endeavour and to gather support from like-minded forces all over India. We do not hold any dogmatic approach to this problem and as federal Government is the 'product of economic and social pressures', nothing can be said as the last word on this subject. Federalism is a growing concept capable of improvement according to change of times and needs and we are prepared for any fruitful dialogue with all interested parties and individuals.

We once again stress that the States should be given "a position that is self-respecting" to build a socialist society as equal and honourable partners. In this context it is worthwhile to quote the pronouncements made by Dr. Karunanidhi while announcing the appointment of the Rajamannar Committee :

"It should be viewed more as a part of the theme of Socialism that the organs of peoples' power should be vested with necessary resources and authority. In our view, the surest way to ensure the implementation of socialist ideals in a large country like India, whose constituent States are politically and geographically distinctive is to endow the States with greater autonomy. If therefore we reiterate our pleas for greater powers for the States, it is only because of our earnest desire that a strong Centre should emerge, underpinned by prosperous and powerful States." *

* Report of the States Reorganisation Commission, 1955, p. 38.

** *Ibid.*, p.38.

*** Mac Iver, "Modern State", p. 361.

*Budget Speech 1971-72, Part A.

With this background we approached the Report of Centre-State Relations Inquiry Committee with Dr. P.V. Rajamannar as Chairman and Dr. A. Lakshmanaswami Mudaliar and Thiru P. Chandra Reddy, as Members. The Committee was set up by the Government of Tamil Nadu "to enquire into Centre-State Relations, to examine the existing provisions of the Constitution and to suggest the measures necessary for augmenting the resources of the State and for securing the utmost autonomy of the State in the Executive, Legislative and Judicial branches including the High Court, without prejudice to the integrity of the country as a whole". Though the Centre-State Relations have been the subject of discussion several times before, it was the first time that a State Government has initiated a comprehensive and scientific inquiry on the subject. The Committee, popularly known as Rajammannar Committee has done a commendable work and the erudite scholars have brought to bear upon their enquiry a judicious and deep insight into the problem. It has indeed become a valuable document and a bench-mark in the study of the working of federal Constitution in India. For the first time, the issues involved have been analysed threadbare and concrete solutions offered. *Whether one is inclined to accept these recommendations or not, it is beyond doubt that this Report can be a starting point for any discussion on this subject.*

This Committee of D.M.K., with its political philosophy and approach, carefully went into the recommendations of the Rajamannar Committee and offer the following suggestions and comments for consideration and acceptance of the Party. While we are in total agreement with many of the recommendations, in some cases we have sought to amend, alter and improve. We have also suggested additional amendments to the provisions of the Constitution not included in the Rajamannar Committee Report.

Thiru M. Karunanidhi, Chief Minister of Tamil Nadu, moved a Resolution on State Autonomy in the Legislative Assembly on 16th April, 1974

RESOLUTION

I move the following Resolution :—

The House taking into consideration "The Tamil Nadu Government Views on State Autonomy and the Rajamannar Committee Report" and the Report of the Rajamannar Committee;

Resolves that, in order to secure the integrity of India with people of different languages, civilisation and culture, to promote economic development and to enable the State Governments having close contact with the people to function without restraints, and

In order to establish a truly Federal set-up with full State autonomy, the Central Government do accept the views of the Tamil Nadu Government on State Autonomy and the recommendations of the Rajamannar Committee and proceed to effect immediate changes in the Constitution of India.

16th April, 1974 M. KARUNANIDHI

The speech of the Chief Minister Thiru M. Karunanidhi on the 16th April, 1974 moving the resolution on "State Autonomy" in the Legislative Assembly

Hon'ble Mr. Speaker,

I am indeed very happy to have privilege of moving this epochmaking resolution which, I am confident, will form a landmark in the History of India. Ibeseech the Honourable Members of this House, renowned as they are for their sagacity, to give deep and deliberate consideration, keeping in view the laudable object of this resolution and to extend their support to it. We are all aware that the ruling party—Dravida Munnetra Kazhagam—has, on many occasion, demonstrated its determination to play its full part to enhance India's might and strength and in safeguarding and securing that the integrity and unity of India are not affected in the slightest extent.

If proof were needed of the ardent patriotism of the Dravida Munnetra Kazhagam party, it is seen in the fact of how in 1962, the Party gave up its demand for secession, how it enthusiastically took part in the preparations for defence to repel the Chinese aggressors, how it contributed Rs. 6 crores to the National Defence Fund and thus was in the forefront of all the States. Indeed the Dravida Munnetra Kazhagam party had rendered heroic service for the defence of the country imbued by the spirit of being in the very battlefield of India's fight.

I am mentioning all these just to discourage consideration of this resolution on the basis of and with the point of view of unwarranted and unnecessary doubts.

In 1945, in its Election Manifesto, the All India Congresss Party had described the nature of the future Federal Constitution of India as below :—

"The Federation of India must be a willing Union of its various parts. In order to give the maximum of freedom to the constituent units there may be a minimum list of common and essential federal subjects which will apply to all units, and a further optional list of common subjects which may be accepted by such units as desired to do so."

Following this, in 1947, the resolution moved by Pandit Jawaharlal Nehru in the Constituent Assembly emphasized that except the powers assigned to the Union, all the other powers shall vest with the autonomous States. The material part of the Resolution runs as follows :

"Wherein the territories that now comprise British India, the territories that now form the Indian States, and such other parts of India as are outside British India and the States. .shall be a Union of them all; and the said territories, whether with their present boundaries or with such others as may be determined by the Constituent Assembly and thereafter according to the law of the Constitution, shall possess and retain the status of autonomous units, together with residuary powers".

After India attained independence, these resolutions and election manifestos which are part of history have been either conveniently forgotten or deliberately suppressed.

This truth was on many occasions brought out both in Parliament and the State Legislature by the Dravida Munnetra Kazhagam while it was in the Opposition; and it has consistently pleaded for suitable amendments to the Constitution. The idea of State autonomy has also been continuously propagated in Tamil Nadu by the Tamil Arasu Kazhagam.

In 1967, in the Election Manifesto of the D.M.K., it was stated as follows :—

"The D.M.K. had taken upon itself the responsibility of seeing that no region of the country dominates another region in the name of implementing integration;

"The D.M.K. is determined to protect the rights of the States from being suppressed and to chalk out a plan for the uniform economic development of all the States;

"It shall be the endeavour of the D.M.K. to protect the interests of the States and to transfer the residuary powers from the Centre to the States; it will reiterate the necessity to amend the Constitution for this purpose."

Dr. Anna as the Chief Minister of Tamil Nadu, while presenting the Budget for the year 1967-68, had forcefully pleaded against the financial dependence of the States on the Centre—

"We have obviously had to take note of the limitations under which the State Governments have to function in our federal set up. Apart from the provisions of the Constitution which are themselves weighed in favour of the Centre, the practices and conventions which have evolved in the last fifteen years of economic planning have also tended to strengthen the role of the Central Government at the expense of the States. With the delimitation of powers as provided in the Constitution, which gives it the authority to regulate foreign trade, monetary and credit policy, the responsibility for overall direction of our economy vests with the Central Government. Through its access to the more elastic sources of revenue, including residuary powers of taxation, the Centre is in a position to syphon off a large share of the national income, leaving the States in a position where they have to depend on discretionary loans and grants-in-aid from the Centre for implementation of their plans and policies. The Centre also regulates directly through powers vested in it under Article 293 of the Constitution, and indirectly through the Reserve Bank, the terms and conditions and limits subject to which the State Governments can augment their resources through public borrowings. The provision for an objective review of the financial needs of the States at quinquennial intervals through the Finance Commissions has not in any way served to mitigate substantially the dependence of the States on the Centre in view of the various limitations on the terms of reference of such Commissions".

In the concluding part of his Budget Speech, Dr. Anna observed—

"The House is aware that there is need for rethinking on the relations between the Centre and the States. I have no doubt that every one will agree on the need for placing existing relations on a satisfactory basis. No one can deny that the experience so far in regard to distribution of revenues, delimitation of powers and allocation of assistance for Plan has been such as to cause bitterness. It has become an urgent necessity to eliminate this bitterness and evolve ways and means of promoting fruitful relations between Centre and States. The problem I have posed need cause no apprehension or misgiving but should only provok thought. It is my earnest desire that through mutual goodwill and understanding we should forge a fraternal and beneficial nexus".

Again, in 1969, the last article written by Dr. Anna, in the English Journal "Home Rule" runs as follows :

"Dear Brother,

Never have I been mad after power. Nor am I happy of being the Chief Minister of our State under a a Constitution which on paper is federal but in actual practice tends to get more and more centralised. On that account, I do not like my good friend E.M.S. declare that it is my intention to irritate the Centre or pick up quarrels with Delhi. True, a sense of determination at the appropriate stage is all important. But this should be preceded by educating the public on federalism itself. In that, dear brother, I am quite confident of your active co-operation and intimate participation.

If by being in office, the D.M.K. is able to bring to the notice of the thinking public, that the present Constitution is a sort of dyarchy by the back door that would be a definite contribution indeed to the political world".

On the 8th April, 1967, at a Press Conference in New Delhi, Dr. Anna observed—

"It will be sufficient if the Centre retains only such powers as are necessary for preserving the unity and integrity of the country leaving adequate powers to the States. In order to distribute the powers and to suggest the method of working out the Constitution, a High Power Commission should be appointed".

In pursuance of those observations and of my announcement on the floor of the Assembly on the 19th August, 1969, a Committee consisting of Dr. P. V. Rajamannar as Chairman and Dr. A. L. Mudaliar and Thiru P. Chandra Reddy as Members was constituted by the Government on 22nd September, 1969 in order to examine the question regarding the relationship between the Centre and the States on the basis of autonomy for the States without in the least impairing the integrity of the country.

It is to be remembered that, subsequently in 1971, in the Election Manifesto of the D. M. K., it was announced—

"Though the Constitution of India is described as a Federal one, the balance is more tilted towards the Centre, and hence the States are not able to function freely in the administrative and financial spheres. Only such powers as are necessary for be the Centre to preserve to strengthen of India should be assigned to the Centre and all the other powers should be left to the States, without impairing the ideal of a strong India; and for this purpose, the Constitution should be amended. After the receipt of the report of the Expert Committee appointed for this purpose, the D. M. K. would seek support on an All-India level to the movement for State autonomy. More powers in the executive and financial spheres are demanded to the States not for the mere sake of enjoying those powers. Since only the States are in close contact with the people, the States alone can serve the people up to their expectations. Hence it is that we demand State autonomy."

It will be relevant in this connection to point out that the election manifesto of the Mysore Pradesh Congress (O) issued in 1972 contained the following reference to State autonomy :—

"Congress will fight in a determined manner for greater autonomy for the State and against all discrimination and step-motherly treatment by the Centre."

The Report of the Rajamannar Committee was received on the 27th May, 1971. The said report was sent to the Prime Minister of India, Thirumathi Indira Gandhi.

Acknowledging the receipt of the Report, the Prime Minister, in her letter dated 22nd June, 1971, wrote to me as below :—

"Dear Thiru Karunanidhi,

I have received your letter of the 15th June with which you have sent me a copy of the report of the Centre-State Relations Inquiry Committee. Your Government will probably examine the recommendations of this report. As you know, the Administrative Reforms Commission also went into this question and has already submitted a report which is under our consideration. If the views of your Government on this matter are made available to us, they will also be taken into account. These are important issues and we intend to consult all the Chief Ministers.

With regards,

Yours sincerely,

(*Sd.*) INDIRA GANDHI

In the meeting of the National Development Council held on 30th May 1972 under the Chairmanship of the prime Minister while explaning the policy of this Government, I said that—

"Decentralisation is particularly necessary if a large country like ours is to cope with the problems of a modern economy. It is in this sense that our demand for State autonomy should be understood—as a request for more efficient management of the country's resources, as a means to enable the Centre to strong in areas of vital national concern, as a method of enabling the minimum demands of our people to be met in the quickest time and in the most efficient manner."

Though we do not accept the Report of Dr. Rajamannar's Committee in full, we take the Report as the basis for the exposition of our policy in this regard.

As it was thought that a decision on these issue of historic importance had to be taken after great deliberation, the problem was considered at different levels. The Ruling Party appointed the Chezhiyan-Maran Committee and in the light of its observations, the report of Dr. Rajamannar's Committee was analysed. The Government also considered the report of the Administrative Reforms Commission appointed by the Centre. This Government, after a deep counsideration of the various opinions expressed by the several Statesmen in India on this issue and after carefully studying the position in the other countries of the world, has formulated its views on the report of Dr. Rajamannar's Committee and on the question of State autonomy; and the said views have been placed before this House alongwith my resolution for the acceptance of the same by this House.

In the recent meeting of the Consultative Committee on Home Affairs, Thiru Dandapani, Member of Parliament, enquired why the Central Government had not taken any decision on the healthy suggestions made by the Rajamannar Committee on the question of re-examining the powers of the Centre and State Governments, and the Union Minister for Home Affairs, Thiru Dikshit replied that the said Committee was appointed by the State Government and the State Government had not yet communicated its views on that report.

In pursuance of the said reply by Thiru Dikshit and in response to the desire of the Hon. Members of this House to express their views on the Report of the Rajamannar Committee, this Government has brought forward this resolution in order that all the States in India attain State autonomy and the Centre becomes a shining examples of a true Federal Government.

The National flag of India flutters in the glittering sun. We lift our eyes to the high skies beyond the clouds in our attempt to enjoy the majesty of the flag. We hear the National Anthem composed by Tagore, the golden voice of Bengal. The sweet melody of the Anthem rings in our ears like the soft music of the Courtallam Falls. Yes! Our country has awoken from its slavery liberating itself from foreign domination. The epic story of our heroic struggle for liberation of India from which we emerged, holding our heads high, is writ large in the history of the world.

The imprisoned nation has become free. The door has opened. With a smile, the prisoner comes out of the iron cage. The tender tottering child eagerly leaps towards its father to embrace him after the languish of long separation. The father with boundless joy stretches out his hands to lift and kiss his child. Alas ! The hands do not function ! Why is this so ? He has been released from the prison.

What is the further obstacle? What is it that prevents him ? He looks around in surprise. He has come out of the prison and he is free. Then, who prevents him from embracing the child. Nobody prevents him. When he was in prison, his hands and legs were fastened with chains. In his joy of release, he came out of the prison without removing those chains. No doubt he is free, but the chains that bind his limbs had not been removed. Man has become free. Then why should his hands and legs be kept bound ? India has become free. Then why should its limbs, namely the States, be kept bound by the chains of concentration of power in the Centre ?

This is a burning question which has been before us for a long time. I bring forward this resolution to-day before this august House in the hope that it will help to quench the thirst that the question represents.

Our Constitution is not immutable. It has been amended more than thirty times.

It is my earnest appeal to the Central Government that they should realise that implementation of these great changes in the Indian Constitution will form the basis for strengthening our country and increasing its prosperity and that it will contribute to develop the languages of the States, to preserve and protect the different cultures, to foster good relations among the States, to promote healthty relationship between the States and the Centre and to improve the economic conditions of our country. I seek your kind co-operation in this great endeavour. Moved by an ardent desire that the fruits of our freedom should be enjoyed fully by the people and keeping their welfare at heart, we, on behalf of the Government of Tamil Nadu have kindled this luminous lamp at the centre of the stage of Indian politics. I beseech the statesmen of India to help us to keep this flame alive and assist in preserving its glow.

Tamil Nadu Government's views on State Autonomy and the Rajamannar Committee Report

The Government of Tamil Nadu solemnly declares its firm resolve to uphold the sovereignty and integrity of India and expresses its deep conviction that for the speedy economic and social progress of the Nation, the Constitution of the country should be federal in its true sense.

In this connection, it is relevant to refer to the material part of the historical objectives resolution moved by Pandit Jawaharlal Nehru in the Constituent Assembly which adopted it on 22nd January 1947 :—

"Wherein the territories that now comprise British India, the territories that now form the Indian States, and such other parts of India as are outside British India and the States, as well as such other territories as are willing to be constituted into the Independent Sovereign India, shall be a Union of them all; and

"Wherein the said territories, whether with their present boundaries or with such others as may be determined by the Constituent Assembly and thereafter according to the law of the Constitution, shall possess and retain the status of autonomous units, together with residuary powers, and exercise all powers and functions of Government and administration, save and except such powers and functions as are vested in or assigned to the Union, or as are inherent or implied in the Union or resulting therefrom;".

India is a vast country with people of different languages, culture and history. Each State has its own peculiar needs and problems. Hence, the States should have freedom of action and sufficient powers, legislative and executive, to secure their progress without impairing the unity of the country. This is possible only under a truly federal set up.

In our country, unfortunately, the experience during the past twenty-five years after Independence is that the powers concentrated in the Centre have been so exercised as to inhibit the States and to deprive them of their initiative.

There has been a strong tendency to work the Constitution as a unitary one treating the States as subservient to the Centre. It is myth to say that the Centre can be strong only if most of the powers are concentrated in the Centre. Thiru K. Santhanam, an elderly statesman, who was a member of the Constituent Assembly has critically examined the plea for a strong Centre and says—

"....a strong Centre is indispensable if India is not to disintegrate and dissolve in chaos. But I........do not agree with those who equate strength with the range of formal constitutional powers. On the other had, I am emphatically of opinion that by taking upon itself too many obligations in relation to the vast pupulation spread over the length and breadth of India, the Centre will become incurably weak. It is only through concentration on essential All-India matters and by refusing to share the responsibility in such matters with the States, while giving complete autonomy to the States in the rest of the field of Government, the Parliament and the Central Government can be really strong. The tendency towards vague unhealthy paternalism which has come to envelop Indian Federalism as a result of the dominance of a single party during the first two decades of independence is as bad for the Centre as it is unpleasant and provocative to the States".*

Dr. Anna, Chief Minister of Tamil Nadu, while presenting the Budget in the Legislative Assembly on 17th June 1967, has observed as follows :—

"It is futile to raise the altruist argument that national unity will be impaired by such pleas for development of the States. There has been considerable change in the matrix of Central-State financial relations since the provisions of the Constitution in this regard were settled. There have been a number of new trends and developments which could not have been visualised when the Indian Constitution was framed. The Constitution had already provided for considerable concentration of powers in the hands of the

*Vide the paper of Thiru K. Santhanam presented by him to the National Convention on Union-State Relations held in New Delhi in April 1970.

Central Governemnt. Through a new institution which was beyond the ken of the architects of the Constitution, the Centre has acquired still larger powers causing concern about the position of the States. This new development relates to economic planning. The powers which the Central Government have assumed in regard to mobilisation, allocation and pattern of utilisation of resources for the Plan have reduced the States to the status of supplicants for aid from Centre. Though some may shrink from discussing this issue on account of party discipline, all those who have looked at this problem from the purely economic angle, have expressed regret at these trends in financial relationship between Centre and State. By virtue of the powers vested in it such as those under entries 36 to 38 in the Central List under the Seventh Schedule of the Constitution relating to issue of currency and foreign exchange, the Centre is fully accountable for inflation and deficit financing. The responsibility for rise in prices due to these factors is thus squarely with the Centre. The Centre has consequently also to assume responsibility for control of prices. Though the State Governments have to suffer from the impact of rising prices due to the policies of the Central Government, the Indian Constitution has not vested the States with necessary powers to control the prices and set right the situation. Hence it is that I am faced with the situation in which I have to request the Centre to share the additional expenditure involved in payment of dearness allowance to Government employees due to rise in prices and the loss on account of distribution of foodgrains at reduced rates. It will now be possible to appreciate why I feel aggrieved when the Centre asserts that each State Government should itself bear the burden involved in distribution of foodgrains at subsidised rates and grant of dearness allowance to Government employees. Unless considerations of party cloud their judgement, those who have made a study of the relationship between the Centre and States in our Constitution, will not hesitate to endorse the validity of my argument."

It will be seen that through concentration of powers in its hands, the Centre actually becomes weak. The States have been made completely subservient to the Centre and they find themselves helpless under the present Constitution.

In a true federation, the Federal Government should have only powers relating to defence, foreign affairs, inter-State communication and currency. All the other powers along with the residuary powers should only vest with the States. The Federal Government and the State Governments should be completely independent of each other in their respective spheres. This Government firmly believes that only under such a Federal Constitution, the Nation can prosper as a whole.

With this end in view, this Government appointed a Committee in 1969 headed by Dr. P. V. Rajamannar with Dr. A. Lakshmanaswami Mudaliar and Thiru P. Chandra Reddy as members to suggest suitable amendments to the Constitution of India so as to secure to the States the utmost autonomy. This Committee submitted its Report in 1971.

In the Constitution, legislative powers of the Parliament and the State Legislatures are given in the Seventh Schedule under the headings "UNION LIST", "STATE LIST" and the "CONCURRENT LIST". The Rajamannar Committee has suggested certain changes in those Lists. With the aim of setting up a true federation, with a Federal Government having powers only relating to Defence, Foreign policy, inter-State communication and Currency and the States having all the other powers including the residuary power, the Government of Tamil Nadu, after taking into consideration the recommendations of the Rajamannar Committee, has formulated changes in the constitutional provisions and also the entries of the legislative power. Incidental and consequential changes in the Constitutional provisions should also be made. THE following are the important changes suggested in the Constitutional provisions :

Issue of Directions to the States by the Union.—Articles 256, 257, 339(2) and 344(6) empowering the Central Government to issue direction to the State Governments should be omitted. Federal Government should have no such power to give directions.

Inter-State Council.—The Inter-State Council should be constituted Consisting of all the Chief Ministers or their nominees, with equal representation for all the States and the Prime Minister as its Chairman. No other Union Minister should be a Member of the Council.

In respect of any action to be taken in any matter relating to defence, foreing affairs, inter-State communications and currency in so far as it affects the Centre-State relations or State or States, the Inter-State Council should be consulted.

Similarly, the Inter-State Council should have the opportunity to discuss all economic, fiscal, monetary and financial measures undertaken by the Federal Government.

The Inter-State Council envisaged by article 263 of the Constitution will be ineffective and will not serve any purpose.

The recommendations of the Inter-State Council should ordinarily be binding on the Centre and the States. If, for any reason any such recommendation is rejected, the recommendation together with the reasons for its rejection should be laid before Parliament and the State Legislatures.

Legislative power under Concurrent List.—Before any Bill is introduced in Parliament in relation to any entry of the Concurrent List, the Inter-State Council and the States should be consulted. At the time of introduction of the Bill, the remarks of the Inter-State Council and a brief resume of the opinions, if any of the State Government should be placed before the Parliament.

Residuary powers.—The residuary power of legislation and taxation should be vested in the State Legislatures.

Article 154 and 258.—The provision giving power to Parliament to make laws conferring power on State and State authorities should be omitted.

Article 169.—The power to abolish or create Legislative Councils should be vested exclusively in the State Legislative Assemblies without the necessity of any Parliamentary Legislation.

Article 249.—This article, which empowers the Parliament to legislate with respect to a matter in the State List, shall be omitted.

Article 252.—This article empowering the Parliament to legislate for two or more States by consent should be omitted.

Reservation of State Bills for consideration by President.—The provision regarding the reservation of State Bills for the consideration and assent of the President should be omitted. Article 254 should be so amended that in respect of matters falling within the concurrent legislative list, the State law shall prevail over the federal law.

Promulgation of Ordinance by Governor.—The proviso to article 213 (1), which makes it necessary to obtain the instructions of the President before the promulgation of Ordinance should be omitted.

Grants.—The grants by the Centre to the States, both for Plan expenditure and non-plan expenditure should be made only on the recommendations of an independent and impartial body like the Finance Commission or similar statutory body.

Finance Commission.—The Finance Commission as envisaged in the Constitution examines the financial resources and the needs of the States. But it does not discharge a similar function in relation to the finances of the Centre. It is necessary that there should be a periodic assessment of the financial resources and the needs of the Central Government also. The Finance Commission should accordingly be empowered to examine the resources and needs not only of the States but of the Central Governments as well. The Finance Commission will then recommend the amounts necessary for enabling the Central Government to discharge its responsibilities and the amounts so recommended should be allocated from out of the taxes levided by the Central Government.

The Members of the Finance Commission should be appointed in consultation with the Inter-State Council.

It should be expressly provided in the Constitution that the recommendations of the Finance Commission should be binding on all the parties—Centre as well as the States.

Loans and indebtedness of States.—There should be a Federal Debt Commission which should examine the entire issue relating to the indebtedness of States. This Commission should in course of time function as a Federal Development Bank consisting of representatives of the Centre and the States. This Bank should deal with applications for loans made either by the Centre or any State over and above borrowings in the open market.

Relief Fund.—There should be a fund for each State for the relief of distress arising out of natural calamities. The fund may also be utilised for ameliorative measures.

Planning Commission.—The Planning Commission should be placed on an independent footing without being subject to control by the Union Executive or to political influences. To secure this objective, it should be placed on a statutory basis by Parliament enacting a law providing for the establishment of a Planning Commission.

The Planning Commission to be established by law should consist of only experts in economic, scientific, technical and agricultural matters and specialists in other categories of national activity. No member of the Government of India should be on it. The law to be made in this behalf should deal with the tenure, term of office and conditions of service of the members of the Planning Commission which should have a Secretariat of its own. The existing Planning Commission should be abolished.

The duty of the Planning Commission should be to tender advice on schemes formulated by the States.

It will also have the responsibility of making recommendations for consideration by the Finance Commission regarding grant of foreign exchange to States for industrial undertkings started by or in the States. The Finance Commission will keep the recommendation of the Planning Commission in view, in recommending grants.

Each State may have a Planning Board of its own.

Planning and Development.—The Industries (Development and Regulation) Act, 1951 (Central Act LXV of 1951), should be rapealed.

The State should have the power to start and carry on new industries and to grant licences to start new industrial undertaking within the State, and where foreign exchange is needed for any industrial undertaking licensed or started by a State, it should be provided by means of block grants to be allocated to each State, subject to National Plan Priorities, National Demand Projections and Information Sharing System.

Judiciary—The Supreme Court.—No appeal from the High Court should lie to the Supreme Court in ordinary civil, criminal or other matters, whatever be the pecuniary interests involved and whatever the sentence imposed, except in a case involving constitutional issues including inter-State issues or the interpretation of a Central Act.

In appointing judges of the Supreme Court, It is desirable to secure, as far as possible and without detriment to efficiency, representation for the High Court and the Bar of the different parts of the country.

High Courts.—Since the legislative power relating to constitution and organisation of High Court is proposed to be transferred to the State List, articles 217, 222, 223, 224 and 224-A require suitable amendment or omission.

Reference to the High Court.—Whenever any particular provision of a State Act is challenged before the High Court on the ground that the provision is unconstitutional, the State Government concerned should have the power to move the High Court for referring the question to a Full Bench of three or more Judges of whom one should be the Chief Justice. The Bench as constituted should consider each and every provision of the Act concerned and once its decision is rendered no provision of the Act should be challenged thereafter, on the ground of unconstitutionality. The State Government should be empowered to refer any question of law or fact of public importance to the High Court for its advisory opinion.

Governor.—The office of the Governor is a legacy of the British colonial system. The method of appointment of the Governor as provided for in our Constitution makes it an anachronism in a democratic set up. He is a functionary appointed by, and responsible to, the Central Government and as such, he could not be expected to understand the local conditions and the political situation. The expenditure incurred on the office of the Governor does not seem to square with the socialistic pattern of society. The expenditure is a wasteful one, which should well be dispensed with. The Supreme Court in Rao Shiv Bahadur Singh *v.* State of Vindhya Pradesh (1953) SCR (1188) has held that a Minister is an officer subordinate to the Governor. Thus, the elected representative of the people in Legal theory is nothing more than a servant of nominee of the Central Government. The time is ripe for doing away with the office of the Governor.

Where the office of Chief Minister falls vacant by death, resignation, etc., under the West German procedure, the successor should be elected within a fixed period of time and if this is not done the Assembly will automatically stand dissolved. During this interregnum, it is suggested that the Chief Justice of the State may take charge of the administration till such time as a new Chief Minister assumes office. If the principle underlying this suggestion is accepted, the other details may be worked out.

The executive can be dismissed under the West German System by a vote of no-confidence called as the "Constructive Vote of non-confidence". Under this provision the executive cannot be dismissed by a no-confidence motion unless it is accompanied by the selection of his successor. A system similar to this may be adopted here also. The Chief Minister will discharge the functions at present being attended to by the Governor. If there is any interregnum, the Chief Justice of the State will discharge the functions while there is no Chief Minister.

Emergency Powers.—Emergency powers under articles 356 and 357 which enable the imposition of the President rule in States shall be omitted.

Article 365.—Provisions for issue of directions by the Federal Government have been omitted. Consequently, this article also has to be omitted.

National Emergency-Articles 352 and 354.—Powers under articles 352 and 354 relating to proclamation of emergency and the consequential powers should be restricted only to war or external aggression.

Article 353 (a).—Power to issue directions while there is proclamation of emergency should be restricted only to war or external aggression. But such directions shall be issued only with the approval of the Inter-State Council.

Article 355.—The duty of the Federal Government to protect every State should relate only to war and external aggression.

Financial Emergency--Article 360.—The provision which empowers the President to issue a proclamation of emergency in cases of threat to financial stability or credit of India shall be omitted.

Public Services.—There should be only two classes of services—

(1) Services for the purpose of Federal Government, and

(2) Services for the purpose of State Government.

The existing all-India services including the I.A.S. and I.P.S. should be absorbed either with the Federal services or with the State Services.

The recruitment to the State services and conditions of service will continue to be regulated by the States. Recruitment to the Federal services will be in accordance with the existing procedure subject to the modification that such reacruitment should be made on a Statewise basis, with provision for reservation of posts for members of the Scheduled Castes, Scheduled Tribes and Backward Classes, with reference to their population in each State.

There should be provision for mutual exchange of members of the State services and the Federal services on such terms and conditions as may be agreed to between the Federal Government and the State Government concerned.

Article 312.—This provision relating to all-India services and creation of new all-India service should be omitted.

Emoluments of Central Employees.—The emoluments of Government employees of the Central and States should be uniform throughout the country, making due allowance for local or special conditions.

State Public Service Commission.—The power relating to State Public Service Commission and the removal and suspension of the members thereof shall vest with the State Government.

Territory of the State.—It should be expressly provided in the Constitution itself that the territorial integrity of a State should not be interfered with in any manner, except in accordance with any one of the following three alternatives—

(1) The consent of the State Legislature concerned should be obtained.

(2) The issue should be referred to, and decided by a high level judicial tribunal, to be constituted for the purpose with the consent of the contending parties and its decisions should be binding on all the parties.

(3) The opinion of the people of the area or areas concerned should be ascertained by holding a special poll.

In other words, articles 3 and 4 should be omitted and for altering the boundaries, area, etc. of any State, a Constitutional amendment would be necessary.[1]

Representation of States in Parliament—Council of States.—There should be equal representation for each State, that is to say, each State should have the same number of representatives irrespective of population.

There should be no nominations to the Council of States.

House of the People.—The number of seats fixed for each State in 1951 should remain unaltered except where there is increase in population in which case the number of seats may be increased subject to a maximum. However, in no case should the number of seats fixed for each State in 1951 be reduced.

Language.—The Official Language of the Union Government will be all the languages specified in the Eighth Schedule to the Constitution. Till this is achieved, English should continue as the official language in all the Union Government departments including Central Secretariat and for purposes of communication between Centre and States. English should continue to be the language of Supreme Court. The official language in all the courts including High Court will be decided by the respective State Governments. The offices of the Federal Government situated in any State should in addition to English, use the official language of that State for transaction of business in those offices with the public. All communications by and between the Federal Government offices in the State and the Government of the State and its offices should be in the official language of that State for transaction of business in those offices with the public. All communications by and between the Federal Government offices in the State and its offices should be in the official language of the State. Members of the Central services employed in a State should be well conversant with the official language of the State.

Trade and Commerce-Article 302.—This article, which empowers the Parliament to impose restriction on trade and commerce and intercourse should be omitted.

Article 304 (b).—The proviso to article 304 (b) which requires the previous sanction of the President for the Bills of the State Legislature, should be omitted

Public Order.—The Central Reserve Police Force should not be deployed in any State except at the request or with the consent of that State.

Machinery for conducting Elections to the State Legislatures.—Both the Representation of People Act, 1950 and the Representation of People Act, 1951 should be amended so as to confine the provisions and the rules made thereunder to elections to Parliament. That State Legislatures must be left free to enact laws in relation to elections to the State Legislature.

Inter-State Water Disputes.—If there is a water dispute in respect of an Inter-state river, there must be negotiations between or among the Chief Ministers of the States concerned or their representatives. If in such negotiations no agreement is reached within a prescribed time, then the Prime Minister should settle the issue within the period prescribed. If there is no such settlement, then, the issue should be referred to the Supreme Court by the Federal Government itself directly within the prescribed period. If the Federal Government fails to make such reference, any of the parties to the dispute may make a reference to the Supreme Court. Such reference should be heard by a Bench of the Supreme Court consisting of all the Judges.

Satisfactory provisions should be made for implementing the decisions of the Supreme Court.

Sea-Bed under Territorial Waters.—Article 297 should be amended so as to vest in the State itself all lands, minerals and other things of value underlying the ocean within the territorial waters adjacent to that State.

Union Executive.—Conventions should be established regulating the formation of the Union Cabinet in such a way as to secure, consistent with the parliamentary type of Government and all that it involves, representation for the various regions of the country.

The number of Central Ministers of Cabinet rank belonging to any one single State should not be more than one-fifth of the total number.

The Study Team under the Chairmanship of Thiru M.C. Setelvad constituted by the Administrative Reforms Commission to consider Centre-State relationship has devoted an entire Chapter to the role of Central agencies dealing with matters in the State and Concurrent Lists. According to the recommendation of the Study Team the items of work should be decentralised to the States and the role of the Central Government should be that of guide, planner and evaluator. The Administrative Reforms Commission has recommended that the role of the Central Ministries and Departments with regard to the subjects falling within the State List should be restricted. There is no need for a full-fledged separate Ministry or Department at the Centre for dealing with a subject falling within the State List.

Amendment of the Constitution.—Every amendment of the Constitution, irrespective of the provision involved, should need ratification by the Legislatures of all the States.

Legislative power.—The legislative powers of Parliament and the State Legislatures have been enumerated in the Seventh Schedule to the Constitution as Union List, State List and Concurrent List. These entries of legislative powers have been examined in detail and a new set of three lists of legislative powers, namely Federal List, State List and the Concurrent List, have been

prepared with the object of setting up of a true federation with a Federal Government having powers only relating to defence, foreign policy, inter-State communication and currency and the States having all the other powers, including residuary power giving due consideration to the recommendations of the Rajamannar Committee.

Federal List

Legislative power retained

The following entries of legislative powers in the Union List have been retained in the Federal List as follows :—

Defence of India and every part thereof including preparation for defence and all such acts as may be conducive in times of war to its prosecution and after its termination to effective demobilisation.

Naval, military and air forces; any other armed forces of the Union.

Delimitation of cantonment areas, local self-government in such areas, the constitution and powers with such areas of cantonment authorities and the regulation of house accommodation (including the control of rents) in such areas;

Naval, military and air force works;

Arms, firearms, ammunition and explosives;

Atomic energy and mineral resources necessary for its production so far as it relates to the defence of the country;

Industries so far as they are necessary for the purpose of defence or for the prosecution of war;

Central Bureau of Intelligence and Investigation;

Preventive detention for reasons connected with Defence, Foreign affairs; or the security of India; persons subjected to such detention;

Foreign affairs; all matters which bring the Union into relation with any foreign country;

Diplomatic, consular and trade representation;

United Nations Organisation;

Participation in international conferences, associations and other bodies and implementing of decisions made thereat;

Entering into treaties and agreements with foreign countries and implementing of treaties, agreements and conventions with foreign countries;

War and peace;

Foreign jurisdiction;

Citizenship, neutralization and aliens;

Extradition;

Admission into, and emigration and expulsion from India; passports and visas;

Pilgrimages to places outside India;

Piracies and crimes committed on the high seas or in the air; offences against the law of nations committed on land or the high seas or in the air;

Inter-State railways;

Maritime and Shipping navigation, including shipping and navigation on tidal waters; provision of education and training for the mercantile marine and regulation of such education and training;

Lighthouses, including lightships, becons and other provision for the safety of shipping and aircraft;

Major ports and the constitution and powers of port authorities therein including their delimitation.

Port quarantine, including hospitals connected therewith; seamen's and marine hospitals;

Airways, aircraft and air navigation; provision of aerodromes; regulation and orgainsation of air-traffic and of aerodromes; provision for aeronautical education and training and regulation of such education and training;

Carriage of passengers and goods by inter-State railways, sea or air;

Posts and telegraphs and telephones;

Property of the Federal Government and the revenue therefrom, but as regards property situated in a State, subject to legislation by the State;

Courts of wards for the estates of Rulers of Indian States;

Public debt of the Federal Government;

Currency, coinage and legal tender; foreign exchange;

Foreign loans;

Reserve Bank modelled on Federal Reserve system;

Trade and Commerce with foreign countries; import and export across customs frontiers; definition of customs frontiers;

Establishment of standards of quality for goods to be exported out of India;

Fishing and fisheries beyond territorial waters;

Industrial disputes concerning Federal Government employees;

The institutions known at the commencement of the Constitution as the National Library, the Indian Museum, the Imperial War Museum, the Victoria Memorial and the Indian War Memorial;

The institutions known at the commencement of the Constitution as the Banaras Hindu University, the Aligarh Muslim University and the Delhi University;

Census;

Federal Government Services and Federal Government Public Service Commission;

Federal Government pensions, that is to say, pensions payable by the Government of India or out of the Consolidated Fund of India;

Elections to Parliament and to the offices of President and Vice-President;

Election Commission in respect of such elections;

Salaries and allowances of Members of Parliament, the Chairman and Deputy Chairman of the Council of States and the Speaker and the Deputy Speaker of the House of the People;

Powers, privileges and immunities of each House of Parliament and of the members and the Committees of each House; enforcement of attendance of persons for giving evidence or producing documents before committees of Parliament or commissions appointed by Parliament;

Emoluments, allowances, privileges, and rights in respect of leave of absence, of the President; salaries and allowances of the Ministers for the Federal Government; the salaries, allowances and rights in respect of leave of absence and other conditions of service of the Comptroller and Auditor-General of the Federal Government;

Audit of the accounts of the Federal Government;

Constitution, organisation, jurisdiction and powers of the Supreme Court (including contempt of such Court) and the fees taken therein, persons entitled to practise before the Supreme Court;

Extension of the jurisdiction of a High Court to, and exclusion of the jurisdiction of, a High Court from any Union Territory with the concurrence of the concerned State Government;

Inter-State migration inter-state quarantine;

Duties of customs including export duties;

Offences against laws with respect to any of the matters in the Federal List;

Inquiries, surveys and statistics for the purpose of any of the matters in the Federal List

Jurisdiction and powers of all courts except the Supreme Court with respect to any of the matters in the Federal List; admiralty jurisdiction;

Fees in respect of any of the matters in the Federal List but not including fees taken in any Court.

State List

(1) *Legislative powers retained in the State List*

The following entries of legislative powers in the State List have been retained in the State List :—

Public order (but not including the use of naval, military or air forces or any other armed forces of the Union in aid of the civil power);

Police, including railway and village police;

Administration of justice; constitution an organisation of all courts, except the Supreme Court; officers and servants of the High Court; procedure in rent and revenue courts; fees taken in all courts except the Supreme Court;

Prisons, reformatories, Borstal institutions and other institutions of a like nature, and persons detained therein; arrangements with other States for the use of prisons and other institutions;

Local government, that is to say, the constitution and powers of municipal corporations, improvment trusts, district boards, mining settlement authorities and other local authorities for the purpose of local self-government or village administration;

Public health and sanitation; hospitals and dispensaries;

Pilgrimages, other than pilgrimages to places outside India;

Intoxicating liquors, that is to say, the production, manufacture, possession, transport, purchase and sale of intoxicating liquors;

Relief of the disabled and unemployable;

Burials and burial ground; cremations and cremation grounds;

Education including universities;

Libraries, museums and other similar institutions controlled or financed by the State; ancient and historical monuments and records;

Communication, that is to say, roads, bridges, ferries, and other means of communication, municipal tramways, ropeways; inland waterways and traffic thereon; vehicles other than mechanically propelled vehicles;

Agriculture, including agricultural education and research, protection against pests an prevention of plant diseases;

Preservation, protection and improvement of livestock and prevention of animal diseases; veterinary training and practice;

Ponds and the prevention of cattle trespass;

Water, that is to say, water supplies, irrigation and canals, drainage and embankments, water storage and water power;

Land, that is to say rights in or over land, land tenures including the relation of landlord and tenant, and the collection of rents; transfer and alienation of agricultural land, land improvement and agricultural loans; colonization;

Forests;

Protection of wild animals and birds;

Fisheries;

Courts of wards subject to the provisions of List I; encumbered and attached estates:

Regulation of mines and mineral development;

Industries subject to the provisions of List I;

Gas and gas-works;

Trade and commerce within the States;

Production, supply and distribution of goods;

Markets and fairs;

Weights and measures except establishment of standards;

Money-lending and Money-lenders; relief of agricultural indebtedness;

Inns and inn-keepers;

Incorporation, regulation and winding up of corporations and universities; unincorporated trading, literary, scientific, religious and other societies and associations; co-operative societies;

Theatres and dramatic performance; cinemas; sports, entertainments and amusements;

Betting and gambling;

Work, lands and buildings vested in or in the possession of the State;

Elections to the Legislature of the State;

Salaries and allowances of the members of the legislature of the State, of the Speaker and Deputy Speaker of the Legislative Assembly and, if there is a Legislative Council, of the Chairman and Deputy Chairman thereof;

Powers, privileges and immunities of the Legislative Assembly and of the members and the committees thereof and, if there is a Legislative Council, of that Council and of the members and the committees thereof; enforcement of attendance of persons for giving evidence or producing documents before committees of the Legislature of the State;

Salaries and allowances of Ministers for the State;

State public services; State Public Service Commission;

State pensions, that is to say, pensions payable by the State or out of the Consolidated Fund of the State;

Public debt of the State

Treasure trove;

Land revenue, including the assessment and collection of revenue, the maintenance of land records, survey for revenue purposes and records of rights, and alienation of revenues;

Taxes on agricultural income;

Duties in respect of succession to agricultural land;

Estate duty in respect of agricultural land;

Taxes on land and buildings;

Taxes on mineral rights;

Duties of excise on the following goods manufactured or produced in the State and countervailing duties at the same or lower rates on similar goods manufactured or produced elsewhere in India :—

(a) alcoholic liquors for human consumption;

(b) opium, Indian hemp and other narcotic drugs and narcotics;

Taxes on the entry of goods into local area for consumption, use or sale therein;

Taxes on the consumption or sale of electricity;

Taxes on the sale or purchase of goods other than newspapers;

Taxes on advertisements;

Taxes on goods and passengers carried by road or on inland waterways;

Taxes on vehicles, whether mechanically propelled, or not, suitable for use on roads, including tramcars;

Taxes on animals and boats;

Tolls;

Taxes on professions, trades, callings and employments;

Capitation taxes;

Taxes on luxuries, including taxes on entertainments, amusements, betting and gambling;

Rates of stamp duty in respect of documents:

Offences against laws with respect to any of the matters in this List;

Jurisdiction and powers of all courts except the Supreme Court, with respect to any of the matters in this List;

Fees, in respect to any of the matters in this List, but not including fees taken in any court.

(2) *Legislative powers transferred from the Union List to State List*

The following entries of legislative powers in the Union List have been transferred to the State List :—

Atomic energy and mineral resources for purposes other than defence;

Railways within the State;

All Highways within the State;

Shipping and navigation on inland waterways as regards mechanically propelled vessels the rule of the road on such waterways;

Carriage of passengers and goods by railways within the State;

Wireless, broadcasting , television and other like forms of communication;

Savings Bank;

Lotteries;

Inter-State trade and commerce;

Incorporation, regulation and winding up of trading corporations, including banking, insurance and financial corporations;

Incorporation, regulation and winding up of corporations whether trading or not;

Banking;

Insurance;

Stock exchanges and future markets;

Regulation and development of oil-fields and mineral-oil resources; petroleum and petroleum products; other liquids and substances;

Regulation of labour and safety in mines and oil fields;

Fishing and Fisheries within territorial waters;

Manufacture , supply and distribution of salt; regulation and control of manufacture; supply and distribution of salt;

Cultivation, manufacture and sale for export, of opium;

Sanctioning of cinematograph films for exhibition;

Institutions for scientific or technical education;

Institutions for professional, vocational or technical training, including the training of police officers; or the promotion of special studies or research; or scientific or technical assistance in the investigation or detection of crime;

Determination of standards in institution for higher education or research and scientific and technical institutions;

Ancient and historical monuments and records, and archaeological sites and remains;

Elections to the Legislatures of States; Election Commission relating to such elections;

Audit of the accounts of the State;

Constitution and organisation (including vacations) of the High Court; provisions as to officers and servants of the High Court; persons entitled to practise before the High Court;

Taxes on income;

Duties of excise on tobacco and other goods including medicinal and toilet preparations containing alcohol or any substance;

Corporation Tax;

Taxes on the capital value of the assets of individuals and companies; taxes on the capital of companies;

Estate duty in respect of property;

Duties in respect of succession to property;

Terminal taxes on goods or passengers, carried by railway, sea or air; taxes on railway fares and freights within the State;

Taxes other than stamp duties on transactions in stock exchanges and future markets;

Rates of stamp duty in respect of bills of exchange, cheques, promissory notes , bills of lading, letter of credit, policies of insurance, transfer of shares, debentures, proxies and receipts;

Taxes on the sale or purchase of newspapers and on advertisements published therein;

Taxes on the sale or purchase of goods other than newspapers;

Any other matter not enumerated in List I or List III including any taxes not mentioned in either of those Lists.

(3) *Legislative powers transferred from the concurrent list to the State List*

The following entries of legislative powers in the Concurrent List have been transferred to the State List :—

Criminal law, including all matters included in the Indian Penal Code at the commencement of this Constitution but excluding offences against laws with respect to any of the matters specified in the Federal List and excluding the use of naval, military or air forces or any other armed forces of the Federal Government in aid of the Civil powers;

Criminal procedure, including all matters included in the Code of Criminal Procedure at the commencement of this Constitution.

Preventive detention for reasons connected with the security of the State, the maintenance of public order, or the maintenance of supplies and services essential to the community; persons subjected to such detention;

Marriage and divorce; infants and minors; adoption; wills; intestacy and succession; joint family and partition; all matters in respect of which parties in judicial proceedings were immediately before the commencement of this Constitution subject to their personal law;

Transfer of property; registration of deeds and documents;

Contracts, including partnership, agency, contracts of carriage, and other special forms of contracts;

Actionable wrongs;

Bankruptcy and insolvency;

Trust and Trustees;

Administrators-General and official trustees;

Evidence and oaths; recognition of laws, public acts and records, and judicial proceedings;

Civil Procedure, including all matters included in the Code of Civil Procedure at the commencement of this Constitution, limitation and arbitration;

Contempt of court, but not including contempt of the Supreme Court;

Vagrancy; nomadic and migratory tribes;

Lunacy and mental deficiency, including places for the reception or treatment of lunatics and mental deficients;

Prevention of cruelty to animals;

Adulteration of foodstuffs and other goods;

Drugs and poisons;

Economic and social planning;

Commercial and industrial monopolies, combines and trusts;

Trade unions; industrial and labour disputes;

Social security and social insurance; employment and unemployment;

Welfare of labour including conditions of work, provident funds, employer's liability, workmen's compensation, invalidity and old-age pensions and maternity benefits;

Vocational and technical training of labour;

Legal, medical and other professions;

Charities and charitable institutions, charitable and religious endowments and religious institutions;

Vital statistics including registration of births and deaths;

Ports other than major ports;

Shipping and navigation on inland waterways as regards mechanically propelled vessels, and the rule of the road on such weterways, and the carriage of passengers and goods on inland and waterways within the State;

Trade and commerce in, and the production, supply and distribution of,—

(a) the products of any industry, and imported goods of the same kind as such products;

(b) foodstuffs, including edible oilseeds and oils;

(c) cattle fodder, including oil cakes and other concentrates;

(d) raw cotton, whether ginned or unginned, and cotton seed; and

(d) raw jute;

Price control;

Mechanically propelled vehicles including the principles on which taxes on such vehicles are to be levied;

Factories;

Boilers;

Electricity;

Newspapers, books and printing presses;

Archaeological sites and remains;

Acquisition and requisitioning of property;

Recovery in a state of claims in respect of taxes and other public demands, including arrears of land revenue and sums recoverable as such arrears;

Stamp duties other than duties or fees collected by means of judicial stamps, but not including rates of stamp duty;

Inquiries and statistics for the purposes of any matters specified in the State List.

Concurrent List

(1) *Legislative powers retained.*

The following entries of legislative powers in the Concurrent List have been retained in the Concurrent List :—

Removal from one State to another, State of prisoners, accused persons and persons subjected to preventive detention;

Prevention of the extension from one State to another of infectious or contagious diseases or pests affecting men, animals or plants;

Custody, management and disposals of property declared by law to be evacuee property;

Relief and rehabilitation of persons displaced from their original place of residence by reasons of the setting up of the Dominions of India and Pakistan;

Inquiries and statistics for the purpose of any of the matters specified in the Concurrent List;

Jurisdiction and Powers of all Courts, except the Supreme Court, with respect to any of the matters in the Concurrent List;

Fees in respect of any of the matters in the Concurrent List but not including fees taken in any Court.

(2) *Legislative powers transferred from the Present Union List to the Concurrent List.*

The following entries of legislative powers in the Union List have been transferred to the concurrent List :—

Bills of exchange, cheques, promissory notes and other like instruments;

Patents, inventions and designs, copyright, trade marks and merchandise marks;

Establishment of standards of weight and measure;

Establishment of standards of quality for goods to be exported out of India or transported from one State to another;

Regulation and development of inter-State rivers and river valleys:

The Survey of India, the Geological, Botanical Zoological and Anthropological Survey of India, Meteorological organisations;

The above changes in the List of legislative powers have also to be incorporated in the Constitution with necessary amendments, supplemental, incidental and consequential.

DRAVIDA MUNNETRA KAZHAGAM

Supplementary Memorandum

INTRODUCTION

In 1969, for the first time in India, the D.M.K. Government of Tamil Nadu constituted a Committee of Experts, with Dr. P. V. Rajamannar as the Chairman, to inquire into the relations between Centre and the States and to make recommendations thereto.

Dr, A. Lakshmanaswamy Mudaliar, former Vice-Chancellor of Madras University, Thiru P. Chandra Reddy, former Chief Justice of the High Court of Madras are the other members of the Committee.

The Rajamannar Committee, as it is popularly called, presented its report in May, 1971.

Largely based on that Report, Thiru M. Karunanithi, the then-Chief Minister, moved a resolution on State Autonomy in the Legislative Assembly of Tamil Nadu.

The Assembly discussed the same for five days and for the first time in the history of India a Resolution about Centre-State Relations, commending suitable changes and amendments to the Constitution, was passed on 20-4-1974.

Those documents with title "The D. M.K.'s views on State Autonomy" forms our Memorandum to the Commission on Centre-State Relations.

In this Supplement we are presenting our further views on the said subject.

Madras

30*th* *December* 1985. M. KARUNANITHI

President, D.M.K. Party.

PART 1

India, like U.S.S.R., Peoples' Republic of China and Switzerland etc., has many nationalities with distinct languages, cultures, religions, traditions and history of their own. Another important factor is the continental geographic dimensions, with different States at different stages of development.

As professor Toynbee observes, "the growing consciousness of Nationality had attached itself neither to traditional frontiers nor to new geographical associations but almost exclusively to the mother-tongues."*

*Quoted in 'The Report of the States Reorganisation Commission', 1955, p. 41.

The Report of the Linguistic Provinces (Dar) Commission, 1948, states that creation of linguistic provinces would bring 'sub-nations' into existence.

But forces of history have created the linguistic states and today nobody could undo them and face the public wrath.

Those who object the use of the terminology of 'nationalities' may, like the Dar Commission, use the nomenclature of 'sub-nations' or call our country as 'polyglot' or 'poly-ethnic'.

Only these inexorable facts of life demand federalism for our country because as Prof. Kenneth C. Wheare has put it, that "as a matter of history, federalism has provided a device through which differing nationalities could unite, and. while retaining their own distinct national existence, attempt to create in addition a new sense of common nationality. Nationalism in a federation can be expressed on at least two levels; it is not exclusive, homogenous passion". *

We feel federal polity for India is an inevitability as it provides a chance of linking union with diversity as the democratic alternative.

It is our opinion that if Canada has one Quebec India has many Quebecs.

Mr. Gerald Pelletier, M. P. of Canada and Editor of 'La Presse' has stated;

"If I told you that I am firstly a Canadian and that my belonging to the French Community comes second that would be shameful lie.... Confederation is good in so far as it allows my own people to live in the best possible conditions, to develop their own capabilities within their own culture. If confederation means abandoning the French-Canadian identity, giving up our French culture, disappearing into the North American melting pot then I am against Confederation". **

In the same way we, the Tamils, also feel. No self respecting Tamil would sacrify his language culture and identity for anything. So also is the case with others.

We should not forget that after the birth of linguistic states the States have come of age and each State has acquired a personality and identity of its own and the people are State conscious. Nay; as many state boundaries coincide with the languages they speak we could say that they are nationality-conscious.

"Without federalism Canada could not continue to exist, for French-Canadians would not feel that their distinct nationality would be preserved—the basis upon which alone they are prepared to think of themselves as Canadians". ***

*Kenneth C. Wheare, "Federalism and the Making of Nations", in "Federalism : Mature and Emergent", edited by Authur W. Macmohan, p.35.

** GERALD PELLETIER, "Confederation at the Cross-roads", University of Saskatchuam, 1965, p. 4-5.

***Kenneth Wheare, *Ibid*, p. 36.

—The same holds true in India which has many Quebecs.

—Wholesome federalism alone can keep India together and strengthen her from within and without.

In a federation, Governments—the Union and the States, must have complete freedom from mutual control and encroachment in the determination of their policies and the way in which they are implemented. —This freedom is the soul of federalism. We call this freedom as Autonomy. It should not be confused with separation involving seccession.

It is our firm belief that National Unity should be based on State Autonomy.

Along with the Royal Commission on Dominion-Provinces in Canada, we say:

"National Unity and Provincial Autonomy must not be thought of as competitors for the citizens' allegiance, for.... they are but two facets of the same thing, the same federal system".

Political autonomy for the States would be useless unless they are backed by adequate fiscal autonomy and financial resources.

So, we demand a reapprisal of the Constitution to achieve that end.

If the present Hon'ble Commission is not to suggest any amendments to the Constitution in the light of our past experience and in view of our future needs, then it is our opinion that the entire efforts would become an exercise in futility.

There are some quarters who consider the demand for 'Autonomy for the States and Federal Union at the Centre' and regionalism as anti-national. They are wrong.

Autonomy for the units is the life of blood of federalism. Even the present Constitution provides for some amount of autonomy. Our demand is that they should be more; that they should be sufficient and that they should be real to develop their units in their own way and genius without hampered by the overlordism of the Centre.

Regionalism and sub-regionalism are recognised in the Constitution.

There are special provisions in the Article 370 of the constitution for Jammu & Kashmir.

Article 371 speaks about special provisions in respect of Vidarbha, Marathwada, Saurashtra and Kutch.

Article 371-A speaks about special provision with respect to the State of Nagaland.

There are special provisions for the tribal areas of Assam, for the Hill areas of Manipur.

Article 371-D speaks about special provisions with respect to Telengana in the State of Andhra Pradesh.

One should not forget the fact that "the National movement which achieved India's independence was built up by harnessing the forces of regionalism". As the Report of the States Reorganisation Commission (1955) puts it:

"It is only when the Congress was reorganised on the basis of language units that it was able to develop into a national movement. The Congress under Mahatma Gandhi realised that the same forces which worked for our national unity had also helped to develop the regional languages, which led to the integration of language areas. It is this alliance between regional integration and national feeling that helped us to recover our freedom.

"With the achievement of freedom, a tendency has developed to overlook the claims of different regions by denying to them the right to internal integration, on the plea that this will weaken the unity of the nation. This, however is false cry, for true development will be possible, only if we are able to utilise genuine loyalties which have grown up round historic areas united by a common language".

(—*Page* 38, *Emphasis ours*)

Those who decry the demand for more powers for the States in the name of State. Autonomy are those who fail to understand the efficacy of federalism. By uttering this criticism they also fail to understand the necessity to harness the aspirations of genuine and basic loyalties which have grown up around historic areas united by a common language which are the cementing forces of national integration.

As Dr. Chandra Pal puts it, "the demand for state autonomy is not at all incompatible either with the process of nation-building or with national integration. Rather it is essential. The need of the hour is "Unity" and not "Uniformity". Unity in diversity cannot be maintained without permitting diversity in unity. Any attempt to crush "diversity" is fraught with dangerous consequences and may eventually lead to disintegration and balknisation of the country".*

The problem of State Autonomy has been a live issue in Indian federal system as in any federal systems since the birth of our Republic, nay, even, earlier. Student of Indian constitutional history are conversant with the fact that the federal idea which was mooted in the Nehru Report and the Report of the Indian Statutory Commission was assiduoulsly pursued in the Round Table Conference and was adopted in the Government of India Act of 1935. The two major characteristics of the aforesaid Act were that (1) It proposed a Federation for India; and (2) It provided for provincial Autonomy. Even though the proposed Federation could not see the light of the day the issue of provincial autonomy gained momentum.

The historic fact was that the Constitutent Assembly met to consider the proposals of the Cabinet Mission Plan, constituting India into a Union under which the Provinces would have full autonomy, subject

*Dr. Chandra Pal, "State Autonomy in Indian Federation : Emerging Trends", p. 53.

only to a minimum of Central subjects comprising Foreign Affairs, Defence and Communications and vesting all subjects@ and all residuary powers in the Provinces. According to K. M. Munshi, "Gandhiji saw in the Plan the seeds to Convert this land of sorrow into one without sorrow and suffering".*

On 3 June 1947 the decision to partition India was announced. Sensing this before-hand B. N. Rau had sent a memorandum on the Union Constitution on 30 May 1947 as follows :

"If it is decided to abandon the Cabinet Mission Plan ...the whole matter may have to be considered afresh. In that event we may either have a unitary type of constitution, as before the Government of India Act of 1935, or we may have a federation with the present distribution of powers between the Centre and the Units. The former, however desirable, may no longer be practical politics."**

On 4 July 1947 the Second Report of the Union powers Committee presented its Report to the constituent Assembly recommending that "The Constitution should be a federal structure with a strong centre". The objectives Resolution moved by Pandit Nehru to create" a complete, adulterated federation" *** and the first Report of the Union Powers Committee had been given a go-bye.

As K. Santhanam States, "....the main constitutional results of the partition of India was that the pendulum swung from one extreme to another extreme. From the idea of minimal federation, almost all leaders and, much more than leaders, the followers, wanted a maximal federation".****

H.V. Pataskar had explained this aspect very clearly in the Constituent Assembly:

"....at the time of the second reading, we developed a fear complex.....the result was that the autonomy of the States, or their semi-autonomy came to be looked upon as a matter of national danger....It was with the idea of having a federation that we began changing the name of the Provinces into States. If the present idea had existed throughout, we never would have made that change. But while the name of "State" is there, the power of the State is so curtailed that it is a misnomer to call it a "State" any longer".†

With the result they created our Constitution in the Plaster cast set in the Act of 1935, which was anathema to those Constitution-makers themselves.

The Constituent Assembly had also formally endoresed the federal principles when Pandit Nehru moved the objectives Resolution which stated that:

"the said territories....shall possess and retain the status of autonomous Units, together with residuary powers, and exercise all powers and functions of Government of administration, save except such powers and functions as are vested in or assigned to the Union, or as are inherent or implied in the Union or resulting therefrom.‡

Those proposals had been accepted by the Congress Party and 'therefore by the people' could be evinced by the following statement of N. Gopalaswami Ayyanger in the constituent Assembly:

"The statement of the Cabinet Mission, I would describe as the law of the constitution of this Assembly. That Constitution derives it authority not from the fact its authors were three members of His Majesty's Government but from the fact that the proposals made therein have been accepted by the people of the Country."§

It should be noted that the Congress Party of yester-years stood for genuine federalism with maximum autonomy to the Units. Pandit Nehru in his book "The Discovery of India", which was written during April to September 1944 in the Ahmednagar Fort Prison has opined as follows :

"It is clear that any real settlement must be based on the good-will of the constituent elements and on the desire of all parties to it to co-operate together for a common objective. In order to gain that any sacrifice in reason is worthwhile... It is not difficult, if passions and unreasoing emotions are set aside, to derive such freedom with the largest autonomy for provinces and States and yet a strong central bond."@@

He even went to the extent of granting the Units the right to secede, "say ten years after the establishment of the free Indian State."@@@

His views were echoed in the election manifesto of the Congress Party when it fought the elections in 1945. It assured "a minimum list of common and essential federal subjects" and "the right of any well constituted area to secede from the Indian federation or Union"††

——Undoubtedly this was "the predominant idea of our national leaders" at the outset.

But, with the birth of Pakistan came a right-about turn in their thinking and it not only destroyed the concept of United India but also the concept of genuine and wholesome federalism.

It should be noted that the Congress Party stoutly opposed the Act of 1935.

The following reasons were given by Pandit Nehru:

"The Act of 1935 was bitterly opposed by all sections of Indian opinion. While the part dealing

with Provincial Autonomy was severely criticized for its many reservations and powers given to the Governors and the Viceroy, the Federal part was even more resented. Federation as such was not opposed and it was generally recognised that a Federal structure was desirable for India. But the proposed Federation petrified British rule and vested interests in India.*

——It is a tragedy that a number of provisions of the very Act which was created by the 'Colonial Masters' 'representing the old tradition of British imperialism' to suit their exploitation and which was then totally objected to by the Congress party had been incorporated verbatim in our present Constitution and that is why some authors call our Constitution as the 'Palimpsest of the Act'. The Constitution, as Ivor Jennings puts it, "derives directly from the Government of India Act 1935, from which in fact many of its provisions were copied almost textually" and as Dr. Durga Das Basu observes, "75 per cent of the Constitution owes its origin to that Act", with the basic difference that the paramountcy of the British Crown over the States and, Provinces had been transferred to the Government of India.

The Main reasons for copying the much hated Act of 1935 may be summarised as follows:

1. The anxiety-Complex was predominant; therefore those who advocated State-rights were suspected of lack of loyalty to the country because of the creation of Pakistan.
2. In a hurry to create a Constitution of our own they simply forgot the mandate they got from the people, the primary plank being federalism.
3. In their jubilation over Independence, they thought that Congress and its 'God-like' leaders would rule the country for ever and they never even considered the possibility of other parties coming to power in the units. Even if such a situation arises, they thought, that it would be convenient to suppress them by some of the provisions of the Act of 1935.
4. The Congress Party was and has been unitary in character. During the days of Provincial Autonomy the top-most leaders like Pandit Nehru, Sardar Patel, Rajendra Prasad etc. stood outside the new ministries as the High Command and it was that High Command which made the choice of Premiers and settled the differences of opinion in the Cabinets of the provinces. "What happened in practice was that Constitutional federalism was superseded by political unitarianism". —Therefore States were looked down upon as the fiefdom of Delhi.

——In effect the Congress High Command stepped into the shoes of the "irresponsible and unresponsive" British imperialism and a Swadesi Imperialism was established with the States as the internal colonies. Like the British they continue to treat the States with suspicion and distrust. Otherwise there is no need to retain many of the provisions of the Act of 1935 which they hated.

* Pandit Nehru, Ibid., p. 307.

——That is why mild criticism calls our Constitution as a federation with unitary features or quasi-federal while pungent comment describes the States as 'no better than glorified municipalities' or' dole-getting Corporations**

Here below are some of the comments about our Constitution:

K. M. MUNSHI	"a quasi-federal union invested with several important features of a unitary Government" ("The President under the Indian Constitution", Bombay, Bharatiya Vidya Bhavan, 1967, p.1.)
Dr. GAJENDRA GADKAR	"..though it partakes some of the characteristics of federal structure, it cannot be said to be federal in the true sense of the term". ("The Constitution of India—Its Philosophy and Basic Postulates", Bombay (1969), p. 67.)
HANUMANTHAIYA	"The Constitutional edifice of India is neither unitary nor federal in the strict sense of term". (—The Report on Centre-State Relationships, A.R.C., p(i))

As Dr. V. K. R. V. Rao has stated, "There is a feeling that we should come to Delhi and by the very fact you have come to Delhi you now much more than what you would know if you are in Bangalore or Madras or Lucknow or Chandigarh". †

It is that wrong feeling that wants to give an omniscient and omnipotent role to the Centre. Dr. Sampurnanand had expressed it in no uncertain terms:

"There is less and less an inclination to treat the State Governments as partners in a common endeavour and a growing inclination to treat them as subordinates and agents, whose outlook is narrow and who cannot be trusted to take important decision by themselves.... At times it creates irritation and there have been occasions when state ministers have expressed the view that the Constitution had better be scrapped and the country made a Unitary State under one Government".

—"*Reflections*". 1962.

As the Report of the Study Team of the Administrative Reforms Commission says, "at the Centre, dominant financial power in relation to the states gives central authorities exaggerated notions of their importance and knowledge and does not allow, sufficient place to the points of view of the states. It is important, therefore, that the degree of financial dependence of the states on the Centre should be reduced to the minimum".

(*Vol. I, Page*—23)

More often we read in the newspapers that one Chief Minister or the other has been "summoned to New Delhi" not invited——This shows the attitude of the Centre. It is nothing but an insult to the people of the States.

**Dr. Anna, 'The Hindustan Times', 5 Feb., 1963.
†VKRV Rao, Lok Sabha Debates, Vol. XV, 1972, P-251.

The result is that the Centre is behaving as if it has inherited the Viceroy's mantle of paramountcy. That is why the elected representatives of the States have to make so many pilgrimages to New Delhi with begging-bowls in their hands.

The West Bengal Government's memorandum, prepared under Dr. B. C. Roy as the Chief Minister says:

"In our view one of the major tasks of the Finance Commission would be to assess the needs of the Centre according to them functions it is required to discharge under the Constitution and to allow it to retain so much, and so much only, of the funds that are actually required for the discharge of those specifically Central functions in an efficient manner".*

Ten years before this, the State Government had explained to the First Finance Commission:

"An attempt to build a strong Centre on the foundations of weak States is like an attempt to build a strong building on the foundation of sands".**

It approvingly quoted the recommendations of the Constitutent Assembly's Expert Committee on the financial provisions of the Constitution which has said : "The basic functions of a Federal Government are defence, foreign affairs and the bulk of the national debt."

—We entirely agree with the above views.

Therefore there should be a reappraisal of the Constitution on the following principles:

1. The basis for the adoption of genuine and wholesome Federalism and States' Autonomy lies in the multinationality of India, its continental geographic dimensions, various languages, cultures, religions, traditions, and history of the States.
2. The re-structuring of the relations between Centre and States requires first of all genuine equality of all States, equality of the States and the Centre both formally and materially-including equality of all national language, not excluding Hindi and equal development of all States.

Besides other details given in "The DMK's views on State Autonomy" we reiterate the following:

Language:

The group of Articles collected in Part XVII of the Constitution deals with language.

There is a Constitutional declaration that the official language of the Union shall be Hindi.

It is left to the Parliament and the Legislature to continue English or not.

In regard to the Laws and Courts, there is a declaration that English shall be the language until Parliament by law otherwise provides.

*West Bengal Government, Memorandum to the (Third) Finance Commission, 1961, p-6, (Original emphasis).

** West Bengal Government Memorandum to the (First) Finance Commission, p.-63.

There is a directive for the development of the Hindi language.

We demand that a regional language like Hindi should not be chosen and crowned with the status of the official language of the union.

The people of Tamil Nadu have been fighting for the last 50 years against Hindi domination in one form or other. Even though Pandit Nehru, and other Prime Ministers after him, have given an assurance that Hindi will not be imposed on non-Hindi people, Hindi is being imposed directly and indirectly—mostly by back door means.

Moreover, there is the liklihood of Hindi being made the sole official language of the Union, the language of the laws of the Parliament and the language of the High Courts and the Supreme Court etc., by an Act passed in the Parliament by a simple majority.

——The non-Hindi people cannot anymore trust that the assurances of the previous Prime Ministers would be kept up.

Therefore we demand,

1. The provisions to make Hindi the official language of the Union, the Courts, and the Legislature etc. should be deleted.
2. The directive for the development of Hindi language should also be deleted, and
3. All the languages specified in the Eighth Schedule should be made as the Official Languages of the Union. Till it is achieved English should continue as the official language of the Union.

In the words of Dr. Anna "the Government of Tamil Nadu has stated in unmistable terms that Tamil and English can serve all purposes, the former as the official Language of this State and the latter as the link language....It is accepted that English can serve admirably as link between our State and the outside world, why plead for Hindi to be the link language here? What serves to link us with the outside world is certainly capable of rendering the same services inside India as well. To plead for two link languages is like boaring a smaller hole in a wall for the kitten while there is bigger one for the cat. What suits the cat will suit the kitten as well".

We strongly believe that Hindi is a divisive factor and our hard-won national integrity would meet its Waterloo on the day if any fanatic, by mistake or by scheme, makes Hindi as the Official Language.

The Office of the Governors

Pandit Nehru "The Discovery of India", described that Governors were "acting on instructions from New Delhi or Simla†"

——The same position continues even now. The Governors act as the agents and spies of the centre and their executioners of Democracy in the States.

†Ibid. Page : 313

During 1977 when the D. M. K. Government was dismissed in Tamil Nadu it was said that the Centre did so on the Report of the Governor. In fact it was not so. The Report was prepared and kept at New Delhi and the Governor was later summoned to affix his signature after the Proclamation was issued by the President under Article 356.

The Office of the Governor is legacy of the British Colonial System. The method of appointment of the Governor makes it an anachronism in a democratic set up.

As Mrs. Vijaya Laxmi Pandit described, the office of the Governor's should be abolished and the West German model should be adopted.

If a system is successfully working in a federation like West Germany there is not reason why it should not work in India also.

President's Rule

As there is no provision for President's Rule at the Centre so also there must not be any provisions for President's Rule in the States. Therefore those provisions like the much misused Articles 356, 357, 360, 365, etc., should be deleted from the Constitution.

PART II

In this part II and attempt is made to show how some of the original provisions of the Constitution have been subsequently amended, if not amended, bypassed or maneuvred to take away what little powers that had been given to the states.

It also, tries to explain how the centre, with its enormous resources and dominant budgetary involvement, has made massive inroads into state subjects through the financial backdoor, thereby enrasculating autonomy of the states. As a consequence thereof and with the addition of planning the enumeration of state subjects and union subjects can be said to have become blurred and less and less clear, there by effacing what little federalism we have been left with. We have cited only some examples; and indepth study would reveal how our federalism has become a shame-faced.

1. There are three significant entries in the State List :

(1) Industries

(2) Trade and Commerce; and

(3) Production, supply and distribution of goods.

The Union list permits Parliament to legislate in respect of "Industries, the control of which by the Union is declared by Parliament by law to be expendient in the public interest."

——These are Entries 24, 26 and 27 in the State List and entry 52 in the Union List in the VII Schedule to the Constitution.

——Thus the basic scheme of the Constitution is industries and commerce should remain State subjects and should be dealt with primarily by the States; and that it is only those industries the control of which by the Union is expendient in the public interest, that must be regulated by the Centrre.

Parliament passed the Industries (Development and Regulation) Act in 1951 specifying those industries which in the public interest had to be controlled by the centre.

—This is the single most important legislation through which the centre has invaded and almost captured this Subject without any amendment to the Constitution.

In course of time more and more industries have been added in the Act; and the basic constitutional scheme has now been almost subverted.

Without any amendment of the Constitution, "Industries" has been virtually transformed from a State subject into a Union Subjcet, with the result the Centre has now extended its control to as much as 93 per cent of industries in terms of the value of their output.

Even items like razor blades, paper, gum, shoes, matchboxes, household electrical appliance, hurricane lanterns cosmetics, soaps and other toilet requisities have all been brought under the dominion of the Centre. The list is ever ending and now includes practically every conceivable industrial product.

As Mr. N. A. Palkivala points out, "There can be no doubt that this is a violation of the constitutional mandate".*

It is imperative that the States should remain their legitimate powers over industries and powers.

No doubt, We have permitted a clear fraud to be perpetrated upon the powers of the States under the Constitution."*

2. Central involvement in Village a Small-Scale Industries is also very high as may be seen from the share of the Centre in the total budgetary expenditure on village and small scale industries which is nearly two-thirds.**

What is more, the Centre's scheme-wise transfers financed one-thrid of what appears in the States budgets, as their expenditure.

With regard to its massive involvement in small scale industries the Centre cannot claim much legal support, constitutional or legislative, as special notifications under practically all the measures mentioned earlier exclude small scale industries from their operations.

Now the Centre is holding under the umbrella of its Control and regulation almost all industries including industries which are not in the core or heavy investment sectors. For example Centre's share in the expenditure on consumer industries is about 70% of the

*N. A. Palkhivala, "Our Constitution—Defaced and defiled", p. 119.

** All calculations in this paper are based on the "Combined in "Combined Finance & Revenue Accounts of the Union & State Governments in India", (1978-79), published by Government of India, 1983.

total. Of the agro based consumer industries, its share is 76%. Its share in the expenditure on plantations is 71%.

3. **Minerals:**—In terms of Entry 23 of the State List, regulation of mines and mineral development is a state suject. They are subjected to Entries 6,53, 54 and 55 of the Union List.

Now the States account for only one-tenth of the total budgetary expenditure on minerals. Of what it presented in the state budgets as their expenditure, more than one-fifth has been financed by the Central Government under their schemes.

The Centre's involvement in mines and minerals is nearly complete as it accounted for 97.5% of the combined budgetary expenditure.

——The result is the subject 'Minerals' has been virtually transformed from a State subject to a Central subject.

4. Originally, "AGRICULTURE, including agricultural education and research, protection against pest and prevention of plant diseases" form Entry 14 of the State List.

By the Third Amendment Act 1954, Entry 33 to the Concurrent List was brought in.

According to Entry 33, trade and commerce in and the production, supply and disribution of a wide variety of domestically produced or imported products of industry and agriculture including,

"(b) Foodstuffs, edible oilseeds and oils.

(c) Cattle fodder, including oilcakes and oils.

(d) Raw cotton, whether ginned and unginned and cotton seed, and,

(e) Raw jute"

——are subject to concurrent jurisdiction. The above articles mentioned in the Entry 33 from (b) to (e) form much of the largest part of agricultural produce.

As the Setalwad Study Group on Centre-State Relationships (of the A.R.C.) says:

If the word "production" occurring in this entry has to be given wider import AGRICULTURE FOR THE MOST PART MUST BE DEEMED TO HAVE BECOME A CONCURRENT SUBJECT

"If the term "production" is to carry a limited import, it is not clear at all what the limitation is."

(—*Volume I P.* 164; *Emphasis ours.*)

The Setalwad Study Group took the view "that Agriculture should administratively be treated as a State subject and that central encroachment in the shape of the assumption of responsibility for substantive activity should not be permissible", (Ibid.,page 64)

——The view of the Study Group has not been followed in practice, and AGRICULTURE HAS VIRTUALLY BEEN TRANSFORMED INTO A CONCURRENT SUBJECT.

5. Entry 14 of the State List a specifically mentions "research in agriculture" as a State subject.

Now it "has virtually become a Central subject and is concentrated in the IACR."

Centralisation of research with the Union Government is almost total if we take the relative expenditure of the Union on the head* "Social and Community Services". The share of the Union on, expenditure under this head comes to 99.8 per cent.

The risk of overlooking regional and even sub-regional differences in objective conditions is there because of centralisation of research.

6. Animal husbandry and dairy development can be said to be exclusive State subjects.

Entry 15 of the State List Clearly says :

"Preservation, protection and improvement of stock and prevention of animal diseases; Veterinary training and practice."

The Centre's role is limited to the prevention of cruelty of animals and the prevention of the extension from one State to another of infectious or contagious diseases of pests affecting animals under Entry 17 and Entry 29 of the Concurrent List.

Because the new Entry 33 to the Concurrent List was brought in by the Third Amendment Act of 1954, the concurrent jurisdiction of Centre now extends to the production, supply, and distribution of not only food-stuffs which can be interpreted to include dairy products, but also cattle fodder including oil cakes and other concentrates.

——This is a new invasion of powers of the States by the Union.

7. "Forests and Protection of wild animals and birds" belonged originally to the State List (Entries 19 and 20). By the Forty-second Amendment Act, 1976 they have been transferred to the concurrent List (Entries 17A and 17B).

8. According to the Government of India Act, 1935, Education was in the Provincial Legislative List.

By Forty-second Amendment Act, 1976 it has been transferred to the Concurrent List, with Entries 63, 64, 65 and 66 already remaining in the Union List.

This we consider as the cultural invasion of the Centre. With this weapon on hand the Centre Plans to open central schools in every District. perhaps with a view of impose hindi and cater to the needs of the elite. Hundreds of crores are to be dumped in this process while thousands of elementary Schools have no roofs over their heads and no Basic Amenities like black-boards etc,.

9. Fisheries belong to the State List under Entry 21. But fishing and fisheries beyond the territorial waters" is a Union subject under entry 57. Besides,

* "Scientific services and research" coming under the sub-group.

under Entry 33 of the Concurrent List, fish being a foodstuff, the Centre can claim a role in the production and distribution of fish and fish products. As ports other than the major ports belong to the Concurrent/List under Entry 31, the Centre can also lay claim to a role in the development of fishing harbours and landing facilities.

The Centre incurs 47% of the combined expenditure of the Centre and the States on fisheries.

Of what is shown as the States' expenditure, about one-sixth is financed by the Centre through scheme-wise transfers particularly for the development of inland fisheries, again purely a State subject.

Other than budgetary control the Centre exercises administrative control on fisheries through its agency, Marine Products Development Authority.

—The list may become longer as to how the Centre has made inroads into State subjects by the financial back-door.

We request the Hon'ble Commission to make an in-depth study of this particular aspect.

Making inroads into the States' field by financial back-door has been possible because the Centre has at its Command elastic and immense sources of revenue. Planning also comes handy to the Centre. Because of this, the separation between the State subjects and Union Subjects have become less and less clear and therefore blurred.

It is true because of acute financial constraints the States are not in a position to spend more on various subjects of their own.

But this is an argument for enhancing the States' access to additionl resources; and not for making inroads into States', subjects by the Centre, emasculating their autonomy.

10. Income Tax is shared between the Union and the States in the manner prescribed by the Finance Commission.

As per the provisions of Article 279 the Comptroller and Auditor General of India specified the net proceeds forming the divisible pool. His Certificate in this respect is final.

However, if we examine the 'net proceeds' arrived at in practice, we find that they are much less than what they should have been.

As per the recommendations of the Sixth and succeeding Finance Commissions, the States are entitled to get 80 to 85% of the net proceeds. In fact they are getting less.

The Table I shows the States' shares for the years from 1974-75 to 1979-80, for which period the reports of the Combined Finance and Revenue Account are available.

In 1974-75 the States and Union Territories received only 64.55%of the 'net proceeds' instead of 81.79% (80% as States' share and 1.79% as the share of Union Territories).

—Thus instead of getting Rs. 653.94 crores the States received only Rs. 516.15 crores.

TABLE I

Share of States and Union Territories in the Divisible Pool of Income-tax—Actual Accrual and Estimated Accrual

(Rs. Crore)

Item	1974-75	1975-76	1976-77	1977-78	1978-79	1979-80
(A) Exclusively going to the Centre						
(i) Taxes on union emoluments	23.42	31.73	28.82	..	15.06	16.62
(ii) Surcharge/Super tax, etc.	27.65	62.69	63.80	74.76	115.92	183.61
(iii) Misc. receipts	7.64	15.97	9.94	16.58	13.02	11.53
(iv) Total i+ii+iii	78.71	110.39	102.56	..	144.00	241.76
(B) Net proceeds of income tax after deducting cost of collection	878.25	1214.46	1194.40	1002.39	1177.39	1340.31
(i) Cost of collection	27.31	33.96	34.38	33.28	47.59	41.48
(C) Divisible pool (B—A)	799.54	1104.07	1091.84	..	1033.39	1128.55
(D) Union territories and States' Share						
(i) Assigned or actual	516.15	734.21	652.24	675.81	702.62	864.88
(ii) Per cent share	64.55	66.50	59.73	..	68.37	76.63
(iii) Share as recommended by Finance Commissions	653.94	883.25	893.01	..	845.20	983.98
Recommended Share (Per cent)						
States	80.00	80.00	80.00	80.00	80.00	85.00
Union Territory	1.79	1.79	1.79	1.79	1.79	2.19
Total	81.79	81.79	81.79	81.79	81.79	87.79
Difference between the actual and estimated transfers to Union territories and States	137.79	149.04	240.77	..	138.58	119.10

——The same is the case for the succeeding years.

As our Table shows the States and the Union Territories have lost Rs. 137·79 Crores in 1974-75, Rs. 149·04 Crores in 1975-76, Rs. 240·77 Crores in 1976-77, Rs. 138·58 Crores in 1978-79 and Rs. 119·10 Crores in 1979-80.

——There is no explanation either in the Combined Finance & Revenue Account or in the Report of the Comptroller & Auditor General, Revenue Receipts, Vol. II, of the way they have determined the net proceeds of Income Tax for sharing purposes. Nor is there any explanation for allocating lower share to the States than that recommended by the Finance Commission.

——If this findings are true then what is happening is an open defiance of the provisions of the Constitution and the recommendations of the Finance Commission which may be construed as a kind of misappropriation.

We request the Hon'ble Commission to appoint a Panel of Experts to go into the question and make necessary recommendations to rectify the position, if the accusation is true.

11. The taxes on Union emoluments are excluded from the Divisible pool, which may amount to about Rs. 200 Crores per year.

As this provision of the Constitution is borrowed from the Act of 1935 it may be called as the hang-over of the Colonial past.

——As there is no justification for this exclusion Union emoluments should form part of the Divisible pool.

12. Interest on recoveries of Income Tax and penalties do not form part of the Divisible pool.

The Eighth Finance Commission felt that since the power to levy penalties and recover interest under the Income Tax Act emanates from the power to levy Income Tax, they should also fall within the concept of Income tax as the term used in Article 270.

If they are included, the Divisible pool will increase by about Rs. 10 to 15 Crores.

If Corporation Tax also is included the Divisible pool will increase by about Rs. 2,000 Crores.

13. By inflating the cost of collection of Income Tax the Centre is wantonly reducing the Divisible pool and thereby reducing the legitimate share of the States and Union Territories.

The cost of Collection of the Central Taxes is in the following proportion :

Income Tax, including	
Corporation Tax	90%
Estate Duty	2%
Wealth Tax	7%
Gift Tax	1%

The costs of collection between Corporate Tax Income Tax is made in the ratio of 1 : 7, which seems to be patently loaded in favour of Income Tax. More so, if we deduct the cost of collection of the Union emoluments which do not form part of the Divisible pool.

——It is very clear that a honest, rational and correct method is not followed in computing the 'net receipts' and thereby the States and Union Territories and deceived.

Therefore we accuse that Income Tax is nots genuinely shared at all to the benefit of the State and a jugglery in accounting reduces the legitimate share of the States and Union Territories. In fact, the Finance Commission proposes and the Centre disposes.

We request the Hon'ble Commission to put an end to this mal-practice.

14. Certain concessions are given to assessees of Income Tax if they invest in notified savings like, National Saving Certificates.

——This results in reduction of the Divisible pool and at the same time the States get a share of small savings in the form of loans for which they have to pay interest.

——The States thus loose their rightful source of Income due to the growing exemptions provided by the Centre in the Income Tax.

——We plead that the States should get adequate compensation for the various concessions and exemptions given in the case of Income Tax.

15. Article 163 states : "Council of Ministers to aid and advise Governor : (1) There shall be a Council of Ministers with the Chief Minister at the head to aid an advise the Governor ..."

Now the question arises : Whether the Governor can appoint the Chief Minister alone, without the other Ministers who form the Council of Ministers while Article 163 stipulates that there shall be a Council of Ministers with the Chief Minister at the head ?

A Committee of the Governors, appointed in one of the Conferences of the Governors, in their report to the President has categorically stated that to appoint the Chief Minister alone without a Council of Ministers is unconstitutional.

——But it has not been practiced by some of the Governors.

We want the Hon'ble Commission to give its verdict whether the opinion of the Committee of the Governors is right or not.

16. During the First Ministry formed by the Communist Party in Kerala, the Governor nominated the Anglo-Indian member to the Legislative Assembly without the advice of the Chief Minister, obviously to increase the strength of the Opposition *i.e.*, the Congress Party.

Now some Governors appoint the Vice Chancellors to the Universities in their State according to their will.

The Governor of Tamil Nadu has set up a new precedent by personally interviewing the candidates for the post of Vice Chancellor to one of the Universities.

Recently he has publicly asserted that in appointing the Vice-Chancellors, the Governor as the Chancellor, is not bound by the Cabinet.

It is our opinion that it is a wrong view and it is bound to create a lot of frictions.

——Therefore the Hon'ble Commission should clarify that Governors should not behave in an autocratic manner, brushing aside the advice of the Cabinet in selecting the nominated member to the Assembly and in appointing the Vice Chancellors to the Universities.

17. The Governors have used Articles 200 and 201 to serve the interests of the ruling party at the Centre.

During 1950—83 eleven Bills passed by the Legislative Assembly of West Bengal have been withheld by the President.

A Bill on the Abolition of Bengal Land holdings by the Government of Tamil Nadu is kept in the cold storage by the President without giving his assent.

Recently the Home Minister of the Union has stated on the floor of the Parliament that if this Hon'ble Commission recommends, then the Centre is ready to delete the portions from the Constitution which calls for the assent of the President.

We plead for the deletion of Article 200 and 201 as those provisions are anti-federal and anti-democratic.

18. The Centre has been adopting the policy of increasing the administered prices of certain key industrial goods over which it has control like Coal, Cement, Fertilizer, Steel etc.

For example last year the Centre raised Rs. 500 Crores through a hike in the price of coal. Instead, if the rate of excise was revised the States would have got Rs. 200 Crores.

The Centre should be advised not to reduce the resource-flow to the States by adopting such techniques. The Centre should not play this kind of tactics which is highly unbecoming and harmful to the interests of the States.

19. The Recommendations of the Finance Commissions should be accepted by the Union.

The recommendations of the last Finance Commission for the last year was not implemented and the Finance Minister advanced the plea that it was due to resource-crunch.

This argument if flimsy. We should not forget the fact that the Centre had spent hundreds of crores of rupees for the ASIAD. Where there is a will there is a way—Therefore it should be made mandatory that the Recommendations of the Finance Commission should be accepted and implemented by the Union in toto.

20. As K. Santhanam has put it, "Planning has susperseded the Federation."

As A. N. Jha says, "the stage has now been reached where if a State Government wishes to set up large number of Basic schools or Agricultural Colleges, Veterinary Colleges,. . .all matters obviously within the State field——it has some how got to carry the Planning Commission with it. This is a far cry, indeed, from what the earlier fighters for freedom has thought of and indeed what the makers of even our Constitution intended. But it has come about".*

——As a result of this the list of subjects of the Union, State and the concurrent have been vertically partitioned into Plan and Non-Plan sectors and that within the planning sphere the three horizontal lists have been turned into a single near-monolithik chunk controlled by and from the Centre. As the Report of the Study Team on Centre-State Relationships of the A.R.C. says "this is a distortion and the demonstrable weaknesses are so numerous as to call for a review of the system." (Page : 95—96).

Planning Commission has become the hand-maid of the Centre and the National Development Council is nothing but a mere rubber-stamp. The approval of the Plan by the N.D.C. is only an empty ritual. Both are not Constitutional or statutory bodies. Then, where is the question of "Planning from below" or "gross-root level Planning"?

Mr. Morarji Desai, who presented 10 Budgets to the nation, has stated on 2nd May 1970 in a symposium on Centre-State Relations held in New Delhi that it was true there was not a regular system in the devolution of plan resources and that "sometimes favouritism was shown to some people according as the predilections of people lay".

As more than two-thirds of the transfer of financial resources from the Centre to States is of non-statutory character at the discretion of the Centre, a donor-recipient relationship exists.

The Centre does not want to change this system because it gives them dominant financial powers.

——This system should be changed which cuts at the roots of federalism.

KERALA CONGRESS (J)

MEMORANDUM

More than three decades have elapsed since the golden lines of our Constitution have been framed. Thinkers everywhere will unanimously agree that the modern democracy is founded on those codes of conduct laid down in the Constitution which in turn have been directly or indirectly approved by the

* A.N. JHA "The Indian Journal of Public Administration". April—June, 1966 p. 164.

citizens. More and more rules and regulations will invariably check the freedom of man, even if it is for the betterment of the Society. Hence, in a modern democracy, every attempt should be made to give maximum freedom for the development of the individuality of its citizens, without being detrimental to the society. In other words, concentration of power will undermine the very idea of democracy. It is in this contest that we advocate maximum decentralisation of power, thereby delegating more and more powers to the States.

Contrary to 1916 Congress-League Lucknow Pact and the "Quit India" resolution of 1942, the Constitution of India when adopted by the Constituent Assembly in 1949, did not truly reflect the Federal character of the Union. The Quit India resolution emphatically declared "The Constitution of Free India will be a Federal Constitution with the largest powers for the States, residual power being vested with the States". It was only natural that the peculiar circumstances prevailing at the time of partition, the communal riots, the mass migration of the people and the deep scars of partition, let our Founding Fathers to think in terms of a strong Centre. But the working of the Constitution for the past three decades has further concentrated powers at the Centre. It was in this context that the Kerala Congress was formed in 1964 with the slogan "strong Centre and contented States". From the very birth of the Party (Kerala Congress) we have been pleading for necessary changes in the Constitution and for a redrafting of Centre-State relations. The past three decades have presented so many tests for our Constitution and happily our Constitution has proved its worth during this period. However, the different problems that have surfaced from time to time reminds us that it is high time that we examined and reviewed the present state of the relations between the Centre and the State, with a view to bringing about appropriate changes. We are really confident about the happy outcome of the Constitution of Commission, since it consists of eminent dignitaries who have deep knowledge and understanding not only of Constitutional and legal matters but also of the Socio-Political uniqueness of our country.

The following are the recommendations of the Party :—

(1) Before enacting legislations directly affecting the States by the Centre, the concerned States should be consulted.

(2) **Residuary Powers** : In most of the Federal Constitutions all over the world, notably U.S.A., Switzerland, Australia etc. the residuary powers are vested in the States. Contrary to this practice in our Constitution the residuary powers are vested in the Centre. We suggest that Article 248 of the Constitution which emplowers Parliament to legislate on matters not included in the State List or the Concurrent List be amended, so that the residuary powers of legislations are left to the State.

(3) As far as the List III—Concurrent List of the Seventh Schedule is concerned, for the purpose of discussions and advising the Centre before and after legislation, and to examine and re-review the problems and impacts of implementation, a high level committee represented by the Ministers concerned should be constituted.

(4) It is seen that certain Bills passed by the Kerala Legislative Assembly have not re-received the assent of the President even at this distance of time. The Party is of opinion that a definite time limit should be prescribed within which the State Government should be informed of the decision regarding assent to the Bill or with-holding of assent or of the message to the legislature for re-consideration of the Bill. Where the President withholds assent, it should be clearly laid down that the reasons therefor should be stated in writing.

(5) It is the Prime duty of any Government to feed its citizens, especially so, when there is shortage of food-grains. Hence, every State Government should be given the freedom to purchase from the open market of any State food-grains without any technical or legal hindrance.

(6) At present, entries 45, 46, 47 and 48 of List I of the Seventh Schedule gives almost complete control of the large scale financial and banking institutions to the Centre. Often, in effect, this adversely effects the balanced economic development of the country. So as to give the State economy a rejuvenating effect, the Centre must make it a policy to invest what is collected from the State through these institutions, in the same State itself. The State must have a say in such investment.

(7) Likewise, the duties and taxes including Central Excise and Customs Duty collected from One State must invariably be spent for the development of that State.

(8) The Foreign exchange obtained through export of cash crops and man power should be transferred to the concerned States for the welfare of the people who are actually behind it.

(9) While the Centre decides to import agricultural products, excluding food-grains, it should only be with the consent of the State which customarily produces the product so that its economy will not be adversely effected.

(10) The State should be given proper representation in the Planning Commission, and the Planning Commission should be made a statutory body.

(11) The present practice of imposing Central Excise duty on certain items should be abandoned and sales tax introduced instead.

(12) The practice of frequent price hike adopted by the Central Government for mobilisation of resources should be stopped and instead, excise duty should be imposed on such items.

(13) If the State Government is convinced about the availability of sufficient resources, working capital etc. required for a particular industry, the Central Government should give clearance for starting that industry.

(14) The Central Government should take steps to see that all essential commodities are made available to the public at the same price throughout the country. If this is not possible, the amount spent by the State Government towards Dearness Allowance for the employees should be reimbursed to the concerned States.

(15) Whenever a State is within the grip of some natural calamities like flood, drought etc. effective means should be adopted to send relief to the State, without any delay. The present practice is to send a Committee of experts from the Centre to study the problem, and to give some inadequate relief based on their report. This is very time consuming and hence at least 50 percent of the relief, based on the calculations of the experts from the State itself should be disbursed to the State immediately.

(16) While starting new industrial ventures, the Centre should see to it that every State receives a just proportion of the investments. To decide the proportion, the criteria must be the investment by the Centre per head in every State.

The Kerala Congress (J) is confident that the Commission would give due consideration to their views and would make recommendations that would help our nation to protect and uplift the democratic values. Moreover the Party feels that the recommendations of the Commission would help to bring in a balanced growth in the country, where one State would not be thriving at the expense of others.

MAHARASHTRAWADI GOMANTAK

MEMORANDUM

For 25 long years since our liberation from Portuguese rule we, the people of Goa, Daman & Diu are being governed by the Central Government through an Administrator assisted by a Council of Ministers. To give semblance of self rule we have been given a Legislative Assembly. However, the provisions of The Constitution of India and the Government of Union Territories Act, 1963 make it amply clear that we are no better than subordinate citizens of the great Country.

This anomalous situation needs to be permanently ended particularly in the context of the claim of various State Governments for greater autonomy as well as the feeling of resettleness pervading the minds of large section of the people of the Country over what they feel the excessive domination of the Central Government over the affairs of the various States, Union Territories and their people.

The Union Territory of Goa, Daman & Diu has taken big strides over the last 25 years in matters of every field of development. Though geographically we may appear to be a small place on the Country's map we are no doubt big in many other matters and compare favourably and even better with a number of other States and Union Territories in matters of our revenues, per capita income and in administrative infra-structure for our promotion to full fledged Statehood.

We have at present two Members in the Lok Sabha duly elected by the people. We have however no elected representative in the Rajya Sabha due to our Status as Union Territory. Consequently we cannot take part in the election of the President of India who is supposed to rule this Territory through an Administrator appointed by him.

We do not have our own Public Service Commission and are therefore dependent upon the U.P.S.C. for all appointment to the Goa Administration.

We earn a lot of revenue by way of taxes and duties. We are denied our share therein because of our status as an Union Territory.

We are richly endowed with natural beauty, a harbour and an International Airport besides rich deposits of iron ore, forest wealth, water resources and a cultural heritage which establishes out oneness with the Mother Country. For the purpose of carrying out official business we are endowed with languages like Marathi and Konkani one of which namely Marathi is already at the pinnacle of glory and the other namely Konkani is being enriched by our people to take over the challenges faced by any modern Indian language.

Our demand for Statehood is unanimous, earnest and strong. Public opinion will not brook any further delay in bestowing Statehood upon this Territory. Our Party, in consonance with the Public opinion submits that the Commission should make a strong recommendation for granting Statehood to this Territory and thus get on par with the rest of the States our relations with the Government of India. As regards our overland pockets of Daman & Diu we request that the opinion of the people of those regions may be considered by the Commission separately and in case they desire to be with Goa in the new framework of Statehood their wishes may not be ignored.

MUSLIM LEAGUE KERALA STATE COMMITTEE

MEMORANDUM

The Memorandum submitted to the Hon. Chairman of the Sarkaria Commission by N. A. Mammu Haji, M.L.A. and Secretary of the Legislative Party (on behalf of the Muslim League State Committee).

Welcoming your visit to the State, we bring to your notice the following points :

1. The Centre-State relations should not be the same as the relation between the States and Local Bodies. Except in certain specific matters, the States should be given ultimate powers.

2. The Centre and the States should have equal rights in enacting Legislations. The power for this is concentrated in the Centre at present. This should be shared by the States also.

3. At present, the States are depending on the Centre for their existence. The Commission should submit its strong recommendations about the dependence of the States.

4. Since the Central Government is misusing its power to enact Legislations on State subjects, it is better to delete this power.

5. The State Governments should have access to matters which do not come within the Union list or the Concurrent List. The interference of the Centre like giving directions to get the assent of the President in Legislations passed by the State Legislatures, should be avoided to the maximum.

6. According to the Constitution, the National Development Council, which consider the problems of the State, and the Planning Commission should be separate bodies.

7. The Governor should be answerable to the State Legislature. The consent of the concerned State Government would be obtained before the appointment of Governor.

8. Since Article 356 is frequently being misused, this must be deleted from the Constitution.

9. 75% of the total revenue mobilised from a State should be expended for the welfare of that State.

10. The Central Government should give directions to the States to preserve the rights of the minority communities and to redress their grievances; and that measures would be taken to review the implementation.

Hoping that the Commission would submit its recommendations to the Centre as early as possible.

PEASANTS & WORKERS PARTY OF INDIA
Kerala Unit

MEMORANDUM

MEMORANDUM submitted by the State Committee of the Peasants & Workers Party of India (Kerala Unit).

India is a Union of States consisting of people of different race, culture, language, religious and historical background. Unity in diversity is the core of our nation. The framers of our Constitutions had endeavoured much to strike out a balance between fissiporous and dictatorial tendencies prevalent in our nation at the time of independence. Although our constitution could survive the test of time, now it finds that the rulers at the Centre are trying to minimise the federal characters and to convert into a unitary one. Unless this tendency is checked in time, the integrity of our nation could be lost soon. Hence it is incumbant on the part of everyone to assess our experience of the last 37 years and to formulate a new approach to the whole problem.

To begin with we would like to state that the present State of affairs has degraded the functioning of the State to that of a municipal council. The States are always in need of finance to carry on welfare measures. Although the Centre is reequipped with extra ordinary power to raise money by resorting deficit finance, the States have to beg before the Centre to fill up the gap between the revenue and the expenditure. The facilities of over-draft given to the States are not sufficient to meet the present exigencies. In our opinion 75% of the total revenue of the nation should be distributed among the States in proportion to their population. Finance Commission must be constituted as a permanent body with a permanent Secretariat. The recommendations of the Finance Commission shall be made binding on the Centre as well as on the States.

It is distressing to note that several States are lagging much behind in economic progress. It is alleged that the rulers at the Centre are favouring certain States by starting new industries in that State disregarding the equitable claims of other regions. This economic disparity among the states could naturally inculcate an ill-feeling among the States. In order to avoid this the State should be given free hand to issue licence to start new industries both in the private and public sectors even with foreign collaboration. To further the inter-state trade all barriers including taxes, cesses, duties etc. must be abandoned. The Central Govt. should take the responsibility to see the essential commodities such as food grains, edible oil etc. is evenly distributed to all states at fair prices.

Education must be made a subject of list I of Sch. II of the constitution. Education must be nationalised and a national education policy should be accepted in order to imbibe secular, democratic socialist outlook in the younger generation. No activity which affects secularism should be allowed in any of the educational institutions whether it is run by majority or minority communities.

In order to solve the disputes among the States and to chalk out national programmes for the uplift of down trodden masses, inter-state council must be constituted as provided in the constitution with all Chief Ministers as members and Prime Minister as the chair person. This body should be made a permanent one. All legislation affecting the people of two or more States must be discussed and approved by the council before introducing them in the Parliament or in the State legislatures.

Planning Commission must be a statutory body independent of central executive. Outstanding scientists, economists and technicians shall be included. It should tender advice and schemes formulated by the States. It should make recommendations for consideration to the Finance Commission regarding foreign exchange to States for industrial undertakings in the States.

Governors shall be appointed by the President only after considering the views of the cabinet of the State concerned. Art. 185 shall be amended to that effect. The Governor shall be removed if the assembly passes a resolution with a 2/3rd majority expressing its displeasure.

Legislative councils should be abolished.

Art. 200 must be amended so that all bills passed by the legislature shall be assented invariably by the Governor since the provisions to withhold assent is quite redundant in the light of powers of judiciary review vested with the judiciary of the country.

Art. 356 must be amended so as to confine the power vested with the President to dissolve the State assembly and to assume power by himself only in cases where the integrity of the nation is found to be in danger or when cessionist forces are active to endanger the unity of the nation.

REVOLUTIONARY SOCIALIST PARTY

REPLIES TO QUESTIONNAIRE

1.1 No. Even though bearing a superficial structural similarity with a Federation, the constitution has reduced the constituent units into the practical status of provinces as under the Government of India Act, 1935, with sweeping overriding powers to the Union even without any clearly delineated objective conditions under which the same may be exercised. Thus in the constitution-framing the constitution-makers' declaration, as quoted here from the A.R.C. Study Team's comment, found a lop-sided implementation, with everything revolving round 'strong centre' with little room for a true 'Federation' in any sense of the term except in a very superficial form.

1.2 Arts. 251, 252, 256 & 257(1) as also Arts. 352-360 and 365 should be deleted because these Articles envisage undue inroad on States' legislative or administrative rights and abridgment of citizens' restricted fundamental rights under undefined conditions. These provisions in the constitution are most offensive ones whether viewed from the aspect of States' rights, not to speak of States' autonomy, citizens' civic and democratic rights and most of all the basic democratic principles.

1.3 Decentralisation and centralisation should not in this manner be juxtaposed against each other. It is not merely a question of integration and unity artificially created by constitutional provisions. The organic unity in thought and action should permeate units as well as the centre, while allowing for fruitful initiative and clearly demarcated jurisdiction for different levels.

1.4 This question has to be examined in the national setting. India is a multi-national State. Generally speaking, India needs a full-fledged federal system. The Constitution should be reviewed as a blue print for action and development. It has to be changed in accordance with stages of development. The constituent units of Indian federation may even be given the right to secede. Conditions, however, should be created by actual performance so that such an eventuality does not arise. Changes in basic approach on various aspects are necessary, not a patchwork.

1.5 While not accepting (a), it can, however, be contended that even the half-baked Federation of the Indian Constitution has further been diluted by various extra-constitutional means. Though the observance of Federal principles, as they are incomplete in themselves, cannot be ensured by (i), yet so long as the Constitution is not overhauled (ii) can be given a trial to check distortions even of existing constitutional provisions.

1.6 The provisions relating to the official language or those providing safeguards for minorities or reservation for scheduled castes and tribes may perhaps be cited in this regard. Experience shows that these are very insufficient for the purpose, particularly because instead of laying down any strong basis for freeing the country from the strangle-hold of superstitions and prejudices, religious and social, which really stand in the way of integration of the people of the country as human beings, most of the foregoing provisions either help in perpetuating them or give rise to new tensions, allowing for preferential treatment to a particular language in this multi-lingual country.

In order to foster national integration, it is necessary to promote communion of class interests. Even a bourgeois State System can do that unless it feels the compulsion of preventing conflict of class interests by hurturing communal and caste divisions and by fostering linguistic animosities. The social backwardness is but an outcome of economic backwardness which is the result of the failure of the State System to ensure food, clothing, shelter, health and education for all. If the entire population of the country are assured these five things, it is bound to generate a climate of change and a level of national progress in defending which as also in further improving which every citizen of the country will feel an willing obligation. As pointed out in 1.4, "the constitution should be a blue print for action and by involving all citizens in its implementation can the integrity and sovereignty of the country be best ensured."

1.7 Thoroughly unreasonable. It leads to despotic centralisation. Those provisions are virtually made the handmaids of power politics of the ruling party at the Centre. Past experience bears testimony to this.

1.8 Certainly. This provision cuts at the root of federalism which means a voluntary union of constituent units. The concerned State/States and their people should be the ultimate decision-makers in this regard and not the Centre.

PART II

LEGISLATIVE RELATIONS

2.1 & 2.2 'Legislative powers' should not be viewed in a vacuum. Legislation gives expression to social realities. Therefore whether the distribution of legislative powers is commensurate with the federal principle in a functional way should be

assessed not only in a constitutional form but in the perspective of the entire gamut of multifaceted life. It is the economy, politics and socio-cultural milieu of the country which provide flesh and blood to the polity. Hence any constitutional provision may be practically negated in actual political process. So the distribution of powers should be viewed as a comprehensive problem embracing the entire society. We have to give an economic interpretation of the constitution which would enable one to clearly analyse the class Character of the State.

It is a reality that the Centre has acquired power which it cannot usefully discharge or powers which properly belong to States. Even Sanjiva Reddy (Press Interview, Jan. 1978) complained about the erosion of federal structure. He said ——— "A State Chief Minister cannot undertake even the small things, a health scheme or a forest development scheme or something like that. Officials from the Centre thinks they have to go from the Centre to the State within the constitutional framework".

The Administrative Reforms Commission opines, "As a result of planning, the three horizontal layers of administration represented by lists of Central, concurrent and State subjects have been vertically positioned into plan and non-plan sectors and that within the plan world, the compulsions and consequences of planning have tended to unite the three horizontal piece into a single near-monolithic chunk controlled from the Centre although operated in respect of concurrent and State subjects in the States". "The committee was of the view that this position has created a distortion" with numerous demonstrable weaknesses and calls for a review of the system. The Committee feels that the constitution is well balanced, and this balance has been tilted to some extent in favour of the Centre during the last two decades. And again this refers only to matters administrative and financial and not to constitutional issues. The Committee concludes that it is not necessary to amend the constitution. The constitutional provisions should be worked by all concerned in the balanced spirit in which the founding fathers intended them to be worked.

On the other hand Rajamannar Commission wanted to make the Indian Constitution an exact replica of the U.S. constitution.

So these commissions do not see the actual problem. The former wants to make patchworks. The latter wants the American model. What India requires is neither of the two?

Article 201 of the Constitution and related provisions for the President's assent to bills passed by State legislatures call for a review in the light of experience. Assent has been delayed for months on end and to the Bills which State Legislatures were well within their rights in enacting *albeit* on matters in the concurrent list. Withholding the President's assent arbitrarily results in a virtual denial of the concurrent power to the States and drastically affects the distribution of legislative powers between the Union and the States.

Further, even a legislation by the State within its competence requires Centre's help in many a field and hence it has to be tailored according to the instructions of the Centre. This is an effective check on the legislative powers of the State.

When the State makes an enactment in the case of any subject within its competence it should have all the infrastructure and other requirements for the implementation of the law. The following instances prove a strong tendency diametrically opposite to this.

If the directive that the State Government must be in tune with the Central Government is accepted (Mrs. Gandhi 3/2/72), politically speaking constitutional division of powers becomes not only blurred, but also irrelevant, the late C. M. Stephen said (7-3-1980) that the States which did not invoke the Central law for preventive detention against boarders can or may be pushed out.

2.3 Not only consultation there should be actual concurrence regarding the issue. In that case, better understanding may develop.

2.4 This provision is an encroachment on States' legislative powers and should not be there. Such conditions should better be avoided. Such a situation is highly pathological showing lack of prudence, planning and foresightedness. The harmonious correlationship and interaction among 'national', 'public' and 'state' interests should not be assessed in a despotic or authoritarian way. In the context of deepening economic and political crisis in India, such declarations will naturally lead to usurping the powers of the State.

2.5 Residuary powers should be with States.

PART III

ROLE OF THE GOVERNOR

3.1 It should be categorically stated at the outset that we are strongly in favour of the abolition of the office of Governor as the agent or nominee of the ruling party at the Centre.

(a) What has been practised since 1950 has been as envisaged by the Constitution.

The Governor has always been and is, by all means a thorn in the flesh of any State Government as an instrument in the hand of the Centre. Legislative provisions regarding this amply prove the erroneousness of the contention that what was envisaged was something else. The founding fathers of the Constitution were not fools, neither those who came to powers since '47. The nature of the ruling class necessitated centralisation and increasing authoritarianism. Naturally the Governor both in theory and practice has increasingly become just an instrument in the hands of the Centre, for the Central ruling parties and its interests.

3.2 If there were a genuine federation in India there could be no justification for the office of the Governor. Of course there should be co-ordination between the States and the Centre by the office of

Governor hardly performs that task. This should not result in the dwindling or dwarfing the States and the imposition of the interests of the ruling party at the Centre on them. We have been simply following the colonial pattern. States in a Federation in the true sense of the term has no need of a guardian imposed by the Centre or for its watch-dog.

3.3 (a) To-day the Governor obeys and has to obey or will be made to obey the dictated of the Centre. The Governor should have no such power.

(b) The leader of the majority party or leader of the parties should be appointed Chief Minister. His power to appoint the Chief Minister should not include discriminatory exercise of discretion favouring a particular group. The Governor, of course, has the duty to see whether the leader commands the majority. In case of any doubt, different Parties in the Assembly should elect respective leaders and the Assembly should be summoned to prove the majority in the House of the leader of a Party or group of Parties.

(c) The experience, so far, has shown that this power has often been misused by the Governor in favour of the ruling party at the Centre. Before the decision to dissolves the assembly is taken, the different groups in the Assembly or at least that group which could form a ministry should be given an opportunity. So also the Governor, without exploring the possibilities for the formation of a ministry, should not decide against the summoning of the Assembly e.g. Kerala election in 1965 and its aftermath. The Assembly was not at all summoned. Here the exercise of discretion by the Governor was undemocratic, unconstitutional and he was equivocably supporting the ruling party at the Centre.

There should be done so long as the office of the Governor in its present form exists. We are strongly in favour of the abolition of the office of the Governor.

3.4 This question itself is unwarranted. The details concerning the problem involved here are well known. This question tries to collect information which is already available. Further whether the Governor has acted without advice from his Council of Ministers is not expected to be known by the public. It is something confidential. It is regretable that such a question found its place in the questionnaire. Reservation of the Bill by the Governor for the consideration of the President is done with a purpose. This gives the pressure groups, interest groups and the opposition to represent against the Bill and dilute it. Here it ultimately results in the negation of the competence of the State to legislate over the subjects assigned to it. Such instances in different States are well known. The most recent example is the act of West Bengal Governor is reserving the Calcutta University (Amendment) Bill for President's assent on his own.

3.5 Do not agree. Facts are to the contrary. The first portion of the comment is more objective.

The process of Presidential assent has not only acted as a substantial threat to the autonomy of the States but it has ultimately resulted in the virtual defeat of actual content and purpose of the Bill. Then it becomes either superfluous or anti-people, with the changing time. The delay of 1 year to 5 years is eloquent proof of the obstructionist nature of this provision, if nothing else.

3.6 **Answer to the First question:** It is only a pious wish couched in empty verbiage. They undoubtedly act from the States with a close link with the Ruling Party at the Centre, the latest example being Talyarkhan, Sikkim Governor. They have been without any dependent role.

Question No. 2: Many an instance could be quoted, (provisions governing the office and duties of the Governor combined with Art. 356) (1) Dismissal of the Communist Government in Kerala in 1959 even though it continued to have majority support in the Assembly, (2) The dissolution of the Kerala Assembly in 1965, (3) Dismissal of the United Front Cabinet in West Bengal in 1967 in spite of its majority in the Assembly, (4) Dissolution in 1971 of the West Bengal Assembly without giving an opportunity to the CPI(M), (5) The wholesale dismissals of a number of State Assemblies in 1977 and 1980, to quote a few. The role of G. D. Tapase in Haryana enabling Shri Bhajanlal to purchase support to form the Congress(I) Ministry is still too fresh. (6) In 1952 Shri Prakash, the then Governor of Madras, refused to invite Shri T. Prakasham who had been elected leader by all the opposition parties to form a Government, but nominated C. R. as a Member of the Legislative Council and then invited him as the leader of the Congress Party, to form the Government.

(7) **The worst Examples:** In Bihar in 1967, when the specially appointed Governor, N. Kanungo, appointed S. P. Singh as Chief Minister just for a day so that, on his advice, B. P. Mandal could be nominated a Member of the Legislative Council and then, as agreed beforehand, S. P. Singh resigned and B. P. Mandal was installed as Chief Minister.

3.7 In addition to this something more should be done if we decide to continue the office of the Governor.

(a) Supreme Court in Dr. Raghukul Tilak's case—(Hargovind Pant Vs. Dr. Raghukul Tilak—1979)—Governors not amenable to the direction of the Centre—not subordinate of subservient to the Centre—he is not accountable to them—his is an independent constitutional office, he is constitutional head of the State.

(b) ARC—a person should not be appointed as a Governor for more than one term.

(c) ARC—study team: Headed by M. C. Setalvad.

—No person who is appointed Governor should take part in politics after his appointment as such not even after retirement *K. Subba Rao* (former C. J. of India)—a Governor should not be eligible for any other office under Government after retirement and should be irremovable from office on any ground other than proven misbehaviour or incapacity after enquiry by the Supreme Court.

Even if all this is done, the problem is not solved. If the Governor proves to be recalcitrant, even then the President can take action under Art. 355 if he is "otherwise satisfied 'that........'. Then what is the use of bringing Amendments to the Constitutional provisions regarding Governor? It is a question of changing the basic approach of the constitution in this matter.

3.8 This can be done if property carried out, but the Speaker should conduct the meeting and forward the outcome to the Governor who should act accordingly. The legislature is the representative of the people of the State. Its decisions on the floor of the house should be accepted by the Governor. In certain cases (as in the case of Kerala in 1965) the suggestion in the Q. 3.8 could be put into effect.

3.9 The suggestion may be given a trial, but, in our opinion, the Speaker whose office should remain a continuous one should summon the House, recommend dissolution of the House when it is not possible to have a ministry enjoying majority support in the Assembly. In such a case the House should stand dissolved and elections held in two months' time during which time the outgoing Ministry would act as a Caretaker Government to discharge routine functions of the Government. The Election Commission which should be expanded, should be responsible for conducting the elections by direct arrangement with Police and General Administration through the requisition of different categories of personnel. The constitution should, accordingly, be amended.

Add 3(10). See copy.

PART IV

ADMINISTRATIVE RELATIONS

4.1 Art. 256 is concerned with wilfull neglect of enforcement of a Central law of a mandatory character, or else the word 'compliance' would have no meaning. A law like P.D. Act, for instance, is only an enabling statute which adds to the armoury of the powers of the Governments, Central and State. Each enjoys a clear discretion as to which statutory power has to be exercised. What a State cannot do, of course is to obstruct the Union if it exercises its own executive power under a Central law within that State. Article 257(1) is designed to remove an obstruction to the Centre's move to enforce direct a Central Act within A State. According to Dr. Ambedkar through Art. 257 it was sought to meet a situation 'which makes it impossible for the Provisional Government to be carried on'. However, the provisions continue permanently even after the transitional phase.

The sanction for securing compliance with a Central Directive in such a case is a drastic one which is precisely why it cannot be used without offending the autonomy of States. It is Article 365 which paves the way for imposition of the President's rule (Art. 356). The remedy against such abuse is a judicial one. The Supreme Court has opened the door ajar to judicial review. It should be persuaded to open it wider.

The idea of giving directions to the State is foreign and repugnant to a truly federal system. Arts. 256 and 257 are taken from the 1935 Act with all the attendant loopholes, drawbacks, imperfections etc. as colonial legacy, suited to the new ruling class. It is to be noted that the Constitution prescribes a coercive sanction for the enforcement of the directions issued under Articles 256 and 257, namely the powers of the President to make a proclamation under Art. 356 via Art. 365. Our opposition to Art. 356 does, by implication, envisage deletion of Art. 365 even though it contains a fecade of an objective criterion and is at best an enabling clause.

A federal constitution involves the sovereignty of the units within their respective territorial units.

The experience of the working of the constitution so far makes it clear that the constitution has been used by the Centre to establish its dictatorship over the States.

When the provisions regarding Governor and Art. 356 are there, the Central Government need not make use of 365 in order to topple any State Government. Therefore the absence of any instance of invoking 365 need not be taken as justification for the incorporation or the continuance of 256 and 257. Nor do we know of any instances which justify Arts. 256 and 257. Hence, both the articles should be deleted.

4.2 365 can safely be deleted even from the point of view of the ruling party at the Centre. Even without 365 the Centre can smoothly establish its dictatorship over the States under the Indian Constitution. The utter lack of confidence in the democratic process of the country and the principle of federalism has been writ large upon the entire process of Centre-State relationship as envisaged in the Constitution. The overabundance of safeguards for the foolproof dictatorship of the Centre is unabashedly provided for in the Constitution. Therefore one need not worry at all if 365 is deleted. Nor would it signify any significant improvement in the unitary character of the Constitution.

4.3 If the provisions remain, the Centre could exploit them at will going through motions of discussion.

In this connection a piece from the Constituent Assembly Debates may be quoted. Nehru wanted Education, Health and Forests concurrent subjects (instead of State subjects as under the 1935 Act) for integrated development of whole regions and of the country. G. B. Pant and G. B. Kher (provincial Govt. chiefs) objected. Then Nehru asked how would it be possible for an integrated plan for forest development to be carried out unless the subject was included in the Concurrent List? G. B. Pant's reply was, "It was not legislative coercion that would help in such matter, but pursuation and willing consent. It is this that most protagonists of a dominant centre have overlooked." Hence, these provisions (Arts. 256 and 257 (1)) should not bother. The foresight of Constitution-makers, as manifested in Art. 356, is an apprehension that States may slip out of their hands.

4.4 This extra-ordinary remedial power has been arbitrarily, irresponsibly and despotically used in a narrow partisan way. Instances have been cited above. Latest example was in Jammu-Kashmir where the Speaker was forcibly thrown out. All those cases are well-known and need no explanation.

4.5 Under no circumstances Art. 356 should be there in the Constitution.

4.6 It would be better if the present arrangements are continued. There can be no other suitable arrangements.

4.7 Yes, these activities could be carried out by the States. If the State actually wants any help, it may be given by the Centre in such a way that it should never become an obstacle to the State's autonomy and operational freedom. The Centre's role should at the most be that of a guide and not of an arbiter or dictator. Even advice may amount to virtual dictate and should be avoided to the extent possible. Bodies referred to here should be autonomous with complementary role both for States and Centre. They must not make inroad into States' jurisdiction.

4.8 All India services are not necessary though Inter-State transfers and open recruitment should be there. States' control over services is a must for proper functioning of the democratic system.

4.9 Only if the State wants and not otherwise. This should apply in case of all central forces. The Centre must not have the power to do so *suo moto*.

4.10 To be shared between Centre and States There is hardly any justification for these media being the monopoly of the Centre.

4.11 So far they have not been instrumental in collectively pursuing States' interests by cutting across party lines. The Councils themselves are practically non-entities and are under the thumb of the Centre.

4.12 Inter-State Council should be set up on a permanent basis. The Council should have an independent Secretariat.

In this connection the recommendations of the ARC may generally be followed to begin with (in all respect *i.e.* in organisation, functions, etc.). The Inter-State Council may be the pivotal co-ordinating body on all matters where States' interests are involved and any move of the Centre should be subject to discussion and decision in the Inter-State Council.

PART V

FINANCIAL RELATIONS

5.1 The question essentially is not whether the scheme of devolution as envisaged by the constitution-makers has worked well or not. The essential question is whether the scheme as has been prescribed as actually practised has been prescribed and actually practised has been helpful to the States. The answer is an emphatic and unequivocal 'no'. There is partisanship and discrimination. The entire show is manned by the Centre. Uneven development, lopsided development and even what is akin to internal colonisation has come into existence as a result of the economic, fiscal and monetary policies of the Central Government. The State's needs and aspirations should be taken into consideration. Development and not party politics should be the guide in this respect. More than anything, the basic arrangement of the distribution of the country's finances between the Union and the States is wrong and does always leave States subservient.

The financial problems and constitutional provisions regarding this cannot be separated from the economic system of the country. The collection of taxes and also distribution among the States, allocation of taxes etc. depend upon the economic system. Financial relations, when isolated from this fundamental problem and considered as merely a problem of relationship between the Centre and States, cannot be solved in a scientific and systematic way. Any way, the basis on which there has been devolution of finances, through sharing of revenue resources between the Centre and States as also through grants-in-aid from the centre has never been automatic and free from interference as would be clear from States' memoranda to successive Finance Commissions as also the *ad hoc* nature of the recommendations of the Finance Commissions which did hardly touch the basic issue of division national finances through a scientific system taking away the lever of finance from the hands of the Centre.

5.2 The observations of the Study Team of the ARC, as quoted, hold good all the more to-day. There are also other problems which the ARC have not mentioned. What with the Finance Commission or the N.D.C., the role of the given on the part of the Centre has been all the more pronounced, with even the Prime Minister threatening to stop financial assistance if a State is not well-behaved by her standard. The important problem is that some States may not have adequate financial resources to exploit all the resources and develop its economy. In such cases for the even development of all regions to the extent possible, the Centre has the responsibility to help those States and this should be done as a necessary things, of course, in the process of the governance of the country as a whole, taking all the resources of the country into account. For this adequate provision should be there, providing for the mutually complementary status of the Centre and States.

In this respect a high power Commission consisting of the representatives of the States and the Centre (both experts and those who have a total view of the society, *i.e.* both specialists and generalists) may be appointed as the Finance Commission/the Planning Commission, as they are constituted today, cannot do this. All aspects of the problems related to Finance and development should be studied thoroughly. The recommendations of these Commissions should be considered and finalised by the NDC which should, however, give adequate reasons for departure from any of them.

Regarding the alternatives, broadly speaking, under the existing system of distribution through divisible pool, (d) and (e) have to be incorporated.

(c) can be outright rejected.

(a) Keeping in view that States are responsible for all the Welfare measures and that they are accountable direct to the people who hold them responsible in the first instance for their weal or woe, major heads of revenue should be reserved from them, allocating to the Centre resources enough to discharge their responsibility in regard to Defence, External Affairs, Communications, Railways (the last two being revenue earning also), International Trade and Commerce as also currency besides co-ordination which should largely be carried through the NDC, Planning Commission, Inter-State Council and similar other bodies whose expenses should be borne jointly by the Centre and States.

Instead of the procedure suggested in (c), it may be the other way round.

Let the tax heads be decided upon without any reference to their being under so-called State or Union List. The responsibility for collecting taxes (however it is termed) within a particular State would belong to the State concerned. After deducting the collection charges, the net collection be divided between States and the Centre generally on the basis of 65 and 25, keeping 10% to be made over either to the Centre in case of urgent requirements for the efficient and proper discharge of its vital functions or for greater development requirements of relatively poor States.

Needless to say, control and benefits of financial institutions should also accrue both to the Centre and States. It is the development needs which should be the determining factor and not the criterion of raising of resources, the Centre providing the matching share, as is the system in the main at present.

5.3 While giving more financial powers to the States in general, provisions can be made to help the poorer States. When we examine the development hitherto, it has been directed for the benefit of the landlords, capitalists, traders and foreign exploiters. It has also led to regional imbalances. Exploitation of the resources, men and material, has always been in this perspective. The basic malady is in the field of the ideology of development, which is geared to the interest of the ruling class. Unless it is changed, the arrangements made whatever they may be, would serve only as adjustments.

If the Centre is made the guardian of the development of the poor States in the present context, it will further subordinate the States and will certainly add to the already strong, dominating role of the Centre.

There may be a system for pooling all the resources of the country and distributing it to the different regions with a view to the exploitation of resources and economic development according to the needs and potentialities of the various regions but this should not lead to the condition of the States as receiver and the Centre as the benevolent giver.

The question has been posed in a peculiar manner. It is the States who are expected to implement welfare measures which may lead to improvement of conditions of people in general, particularly those who are poorer because of an exploitative economic and social system. Nothing has so far been done by the ruling power at the Centre to touch the exploitative system or the basic inequality. Nor has anything worth-while been done to remove regional imbalances. Rather, it has been the other way round. Hence, the Centre, as oriented at present, is hardly a fit instrument to remove regional imbalances. Moreover, it should be borne in mind that it is the basic inequality which is the basic ailment and to expect the protagonists of this basic inequality who have pushed larger and larger segments of people all over the country below the poverty line, to remove it from any party thereof is unrealistic. Hence, the suggestion is totally misconceived and deserves total rejection. The scheme of division of resources, as enumerated in 5.2 would serve the purpose to the extent possible under the existing socio-political structure. The task of removing inequality involves social revolution and is not just a matter of constitutional provisions within the existing socio-political structure. Non-justiciable high-sounding verbiages contained in the Directive Principles of State Policy (Arts 35-51 of the Constitution) were devised merely as an eyewash to hoodwink the people as to the true class character of the Constitution and its makers and cannot and need not be taken seriously as the State System itself is not only incapable but also opposed to implementing any of them, *viz.*, elimination of inequalities in status, facilities and opportunities right to an adequate means of livelihood to citizens, men and women equally, to avoid concentration of wealth, to prevent abuse of tender age of children, to protect childhood and youth against exploitation and against moral and material abandonment or education for all after the age of 14 etc., just to quote a few.

5.4 All the three measures could be used invariably. To the extent possible deficit financing may be avoided. There is vast possibility for raising new revenues from the richer sections. Tax evasion should be effectively prevented. Better control over expenditure has been reduced to only a lip service. Actually, unnecessary expenditure has ever been increasing. The resources of the country are being utilised for non-productive purposes. The present loan melas provide an example. If the suggestion in 5.2 is accepted, the present position in this regard, is bound to change and the question of deficit financing would came in a different manner.

5.5 A little over 60% of the budgetary funds from the Centre to the States in the past 30 years (51-81) came in the form of plan and discretionary assistance and only 40% was transferred on the basis of recommendations by Finance Commissions (statutory grants play less than a central

role). The weightage of statutory grants is, naturally, even smaller when non-budgetary transfers are also taken into account. Tax sharing, as a portion of the total revenue transfer from the Centre to the State, is 40%. A Finance Enquiry Commission may be appointed to go into this question. The criterion for assistance should be development and other non-developmental essential requirements.

5.6 Constitutional provision is necessary for such a fund which should be under an independent statutory authority with the task of implementation on States concerned.

5.7 If the Centre and States are seen to be collectively responsible for ensuring 'freedom of trade, commerce and inter-course in the country', whatever the last one may mean, as it cannot but he, to be effective, the overall scheme suggested in 5.2 should suffice. A complicated devolution procedure tenders to leave greater leverage in the hand of the Centre against States. Entire financial scheme in the Constitution paves its way and hence should be changed basically.

5.8 The suggestion in 5.2 would and can take care of all these aspects. Any proposal that would further increase the Centre's power would be unacceptable in the light of the experience of the Union Government's functioning for more than three decades.

5.9 In this regard, the views of the Administrative Reforms Commission may be studied. Also further enquiry may be necessary. However, the present arrangement is haphazard and overlapping. The organisational status, structure etc. of the Planning Commission should be changed on the basis of the suggestion contained in this regard in 5.2. The precise functions of both the Commissions may be as indicated in 5.9.

5.10 Not at all satisfactory and promoted neither.

5.11 Yes.

So far to what extent economy measures have been sincerely followed and implemented by Central and State Governments? The involvement of both the Centre and States in the process and their complementary functioning for the implementation is a sure guarantee against any irrational practices inherent in the present system.

5.12 Yes, within the existing framework, so long as it cannot be changed.

5.13 Can be agreed to generally. The formula can help States to meet non-Plan obligations.

5.14 As has been asserted in 5.2, all resources should be harassed through the process stated therein, taking care of all the aspects referred to in the questionnaire. As it is, of late, the tendency of the Centre has been to raise resources through such devices as not to make the same a part of the divisible pool. The Corporation Tax resources is responsible for this state of Centre do not form a part of the divisible pool under Arts. 270(4)(a) and 271 of the Constitution. In successive Budgets, while keeping the basic taxes levied under Arts. 269 and 270 unaffected, surcharges are being increased in order to avoid their incorporation in the divisible pool. The amount thus collected and the Centre's own resources out of the divisible pool and from financial institutions including nationalised banks and LIC provide the Centre with sufficient leverage over states who are threatened or tempted, as the case may be, with money bags so dubiously filled. Even in implementing recommendations of the Finance Commission, Centre's discretionary power is wide as Art. 285 requires the President only to cause every recommendation of the Finance Commission together with an Explanatory Memorandum as to the action taken thereon to be laid before each House of Parliament. The 'action' obviously can be full or part implementation or non-implementation as there is nothing in the constitution to require the implementation of 'every recommendation' of the Finance Commission. In this context the inclusion of the emphatic 'every' is rather misleading. Thus the provisions regarding the Finance Commission, even so far as its existing functions are concerned, are highly unsatisfactory. The Union Government's decision to implement recommendations of the Eighth Finance Commission from the next financial year covering four years instead of five sharply illustrated this lacunae.

5.15 Shared in what proportion? What should be the criteria on the basis of which the proportion should be decided? If the present public sector is designed in such a way as to serve the imperialists and the private sector, a better distribution as suggested in the question will mean the escalation of the already existing interests. Of course the concentration of the vast majority of public Sector Undertakings as also of the pivotal among them in the hands of the Centre, makes this question largely academic.

Today it is done in a centralised way so as to benefit the big, monopolistic, bourgeoisie.

5.16 The total recorded budgetary deficits of States is less than that of Centre. However, the phenomenon pointed out does not become clear from the way it has been portrayed.

5.17 Naturally, States' obligation for at least a modicum of welfare measures and paucity of their resources, both developmental, have given rise to this situation.

5.18 It is a fact. However, this should be linked to specified functions and from clearly defined sources.

5.19 The present system of foreign borrowing does not help our economy and subserve foreign monopoly interest. However, the Centre should not change as it does, more from the States than it gives.

5.20 The suggestion of Loan Council for the raising of internal loan is better.

5.21 The gap between states' obligations and resources is responsible for this state of

affairs. It is the reallocation of resources which can remedy this situation.

5.22 Tax-dodging is not a problem peculiar to States. Moreover, elasticity of sources of revenue exploitable by States is practically non-existent in view of the Centre's all-pervasive thrust.

5.23 Facts agree with the observation. If the class character of the Central Government or that of the basic State structure does not change, there is hardly any scope for that.

5.24 It will not be enough to ascertain the view of States in such cases but to act in accordance with the general view.

5.25 If it means that States should be vested with the power to levy them and fix the rates, that is a welcome suggestion.

5.26 The claims of the States are quite justified.

5.27 The increase should be proportionate to increase in passenger-fare earnings. It is related to total financial arrangements in regard to Union territories and cannot be dealt with in isolation.

5.28 The assistance should be on the basis of actual costs of relief and rehabilitation.

The relief and assistance may be under specific heads, for which the money ear-marked should be utilised. It may lead to optimum and systematic utilisation of funds, making allowances for general assistance depending on the magnitude of the calamity.

5.29 With the ultimate residual role (better to say, authority) in-tact, the institutions would hardly help States except as grounds for giving expression to their views.

5.30 It matters very much as to who collects and to whom it is distributed even while agreeing to the last portion.

5.31 Not a periodical assessment but a continuous and comparative (year to year) assessment is essential in respect not only of both State and Central Governments but also of all public institutions. To serve this purpose there may be a statutory agency whose recommendations should have a binding nature. It may be called NEC.

5.32 Today these are carried out only formally. If these can be done properly and if active discussion is carried on these reports (of course it will be a post-mortem of expenditure), this may help operations in future. But today the executive legislative relationship and the role of the legislature remaining as they are, nothing substantial could be achieved out of this. Further the legislative committees being bureaucratic outposts, no serious analysis comes out of this system. Also, legislatures including Parliament have lost much of its effectiveness today.

5.33 Generally support 'evaluation audit'. But 'voucher audit', if conscientiously done, can pinpoint misuses.

5.34 The office hardly accomplished its assigned functions which are carried out dilatorily.

5.35 Of course the reports can be made more comprehensive and more accurate. Or further subdivisions may be made such as developmental, plan. non-plan. establishment, even establishment may be further sub-divided into police.

5.36 Not sufficient. Without a total change in the system, functioning and the attitude towards people's problem, these thing could not be solved properly.

5.37 Theoretically, yes, practically not so nor is there much scope for it in the existing political atmosphere.

5.38 Not really.

5.39 Undoubtedly, the changed procedure suggested will remove the irritant and may help in expenditious implementation. However, it all depends on a trustworthy system, which is not in existence.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The structure and functioning of an agency for making decisions and carrying them out is vitally related to its basic objectives. What has been achieved so far? Was it in the interest of the people? Procedural changes may not be much useful unless the basic objectives themselves are changed. Unless the totality of structural relationship between the Centre and States is changed nothing substantial could be achieved. Certain changes, if brought about, would very well be circumscribed by the Establishment without much difficulty.

6.2 Subject to foregoing observation, on NDC statutorily endorsed with power to formulate plans with greater scope for states to formulate their plans within a national framework is essential.

6.3 No. There should be change in the politics, economics and administration of the Central Government which appoints the Planning Commission. Transfer of power was achieved without a social revolution. National reconstruction and planning was set a foot without administrative revolution. The whole set up was based on a constitution which was more or less the replica of the 1935 Act which was enacted by the colonial matters for a colony. If this is the basis and foundation what could be the nature of the edifice? There may be changes in the procedure, in the structure here and there, or more formal representation may be given to the less privileged in an antiquated social system but the fundamental change can thus take place.

6.4 & 6.5 (iii) for obvious reasons and in the light of experience so far, only an independent and autonomous body can have its own views but in the present circumstances even an autonomous body may not be of much use. Even then it will be a change and such a situation may help to expose

things in a better way. It may bring about a better awareness of things in the 'concerned people' and also in the 'public', if there 'concerned people' are interested in the 'public'. The Planning Commission should function under NDC endowed with statutory power. The views of ARC may also be considered in this connection.

6.6 There should be decentralisation in planning with greater independence for States in formulating their Plans.

6.7 The system acts as a device to pressurise States to fall in line with the Centre.

6.8 Yes. Objective criteria for State Plan and assistance for State Plan should be the needs of the State, potentialities of the State for development and not the politics of the State or not the place of the State in the overall economic interests of the ruling classes at the Centre.

6.9 Unscientific, against the needs and potentialities of various regions and sections of the people. Everything so far was so directed as to serve the vested interests. Even the Special Assistance Schemes fail to subserve the interests of tribal and hill areas which are not at the take off stage and the assistance is utilised more as pay off.

6.10 The process of planning should begin from down below. Co-ordination, supervision guidance, etc., can be made by the Centre, but no imposition. Let the States decide what they want. Of course, the various States, while making their plans, do so not in a democratic manner, do not consult all the necessary agencies. The entire planning machinery, procedure etc., should be suitably changed to make it more responsive to popular demands and requirements.

6.11 Almost a dead letter. No systematic follow up or evaluation is there. Achievement of the financial target considered as most important. Evaluation reports point out certain peripheral mistakes but it never goes into the substantial aspects. The evaluation machinery is never expected to do that. Sometimes evaluation is done in such a way as to foster developments with a view to stabilising what is already achieved.

6.12 & 6.13 Much has already been said and written about this. Through answers to a questionnaire these things could not be analysed. If the Government (both the Central and the State) is in earnest, steps may be taken to initiate a serious discussion on these problems at different levels involving all concerned.

But if a Committee of generalists are appointed to go into the question of how far specialists should be more involved in things, nothing would come out.

Strengthening of planning machinery may enable the State Government to plead more systematically and with more clarity. This can be done by all the States. If statutory grants etc. constitute 60% or more of the Central contribution to the State, how the modified machinery could bring out a change in this?

PART VII

MISCELLANEOUS

Industry

It is interesting to note Industry, Trade and Commerce, Agriculture, Food and Civil Supplies, Education etc. given under the head miscellaneous.

7.1 & 7.2 Yes.

The entire industrial structure in which foreign interests (in collaboration with business interests in India) are involved and included by the Government under the I Schedule. Everything is directed enmasse towards this. There is increasing involvement in different sectors by foreign interests both in the public and private sectors. The very approach of lending practically the entire industrial set up from the Centre is objectionable. The norm should be specific requirements of the common man, taking into account at the same time the industrial potential of a particular State. However, common requirements of all States should make it possible to plan industrial development in a particular State according to its potential. This would enable division of the production of industrial goods among different States according to the potential of each of them represent except however, one thing should be made clear, on the points raised here. How national interests in the true sense of the term can be against the interest of any State (if people, the vast majority of the people and their interests are the main criteria)? When foreign money is invested with a view to utilising the abundant raw materials and cheap labour and when the products are exported to the investing country and when they are imported and sold out here after being reprocessed in the investor country whether such products are pins or washing soap or powder, industries producing such products come in terms of the constitutions under national sphere, 'national interest' etc. Thus at the 1st schedule of the Industrial Act and the attempt at definition of natural interest all point to one thing, viz. many an industry in India is subservient to interests other than those of the people of India.

7.3 In many fields of industry to-day, the Indian raw materials and cheap labour are exploited for foreign investments or foreign investments and Indian private or public investments together, both the sectors serve the interests of the foreign investments and native bourgcoise. The Government is not encouraging independent national investment which undertakes the utilisation of raw materials and labour and the manufacture of finished goods for domestic and foreign consumption. The national bourgeoise is comparatively weak. However, the Government can encourage independent investment for processing raw materials by using domestic technology. An industrial licencing policy conducive to this can be encouraged. There is no reason for denying States the licensing right in this regards.

7.4 Neither the Centre nor the State Governments have any imaginative scheme in this respect. Industries (Small or big, village or cottage) which

use our raw materials, our labour and our capital should be started. Marketing facilities should be provided by the State and Central Governments. There should be co-ordination between the efforts of States and the Centre. There should be co-ordination between big industry (high power technology) medium Industry (inter-mediate technology and small scale industry (local technology).

All these should be integrated into a comprehensive whole and should be related to the agricultural sector and the production therein.

7.5 These institutions are sub-serving foreign interests and the big business. A great share of the capital resources of these institutions are obtained as foreign loans. Naturally the industrial policy is very much influenced by foreign interests.

7.6 Justified in most cases. The decisions need to be taken by the N.D.C. as envisaged by us. When the locational decisions are taken today what weights more is not the interest of the locality or interests of the people or the country in general but the interest of the investors and availability of raw materials and cheap labour.

7.7 & 7.8 Answers to these questions are implied in answers given to other questions. Decisions are taken not on the basis of objective criteria but out of extraneous considerations.

Trade & Commerce

8.1 Today the restrictions on inter-State or Inter-State Trade and Commerce are not conducive to the development of the market within the State or within India as a Whole. These restrictions often help not the consumer, but vested interests. This is also due to the competition among vested interests in various States. Substantial differences in the price of consumer goods and other items remain. The same goods are sold at different prices sometimes in the same city. Inter-State barriers have promoted hoarding and also black marketing. It has prevented the development of 'national market'. Therefore, the problem requires elaborate study. The appointment of an authority to remedy this State of Affairs will be desirable.

Agriculture

9.1 There has been further centralisation.

9.2 In general agreement. While there should be a national framework within which different States should work, this framework should be formulated on the basis of State Plans and not on the basis of Central directive or initiative. The initiative should be with the States in this field.

9.3 Here there is in effect Central control, no real Centre-State majors consultations. Prices of all agricultural produces are practically Centrally determined.

9.4 (a) Price of Coconut, Copra, Coconut Oil, Rubber, tea etc. The Central policy affects the price of these items of Kerala State. (b) Irrigation Projects—finance, foreign exchange, machinery etc. central acceptance is required. Naturally the Centre is in a position to control. (c) The same is the position. (d) There is central control. The recent policy of the Central Government towards giving title deeds to the occupiers of forest land in Kerala, the forestry policy and administration is against the Adivasis/Tribal people and their traditional rights.

9.5 ICAR and NABARD have their deep impace on agricultural research and agricultural finance of the States. The State has to adjust itself to the conditions laid down by these institutions. Actually these institutions are not catering to the needs of the States. Through these institutions the Central Government can direct and supervise the agricultural policy of the States.

Food and Civil Supplies

10.1 & 10.2 The Centre should undertake the responsibility of feeding. the deficit states. Because of the Central Government's policy, dictated by regional politics and regional interests, rice is sold at comparatively cheaper rates in Tamil Nadu or Andhra Pradesh, whereas the price of rice in Kerala is appreciably higher, inspite of rationing. Though integrated policy of rice procurement and distribution should have minimised the disparities in prices and distribution. In spite of persistent demand the centre has failed to provide effective assistance to the setting up of a public distribution system with minimum efficiency and item coverage not to speak all essential commodities for the common man.

Education

11.1 To a great extent this is true. Through various agencies of research, finance etc., this is done in the field of higher, general and professional education. In other stages it is done through CABE and Plan allocations.

11.2 The UGC is very much influencing University administration. If the guidelines or criteria laid down by the UGC are not followed finance from the UGC will not be available. The recent UGC report on teachers, students, appointment of V.C. shows the way in which it is made to work by the Centre against democratic principle and for foisting further Central control.

11.3 Under the existing conditions no amount of discussion will effect a qualitative change unless policy oriented chanegs are conceived first.

11.4 Education should be in the public sector. The so called right of the minorities should be done away with. The same type of education should be given to all from the primary to University levels. Medium of instruction at all levels should be the local language. Minority Institutions should mean Institutions for the minorities in spheres which do not fall within the scope of general education and which may contribute to the distinguishing features of minorities which do not such counter to national integration in any way. Any Institution run by a person or group of persons belonging to a minority

group cannot be allowed to claim the status of a minority Institution. Education as such should, therefore, be entirely in the Public Sector.

11.5 As in other fields serious discussion between the Centre and the States and among experts should take place on these questions and remedies suggested. The difference on language policy still persists as also on the controls financial responsibility for financing primary and secondary education.

Inter-Governmental Co-ordination

12.1 The days of one party regime throughout the Union have gone thus depriving of the extra Governmental/extra-constitutional channels for consultation. No consultation is essential in several fields especially in Financial matters, concurrent jurisdiction, mobilisation of state effort, for the success of national plan, administrative relations etc. An appropriate apparatus is lacking now. Of course there is the National Development Council, Ministers' Conferences, National Integration Council, etc. Art. 263 refers to the need of an Inter-State Council with specific functions. There are already Central Council of Health and Central Council of Local Self Government.

In this connection the report of the Study Team of the ARC and recommendations of the ARC may be considered. The American System referred to in the question may also be studied. The composition and functions of the suggested Inter-State Council require further study. However, it should never be another body where the Centre can dictate to the States. The spirit should be that of co-operation and co-ordination (or Co-operative federalism).

REVOLUTIONARY SOCIALIST PARTY

Kerala State Committee

MEMORANDUM

R.S.P. Kerala State Committee is happy to welcome the Commission which is to review the present position with regard to Centre-State relations. Proper handling of this live problem was long overdue.

There exists a very strong view that the powers of the states are being eroded both as a result of constitutional amendments and extra constitutional measures, economic and administrative centralism consciously adopted by the Indian ruling class and its representative—ruling party at the centre for the last more than three decades. But the Congress-led State Governments did not care to challenge this steadily increasing tendency towards centralism and hegemony of the Centre over the states. It is with the emergence of non-congress Governments in various states that the question assumed new dimensions and greater importance.

Before going into various aspects dealt with in the questionnaire, we would like to state our Party's stand with regard to the present constitutional set up.

We are of the firm opinion that what is wrong with the centre-state relations is only a part of the general congenital ailment that our Constitution has from its very inception. The present Constitution is a legacy of the British Colonial rule and ideas. It is aimed at establishing a capitalists path of development. There is little scope in the provisions of the Constitution for solving the real socio-economic problems of the toiling masses. This is evident from the fact that while the right to property, is made a sacred fundamenal right in our Constitution, nothing is said about the birth right of every civilised man *i.e.*, 'the right to work'. The Constitution was intended, by its framers, to serve and protect the interests of the erstwhile ruling class, the new capitalist class, and the landlords. The ordinary Indian had no say in the making of the Constitution and this fundamental defect pervades through the whole structure and spirit of the Constitution. Provisions governing centre-state relations is no exception to this. So what is genuinely needed is not piecemeal review of different aspects of the Constitution but a through restructuring in its entirety. Such a restructuring must give due weight to the radical transformation of the Indian Society by solving the complex socio-economic problems, nationality questions, regional imbalances, uneven economic growth, growing impoverishment of the ordinary masses, the fast growing ills of capitalist economic developments and the like.

Since the scope and terms of reference of the Commission is limited to that of centre-state relations we do not wish to elaborate our views on general constitutional questions.

Let it be clear at the out-set that we are for a federal system with a unified, healthy and homogenous Union Government and constituent units with co-equal powers. The Union Government must be efficient enough to protect the nation from external agression and for safeguarding the security and integrity of India. By thus we do not mean the hegemony of an omnipotent Central government, always making inroads into the inherent powers of the states. The Indian Union must be one in which both the centre and the states enjoy equal powers and exercising them in their respective fields in a harmonious and mutually agreed manner. If this is not borne in mind fissiparous tendencies with regionalism and communalism will poke their heads threatening the security and integrity of our nation.

Though the Constitution is called a federal one many of its salient features and provisions are befitting only to a unitary one. In a true federation there is voluntary union of the constituent units to form a federal Government. But unfortunately history did not provide this opportunity for us. All the residuary powers shall vest with the units in conventional federations. But all these cardinal features of federalism are conspicuously absent in our Constitution. So to call our Constitution a federal one is a myth. In fact, the constitutional provisions that govern centre-state relations is largely a legacy of the Government of India Act of 1935. That Act had a limited purpose of satisfying the nationalist clamour for self-government by providing meagre autonomy to the

provinces—the central government enjoying omnipotence in the governance of the whole country. This line of approach was generally followed by the framers of the present Constitution also. So our Constitution do not envisage equitable distribution of powers between the centre and the states. Experience has proved that throughout the last 34 years of our Constitutional development the trend was clearly to establish the hegemony of the centre at the expense of the states. This has resulted in regional disparities, uneven economic growth and social discontentment. The fact that India is a Union of peoples with varied aspirations, languages, religions and sentiments was not given proper attention. This gave opportunity to people with ulterior motives to fan up anti-national regional sentiments. Only by taking urgent steps for re-distribution of powers between the Centre and the States and granting more autonomy to the states this national malady can be cured.

Legislative Relations

The view that there is nothing wrong in the scheme of distribution of legislative powers between the union and states, which ensures in normal times a substantial measure of legislative autonomy to the states is wrong. The very article 249 in the Constitution which enables the Union Government to legislate on any subjects included in the state list is a Democles' sword threatening the autonomy of the state in this sphere. The powers under Articles 200 and 201 vested on the Governor of a state to withhold assent to a Bill passed by the State Legislature or to refer for President's consideration virtually cut at the root of autonomy of the states and drastically affects the scheme of distribution of legislative powers. The articles vest powers on an authority, the Governor who is not answerable to the state Legislature, to defeat the very purpose of the legislation. (Even the President of the Nation does not have so much powers). There are instances where legislation proposing basic changes in the socio-economic set up could not be brought into effect as they were either delayed or shelved.

Whenever any legislation is undertaken by the centre on a concurrent subject, it is not only necessary that the states should be consulted before hand but these should also be concurrence of the states. Declarations enabling Parliament to legislate on subjects which are within the exclusive competence of the states on the plea of national or public interest should be avoided as such declarations will naturally lead to usurption of the powers of the state by the Centre. In case, in exceptional circumstances such declarations are made and legislations attempted to by the centre, it should be for a short period and prior consultation in the Inter-State Council should be made a condition precedent.

Role of the Governor

Through the Supreme Court in Dr. Raghukul Tilak's case has opined that the Governor of a state is not subordinate or subservient to the centre and his is an independent constitutional office, the experience of the states during the course of the last thirtyfour years has proved to the contrary. Instead of being close links between the Union and the State, Governors have become agents or stooges of the centre, who will act as ordered by the centre instead of using their own discretion. The Governor appointed by the Union is a partisan who will have no hesitation to topple a duly elected Government in the political interest of the ruling party at the centre. The latest instance is that of Sikkim.

There is no authority as the Governor under the Constitution which is not accountable to the people. The Governor is not answerable to the State Legislature. The convention of consulting the state Governments before a new Governor is named is being given up. Governors are now appointed just like the British rulers, during colonial periods appointed Agents.

Competent and suitable persons are not appointed as Governors. Our experience has been that disgruntled elements in the ruling party at the centre, defeated in elections by the people are often posted as Governors to avoid headache to the High command. They will only dance to the tunes of their masters using their discretionary powers. Our considered view is that the post of Governnor is an anachronism and it has to be aboilshed. If the post is to be continued, the incumbent should be made answerable to the State Legislature.

Administrative Relations

A federal constitution envisages the sovereignty of units within their allotted spheres. The position in India today is that the Centre restricts to a great extent—almost destroys the autonomous functioning of the states in the areas which fall under state subjects in the Constitution. There are various Articles in the Constitution which enable the Government at the Centre to interfere in the Administration of states directly or indirectly. These powers vested in the Central Government are exercised often to dissolve the legislatures and to dismiss the Government of the state which do not toe the line of the ruling party at the centre. The recent instance of dismissal of the Sikkim Government is a fraud on the Constitution. This sort of partisan exercise of unbridled power shall have to be curtailed and constitutional safeguards should be thought of against such biased exercise of power.

As regards the recommendations of the Administrative Reforms Commission on the Arts. 256 and 257, the Inter-State Council consisting of the Prime Minister and the Chief Ministers of the states shall consider the points of conflict between the states and the centre and solve the differences if they fail to arrive at a settlement by mutual discussion ; Article 365 shall be deleted.

The All India services have not fulfilled the expectations of the framers of the Constitution. The Officers belonging to these services are only loyal to the centre and this has often resulted in conflicts between the state and centre. To prevent this, states should be given more control over these services.

Central reserve police or any other armed forces shall not be sent to a State by the centre without the specific request of the state concerned.

The various central agencies like National Saving Organisation, Employees' Provident Fund etc. and their handling of activities relating to subjects in the state and concurrent Lists have encroached upon the autonomy of the states. Formerly the officers who manned the state units of these agencies used to be appointed in consultation with the state. In most cases this practice has been discontinued. Most of the activities of these agencies could be carried out by the states with centres assistance and help.

Broadcasting and other like forms of communication should be included in the concurrent list so that the states should have a say in the administration of AIR & Doordarshan.

Zonal Councils have not fully served the purpose for which they were set up.

Inter-State Council

Opposition political parties and eminent jurists as well as the Administrative Reforms Commission have urged the establishment of an Inter-State Council envisaged under Article 263, to deal with the problems arising among states and between the states and the centre. The council should consist of the Prime Minister and all the Chief Ministers of the states with a permanent Secretariat.

Financial Relations

A review of the working of the mechanism for devolution and examination of details of resources transferred by the centre to the states during the last 34 years will reveal that the scheme has not at all worked well and if at all it worked, it was in favour of the ruling capitalist class and to the detriment of the states. The states needs and aspirations are being ignored by the centre.

In the economic field and in matters of relations between the centre and the states, there is increasing centralisation. Even after acquiring more financial resources making inroads into the states areas of taxation and receiving billions of dollars of foreign loans and increasingly resorting to deficit financing the centre has failed in ensuring balanced development in various regions of the country and to bridge the gap in resources between poorer and richer states. While uniform pattern for development is prescribed in the name of planning, the stage of development in various sectors and the special needs of the state are not considered. This is the result of too much of centralisation in planning process.

The state of Kerala is far advanced in the field of education and health and ahead of many other states in regard to transport facilities. But the state is not provided special assistance by the centre for follow up actions on the plea that the state is already ahead of other states in these sectors and thus the state is being penalised for having acted in accordance with the directive principles in the Constitution. At the same time no additional financial assistance is extended for developmental activities in other sectors. The state's resources to raise its own funds for taking up these works are meagre and exploited to the maximum. While this is the state of affairs in the state, it has no alternative but to agitate against the attempts of the Centre to encroach upon the rights of the state for taxation on the basis exclusively left to them by the constitution.

The Centre shall not make further inroads into the state's limited sphere of taxation. In this context, the Kerala Government is very much concerned with some of the Legislations passed by Parliament in recent years. The amendments to the Central Sales Tax effected some time ago adversely affected the finances of the State. These amendments to legislations, levy of surcharges etc. very seriously cuts into the tax potentials of the state. These changes to the detriment of the state's interest are effected without the concurrence of the states. We are definitely of the view that the Centre shall desist from these measures which are extraconstitutional. As a safeguard to the states from the aggressive encroachment on their rights by the centre and to do social and economic justice to them the Constitution should be amended to make all central taxes including corporation taxes and surcharges and all excise duties shareable with the states and it should be ensured that at least 75% should be distributed among the states.

Economic and Social Planning

In the field of planning the Centre is expected to play a pivotal role. Unfortunately, the Planning Commission, the authority which formulates the plan and the National Development Council which affixes the seal of approval to it have failed in fulfilling the aspirations of the people. The Administrative Reforms Commission has opined that the National Development Council has in the past, often failed to consider in depth the crucial issues raised before it. Controlled by a single party, the council has not discharged its obligation to consult the states or to evolve a satisfactory process of consultation between the centre and the states. Too much of centralisation in the field of planning crippled the initiative of states. The Planning Commission, being a department of the Central Government failed to act 'in close understanding and consultation with ministers of Central Government and the Government of the States'.

The Commission could not discipline the Central Ministries; but the states are obliged to accept its dictates. Central assistance by way of loans and grants are used to patronise some regions which results in uneven growth and regional imbalance. In the case of loans obtained by the Centre from foreign Countries and agencies at lower interest, the Government of India charges higher rates of interest from the states. It may be noted in this connection that major portion of these loans taken by the states are used to repay the previous loans. The principles governing the sanction of loans and grants should be reviewed and clearly laid down to benefit the deserving weaker states, to enable them to cover fiscal gap and to meet special burdens on their financies because of their peculiar circumstances.

The present arrangements for formulation and implementation of plan especially at state level are thoroughly inadequate and efforts should be made

to strengthen the planning macninery at state level also. The Planning Commission should be a statutory body functioning under a restructured National Development Council. The N. D. C. should consist of equal representatives of the Centre as well as of the state. Constitutional provisions should be made defining the functions and responsibilities of the N. D. C. and the Planning Commission. In this connection the recommendations of the Administrative Reforms Commission may be taken into consideration.

REPLIES

PART I

INTRODUCTORY

1.1 The Constitution of India is neither purely federal nor Unitary. It is a combination of both with greater weightage given for a strong Centre. The object of the framers of the Constitut on has been to build a strong central authority which may resist external aggression and also to check internal disruptive forces that may tend to undermine the nescent state.

1.2 There cannot be two opinions about the need to devolve more powers and responsibilities to the States. However, care has to be taken that these do not conflict with the responsibility to maintain national unity and integrity. It is in this context that the views of the Rajmannar Committee have to be examined. The question of deletion, revision or substantial modification of provision mentioned in the aforesaid Articles need to be studied thoroughly and in greater detail before coming to hasty conclusion.

Regarding appeals to the Supreme Court, it is the highest Court in the country and it has so far been functioning with credit and dignity. Hence its powers should not be disturbed.

1.3 It is true that India is a large and heterogeneous country. This size of the country and the inherent diversities demand devolution of more powers and responsibilities to states so as to enable them to develop in all spheres of activities within the parameters of National Unity.

It may be mentioned that the Administrative Reforms Commission has also recommended that powers should be delegated to the maximum extent to the states for carrying out projects in which the Centre is directly interested or which are carried out by states as agents of the Centre.

1.4 In theory a Federal Constitution envisages that the Central and Regional Governments are independent in their spheres of activities. But reality of the situation has shown that this compartmentalisation is not there. One can cite the federal constitution of the United States of America, Australia and Canada.

1.5 There is no doubt that the Constitution is basically flexible enough to meet the challenge of the changing times. One should bear in mind that no constitution is perfect and indeed can never be perfect. Hence there are amendments to meet new challenges and new situations. What is important is evolution of healthy conventions and procedures. There is, therefore, the need for functional cooperation leading to harmonious Centre-State relationship in accordance with the spirit and intent of the constitution.

1.6 There can be no two opinions on the overriding importance of protecting the independence and ensuring the Unity and Integrity of the country. This was uppermost in the minds of the founding father of the Constitution. Hence there are a number of Articles in the Constitution which have made a strong Centre to discharge this responsibility.

1.7 Obligations of the union and the states need to be carefully reviewed in the light of experience gained in the working of the Articles mentioned in your question. It must however be said that much of the tension in the Centre-State relationship can be avoided if there is trust and confidence between them.

1.8 The Constitution empowers the President to establish an inter-state council if at any time it appears to him that the public interests would be served thereby. One of the functions of the council would be to investigate and discuss subject of common interest between the Union and the States or between two or more states. It would be desirable that such a matter as mentioned in your question should be left for the examination of all aspects to the inter-state council.
